The following is the tonnage of commodities on the river to and from Minneapolis during the year 1938 carried by one line—the Federal Barge Line. It shows the variety of commodities that are being now transported on the river. It should be remembered that in 1938 the 9-foot channel was not entirely completed, which was a handicap to regular transportation. Nevertheless, and in spite of the handicap, over 135,000 tons of commodities were shipped by this line in and out of Minneapolis. The totals give an idea of the freight that is now being carried on the river and are an indication of how river traffic will increase to help business and industry in Minneapolis as soon as the channel, including the upper harbor, is completed.

Commodity	Freight received 1938	Freight forwarded 1938
	Tons	Tons
Agricultural implements and tractors.....	3,580	55
Ammunition, small arms.....	123	28
Bags and bagging, cotton.....	880	
Bags and bagging, burlap.....	3,000	
Beet pulp.....		3,271
Beverages.....	433	
Bottles, jars, glass.....	739	
Canned goods.....	1,033	110
Coal, bulk.....	72,890	
Coke, bulk.....	23,114	
Coffee.....	1,119	
Cotton, linters.....	1,257	
Cotton piece goods.....	286

Miscellaneous.....	1,132	266

#### WHAT THE RIVER CAN DO TO BUILD A CITY THAT HAS HARBOR FRONTAGE

The value of river transportation in building the business and industry of a city is illustrated in what has happened at Memphis, Tenn., since the completion of the canalization of the Ohio River. Here is how tonnage has increased at Memphis since the Ohio project was completed:

Year	Tons	Value
1929.....	977,111	\$62,846,785
1930.....	1,590,981	82,261,894
1931.....	1,239,197	83,027,699
1932.....	1,238,254	81,979,745
1933.....	1,090,615	57,486,062
1934.....	1,420,200	78,401,814
1935.....	1,538,311	100,229,008
1936.....	1,862,321	130,371,177
1937.....	1,875,177	122,414,421
1938.....	1,917,835	112,033,614

Although Memphis is hundreds of miles from deep water, inaccessible to oceangoing or lake craft, nevertheless, the circumstances that it now has access to river transportation and the necessary harbor facilities, has made it one of the largest inland ports of America with all that that means in building the prosperity of the city. The following show the tonnage in and out of the port of Memphis as compared with important lake and ocean ports:

Port	Tons	Value
Memphis.....	1,875,177	\$122,414,421
Manitowoc, Wis.....	1,361,544	104,581,600
Wilmington, N. C.....	1,962,374	70,736,533
Miami, Fla.....	1,211,091	66,728,301
Tampa, Fla.....	648,694	53,003,464
Muskegon, Mich.....	1,245,872	46,138,350
Bridgeport.....	1,927,844	37,621,057
San Diego, Cal.....	662,557	32,261,859
Wilmington, Del.....	1,170,559	27,980,212
Pensacola, Fla.....	633,103	20,353,509
Vancouver, Wash.....	511,890	10,753,338
Gulfport, Miss.....	302,763	10,550,982

#### HOW RIVER TRANSPORTATION WITH ADEQUATE HARBOR FACILITIES HAS BROUGHT INDUSTRIES TO MEMPHIS

Under date of November 29, 1939, O. F. Soderstrom, secretary of the Memphis Chamber of Commerce, writes that the following industries have located in Memphis in recent years "largely because of the availability of water transportation":

Manufacturers: Indiana Flour Co., Globe Union Manufacturing Co., Linde Air Products Co., Marquette Cement Manufacturing Co., Southern Shellac Manufacturing Co., Procter & Gamble, Memphis Glass Manufacturing Co., Continental Can Co., Southern Central Co., Memphis Veneer, Inc., Tennison Bros., Firestone Tire & Rubber Co., the Lehon Co., Lloyd A. Fry Roofing Co., Trumbull Asphalt Co., Allied Mills, Inc., Rotary Lift Co., Southern States Iron Roofing Co., Tennessee Metal Culvert Co., Ford Motor Co., National Pressed Steel Roofing Co.

Distribution: Lion Oil Co., Joseph Schlitz Brewing Co., Cummins Diesel Engine Co., Ruberoid Co., Bird & Son, Continental Steel Sales Corporation, Youngstown Sheet & Tube Co., Standard Oil Co. of Louisiana, Jones & Laughlin Steel Corporation, Spang, Chalfant & Co., Wheeling Steel Corporation, National Tube Co., Pan-American Petroleum Corporation, Gulf Refining Co., the Texas Co., Southland Paper Co.

#### WHAT THE RIVER AS NOW CANALIZED CAN DO FOR A CITY IF IT HAS ADEQUATE HARBOR FACILITIES

Under date of November 21, 1939, A. W. Kleinschnitz, manager of the traffic department of the Minnesota State Prison, advises:

"Since river navigation was inaugurated north of St. Louis the actual saving to us as against the all-rail rates on fiber and other commodities the prison uses has been \$141,454.

"In addition to the sisal tonnage, this institution is receiving its coal via the water route. This fall approximately 10,000 tons of coal was unloaded at the Stillwater river terminal, which coal was loaded into rail cars at the terminal and switched to us as required. These shipments by river have meant a saving to the prison of about \$8,200 on only 10,000 tons of coal."

"I have lived in Muscatine for about 30 years and have been in the grain business here for about 25 years. I own and operate an elevator at this point on the river. Last year several million bushels of corn were shipped south and the farmers in the vicinity of Muscatine were paid from 3 to 6 cents per bushel more for their corn than they possibly could have received if shipped by rail."—Statement by L. R. McKee, grain dealer at Muscatine, Iowa, July 15, 1939.

#### RIVER TRANSPORTATION EFFECT

##### Rail coal price cut 39 cents per ton

Does river transportation mean anything to Red Wing?

In addition to the savings made by barge shipments of coal unloaded at the municipal terminal here, there apparently is another advantage, as revealed in a letter received today by the Red Wing Fuel Co. from a Minnesota wholesale concern.

The local concern asked quotation on a 50-ton car from a Minnesota point and was at first quoted \$5.77 a ton f. o. b. that point, shipped by rail.

A few days later another letter was received from the wholesalers quoting a price of \$5.38 a ton, and stating the reason for the cut as follows:

"After discussing this matter with our representative, Mr. ———, we feel the competitive situation at Red Wing resulting from the river transportation warrants a price of \$5.38, which we are in position to quote you at this time."

The difference in quotation meant \$20 to the local dealer on the 50-ton car.—Red Wing Daily Eagle.

"During 1938, our organization, a farmers' cooperative grain elevator, located 32 miles directly west of Muscatine, Iowa, moved a total of 550,000 bushels of corn to Muscatine, which was loaded on barges and shipped to various southern points along the Mississippi River for export. Due to this grain moving by river, we were in a position to, and did, pay from 3 cents to 5 cents per bushel more for grain than we could have paid had we been limited entirely to movement of the grain out of our town by rail."—Statement by manager of the Lone Tree Farmers' Exchange, of Lone Tree, Iowa, June 24, 1939.

The national center for the manufacture of commercial fertilizer is in the Tennessee Valley. Northwest farmers are using more and more commercial fertilizer. It is a heavy, bulky product and does not require speedy transportation. River barge service to Minneapolis for northwest distribution will provide much saving in freight expense.

While the development of pipe lines is taking care of much transportation of oil and petroleum products, the opportunities for cheap river transportation is prompting river shipments of gasoline, oil, and other such products. (During the period from May 1 to November 1, 1939, there were 35,050 tons of gasoline shipped by river to Minneapolis.) The recent installation in St. Paul by the Shell Oil Co. of large storage tanks emphasizes the value of river transportation.

It is also claimed not to be outside the range of possibilities that river transportation from Minneapolis and up the Ohio River will enable a vast cereal and flour market to become available to Minneapolis mills. That area uses approximately 12,000,000 tons of cereal products annually and most of it is shipped into the area by rail from Buffalo at a cost in excess of the river barge rate from Minneapolis.

Large quantities of Minnesota and Northwest dairy products are now shipped to Duluth and down the Great Lakes to the eastern and mid-eastern markets. Much of this area could be served by

river transportation at reduced cost. Coolers are being perfected for barge use that will insure a high grade of service.

## SUMMARY

The extension of the 9-foot channel above St. Anthony Falls is necessary if Minneapolis is to have its share of the advantages accruing from the Government's \$140,000,000 canalization of the Mississippi River.

The extension of the channel is practical, and the plan feasible, because the Army engineers, after extensive investigations, have so reported to Congress.

The completion of the project will give Minneapolis a powerful argument in its campaign to secure new industries for the city.

The completed project will give Minneapolis one of the finest, if not the finest, harbors between the city and New Orleans. The harbor would have plenty of water. It would be wide enough for barges to be turned around easily, which is a great convenience and saving. The harbor itself would be over 3 miles long, or 6 miles of frontage on both banks of the river. It would provide opportunity for industrial development.

The building of the project would give continuous employment to a large number of Minneapolis workers for a period of from 3 to 5 years. There would be a large amount of labor required also to take care of the industrial development, private dock building, etc., certain to follow the project.

The completion of the project, including its extension above the falls in Minneapolis, therefore means that river barges from New Orleans and St. Louis and Pittsburgh would be able to make regular trips to Minneapolis and thus give the city a dependable transportation outlet to the Gulf, to the East, and to the markets of the world.

## Interstate Chain Store Tax Bill

## EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

RADIO ADDRESS BY HON. W. R. POAGE, OF TEXAS

Mr. PATMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. W. R. POAGE, of Texas, delivered Thursday, February 15, 1940, over the Mutual Broadcasting Co.'s network, originating at Station WOL, Washington, D. C.:

Ladies and gentlemen of the radio audience, I desire to express my appreciation to the Mutual Broadcasting Co. for this opportunity to discuss with you a very important bill now pending in Congress, which will likely receive consideration at an early date. I regret, and I know you regret, that my friend, the Honorable WRIGHT PATMAN, of Texas, the author of the interstate chain-store-tax bill, is unable to address you at this time on account of illness. Mr. PATMAN is recognized as the outstanding authority on this subject. I did not know until today that I would be called upon to discuss this subject. I shall not presume to take Mr. PATMAN's place, but in view of my intense interest in the problem, I shall undertake to pinch-hit for him.

In considering the business system as well as the governmental system under which our people want to live, we should always keep in mind the greatest good for the greatest number. I believe that we have the best form of government on earth, and I hope the time will never come in America that fascism, nazi-ism, or communism will have any influence in the affairs of our country. A democracy admittedly is more cumbersome than a dictatorship, but no American would be willing to give up his liberty and freedom for what is held out as a more efficient form of government. So it is in regard to methods of business. Of late years we have heard a great deal of efficiency in business. Has it ever occurred to you that that boasted efficiency in business might, in the case of chain or monopolistic operation, be secured at the same loss of liberty on the part of our people that accompanies the monopolization of governmental powers in the hands of a dictator? That monopoly in business, although undoubtedly assuring certain economies, is in the long run sure to run counter to both the social and economic welfare of the people.

In determining the best thing to do for all the people we should consistently keep in mind the abolition of the four greatest evils, which are: Poverty, ignorance, disease, and crime; and at the same time we should keep in mind encouraging, assisting, and promoting the interest of the three greatest institutions on earth, around which all civilization is built—the home, the church, and the school.

How does the principle of chain-store operation—the principle of monopoly in distribution—meet these tests? In other words, should we encourage an expansion of those great interstate monopolies by our present policy of partial tax exemption to chain stores,

or should we turn to the principle of House Resolution No. 1, more generally known as the Patman chain store tax bill. I am one of the coauthors of this bill. I am not here to discuss the mechanics or the details of this bill. I am here to discuss the principles involved. You may feel that the particular rates of taxation proposed in the original bill should be revised. There is nothing sacred about the rates of taxation. My own idea is that these rates should be fixed high enough to equalize the tax burden carried by the locally owned independent merchants, when compared with the taxes of the chain stores. These matters can and will be worked out with more scientific exactness when the bill comes before the Ways and Means Committee of the House.

Even though there were no question of public welfare involved, we would be both justified and obligated to place a special tax on chain-store operation in order to equalize the incident of taxation. I think most of you will readily recognize that your local home-owned independent store pays far more both in direct taxes and also in voluntary contributions to community enterprises like the Community Chest, the Salvation Army, and so forth, than does its chain-owned competitors who do the same volume of business. Several years ago, while I was a member of the senate in my own State, I had occasion to compare the total taxes paid by a number of retail establishments in my home city, Waco, Tex. I found that in every instance the locally owned institution paid from 25 to 300 percent more taxes than did the chain-owned establishment of approximately the same size. This is largely due to the fact that our tax system, not only in Texas but in most parts of this country, was established long before the system of chain merchandising was devised. As methods of merchandising change our tax system must change if the cost of government is to be fairly and honestly apportioned. Without regard to social implications, we must reach this new method of producing wealth by the establishment of a new tax base.

This bill, H. R. 1, not only rectifies a grievous injustice, but it also uses the taxing power of Congress as a vehicle to reach an absolutely worthy objective—that is, to discourage monopoly in retail distribution; to distribute privileges and opportunities; and to protect consumers, farmers, and wage earners from the toll that monopoly always levies. The attainment of this goal will discourage concentration of money and credit and prevent the destruction of local communities. The Patman chain store tax bill does not provide any kind of tax for the first nine of a chain of stores, and the tax on a large number of stores within one State will not be prohibitive under this bill. But if the concern tries to spread all over the Nation and operate a large number of stores in more than one State, then the tax will become more burdensome. It will curb the commercial conquest of the absentee-owned chains and will give independent business a chance.

The United States Chamber of Commerce has a widely advertised slogan. It is: "What helps business helps you." This great organization could very appropriately have amended that slogan so that it would read: "What helps local business helps you most."

I believe you will be amazed to learn that there are more than 7,000 chain store concerns in the United States. And you will be equally surprised to learn that a majority of such chain store concerns will pay no tax at all under this bill. The average chain store concern will pay a very small tax. But there are about 20 large interstate concerns, which are trying to run roughshod over independent locally owned business in this country. They will be seriously affected by this bill. They are the ones that are making all of the noise about H. R. 1 being a death-sentence bill. It will not affect voluntary or cooperative groups or any individually owned store, but it will be a death sentence to monopoly.

Practically every city in the United States has a heavy tax on the big tent circus. In many places the tax is as much as \$1,000 a performance. Such taxes are levied because the people realize that a circus carries a lot of money out of town and they want to discourage any business coming to their town that takes so much money away and dries up the local reservoir of credit. They want to be sure that any business that takes so much from the community puts something back in the way of taxes.

There are 3,070 counties in these United States. In every county there is at least one good town. A few so-called wise men in the East have conspired to get control of the retail business in these 3,070 local trade centers that they can control the retail business of this Nation. They know that when they get this control that they can dictate to the people from whom they buy, including the farmer, the price that they must accept; and at the same time they will dictate to the consumers the price that they must pay. The interstate chain-store system is absolutely destroying local community life in our Nation. As it becomes more firmly entrenched it is bound to destroy any number of local crafts, trades, and professions, thus still further centralizing the control of all industry and plunging our people into a more hopeless economic slavery. As an illustration: the general acceptance of the chain store idea of merchandising will not only wipe out the thousands of local merchants to whom every community has so long turned in every case of public need. As they close their doors, salesmen, clerks, traveling men, wholesalers all lose their jobs, and join the army of the unemployed. Nor can they be absorbed by the growing octopus, for it is one of the axioms of chain-store operation that it must be conducted with a reduced overhead. That means less men employed.

It also means less buildings occupied. Just now most of those who are asking me to deal lightly with the chain stores are interested either directly or indirectly in renting some building to some chain store at a fancy price. Should the chains gain complete control in

their localities I wonder just what these owners of real estate would do. There are probably five locally owned buildings vacated for each one that can be rented by a chain store—and after the local stores are all put out of business how much rent is that surviving chain store going to pay? Nor will the consequences end with those directly employed by or renting to chain stores. With the substitution of foreign-owned chain stores for locally owned places of business, what will happen to the local insurance agent? How much of the chain-store insurance will be written locally? What will happen to the local banks? How much business will the chains do with them? Today they use local banks only as places of collection. Their business is financed on Wall Street. Their intake is daily siphoned off to distant offices. What will happen to local printing shops and even local newspapers? We already see the great chains doing their advertising by handbills printed at the home office.

What will happen to the price of farm produce? I find that the chain stores make much of the volume of produce that they purchase. Is there a farmer who believes that the chain stores increase the consumption of farm produce? Does not an increase in consumption of butter, eggs, fruits, vegetables, etc., depend on an increase of employment, and don't the chain stores destroy employment and reduce the number of people able to buy these farm products? The chain stores certainly don't increase the population of the communities where the farmers sell their produce. They don't increase the income of the people. If there were no chain stores, would not the local merchants supply these same people with produce, and would not the farmers sell just as much? The chain stores say they pay highest prices for produce. Has anyone ever heard of the chain store that paid more for produce, labor, or anything else than it had to—any more than it was forced to by competition? Remove all local competition—imagine nothing but chains—and what prices do you suppose the farmer would get?

And certainly the consumer should pause and give thought to his situation if monopoly is allowed to run unchecked and to spread its chains into all parts of the country. During the squeezing-out process, while the absentee-owned chains are destroying their locally owned competitors, it is true that the chains will often sell goods at prices so low that no independent merchant can meet them. These prices often mislead the thrifty housewife, but they are in the long run but another case of "Greeks bearing gifts." The savings do not last long. As soon as independent competition has been destroyed the chain stores are able to and do advance their prices to a level sufficiently high to make up for their previous losses and to return a handsome profit in addition. Monopoly always exacts its toll. Competition always has been the most powerful agency on the side of reasonable prices. Both reasonable prices to the producer and reasonable prices to the consumer. The interstate chain stores are fast destroying all competition. They are striving for complete monopoly, and our present tax laws are helping them to obtain such a monopoly. The Constitution of the State of Texas well declares that "monopoly is contrary to the genius of a free people."

Let us awake, my friends, before it is too late. Let us require these great monopolies to at least pay their share of the support of the Government; they are not doing it now. Let us encourage an economic system as well as a governmental system that recognizes the rights of the individual, that preserves freedom of individual effort, that protects local enterprise, that keeps people at work and communities prosperous. Let this Nation avoid all dictators, economic as well as political.

### Work of Tennessee Valley Authority

#### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

LETTER BY DAVID E. LILIENTHAL

Mr. NORRIS. Mr. President, I ask unanimous consent to have inserted in the RECORD a letter written to me by Mr. David E. Lilienthal, a member of the Tennessee Valley Authority Board, relative to the accomplishments of the Tennessee Valley Authority and giving a short history of power facilities provided by the Tennessee Valley Authority.

I also ask unanimous consent to have inserted in the RECORD the article referred to in the letter of Mr. Lilienthal on the activities of the opposition to the T. V. A., particularly by E. Hofer & Sons, Portland, Oreg., a firm well known to many people of the country, which has been given considerable publicity, and a full understanding of the nature of whose business has been made by the recent investigation of the Federal Trade Commission.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

TENNESSEE VALLEY AUTHORITY,  
Knoxville, Tenn., February 14, 1940.

HON. GEORGE W. NORRIS,

Senate Office Building, Washington, D. C.

DEAR SENATOR NORRIS: I have just been looking over the records of T. V. A. power operations for the last 6 months of 1939. They are so encouraging from several standpoints that I thought you might be interested in some of the highlights. Not only have revenues been increasing, but power has been going in greater measure to the municipalities and cooperative associations as primarily intended. The T. V. A. system met successfully the challenge of a prolonged season of drought, providing electric power not only to serve the Authority's customers but to aid neighboring electric systems, and at the same time maintaining the flow for navigation on the Tennessee, and aiding materially on the Lower Ohio and Mississippi Rivers. The reduction of rates by the Birmingham Electric Co. provided another example of the "yardstick" in action.

Revenues of the Authority from power operations in the last 6 months of 1939 amounted to \$7,115,000, compared to \$5,507,000 for the entire fiscal year 1939. The Authority sold 1,658,000,000 kilowatt-hours of power in this period, excluding its interdepartmental sales, as compared to 1,422,000,000 kilowatt-hours for the entire 1939 fiscal year.

Of even greater significance is the increase in the power sold to municipalities and cooperative associations. Where these agencies used 301,000,000 kilowatt-hours, or 21 percent of the power sold during the 1939 fiscal year, they used more than 759,000,000 kilowatt-hours or 45 percent during the last 6 months. This means that in the fiscal year 1940 these agencies will use more than five times as much power as in 1939. Considering primary power alone, well over half of the T. V. A. output of the past 6 months went to municipalities and cooperatives. After the long period of struggle and litigation, T. V. A. is definitely on its way to the successful distribution of power for the benefit of the people of the region as a whole.

As you know, the Authority's system, together with the acquired steam and hydro-generating plants, underwent a major test last fall in supplying electric power under extremely unfavorable water conditions. The T. V. A. system, although incomplete, has met this test successfully. In fact, during the extreme dry period which created a critical power situation on other power systems in the Southeast, the Authority was able, not only to meet all of its commitments under long-term contracts with its regular customers, but also to supply large amounts of power to private systems which otherwise might have had to curtail service to some of their customers or operate obsolete and costly generating plants. We also supplied emergency power to the Aluminum Co., thereby preventing the curtailment of operations at its Alcoa plant.

The multipurpose system did an excellent job of controlling the flow of the Tennessee for both navigation and power production. In fact, during several months last fall one-half the flow of the Tennessee at Chattanooga, about one-quarter of the flow of the Ohio below Paducah, and about a tenth of the Mississippi flow below Cairo, Ill., came from the Norris Reservoir. In addition to maintaining the flow for navigation in the Tennessee, the Authority's system is credited with adding about six-tenths of a foot to the depths on the Mississippi River, a margin of real value to barge operators during a low-flow season.

The importance of even a slight increase in depths during periods of low flow is illustrated by a statement by one barge operator that "We usually move a four-barge tow north and the reduction of 1 foot in this draft curtails our north-bound tonnage in the amount of some thousand or two on the four barges." In other words, 1 foot means the equivalent of from 20 to 40 large freight cars so far as tonnage is concerned.

In power production the Norris Dam releases not only generated 170,000,000 kilowatt-hours at the Norris powerhouse during September, October, and November but increased the output at the downstream plants—Guntersville, Wheeler, Wilson, and Pickwick Landing—by 200,000,000 kilowatt-hours. Precipitation during January has provided a sufficient flow of water in the main stream, and Norris Dam has ceased operation. The reservoir has commenced to fill.

The power situation in the Southeast this fall was especially interesting in the light of the dire predictions of utility officials, publications, and organizations only a few years ago that the construction of the T. V. A. dams would create a vast and unsalable surplus of power in the area. The fact is that the power situation on private systems in the Southeast became critical during the drought and T. V. A. was called upon heavily to help meet their requirements. The Commonwealth & Southern companies in this area purchased 234,000,000 kilowatt-hours from T. V. A. during the 6 months, including 93,000,000 kilowatt-hours of steam power for which it paid a special rate. In addition, steam stand-by plants of the companies were operated to capacity. It is significant that both the Alabama Power Co. and the Georgia Power Co. during the last year, even before the drought, announced plans for new 40,000-kilowatt steam plants at Mobile, Ala., and Macon, Ga. The Aluminum Co. of America, faced with a shortage of power on its own hydro system, purchased about 130,500,000 kilowatt-hours of steam power from the Authority.

The fact is that the tremendous surplus of power foreseen by utility leaders has melted away before remarkable increases in the use of power in this area. Power has been made available for the commercial processing of phosphates in middle Tennessee and for

expansion of the manufacturing operations of the Aluminum Co. of America. And there has been a great increase in the amount of power consumed as a result of the low-rate policies started by the Authority and followed by privately owned utilities.

This is shown strikingly by Federal Power Commission figures revealing that in the 12 months ending with November, electricity generated for public use in Tennessee, Alabama, Mississippi, and Georgia showed an increase of more than 87 percent over production for the similar period of 1929, the predepression peak year. In contrast, production in the Nation as a whole was only about 32 percent above 1929. In other words, the relative increase in this area has been two and a half times as great as that for the Nation as a whole. The demand for power has called for extensive operation of steam plants, and about 833,000 tons of coal, or nearly two and one-half times the 344,000 tons used in 1929, has been used in the 12-month period ended in November in these four States. Use of coal in utility plants in the Nation has not yet regained the 1929 level.

As the latest example of the "yardstick in action," I am enclosing a full-page advertisement of the Birmingham Electric Co. in the Birmingham News, in which it announced its latest rate reduction, bringing its prices down, especially for monthly consumptions up to about 100 kilowatt-hours, close to the standard Tennessee Valley Authority residential rate.

You will note that the company proclaims, with considerable pride, that "this rate slash is the seventh reduction made by this company since 1933." Curiously enough, the advertisement makes no mention of any unusual event in the utility field which might make the year 1933 significant.

I am also enclosing a clipping of a news story from the Knoxville, Tenn., News-Sentinel of January 28, in which I think you will be interested. The story is on the present activities of an old utility propaganda acquaintance, E. Hofer & Sons, which figured in the investigation of the utility industry by the Federal Trade Commission a few years ago.

Best personal regards.

Sincerely yours,

DAVID E. LILIENTHAL,  
Director.

[From the Knoxville (Tenn.) News-Sentinel of January 28, 1940]  
PAPERS USING "CANNED STUFF" OPPOSING T. V. A.—EDITORIALS PREPARED BY PRIVATE UTILITIES PROPAGANDIST GET INTO PRINT—WRITER INVESTIGATED—FEDERAL TRADE COMMISSION FOUND CONCERN WAS PAID \$85,000 YEARLY

(By Edward B. Smith)

A publicity concern that, according to revelations by the Federal Trade Commission back in 1928, was paid \$85,000 a year by the electric utility monopoly for writing "canned" editorials against public ownership of utilities and distributing this propaganda free to the Nation's newspapers for use, is still on the job.

Recently the concern has stepped up production of anti-T. V. A. editorials while the T. V. A. appropriation for the coming fiscal year is before Congress for approval.

The company is known as E. Hofer & Sons, of Portland, Oreg. It puts out a weekly mimeographed release called Industrial News Review.

T. V. A.'s clipping service here recently discovered a Hofer editorial entitled "Socialism Begins to Hurt," reproduced in newspapers in such widely scattered places as Waterbury, Conn., Johnstown, Pa., and Ashland, Ky.—and all of them appeared within a day or two of one another.

The "master" editorial was sent out by the Hofer agency in its release for the week ending January 8. The editorial attacks T. V. A., says that "T. V. A. pays next to nothing in taxes," and concludes that "the Southeast is learning that it can't have its cake and eat it too."

Amusingly enough, apparently the Johnstown, Pa., editor objected to the use of the word "socialism" and changed his editorial heading from "Socialism Begins to Hurt" to "The Shoe Begins to Pinch," and in the editorial itself "socialism" was changed to "New Deal."

#### WHO HOFER IS

Who is this Hofer? Page 1 of his bulletin says he has been editing and publishing Industrial News Review since 1913.

More about Hofer, however, can be learned from the Federal Trade Commission's records.

Mr. Hofer first gained notoriety in 1928, when he was subpoenaed before the Commission to tell about his activities as a hired propagandist.

Mr. Hofer's testimony covers several pages in the printed transcript of the testimony, and is summarized in part as follows in the Commission's report to the Senate:

"About 1924 a conference in C. A. Coffin's apartment in New York, attended by R. M. Hofer and representatives of the utilities including E. A. Coffin, retired chairman of the board of directors of the General Electric Co., Randall Morgan of the United Gas Improvement Co., C. E. Groesbeck, S. Z. Mitchell, W. E. Breed, and E. K. Hall of the Electric Bond & Share Co., resulted in expanding the Hofer service to the entire country, reaching from 14,500 to 15,000 newspapers."

"Following this conference the utilities supported the service to the extent of \$84,820 a year to have the Hofer aims disseminated through the press of America."

#### OF ESPECIAL VALUE

"Although the Hofer service was also supported by contributions from other industries in an amount about equal to that from the

utilities, a letter from E. Hofer & Sons to A. R. Gwinn, manager of the industrial department of Central Illinois Public Service Co., stated "the leading utilities of the country have made it possible for us to conduct this work."

"Robert M. Hofer testified that the policy pursued by the Hofer service was persistently to oppose municipal operation of utility plants and Government participation in business."

"Referring to the value of this service Mr. Coffin (of General Electric Co.) said: 'The Hofer service has been of especial value to public utilities. Hofer has pointed out in the clearest way and over again the dangers of municipal ownership; he has fought to a finish the Bone bill in the State of Washington and largely contributed to the defeat of the California power bill \* \* \*'

"The Manufacturer (at that time the name of the weekly service to newspapers) from September 1926 to May 1928 contained editorials relating to disparagement of the Ontario hydroelectric situation, Government ownership, the Swing-Johnson bill, sale of municipal plants, Muscle Shoals, views of Martin J. Insull on holding companies, views of Samuel Insull on private initiative, and articles in disparagement of municipally owned street railways. \* \* \*

"A large part of the weekly service sent out is editorial in form and has been reproduced as editorials in great numbers of papers throughout the country, without indicating the Hofer source. The following quotation from his testimony shows Mr. Hofer's claim relative to this editorial achievement: 'Reproduction of our articles appears almost invariably as an original editorial, as we ask no credit.'"

#### KEPT DOWN RADICALISM

In addition to this editorial service, Hofer has carried on correspondence with editors, giving at length his arguments against municipal ownership of utilities. Nor was he discouraged when his editorials were not printed. He testified that he once said:

"There is one effect of our service, the importance of which cannot be estimated, namely, its influence in causing the editors who read it, but never use our articles, to consider questions from a more conservative viewpoint, and refrain from running such radical matter which would otherwise appear in the papers."

The Federal Trade Commission reported to the Senate further:

"The utility source of some of this 'independent' matter appears in a letter which A. W. Flor, publicity man for Electric Bond & Share, wrote C. E. Groesbeck, vice president of the same company (this was in 1925). In this letter Mr. Flor stated that he had gotten in touch with Mr. Hofer and spent an afternoon with him preparing a story for use in his service. This story was published in the weekly bulletin and bore the caption, 'Inevitable Rate Raise Occurs in Cleveland,' referring to Cleveland's municipal electric plant \* \* \*"

#### HE'S STILL GOING STRONG

Is the Hofer service effective? Has the utility monopoly got its money's worth for the \$85,000 a year it has paid him? Here's what Hofer himself says about it, according to a letter signed by him to a utility company official and which was read into the Federal Trade Commission's record:

"The results surpass anything I expected or promised when I first discussed this matter with Mr. Coffin, Mr. Hall, Mr. Groesbeck, and Mr. Mitchell \* \* \*"

Hofer kept careful records of the space his "canned" editorials and "news articles" were able to grab in the Nation's newspapers. Reported the Federal Trade Commission:

"Mr. Hofer stated the quantity of material reproduced in the rural press \* \* \* for 17 months was estimated at 27,000,000 lines, or about 25,000 full pages."

And, as the exhibits shown here show, Mr. Hofer is still going strong.

#### Aid to Finland

#### EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

RADIO ADDRESS BY HON. MILLARD E. TYDINGS OF MARYLAND

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent address delivered by the senior Senator from Maryland [Mr. Tydings] over the National Broadcasting Co. network on Friday, February 16, 1940, on the subject of aid to Finland.

There being no objection, the address was ordered to be printed in the Record, as follows:

Ladies and gentlemen, I am speaking not as a United States Senator or as a Member of Congress but as a private citizen to the American people.

I shall be deeply grateful if those who are listening tonight will give me their closest attention.

The matter which I shall discuss is of grave international consequence. It is the Russo-Finnish War. I speak with the strong conviction that the cause of Finland appeals to those deep human instincts of justice, morality, humanity, and mercy which have firm lodgment in the heart and soul of the people of the United States.

The Russo-Finnish War is a war between two nations unequally matched, one of which, Russia, has a population of 170,000,000 people, the other nation, little Finland, has a population of only 3,600,000. In manpower Russia outnumbers Finland 50 to 1.

Soviet Russia today contains nearly one-sixth of all the land on the face of the earth. Finland is a small country, being but one-fiftieth the size in land area of mighty Russia.

Yet tonight, in the deep snows along the battle lines in Finland, this gallant little country is heroically standing against these terrific odds trying to hold the invader in check, fighting to save the religion of Almighty God, the homes, the lives of the women and children, the free speech, the free press, the liberty, the humanity, the decency, the democracy, which is a part of the life of the people of Finland.

Does not this command your admiration? Do not the valiant deeds of this little Finnish Army of a few hundred thousand against the military might of the millions of Russian soldiers appeal to the great heart of America in sympathy for Finland in this uneven contest?

We know that Finland did not attack Russia. She gave Russia no cause for war. The giant communistic Russian military machine took advantage of a period of international difficulty to destroy this land of God-fearing, liberty-loving people.

Thirteen years ago I went to Russia to study the Russian system. I have kept in touch with Russian history and events ever since the revolution of 1917. What a dark period the last 25 years of Russian history has been. Russia today is the most barbarous, cruel, relentless, remorseless, and villainous government in modern times. During the Russian revolution of 1917 millions of men, women, and even little children were murdered by the mobs which roamed everywhere, torturing their victims, burning their homes, and shooting women and children with the abandon that the gunner uses in shooting at clay targets.

What is this Russian system which is fighting to destroy Finland? It is the avowed enemy of all branches of religion. It is exterminating religious worship and destroying churches throughout the entire nation. Thousands of Catholic, Greek Orthodox, and Protestant churches are no more. Tonight as I speak I know only 2 Catholic churches in all of Russia where once there were 2,000,000 Catholic churchgoers. Of the thousands of Greek Orthodox priests and churches of old Russia only a mere handful remains. One must look far and wide to find the few Protestant churches yet remaining.

All this extermination of religion, of the worship of God, is a part of the present governmental plan of Russia. Those of you who have read the writings of Lenin, the leader of the Russian Revolution of 1917, and of Stalin, the present dictator of Russia, can clearly recall that both of these men constantly advise the people of Russia not to believe in God. Religion, said Lenin, is the enemy of communism. If communism is to succeed, religion must be destroyed. Stalin says that communism will succeed only as religion is defeated—the two cannot win together.

The young have been taught not to go to church, for in 23 years they have heard preached daily that God and religion are the enemies of communism and they must shun God and religion as an enemy.

This is the sinister picture of modern Russia—a picture of a goddess nation, a nation that since its inception has wallowed in blood and murder, practiced terror and torture, destroyed all liberty and freedom; a nation which has systematically assassinated Catholic and Protestant, priest and parson, and has successfully weaned the young away from God and the teachings of the Bible.

Some years ago, practicing its innate cruelty, the Russian Government took all the grain from the farmers of Russia and left some five or six million to starve to death in the famine which ensued—all of this to punish those who resisted collectivism.

Frequently, in recent months, the papers have been full of the trials and wholesale executions of one leader after another, the highest men in the government, the heads of the army, the heads of the various departments of the state.

That is the Russia which tonight is attacking little Finland, waging upon her an unprovoked war, seeking to destroy the sturdy little democracy whose honesty, rectitude, and democratic way of life stands out in striking contrast to the creed of communism.

One hundred and seventy million Russians fight three and a half million Finns. The Finns have not the natural resources of Russia, few airplanes, no abundance of equipment of any kind. They have only a free manhood and womanhood, a belief in their Creator, a love for democracy, for their homes and their families, and they are standing out in the snows this very night dying one after another in defense of all these things all civilized men love.

Finland is a land of middle-class people, hard workers who pay their debts and wrest their living from a country nearly half of which lies north of the Arctic Circle.

While they fight, hundreds of Russian bombing planes daily fly over Finland, not attacking the men at war but dropping countless bombs on defenseless and open towns, maiming and killing old men and women and children, reveling in the blood of innocent and defenseless people spilled in this barbarous undertaking.

And if the Finns lose this war what of its aftermath? They know the past history of Communist Russia. They know that the Russian political police will join with the Army in killing off the men, women, and children of Finland, once Russia is a victor. They know that civilians in Finland will be slaughtered wholesale, as they have been slaughtered in Russia through the years.

That is the situation that exists tonight. The enormous, dictator-ridden, communistic, murdering, godless nation of Russia, fighting the small, democratic, God-fearing, free little country of Finland—and what a fight the defenders of that stout-hearted little country are putting up.

Now, fellow Americans, if you love God and democracy and your fellow man, can you look on these things save with sorrow and condemnation? Is there a minister of the gospel, a priest, or a rabbi in this land who, realizing what is involved in that war, does not look with sad eyes upon it and brood over the further spread of the vicious and evil doctrine of communism and all that it implies, should Russia win this fight?

Is there a congregation of any denomination in America that is not stirred at what is taking place and what will take place if Finland is no more? Will Sweden, will Norway be next? The long chapter of Russian mass murders over the last 25 years makes one wonder if the struggle through all the centuries for justice and humanity and liberty has been in vain—if those things are to be wiped from the earth?

Well, there are brave men still making that struggle tonight in the bitter gloom and unbearable cold of a Finnish winter, against such tremendous odds as were never before met upon the field of battle.

Ladies and gentlemen, we must help this brave nation now. I ask the members of the clergy of all denominations to call their flocks together at once and ask of them financial aid in Finland's hour of trial. If you are a businessman, if you are a workingman, don't stay that generous impulse which I know is in your heart to help. The families of Finland are like the families of America—help save some mother, or wife, or small children from the curse and the murder and the slavery which a Russian victory over Finland will bring to her inhabitants.

This is the crucial hour. Time is very precious. Finland comes into the society of nations with clean hands; Russia comes dripping with blood. Finland has given no offense; Russia has fomented world revolution everywhere. Russian bombs are daily falling on open Finnish towns, on hospitals and homes alike. Old men, women, and children lie mangled in the wreckage. Remember that if Russia wins communism will surely spread its evil influence.

If you are a poor man, give a nickel, a dime, a quarter, a dollar. If you can possibly do it, spare a day's wages. If you are well to do, give, and give generously, for this is a cause deserving in every way of your most generous humanity. While you sit in the comfort of your American homes, Finnish families are huddled together in cold cellars, in tents in the open country, in forests, in the bitter, freezing cold, while Russian planes roar overhead dropping death and destruction.

Generous Americans, I make this appeal to you as individuals, to aid your brothers who are fighting and dying on the frontiers of civilization tonight.

For your God, for your home, for your fellow man here and for the women and children of Finland, terrorized and menaced—won't you send your contribution tonight? Send it to the Fighting Funds for Finland, at 120 Broadway, New York City. This is headed by Gen. John F. O'Ryan. Let me repeat: send it to the Fighting Funds for Finland, 120 Broadway, New York. Do it now—don't wait until tomorrow.

Then you may go to your bed, confident that you have aided humanity, which all religions preach, that you have upheld the justice which we all seek, that you have not passed by on the other side the men, women, and children who are dying in this tremendously uneven struggle. Your contributions will give them the help they must have and the encouragement that will assure them they are not suffering, fighting, and dying in a vain cause.

Send in all you can afford tonight, before you go to bed, to the Fighting Funds for Finland, 120 Broadway, New York City.

Thank you, my friends. I know you will not fail. Thank you again, and good night.

## Associated Gas & Electric Case

### EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

LETTER AND STATEMENT BY HON. GEORGE W. NORRIS, OF NEBRASKA

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record copy of a letter written by the senior Senator from Nebraska [Mr.

NORRIS], together with a statement concerning the Associated Gas & Electric case.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

FEBRUARY 14, 1940.

HON. JEROME FRANK,

Chairman, Securities and Exchange Commission,  
Washington, D. C.

MY DEAR MR. CHAIRMAN: As a member of the Senate Judiciary Committee, I should like to call your attention to the inclosed article of Mr. Arthur Krock on the Associated Gas and Electric case, appearing in the New York Times of February 13.

The article has particular significance since Mr. Krock is not only a newspaper writer of high repute, but is known to be a close friend of Mr. John W. Hanes and would not be likely to state facts bearing upon Mr. Hanes' position without acquainting himself with Mr. Hanes' version of them. Certain statements in this article cannot help but create an atmosphere of concern about a possible attempt by powerful financial interests to overreach both the judicial and statutory processes in the appointment of a trustee. I quote from the article:

"The utility has assets roughly estimated to be \$1,000,000,000. \* \* \* The holders of these assets and liabilities, in a series of informal meetings, decided that their choice for trustee was Mr. Hanes \* \* \* (who) was a member of the S. E. C. following a successful career as an investment banker in New York. \* \* \* All private parties in interest, save the Government Mr. Hanes recently served, united to ask the court to appoint him."

Several implications of this story give me great concern.

In the first place, it would appear that an undisclosed group of parties decided upon Mr. Hanes as their choice for trustee, and with Mr. Hanes' consent communicated their choice to the court, without waiting for any consultation with the Securities and Exchange Commission. As I read the language of the Holding Company Act, the Securities and Exchange Commission has the right to be consulted before any trustee other than itself is named by the court. Efforts to commit the court to a particular trustee without consultation with the Commission seem to me to be contrary to both the letter and the spirit of the Holding Company Act.

In the second place, this article places the "series of informal meetings" of these unknown and mysterious parties in interest prior to an inquiry which Mr. Krock states Mr. Hanes made to Secretary Morgenthau, the date of which inquiry is known to be prior to the filing of the petition in bankruptcy. This means that these unnamed parties had their meetings and had already decided on their choice of trustee before the case was even assigned to the southern district of New York.

In the third place, who were these parties who assumed to choose a trustee for the court without consultation with the Commission and before bankruptcy proceedings were even commenced?

The article says "the holders of these assets and liabilities." But since the security holders of Associated Gas & Electric, several hundred thousands in number, are widely scattered and could not possibly meet and are not known to have been solicited for proxies, it seems clear that the meetings to choose Mr. Hanes were not held by representatives of the security holders themselves. The inescapable conclusion is that the meetings must have been held by representatives of banking or management groups who had some previous connection or some hope for future connection in the affairs of Associated. As everybody especially interested in the utility field knows, and as your studies have undoubtedly informed you, these affairs have been so badly managed that I understand the Attorney General of the United States has ordered a grand jury inquiry in the southern district of New York to ascertain whether in the financing and management of the Associated Gas & Electric system there has been violation of Federal criminal law.

Of course, experience has abundantly demonstrated there is always the distinct danger that the interests of banking and management groups may be adverse to those of other groups and the general body of creditors and security holders. Indeed, it was to prevent such special groups with special interests from dominating a trusteeship to the detriment of the general body of small creditors and security holders that the Congress provided in the Chandler Act for the appointment of one or more disinterested trustees.

The Associated Gas & Electric receivership is one of the largest and most important receiverships which has come into the Federal courts in recent years. The receivership will come into contact with the Securities and Exchange Commission under the Holding Company Act in relation to nearly all important problems of reorganization. It is important, therefore, that the trustee have a sympathetic understanding of the Holding Company Act and be able to work in harmony with the Commission. I am frank to say that the Commission can be trusted to safeguard the interests of investors much better than the self-constituted banking groups which have not heretofore been noted for their solicitude in protecting the interests of small and inarticulate investors. The financial structure of the company is exceedingly complicated and the ramifications of its management and banking connections and affiliations are known to be far reaching. Creditors and security holders have already suffered losses running into the hundreds of millions.

It will be the duty of the trustee or trustees to make a diligent investigation of the affairs of the company, and of those responsible for its management and its financial and security operations, and to prosecute the claims of the estate against any banking or management groups whose transactions with the company may reasonably be thought to subject them to liability.

LXXXVI—App—52

It seems to me perfectly obvious that the general body of creditors and security holders can never be convinced of the complete independence and disinterestedness of a trustee whose name has been, according to Mr. Krock, agreed upon by private groups in advance of the filing of the petition in bankruptcy and urged by them upon the court in advance of a public hearing, without even consultation with the Securities and Exchange Commission.

I regret that a man of Mr. Hanes' standing has been made the victim of such an unfortunate chain of events. But under the circumstances I think that both the court and the commission have been put on notice by Mr. Krock's article to probe to the bottom the situation revealed in that article. I do not see how, on the basis of the situation revealed in Mr. Krock's article, Mr. Hanes can, in accepting the trusteeship, be regarded as free from entangling alliances. I do not mean to impute any wrongdoing to Mr. Hanes, but it would be embarrassing, to say the least, for Mr. Hanes to accept a position where he might be called upon to prosecute men with whom as an investment banker he has been closely and intimately associated, particularly if he owed his position to them.

This associated failure is so large and so dangerous that the trustee must not only be free from technical disqualification for interest but—like Caesar's wife—be above suspicion. Certainly, the administration of so important a test of the ability of the courts and the commission to work in harmony should not be embarrassed by starting out under a cloud created by an appointment of a trustee selected in advance by undisclosed private interests whose freedom from conflict with the general interests of the estate cannot be established without searching inquiry into the tangled affairs of the company.

This trusteeship is a magnificent opportunity to reestablish public confidence in Federal court administration of receiverships and bankruptcies which has recently concerned some members of the Judiciary Committee.

I am sending a copy of this letter to the Secretary of the Treasury and the Attorney General, by way of expressing my feeling that the article of Mr. Krock has put them, too, upon notice to apprise themselves of the true situation. I hope you will also be able to present the point of view expressed in this letter to the court before an appointment of a trustee is named.

Sincerely yours,

G. W. NORRIS.

P.S.—In view of Mr. Krock's reference to Senator WHEELER, I inclose a copy of Senator WHEELER's release to the press on February 13, and also my statement of February 11. G. W. N.

[From the New York Times of February 13, 1940]

IN THE NATION—ISSUES AND IMPLICATIONS IN ASSOCIATED GAS CO. CASE  
(By Arthur Krock)

WASHINGTON, February 12.—A Federal court in New York City, Judge Leibell presiding, has been the center of an interesting and important struggle between a Government group and a business group over the reorganization of the Associated Gas & Electric Company and Corporation, petitioning bankruptcy. The Government group wants the judge to appoint a trustee or trustees selected by Washington. The business interests hold that the court should heed, in naming trustees, the wishes of the overwhelming ownership of the companies affected.

In the background of the struggle is a pattern of conflicting personalities and political philosophies, typical of the divisions in present-day Washington. Through this pattern runs the thread of Government ownership of all utilities, favored by many New Dealers; and the outline of that New Deal tendency to have Government take control of the details of private corporate management which lately found expression in the S. E. C.'s 3-to-2 decision on the Consumers Power Co. financing application.

In the foreground are to be found such persons as John W. Hanes, the famous Federal "firm" of Corcoran and Cohen, Secretary Morgenthau, Attorney General Jackson, former Attorney General Cummings, Senators Wheeler and Norris, Majority Leader Rayburn, and a once-again divided S. E. C. If the drama's outcome is of great economic and political significance, at least it is being played by a star cast.

#### BEGINNING OF THE CONTEST

The Associated Gas & Electric interests, refused a loan by Administrator Jones because of noncompliance with his conditions and for other actions, some time ago took the only course remaining to it and applied for bankruptcy reorganization in the Federal courts. The venue was transferred from Utica to New York City, whereupon the contest began between the two groups and the two ideas.

The utility has assets roughly estimated to be worth \$1,000,000,000, and the scattered nature of its operating properties is such that it provides excellent material for that physical and financial integration which the S. E. C., by direction of the Wheeler-Rayburn Act, is about to undertake in the field of utility-holding companies. The holders of these assets and liabilities, in a series of informal meetings, decided that their choice for trustee was Mr. Hanes. He lately retired as Under Secretary of the Treasury with the warm compliments of the President and Mr. Morgenthau. Prior to that he was a member of the S. E. C., following a successful career as an investment banker in New York. All private parties in interest, save the Government Mr. Hanes recently served, united to ask the court to appoint him. The Government's financial interest is confined to a tax claim of \$5,000,000 in the billion-dollar set-up.

When Mr. Hanes was advised of his selection he asked his recent chief, Mr. Morgenthau, if he saw any objection and to ascertain if the President opposed the plan for any reason. The Secretary,

having been advised by the draftsmen of the Holding Company Act (Messrs. Corcoran and Cohen, probably through the Treasury's general counsel, Edward Foley, their protégé) that the law permitted the S. E. C. to serve as trustee in such cases, had previously approved this idea. But he offered no objection to Mr. Hanes, if appointed by the court, and Mr. Hanes was not advised of any disapproval by the President. Consequently, he sent word that, if chosen as trustee, he would serve.

#### EFFORTS TO BLOCK HANES

At this point began New Deal resistance to the choice of Mr. Hanes. The Attorney General, closely associated with Mr. Corcoran and Mr. Cohen, asked the Federal court to designate the S. E. C. as trustee, and in this request he was surprisingly joined against Mr. Hanes by the latter's very recent chief, Mr. Morgenthau. When their action came to the attention of Messrs. WHEELER and RAYBURN, whose names the holding-company legislation bears and who drove it through Congress, they publicly opposed the plan. They objected to making the S. E. C. trustee, as well as judge, jury, prosecutor, and unscrambler of the bankrupt company. And Senator WHEELER wrote to the S. E. C. a strong endorsement of Mr. Hanes.

These moves seem to have made the S. E. C. plan too hot for the administration to hold. By a vote of 4 to 1 the agency decided to inform the court of its unwillingness to serve. The action was hastened, it is understood, by notice of two Commissioners, Mr. Healy and Mr. Mathews, that they would make public their emphatic objections.

Since it became evident that the S. E. C. trusteeship must be abandoned, the effort of its authors has been to find ways to persuade the court to appoint a trustee or trustees suggested by the administration and not by the holders of the large majority of the company's assets. It is said that serious consideration was given to the nomination of Mr. Corcoran, but this interesting alternative was abandoned. Senator NORRIS seemed to have something like it in mind, however, when he criticized any plan that might exist to appoint "an investment banker and a utilities magnate," a reference to Mr. Hanes and Henry I. Harriman, who, with W. M. Myers, former head of Farm Credit, had been most mentioned as cotrustees.

When the court resolves the contest by naming the receivers the winning group can easily be identified.

[For morning papers, Tuesday, February 13, 1940]

Senator BURTON K. WHEELER made public the following statement:

"I hope the statement that I made last Friday regarding the Associated Gas trusteeship will not be misunderstood. The so-called Wheeler-Rayburn Holding Company Act empowers the S. E. C. to act as trustee. But I expressed the opinion that it should not be necessary or desirable for the Commission to accept at this time, when the Commission is overworked in a determined drive to initiate general enforcement of section 11 of the act, the added and onerous burden of the Associated Gas trusteeship, which might involve extensive supervision of the company's operating subsidiaries. Of course, this is provided that the Commission is satisfied that a trusteeship acceptable to it would be appointed whose disinterestedness, independence, and sympathetic understanding of the requirements of the Holding Company Act are beyond dispute.

"The creditors and investors of Associated Gas have suffered terrible losses, not through operating deficiencies but through financial manipulations. They have a right to be protected against exorbitant fees and charges for supernumerary trustees and counsel. They have also a right to be assured that their claims will be fearlessly pressed against management or other interests with which Associated Gas has dealt not at arm's length. That assurance the creditors and investors cannot have if a trustee has any interlocking relations with the people he might have to prosecute. For that reason the creditors and investors, as well as the general public, have a right to expect the appointment of a trustee whose fearlessness and independence and disinterested judgment cannot be subject to question because of past intimate associations with the management of a utility operating or holding company."

#### STATEMENT OF UNITED STATES SENATOR GEORGE W. NORRIS, FEBRUARY 11, 1940

The appointment of a receiver for the Associated Gas & Electric Co. represents the end of a long trail of financial chicanery and duplicity. This company is large and far-reaching. Its corporate structure and affiliations are extraordinarily complicated, and its contacts with problems under the Holding Company Act are numerous, intricate, and exceedingly important. Tremendous losses have been incurred by thousands of investors under circumstances which make imperative the diligent investigation and prosecution of claims against the officers of this company, its directors, and all affiliated interests.

In the Holding Company Act, Congress provided that the Securities and Exchange Commission may be appointed by the court in cases of this kind and given power to act as trustee. The conditions surrounding this receivership are so vast and far-reaching that it seems to me to be perfectly apparent that in such an intricate case the S. E. C. should be appointed and should act as such receiver. Investors' losses should be protected, and, if possible, recovered, and should not be aggravated by juicy fees for multiple trustees and lawyers. But if the S. E. C. declines to accept the trusteeship,

public opinion demands a single trusteeship which is completely independent of private utility or banking influence, which is sympathetic with and understands the congressional policies embodied in the Holding Company Act.

I was dumfounded to read in the newspapers that an investment banker and a utility magnate were about to be named as trustees in this case. I can hardly believe these reports. It seems to me to be incredible that the S. E. C., familiar with the provisions of the Holding Company Act and having the right to be consulted on the appointments, should ever consent to the appointment of trustees having sympathies with the kind of people they will undoubtedly have to prosecute. It would constitute a shocking precedent. I have heretofore criticized the Commission for not having enforced the Holding Company Act more vigorously, and I believe it would be inexcusably lax in its duty if it were to consent to the creation of such a precedent. However faithfully a banker or a utility magnate might try to perform his duty as trustee, neither the investors nor the public would have confidence that they would diligently prosecute claims against fellow bankers or fellow utility magnates.

#### Allotment of Federal Funds Among Three Regions of the United States

#### EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ANALYSIS BY VOIT GILMORE

Mr. BAILEY. Mr. President, 1 week ago I received from the proper authorities here a statement of the expenditures of our Government for the period beginning April 1935 and ending December 31, 1939, for relief and work relief. The statement shows that the sum of \$11,776,501,569.77 has been spent in that period. I had it analyzed by a young man in my office, Mr. Voit Gilmore, and he shows in this analysis that of this sum \$58 per capita was spent in 13 Southern States; \$94 per capita was spent in 12 Central States; and \$100 per capita was spent in 7 Eastern States. I ask unanimous consent to have the full table of data printed in the Appendix of the RECORD for the information of the Senate.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

#### ALLOTMENT OF FEDERAL FUNDS AMONG THREE REGIONS OF THE UNITED STATES

##### EXPENDITURES BY REGIONS: 1935-39 RELIEF

Since April 1935, the Congress has made available for relief and work relief the sum of \$12,930,201,033.10.

Of this amount \$11,776,501,569.77 was expended as of December 31, 1939.

Those funds were administered by 80 governmental agencies.

A table on the accompanying page shows that of these emergency relief funds, between April 8, 1935, and December 31, 1939, a total of \$58 per person was spent in 13 Southern States; a total of \$94 per person was spent in 12 Central States; a total of \$100 per person was spent in 7 Eastern States.

##### EXPENDITURES BY REGIONS: 1939 RELIEF

Emergency relief expenditures, by years, have been:

Fiscal years 1935-36	\$3,434,564,516
Fiscal year 1937	2,860,508,932
Fiscal year 1938	2,001,240,379
Fiscal year 1939	2,617,974,768
Fiscal year 1940 to Dec. 31, 1939	872,212,975

Total expenditures..... 11,776,501,570

During the fiscal year 1939, a total of \$10 per person was spent in the same 13 Southern States; a total of \$24 per person in the 12 Central States; a total of \$21 per person in the 7 Eastern States.

Following is a table of three general regions of the United States, showing:

(1) Populations by State and region, based on Bureau of the Census 1937 statistics.

(2) Total emergency relief expenditures from April 8, 1935, to December 31, 1939, by State and region, based on the President's report to Congress of January 15, 1940.

(3) Emergency relief expenditures for the fiscal year 1939, by State and region, based on the President's report to Congress of January 15, 1940.

(4) Total Federal expenditures for the fiscal year 1939, by State and region, based on the Consolidated State Report of the Office of Government Reports.

Region and State	Population	Emergency relief expenditures, Apr. 8, 1935-Dec. 31, 1939	Emergency relief expenditures, fiscal year 1939
<b>SOUTHERN</b>			
1. Maryland.....	1,679,000	\$99,804,596	\$16,900,948

### Rural Electrification

#### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ARTICLE BY HARLAN TROTT

Mr. NORRIS. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article from the Christian Science Monitor of February 3, 1940, written by Harlan Trott, on the question of rural electrification.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of February 3, 1940]

NEW ENGLAND WAVES A YARDSTICK—THE LAST STRONGHOLD OF RUGGED INDIVIDUALISM GIVES IN BY COOPERATING WITH THE FEDERAL GOVERNMENT TO GET CHEAP AND ABUNDANT ELECTRICITY ON ITS FARMS

(By Harlan Trott)

Folk in rural New England are thinking a good deal these days about having electricity on the farm to milk the cows, cut the ensilage, saw the firewood, turn the cream separator, work the horse fork, hatch the chickens, pump the water, run the radio, sewing machine, water heater, cook range, and do other chores in house and barn—cheap electricity such as the people themselves can have through the help of the Rural Electrification Administration.

Thanks to R. E. A., the miracle by which farm folk do their work merely by turning a switch is no new thing—except in New England. Every State but Massachusetts, Connecticut, and Rhode Island gets R. E. A. loans that help people in rural areas to help themselves to the natural abundance of low-cost electric power running to waste in their streams. And it is only within the last few months

that Vermont and New Hampshire, two of the richest natural water-power States, have called on this Federal agency for help.

One may well wonder why New England should have to call on the Federal Government at all to get electric power when the source of all they need is foaming under their bridges and over their dams day and night—down the Connecticut, the Merrimack, the Androscoggin, the Saco, the Penobscot, the Kennebec, the Winooski, the Passumpsic, the Ammonoosuc, and lesser tributaries to the sea. New Englanders are proud of their rugged individualism. Maine and Vermont made that plain in the 1936 Presidential election.

Today many believe that private power companies in New England have helped to keep this feeling alive by propaganda designed to egg the people into asserting their rugged individualism in order to resist "Federal encroachments" upon the resources of the States. At the time the Federal Government tried to start flood-control projects in Vermont, the State blocked the program because it meant yielding water-power rights on the streams to Federal control. The Vermont Legislature rallied around the slogan, "The State's resources belong to the people," and held up flood-control work.

Some think this slogan was planted by private-power interests who do not wish to have their monopoly threatened by competition from enterprises the farmers may be encouraged to undertake through the R. E. A. program. If so, the slogan became a boomerang, because New Englanders began to mull it over, and the more they thought about the State's water-power resources belonging to the people, the more they realized that they didn't belong to them at all. The water-power resources belonged to private companies who control practically all the electric output in New England.

Being rugged individuals at heart, the people in rural areas decided to do something about getting more of the benefits of their resources. The experience gained in buying grain and selling milk showed them the way to do it was through cooperatives.

Without electricity, farming is almost as primitive and laborious as it was when the first settlers burned the stumps and laid up the stone walls around the clearings. The State farm bureaus and the local granges showed New Englanders what the rest of the United States was accomplishing through rural electrification. The farmers got busy. In 1937 farm-bureau members in western Massachusetts started the Tri-County Electric Cooperative. They got subscribers to pledge the amount of money which the Federal Government requires before it lends R. E. A. funds to carry out a project.

This must have made the private power companies very angry, because soon men from the electric companies in the Tri-County area began to do mean things to stop the R. E. A. undertaking. They told farmers the cooperative couldn't afford to do what it was trying to do; that it would go broke, and then every subscriber might lose his farm to liquidate the enterprise. This scared the subscribers, and many of them withdrew from the cooperative.

In one valley the cooperative had signed up many subscribers who sometime before had asked the electric company to install electricity. The company said it wouldn't pay them to serve this particular area. But as soon as the Tri-County Cooperative signed up the people in the valley the power company official came back and offered to string the wires. The terms were about \$100 a year per subscriber less than those under which the power company had installed service in a near-by community. This made it seem that the latter had been grossly overcharged for installation of their service, or else the line in the valley where the cooperative was working was being subsidized by the power company to keep the cooperative from going in there. These tactics caused bad feeling. This and many similar cases are on file in the R. E. A. office in Washington.

The Tri-County went right ahead, but just when the R. E. A. was all set to grant a construction loan the Massachusetts Department of Public Utilities refused to permit the Tri-County to start the undertaking. This brought a letter from the R. E. A. Administrator taking exception to the ruling. This is the way he summed up the private utilities' stand in his letter to the department: "We haven't served this rural area; we do not propose to serve it; but we want the department to prevent the farmers from serving themselves."

That was the end of the R. E. A. in Massachusetts, where nearly 50 percent of the farmers are condemned to needless tedium within the sound of rushing streams and the hum of high-tension lines. But it was really only the beginning of R. E. A. in New England.

In New Hampshire, Leon M. Huntress, project supervisor for the New Hampshire Electric Cooperative, Inc., tells of similar obstacles placed in his way by power companies determined to resist this threat to their system of restricted output and price control. But this R. E. A.-sponsored group went ahead and outsmarted the opposition by an exciting display of strategy.

Word came to the project superintendent on a Sunday morning that workers for the private company were setting poles in the area where the cooperative had started to install service. Why Sunday? Mr. Huntress couldn't say exactly, unless it was because legal injunctions cannot be granted on that day. The power company's linemen had clear sailing—until the cooperative's agent arrived on the battlefield.

First off, he cited the law forbidding the setting of poles or the stringing of wires on a Sunday except in an emergency. But to a power company enjoying a monopoly in a State where 70 percent of the farmers have electricity—for which they are saddled with the second highest rate scale of any State in the country (nearly 100 percent higher than, for example, the composite rate average of Washington, D. C., Cincinnati, Montreal, and Tacoma)—this

was a real emergency. The cooperative supervisor was quick on the answer. He retorted the law doesn't consider setting poles and stringing wires on a new project an emergency.

What really floored the emergency crew was that they had failed to comply with the State law requiring the petitioning of town officials for authority to carry an electric line across the highway. The board of selectmen (two of them are members of the cooperative) did not feel that they could grant the required permission on a Sunday. In fact, their attitude was that they were not disposed to grant it anyway. There was nothing for the power company to do but come down off the pole.

Today they are about ready to throw the switch on the Lempster line, the first R. E. A. project in New Hampshire. Farm folk, united under a militantly led State grange and the more moderate State farm bureau, are eager to see what the Lempster project can accomplish under the system whereby it buys power from the private utilities and supplies it to people who can't get electricity any other way—a system designed to pay for itself in 20 years and which promises at the end of that time to reduce its charges even more.

Those who wonder what R. E. A. agents in New Hampshire would have done had the private utilities refused to sell electricity to the R. E. A. will find in Vermont's first R. E. A. undertaking the answer to a refusal of this kind. The farmers in Vermont's Washington County did what the Tri-County Cooperative failed to achieve. They formed a cooperative and then when private companies refused to supply electricity at reasonable wholesale rates the Washington cooperative installed two Diesel engines and is supplying farm subscribers with electricity they could not otherwise get—in a State where the resources belong to the people.

Generating electricity by an oil-burning engine must aggravate a good many farmers, because natural water power is so plentiful in Vermont that the private companies are exporting 80 percent of all hydroelectric energy produced in Vermont.

In pronouncing the benediction at the Washington County cooperative's switch-throwing, Gov. George D. Aiken said: "These lines have been built into territories which private corporations have consistently refused to serve at prices within reach of the people. It is probably true that extension of lines into these farming areas would not immediately pay substantial dividends on inflated valuations. But the cooperative, working under the R. E. A. program, does not inflate its capital structure, does not pay high official salaries, does not hire high-priced attorneys, does not maintain expensive legislative lobbies, does not pay tribute to holding companies, and does not employ high-pressure and expensive publicity methods to expound its virtues."

These views may help to explain why New England has held out so long against "Federal encroachments" and why "rugged individualism" has finally turned. These R. E. A. developments in Vermont and New Hampshire point to a reawakening that promises to bring the whole of New England benefits which the rest of rural America has gained in lighter labor and larger income.

### Admission of Refugee Children

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ARTICLE BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article by my pen entitled "Keep the Bars Up," which was published in the current (February) issue of the Rotarian Magazine. The subject relates to the proposal that we admit to the United States 20,000 refugee children from Germany.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Rotarian magazine for February 1940]

#### KEEP THE BARS UP!

(By ROBERT R. REYNOLDS, United States Senator for North Carolina)

The time has come for changing the tradition that the United States is an asylum for the oppressed of the world. Our house is full. We must now give first thought to our own citizens, both naturalized and native-born. We must find jobs for those who have a rightful claim to the benefits and blessings of American citizenship.

I am opposed to any measure that will provide more competition for the sons and daughters of Americans. If 20,000 boys and girls from abroad are permitted to enter the United States, it will simply mean that in a few years there will be 20,000 more boys and girls here looking for work.

We have in this country today approximately 12,000,000 persons without employment—one-third of whom are under 25 years of age. I think every unemployed man and woman in the United States should be put to work before we allow another foreigner to enter this country.

Since 1820 some 38,000,000 immigrants have entered our gates. Most of these people have made glorious contributions to America. They deserve honor and credit. But times have changed. Our lands no longer need farmers; our mills have too many workers. This appeal to our sympathies in behalf of children might be the entering wedge to break open the immigration floodgates. If we permit special exception to the immigration laws, we will find that within a few years the fathers and mothers of these children will be seeking admission because they wish to reunite their families here on our shores.

It is said that bonds will be made to guarantee that these children will not become public charges. But who will guarantee the bondsmen? They may go bankrupt and become public charges themselves. If we have in this country people who are financially able to take care of children other than their own, then why don't they make financial contributions to unfortunate children here in the United States?

The proponents also say that these refugee children are to be placed in American homes which have already been provided for them. If homes are available for the adoption of alien children, I contend that American children should be adopted into these American homes.

Every State in the Union, as the records will reveal, has a tremendous number of children in want of proper food, clothing, medical attention, and better school facilities. Let us turn our eyes southward to the children of the sharecroppers. Millions are ill nourished; their clothes are tattered and filthy. They live in hovels. They sleep on rags. They fall an easy prey to disease because they have no medical care. They are unschooled. They constitute an army of misery. I think no false idea of humanitarianism should divert our attention from their needs.

Let us turn to the children of the cities. Millions of American children are growing up in squalor, huddled together in cramped quarters. Every creed and kind and race and extraction, already in America, they cry out for the right to breathe fresh air, to eat good food, and to play and live the American way. Shall we sentence these slum children to poverty and hopelessness while we import children from another country to whom we promise to give good care?

We must give more attention than we have to the youthful element of our population. It is upon the boys and girls of today that the future of America depends. We should provide employment for these youngsters when they are old enough for it—gainful employment beneficial to them and to the communities in which they reside. We should also give more attention to the educational facilities and opportunities to which they are entitled. Thousands of American children are able to go to school only part time because in many sections of the country our public schools are overcrowded. Why should we add a further burden to taxpayers by asking them to provide additional school facilities for these 20,000 children from another country?

Shall we first take care of our own children, or shall we bestow our charity upon children imported from abroad?

What is our citizenship worth if it allows our own children to go hungry and unschooled, without proper medical attention, and without the opportunity for jobs, while we reach out for more children from another country? Let the sympathies and charities of American people begin at home. Our country, our citizens, first.

### The American Youth Act

#### EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

RADIO ADDRESS BY HON. JAMES E. MURRAY, OF MONTANA

Mr. MEAD. Mr. President, I ask unanimous consent to insert in the RECORD a radio address recently delivered by our colleague the Senator from Montana [Mr. MURRAY].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I speak tonight on what I deem to be one of the Nation's most serious problems; a problem presented by our failure to adequately provide a place in our American system of economy for the millions of youth growing into manhood and womanhood without an opportunity for a start in life.

For a decade we have been experiencing a struggle to overcome the chaos and bankruptcy which threatened our country following

the economic collapse of 1929. Burdened as we have been by a multitude of confusing problems which we have faced, we failed to fully appreciate the magnitude of the catastrophe which has engulfed our young people. Our minds have been focused on other more manifest, if not more dangerous and pressing, national questions which seemed to demand prompt solution.

During this period, also, our Government has been confronted with threatening international problems due to racial, political, and economic upheavals in other sections of the world, more recently followed by open brutal warfare and wanton, widespread destruction of life and property. These world disturbances have demanded grave attention to our national security.

As a consequence of all these serious and pressing problems we have failed to grasp the extent to which the future of the Nation, our traditional way of life, in short, our entire philosophy of democratic government, is today threatened by the problem of unemployed, frustrated American youth. The minds of thoughtful citizens in this country are beset with anxiety over this problem. Unquestionably, we must seek a solution. We cannot permit millions of youth to feel that there is no place under our democratic system for them, and thus undermine the very foundations of the Nation.

In 1935 the American Council on Education, a nongovernmental organization composed of major national educational associations, pointed out that "without some provision for basic planning to meet this situation, there is serious danger that present conditions may constitute a fundamental threat to the national welfare." Subsequently that council formed what is known as the American Youth Commission, to consider the needs of youth and appraise the facilities and resources for serving those needs, and provide some plan or program of action. That commission was composed of a number of the country's distinguished citizens. Among them were Henry I. Harriman, of the United States Chamber of Commerce; George Johnson, director of education of the National Catholic Welfare Conference; Matthew Woll, of the American Federation of Labor; Owen D. Young, of the General Electric Co.; and a number of others, equally conspicuous in public life, together with Dr. Floyd W. Reeves, who served as director of the commission.

Recently a report was filed by Owen D. Young on behalf of that commission summarizing conditions and making specific recommendations with reference to the youth problem. That conservative commission, made up of the Nation's most conservative citizens, tells us that 30 percent of the young people of our country between the ages of 16 and 25 are without jobs. In fact, it makes clear that the problem of unemployment in this country has become predominantly a youth problem, for as the slack of unemployment is taken up it is the experienced workers who get jobs. The untrained youth of the land are left without work. Today more than 4,000,000 of these young people are unemployed. What is our country going to do about them? That question should be haunting every legislator and every patriotic citizen who asserts devotion to our American democratic system.

Mr. Young in his startling report says: "The Commission feels obliged to emphasize the fact that, whether in war or at peace, any nation interested in self-preservation must see to it that the young have a proper chance to grow into useful citizens. \* \* \* The obligation to provide opportunity for youth has become imperative today because it is not being met by the conditions of private and public employment as they exist. No good purpose can be served by blaming the young person who has not found a job for himself. The facts of arithmetic cannot be wished away. \* \* \* The fact that the older people own the property and control practically all the jobs lays upon them the major responsibility for making the opportunities match the number of youth they have brought into the world."

It is true that this youth problem is part of the general unemployment question, but it has certain aspects peculiar to itself which make it imperative that we take specific action to find useful and productive work for nearly one-third of our Nation's youth. It is bad enough when citizens who have been employed in industry for years are thrown out of work, but it can easily be seen that an irreparable injury is done those young people who may reach the age of 30 without ever having held a job for which they were paid. The years in which learning is easily assimilated pass all too quickly. It constitutes a sort of national perversion for our country to permit those years to pass without giving youth a chance of learning something, of having some useful occupation, and establishing themselves as respectable citizens. If we fail in this, they will have acquired, as they grow to manhood in idleness, nothing but resignation or bitterness. At present, whatever their talents, they are denied the American chance of developing skill of hand or brain. However ambitious they may be, however much they may wish to acquire habits of industry and conscientious work, they are forced to adapt themselves to the habit of doing nothing, doomed to spend their time hunting for jobs never to be found.

This is a tragedy for the young people themselves. It is an even greater tragedy for the Nation as a whole. Where will America find the skilled workers, the mechanics, the chemists, the doctors, and the engineers to build the world of tomorrow? It has been stated by the committee that if private industry should now pick up sufficiently to need more workers, it would be impossible to find employment for any substantial number of the millions of young people who have failed to receive proper education, training, and work experience. Employers naturally demand workers who have had some training and experience. The present generation

of youth would be left on the slag heap of derelict human beings, burned out and yet unused—human wastage on a gigantic scale.

We shall have created a national human "dust bowl" unless we now undertake a program for these young people and see that they somehow receive vocational training, guidance, and schooling, and, above all, a chance to learn to work—now. We all must agree that every American youth should have the right to learn a trade or develop some skill of hand or mind and work at it, and yet today, as I have said, this right is being denied to approximately 4,000,000 young people.

And now, at a time when the American people recognize the importance of the youth problem more clearly than ever before, at a time when the inadequacy of what is being done is glaringly apparent, at a time when everyone is calling for action on the youth problem, for an expansion of what little youth program we have, what do we find? The present N. Y. A. and C. C. C. appropriations have been cut. What little there was to help the Nation's youth is further lessened. To cut N. Y. A. and C. C. C. funds at a time like the present seems to me a dangerous and indefensible course.

Side by side with the reduction of the budget for youth our military and naval budgets are increased enormously. More guns, more planes, more battleships. Necessary, some will say, but surely the needs of the people and the youth of this country should be first. Most of these armaments will become obsolete before any attack will ever be made on this country. Can we sacrifice the vital needs of our youth now and delude ourselves with the notion that such a policy is compatible with the real defense of America? Assuredly we will defend our country more effectively by making it sound and strong internally as well as externally.

Because I earnestly believe that something must be done immediately about these threatening conditions, I have introduced the American Youth Act (S. 3170) as a means of at least attempting to solve the most pressing problems of American youth. I cannot take the time here to go into the details of the provisions of this act. It will, of course, be fully studied in the Senate committee to which it has been referred.

The American Youth Act sets up a National Youth Administration in the Federal Security Agency, directed by an administrator who shall carry out the policy decided by a board of directors, on which shall be represented the national labor, youth, education, civic, and other welfare agencies, appointed by the President. Under this administration a series of public-works projects is to be established, as follows:

- (1) Works projects for unemployed young people at prevailing rates of pay and prevailing conditions, at a minimum of \$12 a week and a maximum of 30 hours per week.
- (2) Academic works projects for college students at a rate of 50 cents per hour with the proviso that the student shall work only so long as to bring him income from N. Y. A. and all other sources to at least \$30 a month.
- (3) Employment of vocational-guidance advisers to furnish free service to all young people in cooperation with other agencies in the locality.
- (4) Stimulation of apprenticeship-training programs set according to local trade-union standards for such apprentice work.
- (5) Federal scholarships for needy high-school students at a maximum of \$5 per week, save those young people obliged to live away from home due to lack of adequate educational facilities. In such cases the Administrator may make the necessary adjustments.
- (6) Federal scholarships for needy students up to the amount required for them to continue their education at law, medicine, and other graduate and professional schools.

N. Y. A., as it is, deals with youth only on a temporary basis. The proposed act deals with the whole problem on a broader and more effective basis. This measure proposes to make a real effort to reach millions of youth now wholly ignored.

In discussing this youth problem, I am thinking tonight of the 4,000,000 youth scattered all over our country. I am not now interested in any factions, quarrels, recriminations, or misconceptions of this problem growing out of conflicting youth groups. Personally, I have supreme confidence in the ultimate deep loyalty of our American young people to our country's sacred institutions. They are our greatest asset for the future of our country and deserve a fair deal and intelligent guidance from a just and beneficent Government. They have proved their loyalty to our flag before in a majestic manner, and I am willing to trust them now and present their right to a hearing and a fair deal on this vital issue. I am thinking solely of the problem as stated in the report of the Youth Commission submitted by Mr. Young. It proposes a program necessary to meet the vital needs of a vast army of helpless, floundering youth. Let us stick to that issue. Let us not confuse it.

Nothing is more sacred to the people of this country than the defense of our Nation. I would not ask one cent to be diverted from national defense if it endangered the country, but I am sure that this problem of youth is an equally vital element in our national security. The Nation and the people, including the vast army of youth, are one. To adequately defend this Nation, we must not let these young people degenerate in idleness, or sink into a morass of despair.

We cannot afford to withhold this investment or to divert it wholly to cannon and to guns. What we invest in our youth today is, in the truest sense, an investment in security, in peace, and in genuine national defense.

## National Defense

## EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

RADIO ADDRESS OF HON. FRANCIS T. MALONEY, OF CONNECTICUT

Mr. MALONEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement which I made over station WTIC, Hartford, Conn., on February 11, 1940, in connection with national defense week.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Because the subject is of such tremendous importance, and because it is sponsored by the Reserve Officers Association of the United States—including the fine members of that association in Connecticut—I am pleased to participate in the program of National Defense Week.

The principal purpose of this national undertaking is to promote the welfare of the United States by way of increasing our national military and naval strength. The idea is not alone to be prepared for war, but rather to insure peace in our country, and in our hemisphere, by giving notice to any and every war-mad nation in the world, that we not only want peace, but that we are strong enough to have it.

In our country we get our powers from the people—our ideals and patriotism by way of education—and our strength by way of those ideals and that patriotism. We grow stronger through the increasing love of liberty that we have enjoyed for more than a century and a half and which with God's help we will maintain.

In days gone by there were many conscientious Americans who sincerely believed that the way to maintain peace was through disarmament. Those people felt that the expenditure of money for a large Navy and air force was wasteful and dangerous, and that we should lay down our arms. Now, however, as the result of recent happenings throughout the world, that feeling has changed, and powerful and dictatorial leaders in other countries have compelled us to suspend that idealistic approach to peace. It is now unfortunately true that we must be prepared to pay for peace by being so strong that none will dare impose war upon us.

Modern inventions have brought the peoples of the world geographically close to each other, while at the same time some of the peoples were being separated from each other insofar as good feeling and international fellowship is concerned. This latter situation will not last forever, because all peoples are fundamentally good, and those of them now in political servitude will one day throw off the shackles with which they are bound, and come to the way of life set forth in teachings 2,000 years old. How soon the world returns to peace and quiet may to a considerable extent be dependent upon what we do here in America.

We are saddened by happenings in the Orient and in Europe, and there is not one of us who is able to remain entirely neutral in thought, although the outstanding desire of the people of our country is that we avoid war. We are hateful of the godless philosophies which would destroy those who are weak, and we are sufficiently enlightened to understand that ours is the most powerful and important country of the world, and that in the slow march back to the dwelling place of understanding and peace we are morally obliged to help light the way.

A short time ago, in discussing the important neutrality resolution, I said on the floor of the United States Senate that "America cannot fail to do right because of a fear of an audacious leadership elsewhere." I said that "our leadership is here," and gave it as my opinion that "Europe's need is for spiritual rearmament." I pointed out that while there were some people or countries throughout the world who might not like what we were doing we were charged with the responsibility of doing what was right, and that we made no contribution to the cause of peace by evading that responsibility.

I should like to say again that the United States can contribute to the restoration and maintenance of peace only by doing just what is right. We all pray the wars of Europe and the Orient will soon come to an end, and it is possible that we may hasten the conclusion of conflict by serving notice to the world that we are concerned with the rights of peace-loving people, and free government, and that much as we dislike to do it, we will pay for peace by such sacrifices as are necessary to build our national defense and keep it strong.

More than a century and a half ago George Washington admonished his countrymen in the following language: "There is a rank due to the United States among the nations, which will be withheld, if not absolutely lost, by a reputation for weakness. If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our

rising prosperity, it must be known that we are at all times ready for war."

Washington had a clear appreciation of the need for a strong national defense. During the Revolutionary War the total enrollment of the American Army was 395,858 men, while the British Army "destined for the American campaign" numbered only 55,000 men. History reminds us that in the summer of 1776 there were on duty in America only 36,000 British soldiers.

It might at first seem strange that with such overwhelming numbers America was compelled to go through such a horrible experience as Washington and his soldiers suffered at Valley Forge, but it is easy to understand when we realize that our army was made up largely of farmers who were untrained in the ways of war, while the British soldiers were well equipped and properly trained. We won the war principally through Washington's leadership, and the fact that the American soldiers were fighting for freedom.

In the War of 1812, the American Army, including Regulars, militia, volunteers, and rangers, comprised more than 500,000 men, while England had but 7,000 regular troops in America at the outbreak of that war. This latter number was increased, but there were only 20,000 British soldiers and sailors in the British fleet that attempted to capture New Orleans. Insofar as numbers are concerned, the comparative figures are amazing. We had the men—but they were neither trained nor equipped.

Historians writing of that period and that war tell us that "the armies of 1812 were little short of mobs."

And all of this in spite of the lessons of the Revolution. Down through the years, certain of our security, we did very little to prepare for war, or against war. In the War between the States neither side was properly equipped, and thousands of lives were needlessly lost.

During the Spanish-American War—again because we were not prepared—we lost many men within the borders of our own country because we were not in a position to give them the protection they needed and deserved. And still, once more, in spite of these experiences of the other years, we found ourselves unprepared in 1917. Our lack of vision concerning the need for modern military equipment, and a sufficient number of well-trained men again contributed to delay, and to suffering, and to loss of life. I do not want to long dwell upon these military experiences and shortcomings, because it is not pleasant to refer to them or to think of them. It is important, however, that in preparing for the future we profit from the lessons of the past—and that in a world temporarily gone mad, we realize that we are not entirely free from the dangers of insult or aggression. If we are strong and courageous, others will be reluctant to insult us, and we may be free from the compulsion of war because we will be respected, and none will dare trespass upon our national honor or domain.

There are many ways in which we must be prepared. One is a strong national defense from a military and naval and air standpoint. None among us wants a big and expensive navy for the Navy's sake, and all of us shudder at the tremendous and terrifying cost of making our forces strong in the air. As we see what goes on about us, however, we realize that these are necessary, and that if we are to guarantee the security of American homes and the lives of American young men, we must make other nations respectful of our might.

One day, when the world has rearmed spiritually and morally, we can cast aside our arms and armament as will the other nations of the world. Perhaps by that time most of us who are now here will be gone, but what we now do may be a great contribution to the happiness of our children and those who come after them.

No one is really hateful of the Russian people or the German people or the people of Japan. They are God's children, as we are, and as good as we are, and want peace as badly as we do but they are shackled by leaderships which they cannot yet throw off. I personally feel that we strengthen our national defense if we are tolerant of the people of those countries—even though hateful of the practices of their governmental leadership.

While talking of national defense I cannot resist the desire to remind my neighbors that there are other ways—and most compelling ways—to strengthen our national defense. Those people among us who are suffering a distress as the result of a world-wide depression need to be cared for and protected. They must be kept strong of body and mind, and for so long as our economic structure is out of gear the Government must guard them properly. Their patriotism must be strengthened by a confidence in their elected public servants, for if we neglect the individual we are terribly careless of our national defense. We cannot expect that neglected men and women will have the same intense love of country that stimulates their more fortunate fellows. When willing and able-bodied and good men are denied the chance to work for the things they need, the Nation has failed unless it affords them some protection.

Right now we are dealing with the question of whether or not we shall make a loan to clothe and feed and sustain people who are fighting for their lives and for their liberty. As I see it there is moral obligation involved. We have always made contributions to the people of other lands in times of disaster—and I am among those anxious to do it again. For myself I cannot be neutral between right and wrong. For myself I have no hesitancy about making loans for the aforementioned purposes, because I can visualize myself—through accident of birth—in the position of those who live in these far-away stricken countries.

But at the same time I am unwilling to afford help by way of loans at the expense of any of our own suffering people. It may be difficult to help in both instances, but I have an abiding faith in God's goodness, and I want to give some help to suffering and saddened people elsewhere as we continue to protect our own.

Help in each instance is a contribution to our national defense. Our Government must have the confidence and intense love of its own people. We must also have the respect and confidence of the world. We cannot under any circumstances violate the traditions of 150 years, and be placed in a cowardly position. America need not be afraid, excepting of itself. We will never suffer attack if we exercise the intelligence with which we are endowed, and take advantage of the available opportunities to protect ourselves. Always there will be some among our people who will decry whatever we do. Always among us we will find some conscientious men and women who regard the building of armaments as a national error. Always among us we will hear careless thinking people insist that it is a mistake to help those who for the moment cannot help themselves.

Tomorrow we celebrate the birthday of a great American. He had the courage of his convictions—and in the face of criticism and bitterness he never faltered. He kept the United States together, even though it entailed sacrifices to all of the people. Sometimes there are things worth fighting for.

I pray that the United States shall never again be at war. I am personally confident that we need not again be at war, and I am very certain that one of the ways to help avoid it is through the lessons of National Defense Week.

We need a strong Army that is well trained. I would not build it to very great numbers—but I would give our Reserve officers a fine training. I would increase the strength of the National Guard. I would vote for an enlarged Navy and I would strengthen our air force. In addition to all of these, I would try to strengthen the confidence and the patriotism of all of our people by reminding them, particularly those going through a period of temporary misfortune, that they are an important part of the richest, and greatest, and most powerful nation of all time—the peace-loving United States of America.

## American Democracy and the Bill of Rights

### EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

RADIO ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject "American Democracy and the Bill of Rights," delivered by the junior Senator from Washington [Mr. SCHWELLENBACH] over the Mutual Broadcasting System at the annual banquet of the Los Angeles Chapter of the National Lawyers Guild.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Many times during the last 5 years I have received invitations to speak in Los Angeles. Usually, such invitations have concluded with the suggestion that their acceptance would afford an opportunity to enjoy briefly the southern California climate. Unfortunately, this invitation to participate in a Los Angeles meeting by radio could not involve such an added inducement. Nevertheless, I was glad to accept. First, since it gives me a chance to pay tribute to the distinguished President of the National Lawyers Guild, Judge John Guttnecht, and second, because I was asked to speak to lawyers upon their responsibilities as officers of the court in the protection of the liberties guaranteed by our Bill of Rights.

Last Monday, in language more striking than ever before used, our Supreme Court gave recognition to that responsibility. Let me read just one sentence from the Supreme Court's opinion:

"Under our constitutional system, courts stand against any winds that blow as havens of refuge for those who might otherwise suffer because they are helpless, weak, outnumbered, or because they are nonconforming victims of prejudice and public excitement."

This pronouncement for the Court, by Associate Justice Black, was carried in the Washington papers in columns paralleling the news story of the President's participation in the birthday exercises for Abraham Lincoln. As I read the two articles, my mind turned to a speech which Lincoln delivered at Edwardsville, Ill., on September 13, 1858, in which he said:

"What constitutes the bulwark of our own liberty and independence? Our reliance is in the love of liberty which God has planted in us. Our defense is in the spirit which prizes liberty as the heritage of all men in all lands everywhere. Destroy this spirit and you have planted the seeds of despotism at your own doors. Accustomed to trample on the rights of others, you have lost the genius of your own independence and become the fit subjects of the first cunning tyrant who rises among you."

Fortunately, we in America retain that spirit which prizes liberty and also have in our hands the tools with which we may make that spirit effective. The tools of our democracy are contained in the first 10 amendments to the Constitution. They are known as the Bill of Rights. Any workman called upon to do a job, whether he is digging a ditch or building a skyscraper, knows that he must have his tools and have them in good shape.

It must not be forgotten that the very nature of these tools of democracy is such that they cannot be misused, exploited, or even neglected for long. They cannot be permitted even intermittently to lie dormant. Their nature is such that neglect and nonuse causes them to atrophy and die. Untiring alertness is the price which must be paid for their preservation.

We live today at a time when the need for this untiring alertness is greater than at any previous period in our Nation's history; this for the reason that right now three factors have merged:

First. For a full decade we have undergone a condition of depth-reaching depression. This could not have helped but to have weakened the resistance of our people. False doctrines of government acquire much more attractive color to a depressed than to a prosperous people.

Second. The last two decades have seen the acceptance by the peoples of many nations of political doctrines which are the direct antithesis of those in which we believe.

Third. At the moment most of the powerful nations of the world either are at war or on the verge of war. This results in a situation in which all of the nations participating feel it essential that every possible effort be made by them to influence the attitude of our people toward them and their enemies.

The concurring of these three factors presents to us the greatest danger, so far as our civil liberties are concerned, that this Nation has ever seen. Our Government and our people must necessarily afford protection against improper activities conducted from outside sources. We cannot afford to permit our actions to be controlled directly or indirectly by those who represent governments other than our own. We must, however, take care that in our desire to defend against improper outside activities we do not run the risk of destroying the civil liberties of our people, and by so doing destroy our very democracy itself.

Each one of us looks upon himself as a patriotic American citizen, interested only in the future welfare of our Nation and our Government. We are inclined to look upon those of whose theories we disapprove as being enemies of our Government and its future welfare. What is hard for you and me to understand is that if we prevent them from stating their point of view we, at the same time, deprive ourselves of the protection of the tools of democracy upon which we rely for the protection of the doctrines we espouse.

No objective in mankind's progress has been more difficult of achievement or of retention than political freedom. The common man has always desired political freedom for himself. He has, however, been slow to remember that his own freedom ultimately depends upon the equal freedom of all, even those whose views of government he may, upon occasion, dislike and even profoundly detest. It was only after centuries of struggle that the common man realized that political democracy was possible only if the right of all men, without regard to race or religion, to express their political opinions freely and publicly were scrupulously safeguarded.

We must have an atmosphere of free expression if we are to have the benefit of fearless political discussion. This is the surest guaranty of orderly change and the surest protection against the forces of disorder. Nothing is so dangerous as the belief that any part of our political society should be beyond criticism. No one generation's judgment as to the essentials of good government can be unerring.

We must scrupulously maintain freedom of discussion if we are to develop our responsibilities as a people by choosing rationally the path we wish to follow. That is why freedom of thought and freedom of speech, with the resulting duty of making up our minds honestly and courageously, is at the very heart of the faith in democracy.

This faith in freedom of expression requires constant devotion; perhaps more so today than ever before in modern times. All about us, and all too close at hand, we see the forces of intolerance at work—forces intolerant of democracy, of science, and even of religion. We have seen them in all too many shapes and forms. They preach a doctrine which is the opposite of that spirit of tolerance which is so essential to the perpetuation of our institution—democracy. Fear, hatred, distrust, and bigotry—these are the tenets of their faith.

We must realize the grave danger to civilization that lurks behind their forces. They must be dealt with resolutely if the freedom and dignity of the common man is to be preserved.

That resolute determination must carry with it an understanding of three basic principles of democratic machinery:

First. It must give to every citizen equality of opportunity to participate in government which is free from coercion or fear on

the one side and free from impossible promises of reward upon the other.

Second. The minority in a democratic community must recognize the right of the majority to govern. At the same time, the majority must insure to the minority the same degree of justice which it demands for itself. Failing in this obligation, the majority becomes merely a mob. When the majority becomes a mob, democracy fades out.

Third. A democratic government must be a government of law. A civilized democratic community demands that all classes within it respect its law. If respect for law is to be maintained, the law must reflect the community sense of justice and not the demands of any class or group. If the law reflects the community sense of justice, no class or group may defy or set itself above or beyond the law without bringing upon itself the just resentment of the whole community. A civilized democracy demands patience and self-restraint from all its citizens.

The very heart of our Constitution is the Bill of Rights. The rest of the document provides the framework of our governmental structure. The first 10 amendments provide the lifeblood that keeps that structure alive. Without freedom of speech, of religion, and of press, and the other guaranties of these amendments, our democracy would be but a sham and a fraud. If those rights are lost, everything in American democracy is lost.

The last quarter century has seen rapid advance of dictatorship throughout the world. The last year has demonstrated the futility of their efforts to solve the problems of their people. They promised peace, prosperity, and security. All of these promises have been broken. One great dictatorship was created for the proletariat. One was created for the capitalists. Both have been bitterly disappointed. Dictators have sneered at democracy. We in America have seen enough of dictatorship by now to know we want none of it. Our first line of defense against it lies in the recognition by each one of us of the civil rights of all the rest of us.

It cannot be expected that the legal profession alone can perform the task of defending these civil liberties. It can be and is expected that the legal profession will furnish the leadership in that protection. By its forthright statement of last Monday, the Supreme Court has challenged every lawyer in the land to accept that responsibility. I know you will not fail.

### Finland

#### EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

RADIO ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on February 17, 1940, on the subject of Finland.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

With a prayer upon my lips—God help me to help noble, heroic Finland—I am happy to speak under the auspices of the Lutheran churches in America in this appeal. I am speaking directly to the heart and soul and, I hope, the pocketbook of America. I am an American blessed with being born an American, even as most of you who are listening to me.

My forebears came from Norway. This summer I was in Scandinavia, and I want to say that after visiting this land my heart and soul is in this appeal to help the people whom I regard as my spiritual brethren.

Finland and the Finnish people need help. Finland is a God-worshipping nation. We are a God-worshipping nation. The Finns are a liberty-loving people. We are a liberty-loving people. Our Christian sympathy and heartthrobs in this great Finnish national emergency must result in the American people, individually and in groups, meeting the situation by providing immediate help so that the heroic defense that the Finns have been making to preserve their liberty and save their Christian institutions can be continued. Other peoples are helping. The people of Norway and Sweden and Denmark, and other nations, are aiding this heroic people in their stout defense of home and liberty and Christianity. It will be a sad day for us all if the atheism of Russia is to destroy the Christianity and democracy of Finland.

The Finnish people are a devout, genuinely devout, people. They live Christianity. They believe in keeping international law. They are honest. They are industrious. They are clean physically and mentally. The invader threatens not only the homes and cities and churches and the political freedom of this people but also, if successful, the invader would threaten the life and the faith and the liberty of the other Scandinavian nations and democracy everywhere.

Yes; as was said by one of the great leaders of Finland to the Finnish people, a Lutheran bishop, "With a clear conscience and with a feeling of complete solidarity we have arisen as one man to defend everything that is holy and precious for us Christians—we feel that we are the advance guard of western Christian culture in the north," this is wholly correct.

We in America, because we are so far away, do not realize the danger—the danger to the natural rights of man to life, liberty, and the pursuit of happiness—on this globe.

Listen to what the Archbishop of Sweden said to the Finns: "High and precious memories unite us. Your danger is our danger. Your salvation is our salvation. Your struggle is not only to defend the beloved fatherland but also to defend the church and the Christian gospel against the forces of godlessness. You have become a high example to all of us, in unshakable confidence that truth is stronger than falsehood, that right is stronger than violence. You have strengthened our hearts in the unbreakable conviction that human life is not the highest value in the world."

Yes, my friends, Finland stands as the first line of defense—your line of defense and my line of defense—against the forces of evil, chaos, and godlessness. We here must realize that if Finland and Scandinavia should become provinces of Russia, communism would overrun these Christian lands. What is more, it would give communism an outpost on the Atlantic. What is communism?

Communism is based upon the theory of Marx, and it means abolition of all private property, complete control of labor by the state, the state having unrestricted power to draft individuals for labor without reference to their personal desire, the individual having no rights whatsoever. Communism asserts there is no God. It strips man of his liberty and makes him a mere cog in a machine for the production of material things by the collective labor of slaves in a godless state—a state under the iron heel of a despot.

We cannot take time in this fast-moving world to hate persons, because if we do we cannot take time to love. We love Finland for her integrity, for her courage, for her righteousness. America, I am sure, has no time for the communistic doctrines of Russia which deprive men of the great freedoms that man possesses under a democracy. But is America awake? Are the citizens of America awake to the danger; awake to the wonderful opportunity that is presented to each individual and each group in America to aid the Finnish people and at the same time to strike a blow against communism and aid our own land and the liberty-loving people everywhere?

Already Finland's heroic stand may have saved Holland and Belgium from invasion.

Under our form of government—we being at peace—this Government, in my opinion, should not make a gift nor a loan to Finland nor to any other nation out of the Treasury of the United States, because of the prohibition contained in international law and because, further, the Congress, in my opinion, has no authority to lay a tax or appropriate public funds to aid a foreign nation at war while America is at peace. Such an act would, in my opinion, establish a new foreign policy for this country, opening up the door of the people's Treasury to unlimited demands in the future. The action of the United States Senate on last Tuesday, increasing the capitalization of the Export-Import Bank, will prove of very doubtful assistance to the Finns, because the measure itself says no loan can be made in contravention of international law—and Jesse Jones, a good businessman, has intimated strongly that he will make no loan unless it is a business loan. We know it can't be a business loan, for Wall Street has already refused the loan as a business risk. Therefore I renew my efforts, asking our people to make individual contributions through their pastors and churches.

Remember, my friends, there is no prohibition against our people—and that means all of us—against individuals and groups, making gifts to Finland. Let us pay attention to the voice within, each one of us, and give to this "great little nation" and thus help our brothers over there. Little Finland has indeed fallen among thieves. But she has beaten off the invader. She has lifted up a standard for the world. Her bravery and courage have lighted a lamp in Europe and throughout the world, and all she asks now is that she be equipped to carry on her fight for freedom—perhaps your freedom and mine.

My friends, we in America are charged with the great responsibility of keeping democracy alive. By individually aiding our Finnish brethren so they can keep democracy alive there, we are strengthening our own democracy. We will be showing liberty-loving people everywhere that we are with them.

It is a deep shadow that has fallen across our modern world—the shadow of an advancing communism that forces its way forward through bloodshed and war. Already villages and churches and homes have been destroyed and many lives sacrificed. Repercussions of this strife are felt the world around, in new feuds that arise, in a disrupted economic order, in the curtailment of charitable and mission enterprises and in unparalleled sufferings reaching far and wide. We may not be able to heal all the wounds this present strife is causing, but we can, at least, heal some. Like the Good Samaritan, we can help those in dire distress. Like Christians we can help keep the lamp of faith burning by generous deeds; we can insist that the gospel shall find expression in the cooperation we give to sustain those of our own ideals and faith in this their dark Gethsemane hour.

Throughout the length and breadth of our land Lutheran churches, in sympathy for their brethren in Finland who are said

to be almost wholly of that church, are uniting in the gathering of funds which will be administered for Finnish relief. Here is an opportunity, not only for those of one denominational group to help, but for all to whom religious freedom and humanitarian ideals are dear. If you do not know how or where to give, watch your local press for information. Through the agency of the Lutheran World Convention and the National Lutheran Council, Lutheran churches and pastors will be enabled to transmit funds and to render service. Bread cast upon the waters of Finnish relief will return a thousandfold. We hear people say: "God bless little Finland." But we must do better than utter pious sentiments, we must square our prayers with our deeds. What Finland has already done compares with the heroic deeds of the 300 at Thermopylae. But let us not wait until it is too late. Aiding a good cause now, there is good hope that communism will yet be stopped at the Mannerheim line as effectively as Charles Martel, leading the Christian forces in an early day, stopped the Saracens at Tours.

## The Situation in the Far East

### EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

RADIO ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered over the radio on February 18, 1940, by the junior Senator from Washington [Mr. SCHWELLENBACH] on the subject "The Situation in the Far East."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

What the world most needs today is simple, common honesty. The best standard by which to judge the honesty of nations as well as men is whether they keep their word. Broken promises, broken pledges, broken treaties have contributed more to the present world disaster than has any other single factor. These breaches of faith have not been limited to any single nation or group of nations. I do not deprecate the importance of economic needs in the present situation. However, if the nations of the world had kept their word during the last quarter century, many of these economic factors would not today exist. Had Germany and Russia believed that England and France would keep their promises to the smaller nations, they would have never dared to plunge the world into its present condition.

What are just a few of these broken promises? England and France made their first mistake in repudiating their financial promises to us. By that act they made certain that we would not again rush to their defense. Hitler knew that. Hitler relied upon it. France made its mistake when it broke its promise to Germany to disarm after Germany had been disarmed. Hitler used that to get his power in Germany. England made its mistake when it broke its promise to China when Japan took Manchuria. England and France broke their promise to Ethiopia. Since then treaty breaking, promise breaking, and word breaking have been the rule instead of the exception. International morality reached the lowest point since the seventeenth century. The present war is the natural and logical consequence.

Our people want peace. We want peace not only for ourselves but for the entire world. We want that peace to last. We hope when the present wars end to play some part in establishing a lasting peace. To my mind that hope will be barren unless we can enter into such a peace conference with a record clear of the taint of treaty breaking on our own part. The only leadership we want to give the world is moral leadership. We must have our own hands clean if we try it.

Are our hands clean today? Unfortunately, they are not. We, too, are violating a treaty just as sacred and just as important as any ever written.

What treaty are we violating? In 1921, in an endeavor to reduce naval expenditures among the great powers, the Washington Conference was called. Its chief purpose, in the beginning, was the limitation of naval armaments. The most important accomplishment of the conference, however, was the adoption and signing of the Nine Power Pact. In that pact we joined with seven other nations in agreeing to respect the territorial and administrative integrity of China.

This was not the first contact our Nation had had with China. For 125 years we have been sending over missionaries to open schools, colleges, hospitals, and churches. In 1899 we intervened in China and insisted upon the open-door policy. We insisted that our rights in China be recognized, and that no other nation could create a

sphere of influence there. During the World War China readily complied with President Wilson's request and declared war upon the Central Powers shortly after we entered the world conflict. When that war ended, however, China profited not at all. The net result, so far as China was concerned, was that her old rival and enemy—Japan—was given all of the German rights in China. In retaliation of that, and with disappointment with the way she had been treated by her allies, the Chinese people commenced their effective boycott against Japanese goods. It was an effective boycott. Its success struck vitally at the economic structure of Japan. It must be remembered that then Japan did not have her diversified foreign trade; her merchant marine had not been built to the strength it now occupies. To Japan, Chinese trade was of vital importance. By the time of the Washington Conference on Armistice Day 1921, the Chinese boycott had reached a state of well-nigh perfection. In that conference we asked Japan to agree to a naval program which meant economy for us and also lessened the danger to us in the Pacific. In consideration of Japan's agreement in the naval side of the conference, we induced China to discontinue the boycott. In payment for this action on China's part, we wrote into article I of the Nine Power Pact the agreement "to respect the sovereignty, the independence, and the territorial and administrative integrity of China." All nine of the nations agreed to it. China, relying entirely upon her trust in us, surrendered her most effective weapon. China believed her sovereignty and independence, administrative and territorial integrity would be respected by the nations of the world. Yet today China suffers and her territorial integrity is being destroyed. We, for the profits involved, are aiding, abetting, and cooperating in that destruction.

We today are Japan's most important ally in her war with China. Were it not for the assistance of the United States, Japan's China campaign would probably have collapsed many months ago. Japan is a nation without the necessary materials of war. Japan has no oil with which to operate her airplanes, her tanks, her trucks, her automobiles, or even her battleships. We furnish 65 percent of that which she secures from the outside world. We furnish 90 percent of the scrap iron and steel with which she manufactures her munitions. We furnish 90 percent of the copper for her munitions. We furnish 99 percent of her other metals for alloys for munitions preparations. She must have metal-working machinery, our contribution is 67 percent of that. We furnish 64 percent of the automobiles and parts which Japan is using in China.

It is true we furnish no soldiers—we do, however, furnish the materials for the munitions which those soldiers use. We furnish no airplane pilots, but we furnish the gasoline to propel the airplanes. We furnish no tank or truck drivers, but we furnish the tanks and the trucks, the gasoline to operate them, and the oil to lubricate them. We are in the Japanese-Chinese war right up to our necks. We are Japan's No. 1 partner. China is being destroyed. We are making the profits.

But don't for a minute think that we are not taking a chance. You mothers and fathers whose boys are coming into military age need have no false sense of security coming from the belief that we can play this game of profit sharing permanently without risking the lives and bodies of those young men you love. Every month, every week, every day, we make possible the prolonging of the far eastern war, to that extent do we enlarge the danger of ultimate world conflict from the ravages of which we can hardly hope to escape. Every dollar of profit enjoyed by the American oil producer, the American scrap iron and steel shipper, the American machinery manufacturer, may ultimately be paid for by the life of an American soldier, the family of whom now thinks that he is safe.

No one can deny that in this matter our duty is clear. Every substantial poll of public opinion shows that at least 75 percent of our people recognize this duty. That duty is to comply with our treaty obligations and stop our citizens from further violation of the Nine Power Pact. Common honesty, common sense, and cold-blooded logic require that we do no less.

## Old-Age Security

### EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

RADIO INTERVIEW WITH HON. JAMES M. MEAD, OF NEW YORK

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD an interview broadcast over Station WJSV, Washington, D. C., on February 18, 1940, at 2:45 p. m., under the sponsorship of Americans Over Forty, at which time Dr. William G. Downs, Jr., interviewed the junior Senator from New York [Mr. MEAD] on the problems of the middle-aged and older workers.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

Dr. Downs. Senator MEAD, to what do you attribute the present plight of the middle-aged and older worker?

Senator MEAD. I think that the unemployed middle-aged and older worker of today, is, for the most part a victim of the machine age in which we live. Our modern industrial system, while productive of untold benefits, has also proved to be a curse to the worker who has reached the age of 40. Private industry has set up age limits which discriminate against the older worker and, in countless instances has resulted in his trading a position on the pay roll for one on the relief roll.

Dr. Downs. Then you think, Senator, that private industry is the great offender?

Senator MEAD. Only in that it is to private industry that the worker should look for his job. No, I should say that at present the Federal Government is about as bad. We have found that the age limits for civil-service eligibility have been steadily lowered. This means that the Federal Government, as well as private enterprise, is not attracting to its service the best talent and experience obtainable.

Dr. Downs. Apparently then, you agree with Americans Over Forty that maturity and experience, have, or should have a value for employment?

Senator MEAD. Absolutely. A man or woman at the age of 40 has, in most cases, just reached the very peak of his or her physical and mental capabilities. Certainly the person of that age is far from being ready for the scrap heap as at present seems to be his destination. That person is just well prepared for many years of future gainful activity—activity which the country still sorely needs. Mature, experienced, and resourceful, the average employables at 40 are the very cream of the crop. In spite of this fact there is an increasing and alarming tendency on the part of employers to shunt the mature worker aside in favor of less experienced applicants.

Dr. Downs. You spoke of the attitude of the Federal Government? Senator MEAD. And I say again, that under existing laws and regulations, it has become exceedingly difficult for mature workers to obtain employment in the Government services. Even where such laws and regulations may not strictly apply, it is evident that the younger candidate is invariably favored over the older one.

Dr. Downs. Of course youth has plenty of problems, too. Senator MEAD. Indeed it has and I am fully sympathetic to them. I am not, in any sense, trying to make a case against the younger worker, not any more than Americans Over Forty is, in their approach to these problems. In the hands of youth rests the destiny of the Nation, and to the needs of youth we must, before all, administer. I am for their program; I favor immediate action. Nevertheless, the middle-aged victim of discriminatory employment policies is also an individual meriting our primary concern. All of the delicate but important factors of Government morale, of efficiency, of experienced supervision are tied up in the question of the desirability of fostering and encouraging the employment in responsible positions of our mature workers. We aim to remove the older worker from the so-called blacklist and in that effort youth agrees with us.

Dr. Downs. I think that all of us can fully agree with you there, Senator MEAD. The influence of technological advancement on the entire problem is fairly apparent. Certainly none of us familiar with the circumstances will question the existence of a great deal of age discrimination. Many employers will ardently justify this discrimination. Is there justification for it?

Senator MEAD. None whatever. The average man of that age is the head of a family, hale, hearty, and mentally and physically vigorous and alert; and his employment means education and opportunity for youth.

Dr. Downs. I am familiar with some of the studies that have been made on this subject. You, however, have been extremely close to the matter. Won't you tell us of some of the evidence there is available to support your contentions?

Senator MEAD. Yes; as you say, there have been a good many studies which bring out these facts. The popular superstition—the "forty phobia"—that men at 40 are no longer desirable employables, suffered a stern denial at the hands of the National Committee on Employment of Older Workers which made its report to the Secretary of Labor in March 1938. The committee reported that it found little evidence to substantiate the widespread opinion that the efficiency of workers declines at 40. "On the contrary," it reported, "We have found particular evidence that in many instances the reverse is true." The committee went on to report that, after making its survey, it felt that much of the discrimination against the older workers was entirely without justification. It asserted that the determining factors for employment should be physical fitness, skill, and experience rather than age.

Dr. Downs. Believe me, all Americans over 40 will say amen to that.

Senator MEAD. Since that report in 1938, the committee has issued subsequent reports of great significance. Last year it revealed that, as a result of a careful study, it felt that the man over 40 is neither a poor producer nor a bad accident risk. The committee stated that from the standpoints of group insurance and old-age pensions, there is no valid objection to the employment of older workers, provided a graduated system of employee contributions is maintained. The committee indicated clearly that there

is, in fact, no sound, scientific, or economic reasons for using age itself as a barrier to industrial service. Each case should be judged on its merits. When that is done, it is usually found that the man who has reached the age of 40 holds his own with his younger competitor in speed, precision, and production.

Dr. Downs. Senator, I wonder if you would care to elaborate on your previous remarks regarding discrimination in the Federal service?

Senator MEAD. I have been looking into many examples of discriminatory age restrictions in several branches of the Federal Government. I have thought right along that we have had no good right to criticize age discrimination in private enterprise if we condoned it in the Government service. Therefore, I am heartily in favor of attacking laws and regulations in the Government which work detrimentally upon the middle-aged and older employable.

Dr. Downs. And you believe that it is possible to correct this condition? I wonder just how you would suggest doing so?

Senator MEAD. The various surveys that have been made by reliable organizations, augmented by my own personal inquiries, have convinced me that we should promptly clear the Federal service of undue restrictions against the middle-aged worker who is well-qualified in every particular except his age. His age—if he isn't too old—should be an asset instead of an impediment. But it isn't. In accordance with this conviction, I am sponsoring a bill which provides for elimination of qualifying age restrictions in the Federal civil service. This bill has passed the Senate and is now pending in the House of Representatives. I think it should be made into law.

Dr. Downs. Yes; that seems to me to be an excellent approach to the subject. I certainly hope that your bill does become law. And, further, that it is administered according to the spirit as well as the letter. What steps do you think might be taken for a permanent solution for the problem of the over-40 workers in industry?

Senator MEAD. Very briefly, I would suggest a five-point program which might include:

First. A thorough investigation, on an official basis, of the causes of discrimination in the employment of older workers, and the recommendation of corrective measures through State and Federal legislation.

Second. Elimination, or at least reduction, of age discriminations and age requirements in most brackets of the Federal Civil Service.

Third. Make known to the worker the advantages of increased skill, good health, labor organization, and of association with a "going" industry.

Fourth. Emphasize the real need for the services of able, experienced men and thereby help to break down the prejudices against the middle-aged worker.

Fifth. Adjust State and Federal insurance and retirement plans to eliminate any forced age discrimination where it is shown to exist.

In this connection, I would draw particular attention to a resolution I am sponsoring in the Senate which would authorize the Secretary of Labor, acting with a national advisory committee, to investigate and report to Congress upon the effect of economic conditions on our middle-aged and older employables. Through this means, we would learn with some degree of accuracy the nature and extent of industrial discrimination against the older worker; of his relative efficiency; of the effect upon his family; of the increased relief burden; and of the extent to which retirement and compensation insurance plans militate against him.

Dr. Downs. If, as is undoubtedly the case, a good deal of our unemployment is due to technological advances, it would seem that many employable unemployed workers would never be able to return to their former occupations. What steps do you think might be taken to solve this phase of the problem?

Senator MEAD. The question of the retraining of our older workers has likewise captured considerable recent attention. It is an important item because retraining would serve to fit many present unemployed into new vocations in which they could earn a livelihood. I was much pleased to note that the problem of the older worker received attention at the recent National Conference on Labor Legislation called by the Secretary of Labor in Washington. It was recommended at that conference that there be given thought to a plan for the retraining of skilled labor. Technological advances, shifts in demand for types or classes of goods, and other economic changes bring about situations whereby large groups of skilled workers find themselves without a market for their services.

Dr. Downs. How many Americans over 40 are too sharply conscious of that fact?

Senator MEAD. It seems to me that the conference was on the right track in asking the Secretary of Labor to appoint a permanent national committee, composed of employers and employees, to collect and to analyze relevant facts, to establish and promote suitable standards of training, to publish and disseminate its findings, and to assist generally in the establishment of State and local agencies to promote retraining programs.

Dr. Downs. Senator MEAD, I cannot tell you how much I appreciate not only the very valuable interest you have shown in these problems which are so important to us all, but also, the extremely valuable information you have given us and program you have outlined.

## Government and Business

## EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ADDRESS BY HON. HAROLD L. ICKES

Mr. GUFFEY. Mr. President, on February 14, 1940, Hon. Harold L. Ickes, Secretary of the Interior, spoke in New York City before the Economic Club of New York on the subject of Government and business. In the keen, incisive, and very interesting way for which he is noted, Secretary Ickes delivered an address which furnishes much food for thought. I ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This opportunity to speak to you is something that I particularly welcome. I understand that in all the country there is no more fair-minded forum of intelligent, political, and economic conservatives.

Some Washington friends warned me that to escape from this arena I would have to be Daniel, indeed—that this is not merely economic royalism but the inner circle of economic imperialism.

Others assured me that I was to be the bull in a bullfight, with the audience the picadors and the redoubtable Mr. Weir the torador, though a bit cautious about waving anything red.

But if anyone thinks that tonight I am going to be the bull, throwing myself around the ring like my friend Hugh Johnson, let me remind him that I have just seen a Walt Disney picture. If there's a bullfight tonight, I'm going to be Ferdinand, sniffing the flowers.

Tonight I do not want to waste this opportunity in a mere bullfight over specific details of Government administration which irk particular businessmen; I here and now give Mr. Weir a rain check on that kind of a party, if and when he wants it.

Instead, I want to explore, from the public servant's point of view, a few of the glittering generalizations such as "free enterprise," "Government interference with business," and the "need of confidence," which muddy up our thinking at a time when we desperately need to think clearly on the interrelationships of that trinity which stand or fall together as our American way of life—free private capitalism, individual liberty, and political democracy.

Let's start with "Government interference with business."

The most common form in which government has a say about the conduct of a business is direct regulation through a regulatory commission such as, for instance, the Interstate Commerce Commission, the Federal Communications Commission, and the Securities and Exchange Commission; or through the Department of Justice and the Federal Trade Commission under the antitrust laws.

If it is alleged that the investigators and examiners and lawyers of these Government bodies are mercenary armies ravaging the fair fields of business, how did they get into those fields in the first place, and how do they keep coming in?

The answer is—businessmen; businessmen who originally persuaded the Congress that these regulatory agencies were necessary to preserve the system of private enterprise for the majority of businessmen against the depredations of a minority; businessmen whose complaints keep those agencies constantly on their toes.

Let's look, for example, at the oldest regulatory agency, the Interstate Commerce Commission.

Who insisted on bringing the railroads under the I. C. C. in the first place? Businessmen—the businessmen who were grain producers and grain merchants and local supply houses in the farming West.

Who within the last few years demanded the extension of the regulatory powers of the I. C. C. to the new and expanding bus and truck industry? Businessmen—the businessmen who own and operate the railroads that felt the trucking competition.

Who brought the new and adventurous aviation industry under the Civil Aeronautics Authority? Businessmen—the businessmen in the aviation industry itself, both to referee their industry differences and to ward off the attempt of the businessmen of the railroads to get aviation under the control of what they hoped was a railroad-minded I. C. C.

Who is behind wage and hour laws and all the interference they cause with business? Labor unions? Certainly. But also businessmen—manufacturers in high-priced labor areas like New England and New York who rightly think it isn't cricket to have to compete for a national market, which includes New England and New York, against competitors in low-priced child-labor areas.

Who presses the T. N. E. C. for hearings on the oil industry and the tobacco industry and urges Government officials to ask embarrassing questions of businessmen? Other businessmen in those same industries.

Who presses the inquiries at the S. E. C. as to the reason why middle western investors can't buy securities in middle western enterprises from middle western investment bankers through competitive bidding without paying an unnecessary regional tribute to you people in New York? Businessmen—investment bankers in Chicago and Cleveland, who say they don't understand why there has to be a basing point for United States finance at 23 Wall Street, any more than a lot of other middle westerners ever understood why Chicago steel had to be priced in Chicago on the Pittsburgh basing point.

Who starts all of these antitrust actions that sometimes make the criminal docket look like the social register? Businessmen.

Mr. Weir manages the National Steel Co. National Steel is a part of Little Steel. When the elder J. P. Morgan organized the United States Steel Corporation—Big Steel—he never intended that there should ever be any Little Steel or Mr. Weir—or even Mr. Tom Girdler. Why are Mr. Weir and Mr. Girdler managing independent companies? Because some other businessman—who was undoubtedly called a blankety-blank Socialist—asked William Howard Taft, then President of the United States and a trust buster, to have his Attorney General sue to restrain Big Steel.

In other words, one set of businessmen, in the name of preserving the system of private enterprise, is always invoking against other businessmen the power of the people, i. e., government.

The immediate point is not which set of businessmen is right. The point is that what sets the forces of government, legislative or executive, in motion against one set of businessmen is practically always another set of businessmen invoking protection for free enterprise.

When, therefore, a businessman is mad because government is interfering with his business, what he's really sputtering about is another businessman—because government, acting as a referee between the two of them, has decided that the second businessman is right in his idea of what promotes the American system of free private enterprise.

The businessman who wins the verdict from the Government calls the result freedom. The businessman who loses the verdict calls the result—and the whole process—interference. You pay your money and you take your choice—between businessmen.

Suppose I own a business and I come to Wall Street to borrow \$10,000,000. It isn't customary to object if the banking house that, for a commission, gets someone else to lend me the money at interest, puts a couple of directors on my board to tell me what I can do and what I cannot do. The business world thinks that is fair.

Suppose I am a farmer and I want a bounty from the Government. Under the law I agree, in exchange for a Treasury subsidy, not only to vary my production to help the immediate price structure but also to observe specified soil-conservation practices. That is, in return for a money contribution of the whole people of this generation, I am required to use my private property and run my private business in such a way as to preserve for future generations of that whole people the national asset of fertile land. The business world thinks that is fair.

Mr. Weir, the national asset involved in your industry is not only the industrial labor supply of the United States.

It is the national asset of the health of hundreds of thousands of the kind of men and women who will bear for the next generation the children that the well to do will not have.

It is the national asset of the free man's assumption of independence; the spirit of the Declaration of Independence and of the Bill of Rights; the spirit that makes it hard for us to be servants but makes us the best fighting men on earth; the spirit to which rich men will have to appeal in poor men if they want the poor men to defend the rich man's bigger share in capitalism. That spirit, Mr. Weir, your workers may want to manifest by belonging to a union unbosomed by even you.

Suppose, Mr. Weir, the Government were offering you a million or two millions or three millions cash per annum in return for your undertaking to conserve those national assets of manpower and womanpower and childpower, according to a formula that the Government laid down in the National Labor Relations Act—as it lays down a formula for the farmer in the Soil Conservation Act. It would be a fair trade, wouldn't it?

Well, Mr. Weir, you're taking that Government cash on the barrel-head right now—out of the funds of the whole people—just as surely as the farmer, who conserves the soil, is getting his bounty.

It is your company's share of the hundreds of millions per year that your steel industry gets out of the consumers' sales tax that we call the tariff—a tax on all the people which over the years has paid the steel industry literally billions.

It is your company's share of the \$12,000,000,000 subsidy which Federal and State Governments have, since 1916, given to your very best customer, the automobile industry, in the form of new highways.

It is your company's share of the billions of dollars' worth of Government grants for Government construction and equipment loans and of all other subsidies which have gone into the railroads, which are the steel industry's second best customer.

It is your company's share of the hundreds of millions, maybe a billion, of contracts that went to the steel industry out of the Federal P. W. A. program to give you work and profits at the expense of the public debt. Your company's net income has risen from \$1,000,600 in 1932 to \$17,000,800 in 1937, and no one knows or can compute how much of that is represented in the public debt, about which there are so many fainting fits in this election year.

Considering the generosity of the American people in the way of subsidies, any labor legislation to preserve the minds, the bodies, and the spirit of your workmen would have to be terrible indeed before it constituted an unfair intrusion upon the capital investment that you consider all yours and your stockholders'.

I wonder if there is an important industrial business in the United States in which the people as a whole have not put more subsidy than the stockholders have put capital?

Now please don't misunderstand. I'm not objecting to the policy of the present tariff laws, or to subsidies necessary to keep wheels turning, or to the fact that good profits are made with their help.

I raise this public participation in so-called private capital only as a sanitary thought when men, who are the temporary managers and dividend beneficiaries of these mingled private and public funds confuse their own judgment with a high moral tone about the interference by 130,000,000 invisible stockholders who are sugar daddying the company, probably for more than the whole capital account on the books.

To me the most significant thing in President Roosevelt's annual message was this: "The social and economic forces which have been mismanaged abroad until they have resulted in revolution, dictatorship, and war are the same as those which we are here struggling to adjust peacefully at home."

Since 1929 we have come an enormous way in the adjustment. We have saved our system of private enterprise by injecting into it new human rights for farmers, for laborers, investors, consumers, the unemployed.

Then as Mrs. Roosevelt has put it, "We bought time"—time for the revivifying processes to become normal routine around which our capitalistic system will gradually reorganize on a self-sustaining basis. Any wise man who thinks he is more afraid of inanimate debt figures than of irresistible human forces should look across the ocean—where the conservative ruling classes thought that it cost too much to buy time—and see how much faster war and revolution eat up the capital and income of rich and poor alike.

With all my heart I hope that I am not speaking these words tonight to any future American Fritz Thyssen.

In a time of transition there has to be more than money to spend. When the whole world is rocking with forces of revolt—when ruling classes everywhere have failed to make the grade—when the stirring mass is become executive as well as articulate—there must be confidence.

"Ah," says the businessman, "that's what we've been saying. What's absolutely necessary is that we have confidence."

My answer is "No; we are talking about different things."

The businessman's confidence is helpful at all times. But it isn't what's really indispensable at a time like this—partly because it won't stay put anyway and will jump up and down like a monkey on a stick with every flutter in your daily cash account.

However, there is a confidence that's utterly indispensable at a time like this, and that's the confidence of the great mass of the people.

Always the common man and woman, whose hard lives give them no chance to satisfy themselves about the great arguments outside, have, as a human necessity, to find some place to lodge confidence if the Nation is to have enough emotional stability to be able to do business.

Once, in the twenties, after the World War, the mass of people, tired of government, had confidence in the captains of business. Today, even if unjustifiably, they have less confidence in business. Nineteen twenty-nine is not forgotten. Musica, Whitney, and Associated Gas & Electric won't let it be forgotten.

Nor have the people much confidence in most politicians either. About most of us, I'm afraid, the people's reaction can be summarized in the priceless remark of the Republican Governor of Colorado about Senator VANDENBERG, "The Senator will be convincing later on."

The people will be slow to regain full confidence in courts which they thought had betrayed them in refusing to recognize the new rights given them by new legislatures. Judge Manton and Judge Thomas haven't helped much.

The great mass have confidence only in one symbol—the Federal Government. Even you, the most sophisticated men in America, know perfectly well that, as a practical matter, there is only one effective symbol of national unity in this country today. When you wonder if something can be done, you think of Washington. When you want to get something done, you go to Washington.

The confidence is even more concentrated than that. The more bewildering things get, the greater the confidence of the mass has to become personalized. The word must become flesh. Individual men are becoming more and more important as leaders of the masses, and the character of leadership everywhere is of tremendous concern to mankind. Regardless of whether you agree with the President or not, you must admit that this personalization of confidence in him is an all-pervasive reality.

If confidence reposed in a man of responsibility and knowledge is destroyed, today's conditions—even here in America—contain an appalling risk that that confidence will be usurped by some gutter-rat demagog, whose imagination in painting the Promised Land to his wistful followers, will be restrained neither by a sense of responsibility nor by a knowledge of fact.

On the basis of confidence in Roosevelt we do have the fact of enough emotional stability to do business—more than any other country in the world. We are as far away from the state of 1929 today as we are from the mind and conditions of Europe. In this country, men are not afraid of the stability of the dollar; they are not afraid to put their money in the bank; they are not afraid to keep working at the problem of unemployment.

We can go forward provided that we keep the confidence of the mass that gives us our stability.

I know that there are those still living in the past who will understand nothing.

But for the intelligent conservative the situation is clear. Anything you do at this time to shake the confidence of the great mass of the American people in either the President or the National Government is a sin against free enterprise, individual liberty, political democracy, and your own self-interest.

No matter on what you may disagree with him, he is now a symbol of confidence whose loss of symbolic value now would make all agreements and disagreements utterly unimportant.

I am not saying what the situation would be if the world stopped rocking and ceased preparing for a gigantic Armageddon.

But until the world is at peace, the President's position with the bulk of the American people is the strongest protection that the old-fashioned American way of life has. Millions of people, who no longer have faith in the profit system, will follow him in faith in the protection of that system, as well as in the protection of individual liberty and political democracy.

Democrat or Republican, Conservative or Liberal, business, if it were wise as to its own self-interest, would now keep the people confident in him, emotionally as well as intellectually.

It would agree with the President wherever it possibly could. If it had to disagree, it would disagree reasonably—with a smile and not with a snarl. For if, today, the mass of people lose faith in Government through him, there will be no health in us.

The welfare of business and Government are so inextricably bound together that one cannot be dissected out without causing the death of both. This meeting of distinguished citizens tonight was possible because invitations could be sent through a Government-owned post office, or by means of Government-protected communications. You have been able to arrive safely because Government has policed and shoveled the snow from the highways and the streets. You have come here on Government-financed railroads, or in Government-serviced planes, through Government-built subways, and on Government-subsidized roads, to eat fine food grown by a Government-fostered agricultural industry and inspected for your safety by a Government Health Service.

Why have you come?

In order to listen to at least one speech that may, I suspect, tell us that Government regulation does not and cannot work; that Government must grant the same anarchic freedom to business that the feudal overlords of old enjoyed.

The radio audience that will listen to our uncensored speeches will do so in unregimented comfort in numberless unsearchable and unseizable castle homes. The audience will hear our voices, only because Government-licensed radio stations and Government-controlled wave lengths have brought order out of chaos in the ether, as we talk in front of this microphone protected by Government-issued patents.

And so I turn the microphone over to Mr. Weir, for whom I have so high a respect that I hope that tonight his special Valentine message will not be that it is too bad that Government "interferes" with business, and that we would quickly return to Hoover prosperity if it were not for Roosevelt.

## Shoulder to Shoulder

### EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Honorable James A. Farley at Memphis, Tenn., on February 14, 1940, under the auspices of the Memphis Junior Chamber of Commerce.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTRODUCTORY REMARKS BY JOHN REARDON, PRESIDENT, MEMPHIS  
JUNIOR CHAMBER OF COMMERCE

We are very fortunate in having the Postmaster General of the United States to address us tonight. I suppose no American statesman has so endeared himself to the American people as Mr. Farley has during the past 10 years. This admiration is not confined to the Democratic Party, whether new dealers or conservatives, but the affection for him extends to the rank and file of Republicans as well.

Had the Junior Chamber of Commerce been a functioning organization 35 years ago we feel confident that Postmaster General Farley would have been an ardent, active member of this organization. I am sure of that for these reasons: In his grammar grades he was the best marble shooter; in high school and afterward he was an excellent baseball player, and at the same time he was most energetically interested in every civic enterprise not only in his own community but in all Rockland County.

We are therefore glad to have Mr. Farley here to inaugurate our program of Americanism. I suppose no man in American public life has been a more sincere friend of true Americanism. In New York State politics, in national politics, and in his broad international views Postmaster General Farley is a notable advocate of all that is finest in the idealism of American public life. I am, therefore, happy to present him to you. Ladies and gentlemen, the Postmaster General.

ADDRESS BY HON. JAMES A. FARLEY

It is really a very fine thing that the junior chamber of commerce is doing in setting aside the week between the birthdays of two great Americans for the observance of the principles of our Government.

Americanism is a broad term. It embraces all that the founders of our country fought for, and all that their successors in the great work of civilization have striven and are striving for. I say this because in the final analysis civilization means more than economic or mechanical progress; more than the promotion of luxury or even physical comfort. The world's history is dotted with the relics of so-called civilizations. We find them in Egypt, and are awed as we contemplate the mass effort that resulted in the construction of those miles of columns; the man-made mountains we call the pyramids, and all the other evidences of far advancement on the practical side of things, as well as in the advance of art, religion, and civic order.

We find them in Asia, whose ruined palaces tell of the height of luxury to which the rulers had mounted, together with the evidences of power and wealth. We find them in America—so old that even the language has been forgotten and no man can date their creation, and even their strange symbols are not to be read, and their meaning can only be guessed at. We find the remnants of great statues on isolated islands in the vast Pacific—mute testimony of a by-gone race that had progressed far—how, or when, or in what direction we do not know.

The question must always be asked why these civilizations perished from the earth, some of them leaving only fragments of pottery to tell us that they existed. Why men and women capable of such cooperation as resulted in great cities, which means a great commerce and a great education of some sort, should have gone so far and no further.

I think I know the answer to those questions. So far as we are aware, one great element in the growth and progress of empire was lacking. They had armies, churches, palaces, but they had not liberty. It seems written that despotisms, either of individuals or groups, carry within themselves the seeds of their own destruction. The despot falls, alien barbarians rush in to complete the destruction, and so all that is left for a future world to gaze at are monuments without even a record of what these monuments were to honor or commemorate.

Americanism is the answer to these pathetic reminders of past efforts of peoples to achieve popular happiness, for only in happiness can there be civic immortality. Doubtless among these forgotten rulers there were some men and women of broad vision who sought the welfare of their subjects. But in the inevitable succession of dynasties their work was lost. The perpetuation of their own power remained a guiding principle of these empires of the past and sooner or later the misery of the mass of the people destroyed the structure. So I feel that the purpose of your organization in devoting an annual period to Americanism is not only a service to your country but to the world.

Our life as a nation has been short, for a span of 150 years actually comprises only the infancy of a race. In that century and a half we have made progress that has amazed the world. From a meager group of people on the edge of a vast and practically unknown continent, we have grown into the most powerful of all the nations. No people are as comfortable as we are. In no country does the ordinary man and woman participate in the glories and comforts of a rich and strong commonwealth to the extent that we do. Just at present we are unique in the circumstances that we are the one great nation that is able to go to bed at night without shuddering at what tomorrow may bring.

That is one tangible thing that is the result of Americanism. In the midst of a world at war, or trembling on the brink of war, we are able to go about our own affairs, worry about our

own politics, plan our own businesses, worship as we please, and express our views and opinions whenever and however we please.

All things in America may not be as we would wish them to be. Some of us are by force of circumstance denied our share in the good things of life. But our humblest citizen knows that, come what may, he and his loved ones will not be permitted to starve, and that when opportunity comes to him, he may make the most of it, unvexed by decrees made overnight and without fear of a secret police or other agency seeking to twist his every thought and every act into a crime against the state.

Our great men of the past have frequently defined Americanism. Thomas Jefferson put the definition into these simple words: "To preserve the peace of our fellow citizens, promote their prosperity and happiness, reunite opinion, cultivate a spirit of candor, moderation, charity, and forbearance toward one another, are objects calling for the efforts and sacrifices of every good man and patriot; our religion enjoins it; our happiness demands it, and no sacrifice is requisite but of passions hostile to both."

Last year President Franklin D. Roosevelt spoke of your efforts as prompting us "to reflect on the eternal principles upon which our Government, with its objectives of human welfare was founded." and he added: "The best test of democratic government is through the efficiency with which it meets its responsibilities of service to the people. Only as the people, from which leadership comes, are kept truthfully informed will our democratic institutions retain their strength and virility."

Fortunate it is for us that Americanism is not the sole heritage of one political party or another. We may differ among ourselves as to which political principle more nearly meets our ideal. I have quoted to you from two great Democrats. Now let me add the testimony of two great Republican Presidents. Abraham Lincoln, speaking to the soldiers of an Ohio regiment, told them that our Government must be preserved. As he put it, "it is worthy of your every effort. Nowhere in the world is presented a government of so much liberty and equality. To the humblest and poorest among us are held out the highest privileges and positions."

And President Theodore Roosevelt gave us this definition of Americanism: "All of us, no matter from what land our parents came, no matter in what way we may severally worship our Creator, must stand shoulder to shoulder in a united America for the elimination of race and religious prejudice. We must stand for a reign of equal justice to both big and small. We must insist on the maintenance of the American standard of living. We must stand for an adequate national control which shall secure a better training of our young men in time of peace, both for the work of peace and for the work of war. We must direct every national resource to overcome difficulties. In our relation with the outside world we must abhor wrongdoing and disdain the baseness of spirit which lamely submits to wrongdoing. \* \* \* We must guarantee to each man his rights and insist in return upon the full performance by each man of his duties, both to his neighbor and to the great Nation whose flag must symbolize in the future, as it has symbolized in the past, the highest hopes of mankind."

It is given to few of us to express a great sentiment with the clarity and eloquence of these past masters of rhetoric. If I may be permitted to give my own humble definition, let me say that in my opinion the best definition of Americanism is tolerance.

This country has not reached its present status in the world and its place in history by suppression. Our liberties have been preserved by the simple processes of letting each of us say what was in him to say. Perhaps there is no greater symbol of the wisdom of this great principle of liberty than the fact that just the other day a Communist, whose doctrines we abhor, without regard to party, was permitted to go on the ballot as a candidate for Congress from New York, although at the time he stood convicted of a crime against our Government.

In other words, we deemed it best to adhere to our general principle of freedom of speech and freedom of opinion, to permit this man the privileges of every other American citizen. Can you imagine a similar happening in any other country on the globe?

Every now and then in the heat of a political campaign you hear shrill cries that somebody is attempting to interfere with the liberty of the press. Nobody takes the charge seriously, for in the adjoining columns of the newspapers that are uttering the cry of alarm appear the fiercest criticisms of the administration that happens to be in power. It is only these governments that are fearful of revolution that hamper or hinder such attacks. In our own God-given tolerance, the right of criticism is sacredly preserved.

Down South they still refer to us northerners as damnyankees. We of the North flatter ourselves that we have the better of our southern citizens in aggressive enterprise. Our easterners cherish to themselves the comforting belief that they are superior to our westerners in culture and the polite arts. They in the West deign to assume that they have almost a monopoly of independence and breezy courage. Yet all of us, regardless of the points of the compass, are quite satisfied that even those at the opposite end of the country are of immensely better type than those unfortunate enough to be nationals of foreign states, which, after all, is a happy conceit.

There can be no liberty existing side by side with intolerance. We have got to admit the right and privilege of the other man to differ from us, because any other course would mean the domination of one group by another and that principle carried out means tyranny.

It is a happy country where the cathedral, the church, and the synagogue may be all on the same block and on the Sabbath

each of the adherents of the various denominations goes to worship in the place of his own selection, and on the way there or from there he talks politics or business, or the state of the nation and the world with his neighbors, without a thought that a difference in religion makes anybody a different American from anybody else.

Republicans and Democrats, Progressives and Socialists, all recognize the right of the other fellow to whatever political views he may entertain. We battle fiercely in the newspapers and on the radio in years of political campaigns and the day after election we forget all about it, and each of us goes about his own business unworried because this party or that party got the most votes.

That is Americanism in its highest sense. Our parties and our candidates submit the best arguments they can find on their side and make such criticisms as they believe the public will accept of the other candidates and the other side. The public, unwatched and unhampered, drop their votes in the ballot boxes and so pronounce the final verdict.

The victors jubilate and the losers console themselves with the thought of better luck next time.

That is Americanism. That is tolerance.

If these two are not the same thing, they at least go hand in hand, and as long as that condition continues, we are in no danger of revolution or dictatorship. In fact, I wonder if anybody even in the midst of the most heated campaign ever believed that either of these symbols of the decay, if not of the death, of a great nation was anything more than an abstraction? Whenever our people are dissatisfied with an administration, they turn it out and elect a new one.

After all, the only mortgage that the party in power has on the control of our national affairs is the confidence of the people. So long as the administration gives good government, so long is it kept in power. Of course, you hear constant talk of the ability of a regime to perpetuate itself. That is all moonshine. No administration can survive majority disapproval. Nor is that majority the preponderance of one party or another. Neither Republicans nor Democrats have enough members in their party to elect a President. Between the two great parties there stands a group, numbering perhaps 10,000,000 voters, who have either no party affiliation or whose allegiance is so slight and tenuous that it is shifted one way or the other as the conflicting policies and opposition candidates please or displease the individuals of this group.

That is Americanism again. The two great parties, theoretically, at least, formulate the policies for which they stand. They organize the regular forces and put in motion the machinery for attracting votes. It is their respective arguments and the relative appeal of their candidates that determines what direction the independent voter takes. That is the ordinary and orderly course of our politics, and a century and a half of progress under this system has demonstrated both its effectiveness and its success. We have had under the system great Presidents and mediocre Presidents. We never have had, and I do not believe ever will have a bad President in the sense of one who intentionally did anything adverse to the national interest. Some of them have made mistakes and the country has taken the first opportunity to rectify the error.

Do not think that I underestimate the importance of politics, though I subordinate political loyalty to loyalty to our country. It is only through politics—partisan politics, if you like—that we get our governments. It may not be a perfect process, but it is the best human ingenuity has been able to put together for learning what the majority of our people desire and conducting our national affairs in accord with the popular will.

The founders of our country, the authors of our Constitution, the brave and wise men who launched the American ship of state into the ocean of an uneasy world, had for their object the simple and homely purpose of providing a government that would insure the greatest good for the greatest number of our citizens.

Their work endures, and that it does endure and grows stronger, generation after generation, is due in no small degree to the patriotic efforts of such organizations as yours. You remind a busy Nation that has grown accustomed to the exercise of priceless liberties without reasoning why—you recall to all these people that there is a flag to be cherished, a principle to be maintained.

That is Americanism.

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ARTICLE BY ROBERT P. VANDERPOEL

Mr. LUCAS. Mr. President, every Senator is familiar with an organization known as the National Economy League of America. Some of the most prominent businessmen of the Nation are members of it.

Recently a poll was taken among its members throughout the Nation as to whether or not they favored the continuation of the Hull reciprocal trade agreements. The net result showed that 88 percent of the membership favor the continuation of that program. This is more than significant when an examination is made of its membership. Some of the Nation's most prominent Republicans are on the rolls.

Recently Robert P. Vanderpoel, financial editor of the Chicago Herald-American, and one of America's leading economists, published a most interesting article upon the conclusions of that poll. I ask unanimous consent that the article written by Mr. Vanderpoel be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Chicago Herald-American of February 14, 1940]

#### NATIONAL ECONOMIC LEAGUE FAVORS TRADE TREATIES

(Robert P. Vanderpoel, Financial Editor)

The National Economic League today made public a poll of its members, comprising many of the leading businessmen of the Nation, strongly favoring the principle of the Hull reciprocal trade agreements.

The decisiveness of the vote—88 percent favoring the trade treaties—and the fact that a substantial proportion of the businessmen polled are counted upon to give active support to the Republican Party in 1940 Presidential election, made today's announcement something of a political bombshell.

#### MANY PROMINENT MEN

Among the executive council of the National Economic League are Charles Francis Adams, Hoover Secretary of the Navy; Sewell Avery, head of the United States Gypsum Co. and Montgomery Ward & Co.; T. M. Girdler, president of the Republic Steel Corporation; William Allen White, Kansas newspaper publisher, prominent in Republican political circles; Frank O. Lowden, former Republican Governor of Illinois; Silas H. Strawn, former president of the United States Chamber of Commerce, and Ray Lyman Wilbur, Secretary of the Interior under Hoover.

Illinois members of the League's Council include such prominent business men and Republican political leaders as Graham Aldis, George T. Buckingham, Ralph Budd, Bertram J. Cahn, Owen L. Coon, David A. Crawford, Henry M. Dawes, James H. Douglas, Jr., Thomas E. Donnelley, Percy B. Eckhart, Louis L. Emmerson, Thurlow G. Essington, James B. Forgan, Jr., John F. Gilchrist, Otis F. Glenn, Charles F. Glone, Dwight H. Green, Thomas S. Hammond, James S. Kemper, Frank Knox, Oscar G. Mayer, Sterling Morton, George F. Nixon, Roy C. Osgood, C. H. Poppenhusen, George Richardson, Guy A. Richardson, Lessing Rosenthal, Edward L. Ryerson, Jr., H. A. Scandrett, Arch W. Shaw, Lawrence H. Whiting, and Gen. Robert E. Wood.

#### EIGHTY-EIGHT PERCENT FAVOR PACTS

The announcement issued by the league began as follows:

"An 88-percent vote of its national council in favor of the principle of the Hull trade agreements was announced today by the National Economic League.

"The council of the league is a nonpartisan body consisting of leaders of public opinion directly nominated and elected as such by preferential ballot in each State."

A special committee of the league prepared a questionnaire on the reciprocal trade agreements. The first 400 returns disclosed that 90 percent of the Nation-wide council "believes that a reasonable balance between export-import trade is essential to domestic prosperity."

#### FEW WANT CONGRESS

Sixty-six percent favored fixing tariff rates by negotiation of trade agreements with specific foreign countries as against 25 percent voting for fixing rates by administrative inquiry of the Tariff Commission and 9 percent who favored leaving tariff fixation to general acts of Congress.

The members also favored by a 66-percent vote utilizing the President's power to adjust tariff rates by 50 percent downward or upward solely by means of trade agreements.

The question of how trade agreements are to be made brought out a 54-percent vote for continuing the present authority of the President to proclaim them when negotiated without submission to the Senate.

#### SOME ASK SENATE O. K.

Five other alternatives combined totaled only 46 percent of the total vote in about equal proportions. However, three alternatives called for advice and consent of the Senate to the agreement, and these three together polled 27 percent. Only 9 percent voted in favor of complete repeal of the President's authority.

The overwhelming approval of the principles behind the Hull program by these businessmen, who are being counted upon to finance the Republican 1940 campaign, came at a time when the matter of renewing the trade-agreements authority for another 4 years is being actively considered in Congress.

The alignment thus far has been on a purely political basis. Today's announcement, however, is almost certain to give added strength to those fighting for a renewal of the Secretary of State's authority.

## Jackson Day Address

## EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ADDRESS BY HON. LOUIS JOHNSON

Mr. GEORGE. Mr. President, I ask unanimous consent that an address recently delivered at Atlanta, Ga., by Hon. Louis Johnson, Assistant Secretary of War, be inserted in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Democrats, 125 years ago today the valiant Andrew Jackson stepped out upon the American stage as a gallant public figure. To the hardy men and heroic women on the frontier, his emergence into national prominence came as no surprise.

Your forefathers in Georgia already had known of his sterling qualities of leadership, for many of them had fought under his command in the campaigns against the Creeks. Their neighbors in Alabama already had become familiar with his military prowess and his moral courage, for some of them had marched beside him when he rode forth, his shattered arm hanging limp by his side, his quivering body burning with fever, to avenge the massacre of Fort Mims. The home folks in Tennessee already had recognized his devotion to the ideals of the pioneer, for they had stood behind him when they sent him to Washington as their first chosen representative. The whole frontier already had learned to idolize "Old Hickory," for it beheld in him a stalwart champion of the rights of the common man.

Then came the Battle of New Orleans on January 8, 1815, and the name of Andrew Jackson became a household word throughout the Nation and one soon to be conjured with in the political and economic life of our country.

The military significance of this smashing victory of Old Hickory's hastily mobilized amateur force of frontiersmen against the well-organized professional soldiers of mighty Britain I discussed at some length yesterday at New Orleans. Suffice it to say at this time that had Jackson failed, then New Orleans might have remained a subject of international booty, a coveted prize exposed to continuous bicker and conflict between Great Britain, France, Spain, and perhaps other countries. The Mississippi might have become a river of blood exposed to continuous strife among its riparians, as is the Vistula, the Rhine, or the Danube. Louisiana, at this moment, might have been a participant in the present European war.

In making the anniversary of the Battle of New Orleans Jackson Day in the calendar of our Democratic Party we bring into full focus the significance of the event and of the leadership of Old Hickory. Here was a military leader who could fuse into a fighting team such diverse elements as New Orleans aristocrats, Baratarian pirates, Choctaw Indians, African slaves, emigrés from France, refugees from Santo Domingo, and use them effectively in support of Regular Army and State troops. Here was a political genius who could attract to the banner of the Democratic Party hosts of American citizens from the North and the South, the factory and the farm, the city and the country, and win their enthusiastic approval for the candidates and the platforms of true Democratic liberalism in State and National Government.

The Democratic Party always has appealed to the widest cross-section of the American people. For that reason, we are not always unanimous on all public issues. Our Republican friends think that because our representatives in Congress do not always vote as one that our ranks are torn, that we are weak and that the popular tide is turning in their favor. They appear sometimes to sympathize and at other times to gloat over what they believe is our discomfort. But we are not misled by any political chicanery on the part of our rivals.

We admit that we occasionally disagree among ourselves. We Democrats are not like the rabbits of Atlanta's old beloved character, Uncle Remus. "W'en Old Man Rabbit say 'scoot' day scooted en w'en Ole Miss Rabbit say 'scat' day scatted." There are no "Ole Man Rabbits" nor "Ole Miss Rabbits" to dominate our party. Nor will you find such rodents among our rank and file.

We are Democrats, and "democrate" to us means exactly what it says. We are free to disagree, to argue, to get mad, and even to cuss among ourselves. When it comes right down to fundamentals, however, the American people, as always, will find us united. When we go to the country in 1940, we will do so with a record of unparalleled achievement, with candidates that merit public confidence, with a platform that is sound, democratic, and progressive, and with a united party—loyal to the ideals and to the traditions of the great Andrew Jackson.

The Republicans will bring forth a candidate who undoubtedly will be an upright American citizen and the best man they have

available. Unfortunately for them, they have not the quality to choose from that we have. Under our two-party system, it is proper and highly desirable that the Republicans nominate as standard bearer who can make a fight in one or two States other than Maine and Vermont. Whoever he is, we shall be delighted to send him down to defeat.

The likelihood of a Republican victory seems too remote at this stage to merit much consideration. Its chances already have "gone with the wind." In 1932, the American people acted in Rhett Butler fashion, and walked out on the Republican Party. Under present conditions there is just as much chance for it to win back the lost affections of the American electorate as there is for the return of Rhett Butler to Scarlett O'Hara.

Because the Republican Party refused to wrestle with realities, they were turned out of office. Because we have the courage to face facts and issues and to grapple with them in the interests of the American people, we retain their affection and admiration. What does it matter if, now and then, some measure fails to come up to its promises? So long as we continue to think and plan in terms of our country—our whole country—and stand on our record of achievement, we need have no fear as to the outcome of 1940.

It is impossible in the brief period allotted me to discuss fully the accomplishments of our Democratic administration since 1933 under the leadership of our beloved President. Let me invite your attention to a few of the more outstanding. Because of my portfolio with the War Department, I will touch first on national defense. That cause was very dear to Old Hickory and to all of our forefathers. In the preamble to our Constitution they recognized the duty of government "to provide for the common defense."

This basic law of self-preservation, as emphasized by our practical colonial forefathers and as laid down by our Constitution, the Republicans, when in power, always tend to ignore. Look back at the history of our country and invariably you will find the penny-wise, pound-foolish Republicans boasting of their economy at the expense of our armed forces.

It is always the practical idealists of the Democratic Party who give to the Army and to the Navy the authority and the dignity they deserve in the scheme of our American Government. It is always the Democrats who recognize what John Jay, in the Federalist, noted more than 150 years ago; namely, that "among the many objects to which a wise and free people find it necessary to direct their attention, that of providing for their safety seems to be first."

When the Democratic Party returned to power in 1933, after a lapse of 12 years, it found that the Republicans had given little or no support to national defense. Our Navy had been reduced. Our Army had been skeletonized. Our weapons had become outmoded. Our equipment had grown obsolete. No sooner had Franklin D. Roosevelt taken the helm of the ship of state when the renaissance of national defense began.

Under the leadership of President Roosevelt, Congress provided for a navy up to the limits established by the Washington Conference and the London Treaty; and today we are building a navy that should prove far more capable in the present storm-tossed world to protect our interests at sea.

Under President Roosevelt, our Army is modernizing, motorizing, and mechanizing. We are adding officers and enlisted men. We are strengthening our National Guard. We are training more Reserve officers. We are laying the foundations for an air corps that can defend this continent against attack. We are building modern barracks. We are conducting maneuvers. In short, we are giving moral and material support to the Army and bringing it up to a high state of efficiency.

With industry, the Army and Navy enjoy most pleasant relations. Never before in the history of our country has there been a keener appreciation of the respective roles in time of an emergency of our armed forces and of industry. The American businessman knows quite definitely that there is no intent nor desire on the part of the Army to interfere in the slightest degree with his enterprise at any time during peace or war. He, the Army and the Navy understand each other and trust each other. That spirit of cooperation that has been nurtured in the last few years may save us days, weeks, and perhaps months in time of emergency; and, what is even more important, the lives of many of our citizens.

Another field in which the Democratic administration under President Roosevelt has effected significant progress is in foreign affairs. As in the days of Jackson, our work in the field of foreign relations is marked by a procession of triumphs. In keeping with the traditions of Martin Van Buren, Edward Livingston, and John Forsyth, whose administration of the State Department under Andrew Jackson elevated the United States to a new high pinnacle of influence in the family of nations, President Roosevelt has placed in charge of foreign affairs a man of wisdom, of learning, of courage, of kindness, and of firmness. Both Republicans and Democrats have endorsed the splendid administration of our State Department under the outstanding leadership of Cordell Hull. Behind the voice of the President and the hand of Mr. Hull stands a united nation.

At the outset of his administration, the President proclaimed the "good neighbor" doctrine and his actions spoke louder than his words. Dollar diplomacy, he pushed aside. The marines he ordered home. A series of Latin American conferences, beginning with Montevideo in 1933 and culminating with the meeting in Panama last fall, have established a new spirit of hemisphere solidarity. The Monroe Doctrine, too often regarded merely as a

self-imposed unilateral obligation of the United States, has been converted into a cooperative peace of all 21 American republics. Today we behold the peaceful front of a united Western Hemisphere against the aggressions and the ambitions of the Old World.

At home, our farms are more scientifically cultivated, our labor better protected, our industry more intelligently managed, our bank deposits more safely guarded, and our securities more honestly advertised. The evils of prohibition are gone. Law is better enforced. Many of our unemployed young men are finding opportunities in the Civilian Conservation Corps camps. America, united and peaceful, under the leadership of President Roosevelt and the Democratic Party, moves forward to its true destiny. Let us all join hands and continue the march.

### Loans for Homes

## EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ARTICLE BY ERNEST K. LINDLEY

Mr. BARKLEY. Mr. President, I ask unanimous consent to have inserted in the RECORD a very interesting and, I think, fair article appearing in the Washington Post of this morning, written by Mr. Ernest K. Lindley, on the Home Owners' Loan Corporation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of February 19, 1940]

LOANS FOR HOMES—STATE OF THE H. O. L. C.

(By Ernest K. Lindley)

It looks as if the finances of Government corporations were going to be subjected to highly critical analysis by members of the "economy bloc." This will do no harm, as long as accurate figures are used and they are not misinterpreted for campaign purposes.

Such regard for accuracy may be too much to expect in a Presidential year. Already a few rumors of undetermined origin are in circulation concerning the Home Owners' Loan Corporation. One is that the H. O. L. C. has lost \$200,000,000 on its loans in Florida. This sum happens to be about four times the total of H. O. L. C. loans made in Florida. A further fact is that Florida is one of the "best" States on the H. O. L. C. map, with the result that the losses there may well turn out to be zero.

The H. O. L. C. has suffered book losses of about \$78,000,000, and will suffer more during the next year or so. That is because it is putting its affairs in order by foreclosing and selling the properties whose owners could not or did not keep up their payments on H. O. L. C. loans.

The H. O. L. C. already has sold 80,824 pieces of foreclosed property. It has foreclosed 77,229 other homes, but has not yet sold them. Thus, in 158,053 instances its efforts to rescue home owners have not been successful.

This is 158,053 out of 1,019,000 attempts.

The H. O. L. C. was created in 1933, not to make money, but to save homes. The hope was that it would break even. In the 3 years during which it was authorized to lend money, it took over mortgages on 1,019,000 homes. These were supposed to be, and most of them were, mortgages which were in default. In most cases also tax payments were 2 or 3 years in arrears. In many cases repairs were also far in arrears.

In taking over more than 1,000,000 frozen mortgages, the H. O. L. C. thawed out banks and trust companies to the extent of nearly \$1,000,000,000; savings and loan associations to the extent of \$767,000,000; mortgage institutions and insurance companies to the extent of \$356,000,000; and individual mortgage holders and estates to the extent of \$686,000,000. It also cut down the face value of the mortgages by about \$200,000,000, and gave the home-owners a lower rate of interest—5 percent at first, now 4½ percent.

It lent money to pay back taxes and to renovate and repair these homes. It included these outlays in the new 15-year mortgages which it issued.

This is what has happened to its more than 1,019,000 loans:

Sixty-five thousand have been paid off in full, from 8 to 14 years before final payments were due.

Six hundred and forty thousand are in satisfactory condition; payments of interest and principal are up to date or less than 3 months in arrears. Where they are now slightly in arrears the owners have already whittled down the principal of their loans.

One hundred and thirty-five thousand are in a doubtful state. In most cases interest is being paid and in some payments on principal are being made, but in smaller amounts than called for by the original loan. About 12,000 of these look hopeless, but the owners

are still pleading for a chance to make good and are being given a little more time.

Twenty thousand are on the way to foreclosure, but final action has not been taken.

So out of the 1,019,000 bad mortgages taken over and converted by H. O. L. C., more than 700,000 have turned out to be good risks. About 150,000 more are more or less doubtful; some will work out, others won't. And about 158,000 owners didn't or couldn't make the grade.

The H. O. L. C. is taking its worst licking in New York State, where real-estate inflation was the highest and deflation the most severe, and where taxes, reconditioning costs, and foreclosure expenses are exceptionally high. The H. O. L. C. has been losing an average of \$2,357 per property on the homes it has foreclosed and sold in New York. With New York and other big losers included, the H. O. L. C. has lost an average of \$975 per home on those it has foreclosed and sold so far.

By the time the H. O. L. C. has completed this grand clean-up it may have suffered a loss of \$200,000,000. It will then be finished with wholesale foreclosures. There will be a trickle for some years to come. But the big job is over unless we slide into another depression. Most of the remaining owners have been cutting down their principal obligations and continue to do so every month.

To offset losses, the H. O. L. C. has its original \$200,000,000 in capital provided by the Treasury and \$69,000,000 in cash reserves. It pays administrative expenses and has a margin left for reserve against losses out of the difference between the 2½ percent it pays for money and the 4½ percent it receives.

Some H. O. L. C. officials believe that in the end the H. O. L. C. will pay out. The pessimists think it may lose as much as \$200,000,000, its original capital, which already shows up in the national debt. Nobody can be sure. The Federal taxpayer hasn't any ground for complaint yet and may never have. If the social and economic benefits of this home-saving expedition are counted, the taxpayer won't have any ground for complaint, even in the unlikely event that the H. O. L. C. loses twice its original capital.

### New Deal Financing

## EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

EDITORIAL FROM THE PITTSBURGH POST-GAZETTE

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Paul Block in the Pittsburgh Post-Gazette of February 13, 1940, entitled "Mr. Roosevelt's Financial Statements Are Both Puzzling and Shocking."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Post Gazette of February 13, 1940]

MR. ROOSEVELT'S FINANCIAL STATEMENTS ARE BOTH PUZZLING AND SHOCKING

President Roosevelt has, from time to time, made many puzzling statements, but his recent one that the Nation's total governmental debt has not increased during his term of office because the growth of Federal indebtedness has been more than offset by the decrease in local governmental debt is not only puzzling but shocking.

The New Deal's own A. A. A. has prepared figures which definitely prove that decreases in the debt of local governments have not come within billions of making up for the staggering rise in the Federal deficit under Mr. Roosevelt.

From 1932 to 1939, the debts of State and local governments were reduced from \$19,330,000,000 to \$19,200,000,000. The total decline was \$130,000,000. During the same period the direct debt of the Federal Government alone increased about \$21,000,000,000.

Thus, even if all the debts of the State and local governments in this country had been completely wiped out, it would still not have made up for the rise in the Federal debt, because the State and local debt has never been so great as the increase in the national debt under the New Deal.

It is both discouraging and rather shocking for the President to give out such figures, but it is only fair to state that the figures are not his, but are furnished him by the incompetent men who surround him. That is a subject we have mentioned often. At one time there were a number of very able men in some of the administration departments, but one by one they have resigned because they could not conscientiously continue to remain a part of the New Deal three-ring circus. The "yes" men who remain are probably giving the President figures to impress him, but which are not according to the facts.

Mr. Roosevelt's subsequent explanation that he meant to include the decrease in private debt as having helped to offset Federal indebtedness only serves to emphasize the lack of faith industry and investors have in the administration. Private debts are always down to rock bottom when business is bad. But when industry has faith and expands and investors start reinvesting, then private debts increase, and this, of course, is what the country needs.

We do not believe that anyone takes Mr. Roosevelt's financial statements very seriously. He has so often been wrong that this is not surprising. On eight different occasions he has stated that by the next year or shortly thereafter the Budget would be on the way toward being balanced. Instead, the national debt has increased each year, until now it has virtually reached its legal limit.

But why continue to hope for something Mr. Roosevelt and his administration do not know how to achieve? After more than 7 years, it is time to stop this era of unsuccessful experimenting and to place in Washington a President who will surround himself with men of experience pledged to devote all their energies to bringing back business recovery and reemployment. These advisers must include men experienced in business, in labor, and in finance.

It will be a happy day for the country when such a commission or Cabinet starts cleaning up the mess that has been created by the New Deal administration.

### Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

EDITORIAL FROM COLLIER'S WEEKLY OF FEBRUARY 12, 1940

Mr. LUCAS. Mr. President, I ask unanimous consent that an editorial published in Collier's Weekly of February 12, 1940, entitled "Let Trader Hull Trade On," be included in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Collier's Weekly of February 12, 1940]

#### LET TRADER HULL TRADE ON

It's generally agreed that no member of the New Deal Cabinet has done a better all-round job than Secretary of State Cordell Hull. And the Hull enterprise that has earned the loudest applause has been the closing of the reciprocal trade agreements with 20 nations.

It is so much the more shocking, then, to see such a storm of petty and partisan agitation dust up in Congress against the proposal to extend for another 3 years the State Department's power to make these agreements. Present expiration date of power is next June 12.

Farmers are being told that hams from Germany's part of what once was Poland are forcing American hams off the American market \* \* \* that Canadian wheat and beef, let into this country under reduced tariff schedules, are running down American prices for those commodities \* \* \* that Argentine beef is coming into the United States in million-tin lots.

Therefore it is urged that the State Department be stripped of power to make these agreements whenever and wherever it can spot a good dicker for the United States. It is further urged that the agreements themselves be thrown overboard as fast as may be.

For all this the correct word is nonsense—plus a few adjectives such as selfish, narrow-minded, and in more cases than one, false.

The fact is that the State Department in negotiating these pacts has leaned over backward to avoid cutting United States tariffs on any foreign goods that would seriously compete with similar goods produced here. The negotiations with Argentina, for example, fell through because the State Department declined to give Argentina so much as a shred of the American shirt in the matter of reducing tariffs on Argentine wheat. And this is the spirit that has governed the American end of these negotiations ever since Mr. Hull and his associates began them about 5 years ago.

Some of the tangible results have been that 10 nations have reduced their tariffs on our pork, ham and bacon; 9, Great Britain among them, have cut tariffs on our lard; while wide reductions have been made in duties on our grains and grain products, our fruits and our vegetables.

Some American toes have been stepped on, yes; but so have some toes in the 20 countries on the other ends of the trade agreements. One of the net results, though, has been that from 1935 to 1938 our exports of farm products to trade-agreement countries went up almost 50 percent. Another of the net results is that our export trade has been healthy and has been growing healthier since 1935, whereas it was in the deep blue dumps for many years before that year.

LXXXVI—App—53

In the matter of the Mexican and Bolivian oil steals, the State Department in our estimation has been a one-sided good neighbor, which is to say that it has been a sucker and a sap.

But it has done brilliant work on the trade agreements; and it has not bartered away any American markets to the villainous foreigner—who isn't any more villainous than we are, anyway.

Even more important, in a world gone mad with tariff mania and export-subsidy insanity our State Department has stood by the proposition that a nation that wants to sell must also buy; that to get business you've got to be willing to do business. On the survival of this principle depends much of the hope for a livable post-war world.

Hull has done and is doing one grand job. We're for letting the State Department carry on with the trade-agreement work—if not for the proposed 3 years after next June 12, then at least until after the next Congress has convened and the next administration has had plenty of time to get its bearings.

### Can Our Planes Protect America?

### EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

ARTICLE BY FRAZIER HUNT

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which has just appeared in the periodical called This Week magazine of date February 18, 1940. The article is entitled "Can Our Planes Protect America?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From This Week magazine of February 18, 1940]

#### CAN OUR PLANES PROTECT AMERICA?

(By Frazier Hunt)

How many military airplanes do we need? Are the 3,000 Army planes authorized last year—which will bring our total of Army planes to 5,500—enough to protect us?

And are we getting the right kind of planes? Is our air strategy correct?

One more question: Why is it that democracies can build great armies, such as the French Army, and great navies, such as the British and American Navies, and yet trail months and years behind the dictatorships in their air forces?

Some wise people argue that the answer to this last question lies in the inability of democracies to break with the status quo. Armies and navies are accepted forms of defense, while the airplane is still an imaginative weapon that has yet to prove it can win wars—or at least that was the case up to the time of the Polish debacle last fall.

When Hitler decided that he wanted a great air armada he called in Goering and told him to build, in the shortest possible time, 2,500 bombers and a balanced fleet of pursuit ships. Goering in turn called in plane manufacturers, allied industries, gun makers, instrument people. He didn't bother to ask if they could make these planes, or how long it would take, or any other silly questions. He ordered them to get busy.

When I was in Berlin 4 years ago some 2,000 of these planes had just been delivered—and the whole bunch were second rate. The builders had been in too big a hurry. Hitler and Goering were disappointed, but they simply ordered several thousand better planes. They didn't have to wrangle with Congress for the money.

Hitler and Stalin and Mussolini—and even Japan—can do just such things. Unfortunately, or fortunately, democracies do not work with such brutal efficiency.

Our military people and our Congress alike want their money's worth. When we vote \$300,000,000 to more than double our air strength, we want no reckless waste, as in that first batch of Goering's bombers. So we go slowly and feel our way. That saves money, but it wastes time—and time is the essence not only of preparedness but of war itself.

Well, are we getting our money's worth? Are the 3,000 new planes authorized—to be added to the 2,500 we already have—the sort of planes that can make us really strong defensively?

Let's look at our air situation today. On March 1, 1935, Gen. Douglas MacArthur, one of the greatest soldiers who ever graced the office of Chief of Staff, brought all the air force in continental United States together and called it the General Headquarters air force—the G. H. Q. air force. This was to be highly mobile and concentrated—an efficient striking force. In a war crisis it could be sent almost overnight to any point in the country where there were

adequate fields, and immediately thrown into action. "M day"—mobilization day—was to be any day for them. They were set apart as the minutemen of the skies.

Now, that was almost 5 years ago. On January of this year the general headquarters air force had somewhat over 400 combat planes scattered about at its various bases. That seems a pretty small number when we consider that Germany is turning out more than 1,500 planes a month, while England and France together equal or better that number. Our own plants are grinding out close to 1,000 planes a month, and soon this number will be stepped up. Yet on January 1 we had a lowly four-hundred-odd Army combat planes in all continental United States. That is less than one-fifth the number of bombers and attack planes alone that Germany used against Poland—after she had destroyed Poland's airdromes and ships on that mad day of September 1, and had the air to herself.

Let's get the picture straight. Of our present 2,500 planes, these four-hundred-odd combat ships are assigned to our continental general headquarters air force. The remaining 2,100 planes are in Panama, Hawaii, Manila, and Puerto Rico, or are training planes for our air schools and National Guard. Of the 3,000 planes in the works, or authorized, 1,600 will be combat planes. That should give us a reasonable general headquarters striking force—when we finally get the craft.

That date has been set for June 30, 1941. Sixteen months from now, if all goes well, we are to have a moderate-sized continental air force to protect the richest and most envied nation in the universe. No living man can begin to predict the state of the world and its wars by that time. It is probably the most dangerous 16 months the world has ever faced. Startling military advancements will take place—and the greatest of these will be in the field of the deadly long-range bomber.

It is this bomber, constantly lengthening its range of action, that has upset the art of war as much as did the invention of gunpowder. It has built up a whole new philosophy of diplomacy and war. Power politics, which we read so much about, are really "bomber politics," for the dictators realize that the bomber is the true expression of modern force.

Italian bomber politics drove the British fleet out of the Mediterranean in the Ethiopian crisis. German bomber politics humbled France and England at Munich, and lost them Czechoslovakia and their own self-respect.

And once Germany shifted her gears from bomber politics to actual bomber fighting, she broke the back of the inadequate Polish air force, robbed the army of its "eyes," and made troop concentrations impossible. Military experts had agreed that it would take from 3 to 6 months to bring Poland to her knees; yet within 24 hours of the start of the undeclared war, German bombers had completed the horrible job of destroying Polish airdromes, so that there was no place for the planes of France and England to land, even if they had dared attempt a rescue by air.

The devastating blitzkrieg that followed was largely predicated on the astounding victories of Goering's bombers. In a total of 7 days the remarkable teamwork of the infantry and artillery had blasted open the way for the Panzer mechanized divisions to strike their swift and deadly blows. But, our Air Corps men insist, it was the bombers that had paved the way.

And even more impressive evidence of the part that such bombers can and will play in modern warfare is the belief of our Air Corps men that Hitler may already have lost the whole war because his bombers lack a vital additional 150 miles in their operating radius. If Hitler's great fleet of bombers had a bombing radius of 750 miles instead of a maximum of 600, he might have been able to destroy England's docks, ports, factories—and possibly even her grand fleet. Only a comparatively small number of his bombers have an actual bombing radius of more than 350 or 400 miles. (Bombing radius means the distance a bomber can fly with a pay load of bombs and return.) Even with a scanty 600-mile radius, Hitler has been able to greatly curtail the operation of the proud grand fleet in the North Sea, and mine such forbidden areas as the English Channel and the mouth of the Thames.

A second factor is evident: despite his bombers' short range, Hitler might have been able to wreak untold damage on England at the very start—if he had had a great force of finely trained navigators to make the most of his available air power. But that he lacks such navigators is obvious.

And his lack of a highly perfected bomb sight may likewise have deterred him in taking this one desperate chance he had for a speedy victory against England. (Our own marvelous bomb sight, which some of our flyers claim can drop a bomb on a battleship at 15,000 feet, is one of the few great military secrets we possess.)

By spring all these three German air weaknesses will probably have been corrected. We know for certain that all the belligerents—Russia included—are building long-range bombers as fast as they can. For, if the essence of air power is in the bomber, the essence of the bomber is its range.

The other day at Langley Field I flew in one of our fabulous "flying fortresses" at better than 250 miles an hour. This plane can fly, without its pay load of bombs, more than 3,000 miles. Allowing for a comfortable margin of safety, it can fly 850 miles with two or three tons of bombs and return to its base. We will soon have several squadrons of these flying fortresses in service

that can fly in the neighborhood of 1,000 miles with their pay load, and still have plenty of gas to get home. Most of these will fly at 300 miles an hour at 25,000 feet and will be able to climb to 34,000 feet. Part of the total 181 of these heavy long-range bombers that will be in service by June 30, 1941, will be able to fly better than 1,500 miles with their bombs, and return home. And in a few years—say six or seven at the most—we, and other nations as well, will have bombers that can fly the ocean nonstop with five tons of bombs and return home.

This means that our protecting oceans may some day actually betray us. Our industries based on or near our coasts and apparently safe behind an ocean moat 3,000 miles wide, will offer ideal bombing targets in future wars. The very essence of defense against air raids is a system of far-flung listening posts that permit sensitive listening devices to sound their alarms while the bombers have yet two or three hundred miles to travel before reaching their objectives. Listening posts situated along our seacoast can warn inland cities, such as Pittsburgh, in ample time. But Boston, Hartford, Bridgeport, New York, Jersey City, Philadelphia, and a score of other Atlantic coast industrial centers have a far smaller margin of safety. The same thing is true of the industrial cities on our west coast. Listening devices placed on offshore ships, of course, can partially overcome this great handicap, but they will always be far less efficient than land-based posts.

The constantly increasing speed and range of the bombers make this geographical weakness of so many of our great cities a matter of high importance. Bombers attacking at 350 miles an hour move one-half as fast as the speed of sound—one-half as fast as the bullet from an army pistol. Incredible as it may seem, these future bombers will cover 100 miles in from 15 to 20 minutes. That leaves precious little time for the defending pursuit planes to take off and meet the attackers or for antiaircraft defenses to be manned.

Let's consider for a moment the district immediately around Greater New York. In this area almost 50 percent of the critical war materials of the United States Army and Navy are manufactured. And 18 electric plants furnish 90 percent of the power for these factories, as well as for the 12,000,000 people who live in this concentrated district.

Every alert general staff in the world knows the exact location of these power plants. And they know what their bombers of the future may be able to do to them in one great air raid. Granted that this may seem fanciful to us now, but let us speculate as to what damage these long-range future bombers might do to us—provided they were not stopped before they could get off their nests, or were not intercepted, or shot down by pursuit planes or antiaircraft guns.

New York, with its power plants out of commission, would become a shambles in 24 hours. It would be a helpless paralytic, fumbling about in a perpetual black-out. No water tap would work; almost no wheels would turn; few trains would move. Many children and invalids would almost surely die of thirst and hunger before they could be evacuated. And much of our war industries would dry up at their source.

And the New York area is only one of our highly important industrial and population centers.

In the great triangle extending from Detroit to Pittsburgh and Boston lie 90 percent of our war industries. If foreign powers continue to increase their air-offensive possibilities at the rate they are increasing today—and if we do not keep pace with them—at some not far-distant date the great triangle that is the crucible of our defense may be at the mercy of long-range bombers. Slow moving and unprepared as we are today, our condition would be utterly hopeless if our war industries were shattered, our great cities rendered helpless, and our civil morale shaken. Our powerful Navy might keep off actual land invaders, but the Navy's own shore bases would be subject to air bombardment, and unless the bombers were driven off, these bases might actually be destroyed. Save only actual defeat at sea, this is the most serious blow that could come to a naval battle force. A fleet without adequate shore bases is like a man without a home.

Now, all this may seem fantastic speculation, but in order to meet just such an imaginary threat the War Department announced a few weeks ago the tentative formation of an air defense command for the highly important industrial section of northeastern America. Using Springfield, Mass., as the center of operation, this coordinated air-defense plan would include pursuit planes, air-raid alarms, and antiaircraft guns, all concentrated under one unified command. And once this system proves its worth, other vital air-defense districts will unquestionably be laid out.

These individual areas will be guarded by three circles of defense—one inside another—to be used in case our long-range bombers fail in their missions of stopping enemy craft before they can take off. The outer circle will consist of fast, medium-range pursuit fighters. The middle circle in this scheme of defense will be the radius of safety afforded by pursuit airdromes at which swift pursuit interceptors will be stationed, ready to take off and fight those enemy bombers that have eluded the pursuit fighters. The inner circle of defenses will be made up of batteries of antiaircraft guns, which would lay sky barrages of bursting shells that the enemy must penetrate to drop its bombs within the protected area.

This is the last-word conception of modern air defense. As far as the United States is concerned it is certainly no more than a

mere conception, because at this moment we have none of the elements—long-range bombers, interceptor fighters, pursuit fighters, automatic location devices, or antiaircraft guns—in sufficient numbers to make a single American city safe, even if all we possessed in continental America were brought together. At present we have 8 antiaircraft guns to guard the whole Greater New York area. These 8 guns are actually only enough to protect a 2,000-yard radius. It is only fair to add that within a little more than a year we shall have the guns and material for 37 mobile antiaircraft regiments, but the majority of these will be National Guard troops.

Obviously all this has to do with purely defensive measures against air attack. It is an old military maxim that the only true defense is offense—and this is where the long-range bomber comes into its own.

Our flying men propose that our bombers shall have the range, the speed, the ceiling, and the bomb-carrying ability to defend our country by meeting the enemy on his own home grounds—whether those home grounds be land air bases, or aircraft carriers at sea. Their immediate concern consists in seeing that no outside country obtains any sort of air or naval base in any part of the Western Hemisphere, including its islands. Any such base might permit enemy bombers to destroy the Panama Canal—the key to our whole naval defense—and wreck naval shore bases and our great coastal cities and factories. Certainly we have laid down a definite and necessary national policy in regard to keeping Europe and Asia out of this hemisphere forever.

This is the immediate problem—and once our Air Force reaches its present expansion, and our Army, small as it is, becomes a seasoned, equipped and well-balanced machine, and our great proposed Navy attains completion, we should have little need to fear this immediate problem.

The problem that will face us in the future is paced to the increasing range of the bombers. When enemy planes can fly the Atlantic and back, then our bombers must be ready to do the same thing.

Our air expansion program calls for 178 long-range bombers by the middle of June 1941 (along with several hundred medium and light bombers). That means 178 long-range bombers out of a grand total of the 5,500 planes that will make up our projected air force. Yet the long-range bomber is our one master defensive air weapon, because it is the only one that packs a retaliatory threat, and can destroy the enemy's birds before they can get off their nests.

Certainly we need the medium bombers and the light bombers and the 800-odd topnotch swift pursuit planes that we shall have in our active combat groups by 1941. But we also need millions spent in experimenting and developing—especially in the field of heavy long-range bombers that can buy peace by their threat.

It would be a simple matter for this present Congress to appropriate an additional \$25,000,000 for pure air experimentation. Such research is all that is needed before we can build flying fortresses that can fly the Atlantic and back. Then we must see to it that our superb factories are set up to turn out these planes in sufficiently large quantities at the moment they are needed to gain for us the respect of the world.

It may be unwise to concentrate on great fleets of bombers now, but we must insist that we keep well ahead of the rest of the world in air development. It is our historic role. The first man who ever flew a plane was an American. And the first military plane ever built and sold to a government was flown by our Army in 1909. We have always been far ahead of the rest of the world in practical air machines—and it was not until Hitler took power in Germany and grasped the future military value of airplanes that America lost her lead. But we can regain it once we make up our mind that it is essential to our defense. Our civil planes are the finest in the world; our military planes must regain the same distinction.

But hand in hand with our expanding machines of the air must go a steady and ever-growing increase in our trained personnel. It takes twice as long to train a pilot as to build his plane. To fly and service a commercial air liner today calls for 4 pilots and 26 groundmen. Translate that into military terms and you get astounding figures.

Our great air program that anticipates 5,500 planes by the middle of 1941 authorizes an Army Air Corps of 40,000 enlisted men and 4,500 officers. But merely to authorize that number is a far cry from a guaranty of that many really trained men. The money must be actually voted so that this absolutely necessary increase in trained personnel can march ahead.

In the last year of the first World War splendid lads were tossed into the air over the Western Front to battle for their lives with as little of 20 hours' flying training. Air tactics were still largely in the "dogfight" stage, and the keenest and luckiest of these young eagles survived. Today it takes fully five times as long to train a flyer, and an additional year or two for him to become completely indoctrinated with modern air tactics of squadron flying. Solo fighters are largely a thing of the past. Air squadrons are as finely trained as a college football team. There are no better flying teams in the world than our own, but it has taken years to train them, and we need three or four times as many of these men.

One thing all air people insist on is that there be no "dissolution of personnel" in time of crisis. Trained flying teams must be held

together at all cost. To break up trained groups is to trade expert fighting units for "lots of nothing."

To meet this crisis, nine civilian air schools have been virtually taken over by the Government to be used for primary training. Cadets fortunate enough to pass through this primary course are next sent to Randolph Field for the basic training, and then to Kelly for their advanced course. Finally, they receive their completed training with the General Headquarters force itself. At present there are 1,163 cadet flyers enrolled, and about half of them will be able to last through the rigorous steps. Enlisted mechanics are at the same time being trained for their highly specialized duties, first at Scott Field, near St. Louis, and then at either Chanute or Lowry Field. And with these two expanding programs goes the ambitious plan of the Civil Aeronautics Authority to give air training to 20,000 college men during 2 years of their college course; this training will equal the primary course at the regular air schools. Thousands of students are also taking aeronautical engineering courses at a number of our universities. Hundreds of other young men are being trained in commercial flying. And our Clipper ships are the finest possible training schools for navigators and specialists.

All this is slowly building a great and valuable reservoir of flyers and groundmen, at least partially prepared for some dreaded M-day, when war will break out of the blue skies upon us. The 10,000-mile bomber, with a round-trip, nonstop bombing radius of 3,500 miles, is only a few short and dangerous years away. This long-range bomber cannot alone actually win wars of the future, but it can so cripple an enemy that its fighting resistance is almost nil. Certainly the bomber is the most terrific and deadly striking force ever put at the disposal of a military commander—or dictator. It can make victory possible. It is the new third dimension in war.

Enemy bombers alone can never conquer America, but they can cripple us, humiliate us, and reduce our great cities and industrial centers to a bloody shambles. Only soldiers with bayonets can really occupy and conquer a country, but the heavy, long-range bomber can spread death and despair.

Some Army flyers insist long-range bombers could sink battleships. No one knows for certain how true this daring statement may be; the North Sea may soon serve as the stage for this mighty drama of war to unfold its last act. But we do know that there is no limit to the size and striking power of the bombers of the future.

They threaten our peace and our very existence. And we can meet this threat only by an even greater retaliatory threat—by an unparalleled fleet of these deadly war birds.

Let Congress vote us hundreds of these peace guarantors.

Let the President insist on more and greater joint air maneuvers between the air forces of the Army and Navy. Let the whole Army—Air Corps and Navy team—continually practice their great and vital defense problems together.

In the new and important bases being built in Puerto Rico for Panama Canal and hemisphere defense, the Army air field and the Navy air field, instead of being built as a joint base, have been constructed a few miles apart at an extra cost of millions of dollars. There are unquestionably some valid technical reasons for this, but had there been a stronger desire for complete cooperation, a joint base might have been worked out. Both Army and Navy insist that separate fields are necessary, because their problems are different.

But are they really so different? Are not their fundamental problems the simple ones of helping to make America safe from foreign aggression—and at the lowest cost? Our Army and Navy officers are intelligent and patriotic men, but in these times of danger they must forego a little of their intense loyalty to their own branches of the service and throw themselves wholeheartedly into solving our problem of national defense.

Until recently the Navy high command insisted that the Army Air Corps had no business flying more than 100 miles out to sea. The sea belonged exclusively to the Navy. Yet we owned Army bombers that could carry death to such enemy ships as aircraft carriers and troop transports almost a thousand miles offshore. And with the immediate problem of patrolling the new 300-mile safety belt around our continents, Army and Navy people soon came to a working arrangement.

Our problems of hemisphere defense are the very heart of our national safety. We must get ready—stay ready—and then stay out of European and Asiatic wars. We have only to plan and execute ample air, navy, and army defenses for our American world. Then we must stick to this plan through thick and thin. It must be as secure 5 years from now as it will be next year.

From the point of view of the air, to be safe we must have:

More money for air research.

More long-range bombers—or at least the manufacturing facilities to turn them out by the hundreds when really needed.

More fully trained and experienced air personnel.

More antiaircraft defenses—including men, guns, automatic location devices, searchlights, and combat pursuit squadrons.

And our Army, Air, and Navy men must work closer and closer together on such vital items as defense plans, supplies, and training.

Only then can we hope to make America safe from some fantastic blitzkrieg of the future.

# Grand Coulee Appropriations and How They Are Spent

EXTENSION OF REMARKS  
OF  
HON. CHARLES H. LEAVY  
OF WASHINGTON  
IN THE HOUSE OF REPRESENTATIVES  
Monday, February 19, 1940

STATEMENT BY HON. JOHN C. PAGE

Mr. LEAVY. Mr. Speaker, we will shortly be giving consideration to making further appropriations to continue and work toward the completion of one of the greatest engineering constructions ever undertaken by man—the Grand Coulee Dam—which is located in eastern Washington, part in my district and part in the district of my colleague from Washington [KNUTE HILL].

Due to the fact that so many of our colleagues on the floor of this House from the eastern section of the United States have based their criticism of the huge expenditures required in this giant undertaking on the ground that the money was being spent out in the Northwest, I desire to place in the RECORD a break-down showing how and where these appropriations have been spent, in the first instance, and include with such break-down the statement by the Honorable John C. Page, Commissioner of the United States Bureau of Reclamation, which is a part of his report to Secretary of the Interior, Harold L. Ickes.

The tabulation of expenditures, together with Mr. Page's statement, is as follows:

STATEMENT BY HON. JOHN C. PAGE

Of \$102,382,000 spent up to January 1, 1940, in the construction of Grand Coulee Dam on the Columbia River in Washington, \$61,427,266—more than 60 percent—went directly for the purchase of materials and supplies that rang cash registers in all 48 States and the District of Columbia.

Expenditures of more than \$3,000,000 have been made in each of four States, Washington, California, Pennsylvania, and Illinois; of more than \$2,500,000 in each of 5 States, Indiana being added to the other 4; of more than \$2,000,000 in each of 6 States, New York being added; of more than \$1,500,000 in each of 8 States, Alabama and Oregon being added; or more than \$1,000,000 in each of 9 States, New Jersey being added; and of more than \$500,000 in each of 13 States, Colorado, Maryland, Michigan, and Wisconsin being added. Expenditures of more than \$100,000 have been made in just one State less than half the whole 48, or 23.

While the States of Washington and California lead in the amounts spent within their borders for materials, equipment, and supplies by the contractors and by the Bureau of Reclamation, large parts of the totals shown for these States have gone to areas east of the Rocky Mountains. Except for cement, by far the greater amount of expenditures made in Washington, for example, went for materials bought from local dealers representing some eastern manufacturer of trucks, automobiles, tractors, steel cable, and a wide variety of supplies.

An outstanding example of this type of expenditure is found in connection with the contract for the fabrication of the large steel penstock and outlet pipes used in the dam. The materials for the pipe are shipped from Alabama, Indiana, Illinois, and Ohio, and the work of fabrication is done near the dam site, but the payments are made at the home office of the contractor, the Western Pipe & Steel Co., of San Francisco, and consequently all the expenditure falls within the total credited to California.

No attempt has been made, however, to trace back to the actual manufacturer the many items of this sort which appear in the totals for Washington, Oregon, and California.

More than 60 percent of the money used to date in the construction of Grand Coulee Dam has gone directly into the purchase of materials, machinery, and supplies, and this represents industrial business and industrial employment from coast to coast. It is clearly indicated that more than 40 percent of all the expenditures have been made in industrial centers east of the Mississippi River.

This means that construction of Grand Coulee Dam, located 92 miles west of Spokane, Wash., has increased the pay rolls in towns and cities so far removed that many of those directly benefiting from the job might have difficulty in finding the Columbia River on a map.

The following is a tabulation of the expenditures made for these items by States:

Sources of equipment and supplies for Grand Coulee Dam—Actual expenditures to Jan. 1, 1940

State	First contract		Second contract, to Jan. 1, 1940		Total
	M. W. A. K.	U. S. B. R.	C. B. I.	U. S. B. R.	
Alabama.....	\$3,526	\$404,697	\$145,000	\$1,016,705	\$1,569,928

## Air Service to South America

## EXTENSION OF REMARKS

OF  
HON. LOUIS LUDLOW

OF INDIANA  
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 15, 1940

Mr. LUDLOW. Mr. Speaker, in preparing the Treasury-Post Office Departments appropriation bill for the fiscal year 1941 our Subcommittee on Appropriations took cognizance of the need for strengthening the air service between the United States and Latin-American countries and provided for increased frequencies along both the east and west coasts of South America. It was thought that with European air service to South America bogging down on account of the war, now is a very opportune time to bring about the establishment on a permanent basis of adequate air service to the countries on that continent for the improvement of future trade and commercial relations; but paramount even to that consideration was the thought that an increase of air facilities would serve to bind into closer ties of amity and cooperation the countries that are associated in a political union for the defense of the Western Hemisphere under the Monroe Doctrine.

It was this latter aspect of the situation that induced me to write a letter to Hon. Cordell Hull, Secretary of State, ask-

ing his views in regard to the desirability of the proposed increase of air-transport facilities on the two coasts of South America; and as I believe there is a public interest in the correspondence between Mr. Hull and myself, I herewith submit it for the RECORD, as follows:

My letter to Mr. Hull:

DEAR MR. SECRETARY: The Appropriations Subcommittee, of which I am chairman, which prepares the Post Office and Treasury Departments' supply bill, has before it estimates for increased air-mail frequencies on both the east and west coasts of South America which would involve a considerable annual outlay. The foreign air-mail service is far from being on a paying basis, and these additional facilities would increase the annual subsidy in that service. Naturally, we are loath to authorize these increased frequencies unless we can foresee substantial benefits resulting therefrom.

At the same time we are confronted with the impelling argument that the present situation affords a splendid opportunity to establish on a permanent basis advantageous trade relationships with Latin-American countries, and we are not oblivious of the possibility that there may be reasons of the highest political importance which suggest the wisdom of creating and fostering ties of amity with our southern neighbors through the medium of air service.

I know this is a matter to which you have given personal attention, and as your views are held in the highest respect I would appreciate having your opinion as to the value of increased mail service on the east and west coasts of South America, especially in relation to the creation of a better feeling and understanding between the United States and the other countries in the Western Hemisphere.

Very sincerely yours,

LOUIS LUDLOW,

Chairman, Post Office and Treasury Departments' Appropriation Bill.

Mr. Hull's reply:

FEBRUARY 13, 1940.

MY DEAR MR. LUDLOW: I refer to your letter of January 15, 1940, requesting an expression of views of this Department regarding the proposed increase of air-transport facilities on the east and west coasts of South America.

As you are aware, it is the constant desire of this Government to cultivate the closest possible ties with the other American republics. Improved transportation facilities play an important part in the furtherance of this policy, and United States air-transport services have already made a notable contribution in that field.

Last year witnessed the tenth anniversary of several of the United States-South America air services, and during that decade very significant progress was recorded both in dependability and speed. In 1930 it required 10 days to go from Washington to Buenos Aires by air; today the same trip is made in approximately 5 days. Commercial aviation, by opening new prospects for the development of trade and by quickening the tempo of business and social relations, has already exerted a profound effect on the life of the New World.

Great as past progress has been, I am of the opinion that we as yet have hardly crossed the threshold of the development of international aviation. For example, the value of air services in the promotion of tourist travel has already been demonstrated, since one of the principal deterrents to travel between the Americas in previous years has been the amount of time required for such trips. Although there has been a gratifying increase during the decade in the number of tourist passengers carried in each direction, full advantage of this possibility cannot be taken until a greater frequency of service has been established.

As illustrative of the desire of the governments of the American republics to encourage the further increase of transport frequencies, attention is invited to the following resolution adopted at Lima, Peru, in 1937, during the Inter-American Technical Aviation Conference:

"VI. INCREASE IN SCHEDULES IN INTERNATIONAL AIR TRANSPORTATION

"The Inter-American Technical Aviation Conference considering:

"That the development of political, economic, and social relations between the countries of America requires that service on international airlines be as frequent as possible;

"That the establishment of international air services has resulted in closer relations between the countries of America, with evident benefit to the interests of the American continent and of each country in particular;

"Recommends:

"That the governments of the American republics urge international air-transport companies to increase their schedules as much as possible."

The desirability of improving communications generally was also recognized in resolutions adopted at the meeting of Foreign Ministers of the American Republics at Panama last October.

The factor of foreign competition likewise merits consideration. In order to preserve the enviable position achieved by United States aviation services in the New World constant progress must be maintained. While the present activities of foreign services in South America have naturally been curtailed or retarded as a result of

the war, there seems to be no doubt but that the conclusion of hostilities will be followed by strong renewed efforts in that area.

With all of the foregoing factors in mind, it is believed that advantage could well be taken of the present opportunity to increase the frequencies of United States air transport services, to the extent that the Congress may be disposed to appropriate funds therefor.

Sincerely yours,

CORDELL HULL.

## Water Conservation, More Important Now Than Ever

### EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

### REPORT BY GEOLOGICAL SURVEY

Mr. LEAVY. Mr. Speaker, we have just concluded hearings before the Interior Subcommittee on Appropriations, of which I am a member, and when the record of those hearings is printed and made public the reader will find running throughout them evidence that is most alarming in reference to the deficiency of rainfall in recent years.

We people in the great West have long since learned the value of water conservation. The wide extent of the deficiency in precipitation during the year 1939 has brought home to millions of people, living in the eastern half of the United States, in the region that is commonly called the humid area, the great significance that water has in maintaining both animal and plant life.

The United States Geological Survey on February 8 of this year released a statement that covers many sections of the United States, and gives a table containing a summary of the effect of the drought on selected streams, and in order that the membership of this House and the country at large may be more fully informed on this important matter, I am making it a part of the RECORD.

The alarming situation presented by this report of the Geological Survey is the fact that we are going into the crop season of 1940 threatened with even a greater water shortage than existed in 1939. How important, therefore, it is that we expand rather than contract the activities of the Federal Government in the field of water conservation and utilization.

The report follows:

[U. S. Department of the Interior, Geological Survey]

Although the snows now blanketing parts of the United States between the Alleghenies and the Rockies are tending to temper the drought situation which had threatened to become one of the most severe in 60 years, there will have to be additional replenishment or the 1940 growing season will begin with abnormally low water supplies, the Geological Survey, Department of the Interior, said today.

Precipitation during December continued below normal in all regions except the Pacific Northwest and Nebraska. The maximum deficiency during that month occurred in Arizona and Utah, being 29 and 37 percent respectively of normal. District engineers of the Survey report that some small streams and shallow wells in the Great Plains region have failed as water sources.

Climatic trends during the winter and spring months will be most important in the west central Great Plains region where there occurred the greatest annual deficiency. Precipitation in Nebraska was 69 percent of normal and in Colorado 65 percent.

Stream flows in the drought areas during the past year were as low as 26 percent of normal, and to date the flow has not increased appreciably, the Geological Survey reported. In West Virginia, the stream flow during the 5-month period August-December in three streams averaged only about 30 percent of normal.

The flow of the Red River at Fargo, N. Dak., which was zero during September, has increased to an average of 16 second-feet; the flow during the period between October 1, 1938, and September 30, 1939, averaged 179 second-feet, which in itself was only 41 percent of normal.

In the Tennessee River Basin where the run-off for the calendar year was practically normal, the discharge this winter has approached the minimum of record, being 1,650 second-feet on the Tennessee River at Knoxville November 15, compared to the minimum of record of 1,390 second-feet reached in September 1925.

The following table contains a summary of the effect of the drought on selected streams during 1939:

Stream	1939 discharge	
	Second-feet	Percent of normal
Tygart River at Belington, W. Va.	1 138	33
Guyandot River at Branchland, W. Va.	1 130	26
Elk River at Queen Shoals, W. Va.	1 270	26
Scioto River at Hgby, Ohio	2 420	
Miami River near Hamilton, Ohio	2 640	
Green River at Livermore, Ky.	3 554	
Cumberland River at Burnside, Ky.	3 262	
Cumberland River at Celina, Tenn.	4 11,290	93
French Broad River near Newport, Tenn.	4 2,570	137

Green River at Green River, Utah		66
Verde River near McDowell, Ariz.	4 508	64
Salt River near Roosevelt, Ariz.	4 485	50

<sup>1</sup> Mean flow August-December 1939.

<sup>2</sup> Mean flow October-December 1939.

<sup>3</sup> Mean flow September-December 1939.

<sup>4</sup> Calendar year.

<sup>5</sup> October-December 1939 inclusive.

<sup>6</sup> July-December, 1939.

<sup>7</sup> January-November 1939, inclusive.

<sup>8</sup> December 1939.

<sup>9</sup> Percent of flow during October 1934-April 1935 drought.

<sup>10</sup> During October, flow began again in November, almost reaching 10 second-feet by end of year in comparison with a normal of between 30 and 50 second-feet during November and December.

<sup>11</sup> Minimum discharge during 1939.

<sup>12</sup> Minimum discharge of record, in second-feet.

<sup>13</sup> Mean flow September-December 1939, inclusive.

## Return on Common Stock of Potomac Electric Co. 64 to 75 Percent Annually

### REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 14, 1940

Mr. RANKIN. Mr. Speaker, I have lost a perfectly good suit of clothes.

The gentleman from Pennsylvania [Mr. RICH] voluntarily proposed the other day if I would show him that the Potomac Electric Co. was making 70 percent annually on its common stock he would give me a good, new suit of clothes. He did not ask me to bet with him. He said, "We are both members of the church and should not bet," but said he would make me a present of a new suit if I could show that this company made 70 percent on its common stock last year.

I went to work and dug into the proposition. I found, on investigation, that it earned only 64 percent on its common stock last year. While this company earned 74.9 percent on its common stock in 1937, it earned only 64 percent in 1939, knocking me out of this free suit of clothes by a mere 6

percent, although the power consumers of the District were overcharged about \$3,000,000.

From press reports we learn that the Public Utility Commission of the District of Columbia has issued an order providing a rate reduction to the electric consumers in the District, amounting to \$575,029 a year, when it should have been at least \$3,000,000 a year.

This order allocates \$155,375 to residential consumers, \$419,912 to commercial consumers, out of the total amount of \$575,029. This is a ridiculously low reduction when the local company is earning 64 to 75 percent per annum on its common stock. This reduction averages only 10 cents a month for each residential consumer. The mountain has labored and brought forth a mouse.

The press release given out at the time of the issuance of this order states that an unofficial comparison of the local power rates with the rates of other communities or of other cities of more than 50,000 population as reported last year by the Federal Power Commission for average electric bills, showed that the District rates were lower than the others, except in the industrial bracket, and that Washington has little demand for industrial schedules. This press release is not an accurate statement of fact, and it seems strange that such erroneous impressions should be given to the people of the District. Anyone who is interested should compare Washington bills with the T. V. A. rates at Tupelo, Miss., or Knoxville, Tenn., or with the rates in Tacoma, Wash., or Ontario, Canada.

It is not a proper defense to a charge of larceny for the defendant to plead that others are just as bad as he is, or worse.

On February 22, 1939, I covered the local power situation in a speech before the House entitled "Adequate Defense for the Nation's Capital and Full Protection for the People of the District of Columbia." In this address I made a complete analysis of the power, flood-control, and the national-defense power requirements of the Nation's Capital, and it is my desire to bring the results of my previous research down to date. Nothing has occurred within the past year to alter any of the conclusions I presented a year ago.

### RESIDENTIAL AND COMMERCIAL CONSUMERS

Within the District of Columbia, in 1938, there were 134,726 domestic consumers. These consumers had a yearly total of 142,891,000 kilowatt-hours registered on their meters. This represents an average monthly use of 88 kilowatt-hours. This consumption under Tupelo rates would be billed at \$2.01, and under the new Washington rates at \$2.40. The annual saving per bill at Tupelo compared with Washington would be 39 cents per month, or \$4.68 per average customer-year. This means that the 134,726 residential consumers in Washington, D. C., are overcharged \$631,000 per year. If Washington had the T. V. A. rates and the duplicating of meters were eliminated, the residential consumers here would probably use an average of from 200 to 500 kilowatt-hours a month with a saving of several million dollars a year.

In the same period 21,809 Washington commercial consumers consumed 171,029,000 kilowatt-hours, or an average of 654 kilowatt-hours per month. The average monthly consumption at Tupelo would be billed under existing schedules at \$12.29, and in Washington under schedule D at \$15.89. The average Washington consumer pays \$43.20 more per year for this consumption than does the Tupelo consumer. This represents an overcharge on the 21,809 consumers of \$940,000 per year.

If Washington had the same commercial rates as Tupelo, Miss., these commercial consumers would probably use an average of 2,000 kilowatt-hours a month, in which event they would save several million dollars a year.

These changes are coming. The utilities cannot continue to keep the American people in the dark.

The sum of the above Washington residential and commercial overcharges amounts to \$1,571,000. By the same process it is found that the street light, industrial, and public consumption is overcharged \$1,187,171 per year.

For the benefit of my colleagues I am presenting a table showing the Washington, D. C., and Tupelo, Miss., billings for residential and commercial service under different monthly consumptions, with the difference in bills.

The Washington, D. C., electric company produces and purchases current at a lower figure than does Tupelo. What reason can there be for charging such an excess in the District of Columbia?

Read the following comparison of monthly electric bills in Washington, D. C., and Tupelo, Miss., and you will see why the average monthly domestic consumption is twice as much in Tupelo as it is in Washington.

## RESIDENTIAL BILLINGS

Kilowatt-hours used per month	Monthly bill		Monthly difference
	Washington, D. C.	Tupelo, Miss.	
50.....	\$1.74	\$1.25	\$0.49
100.....	2.61	2.25	.36
200.....	4.48	3.75	.73
500.....	8.98	6.15	2.83
1,000.....	16.48	8.15	8.33
2,000.....	31.48	13.95	17.53
3,000.....	46.48	20.95	25.53
4,000.....	61.48	27.95	33.53
5,000.....	76.48	34.95	41.53

## COMMERCIAL BILLINGS

Kilowatt-hours used per month	Monthly bill		Monthly difference
	Washington, D. C.	Tupelo, Miss.	
50.....	\$1.90	\$1.25	\$0.65
100.....	3.50	2.50	1.00
200.....	5.80	4.75	1.05
500.....	12.66	10.75	1.81
1,000.....	23.16	15.75	7.41
2,000.....	44.16	25.75	18.41
3,000.....	65.16	33.75	31.41
4,000.....	86.16	41.75	44.41
5,000.....	107.16	49.75	62.41
7,500.....	159.60	69.75	89.85
10,000.....	212.10	89.75	122.35

Washington bills are those under recent schedule D.

If Washington had the Tupelo, Miss., rates thousands of people would heat their homes with electricity, just as large numbers are doing in Tupelo.

The time is coming when electric heat will be commonly used, but that time will not come to any community as long as it has to pay private utilities the exorbitant rates they now charge.

People have been heating their homes with electricity in Ontario, Canada, for more than 25 years. Many of them build their houses without chimneys, just as they are doing in Tupelo, Miss., today. It is the cheapest and most desirable heat we can get when distributed at reasonable rates.

It is the nearest akin to summer sunlight of any heat known. It leaves no ashes, no cinders, no smut, no grease, no vapors, no noxious fumes, or poisonous gases, and it does not burn the oxygen out of the air but heats it whole.

Since rates have been reduced in Tupelo large numbers of people heat their homes throughout with electricity, and that number is rapidly increasing from year to year.

I have before me here a letter from a friend in Tupelo who says that he lives in a seven-room house which he formerly heated with coal and gas, but that 3 years ago he changed over to electric heat, which has proved not only satisfactory but more economical, and more than satisfactory from a health standpoint.

In this home he has lights in the house and his yard, two radios, an electric iron, an electric refrigerator, an electric range, water heater, food grinder, grill and fans, vacuum cleaner, and heating units throughout the house. He used in the month preceding his letter 1,925 kilowatt-hours of electricity, which cost him \$12.60.

Another one writes that he has lights, radio, refrigerator, iron, range, fans, vacuum cleaner, water heater, and heats his house throughout with electricity, and that during the preceding month used 1,787 kilowatt-hours of electricity, which cost him \$12.05.

Another one who has lights, radio, refrigerator, iron, range, water heater, fans, and vacuum cleaner, and has his house

heated throughout with electricity, used 1,627 kilowatt-hours of electricity 1 month, which cost him \$11.41.

Another one with the same appliances and who heats his house throughout with electricity used 1,975 kilowatt-hours of electricity 1 month, at a cost of \$12.80.

I have one here from a civil engineer who owns a seven-room bungalow. He has lights, radio, refrigerator, iron, range, water heater, grill, fans and vacuum cleaner, and heats his house throughout with electricity. He used 2,706 kilowatt-hours of electricity 1 month, for which he paid \$15.72.

Since these letters were written the rates in Tupelo have been reduced again, which would bring these bills even lower.

These are the benefits we are trying to bring to all the electric consumers of the Nation, and especially to the people in Washington, the Nation's Capital, where the example should be set.

I call attention to the fact, also, that in nearly every residence, or apartment, or business establishment, in the District of Columbia, the power company has two or more meters, in order to compel the consumers to pay the top rate for the power used.

Let me also remind the House, again, that the Potomac Electric Co. can either produce or buy its power, wholesale, at a much lower rate than Tupelo, Miss., pays for T. V. A. power, and that, while the Potomac Electric Co. pays only from 4 to 6 percent of its gross income for local taxes, the Tupelo Electric System pays in lieu of taxes from 8 to 10 percent of its gross income—and then makes a net profit of \$40,000 a year, after meeting all its overhead expenses, sinking funds, interest on its indebtedness, and paying the city 6 percent on the entire investment in its electrical system. Anyone who is really interested in this subject can verify these rate comparisons, even for his own community, by consulting the Electric Rate Book, which he can purchase from the Federal Power Commission.

## POTOMAC VALLEY AUTHORITY

I have introduced a bill, H. R. 2749, setting up a Potomac valley authority. Such an authority is a national necessity from the standpoint of national defense, flood control, as well as for the establishment of a fair yardstick for the protection of the electric-rate payers of the District of Columbia and the surrounding territory.

It will be noted in the press release above referred to that justification for the high industrial rates in the District is based on the theory that there is little demand for industrial power in Washington.

Everyone in this House knows as well as I do that every activity in any defense program radiates from Washington. The strategic gun and naval supply factories are located within the District or within short transmission distance of the power sources supplying the city of Washington. There is a definite power shortage in this area. Electric power is the basic element in any modern defense program. Under a power shortage our defense facilities will break down, as they did in the World War. A chain is no stronger than its weakest link.

The bill that I have introduced will augment an inadequate power supply, will control floods, improve navigation on the Potomac River, and furnish an ample supply of electric energy at reasonable rates to industrial activities and to the domestic and commercial consumers, who need greater protection than is given under the application of the present regulatory statute. Rate regulation in the District of Columbia is better than in the average State, but, nevertheless, as I pointed out a year ago, it is an ineffective and obsolete method of protecting the consumer. What we need is a fair and honest yardstick to enable the electric consumers of the Nation to judge for themselves as to the true cost of distributed energy. When such information is available and is thoroughly understood, the people, through their representatives, will be able to act. We should set an example here in the National Capital for the guidance of the entire Nation.

This is easily possible, as I demonstrated last year, from the official earnings and operating statements of the Potomac

Electric Power Co., which serves the District and suburbs. This "lily white" private power company is still taking extortionate tolls from the people of the District, as I will show as I go along.

#### TEN CENTS PER MONTH

The rate reduction of 10 cents a month per residential consumer, to which so much publicity has been given, resulted from the operation of the sliding-scale plan of annual adjustment of electric prices. In my speech of last year, I pointed out the jokers in the consent decree, jockeyed through an unsuspecting court by the legal emissaries of the North American Co. This consent decree was supposed to be based on paragraph 18 of the act of 1913. The 1913 Regulatory Act permitted, with the consent of the Commission, a sliding scale of rates and dividends, according to what is commonly known as the Boston sliding-scale plan. I analyzed the genesis of the sliding-scale plan and pointed out the interlocking devices that should connect rates and dividends. In the application of the sliding-scale plan the consent decree covered only a sliding scale of rates and omitted all reference to dividends.

#### ANNUAL PROFIT OF 75 PERCENT

I further pointed out in detail how the application of the consent decree represents a violation of the intent of Congress. Although the top step of the domestic rate has been 3.9 cents since 1932, the common stock has earned from 62.4 percent annually in 1932 to 74.9 percent in 1937.

In table 1, given on page 2540 of the CONGRESSIONAL RECORD of February 22, 1939, I presented a financial statement showing the net earnings available for dividends and the percent earned on the common stock from 1914 through 1937. These years represented the latest information available at the time I made my previous study. To bring this table up to date, I am presenting evidence showing the earnings and the percent earned down to and including the calendar years 1938 and 1939.

TABLE 1.—Stock earnings, Potomac Electric Power Co., compared with rate index

BEFORE CONSENT DECREE, REPRESENTATIVE YEARS							
Calendar year	Top residential rate index, cents per kilowatt-hour	Amount available for dividends	Amount preferred stock outstanding	Amount paid on preferred stock	Amount common stock outstanding	Amount available for common-stock dividend	Percent earned, common stock
1	2	3	4	5	6	7	8
1914.....	10	\$617,425	\$250,000	\$25,000	\$5,750,000	\$592,425	10.3
1915.....	10	666,942	250,000	27,500	5,750,000	639,442	11.1
1918.....	10	568,780	250,000	27,500	5,750,000	541,280	11.0
1920.....	10	532,818	250,000	20,000	5,750,000	512,818	8.0
1923.....	10	1,020,896	250,000	25,000	5,750,000	1,004,896	17.5
AFTER CONSENT DECREE							
1925.....	7.5	\$2,295,724	\$2,000,000	(1)	\$6,000,000	\$2,295,724	38.3
1926.....	7.0	2,598,117	2,000,000	\$106,128	6,000,000	2,491,989	41.5
1927.....	6.25	2,932,162	7,000,000	248,702	6,000,000	2,683,465	44.7
1928.....	5.9	3,699,677	7,000,000	392,030	6,000,000	3,307,647	55.1
1929.....	5.2	4,120,136	7,000,000	394,917	6,000,000	3,725,219	62.1
1930.....	4.7	4,471,725	7,000,000	394,911	6,000,000	4,076,804	68.0
1931.....	4.2	4,471,725	7,000,000	394,970	6,000,000	3,872,704	64.6
1932.....	3.9	4,267,674	7,000,000	395,045	6,000,000	3,746,959	62.4
1933.....	3.9	4,142,004	7,000,000	395,044	6,000,000	3,619,120	60.4
1934.....	3.9	3,598,793	7,000,000	395,045	6,000,000	3,203,748	53.5
1935.....	3.9	3,607,267	7,000,000	395,044	6,000,000	3,212,223	53.5
1936.....	3.9	4,246,041	7,000,000	395,045	6,000,000	3,850,995	64.4
1937.....	3.9	4,886,974	7,000,000	395,044	6,000,000	4,491,930	74.9
1938.....	3.9	4,187,909	7,000,000	395,000	6,000,000	3,792,909	63.2
1939.....	3.9	4,230,271	7,000,000	395,000	6,000,000	3,835,271	64.0

<sup>1</sup> No dividend paid on preferred in 1925 as new issue put out at end of year. Columns 3 to 7, inclusive, taken from reports, Public Utilities Commission, District of Columbia.

<sup>2</sup> Reductions given in each year by reducing bottom steps of rate from 3 cents to 2, 1.5, and intermediate steps from 3.8 cents to 3.6 cents, 3.3, 2.0, 1.9, and 1.8 cents, respectively.

<sup>3</sup> 50 kilowatt-hours included in first step.

<sup>4</sup> 45 kilowatt-hours included in first step.

Earning data secured from Public Utility Commission of the District of Columbia.

It will be noted from this table that as the sale price to the ultimate consumer decreased, the net earnings of the common-stock holder increased. When the electric consumer

in Washington was charged 10 cents per kilowatt-hour on the first step of the residential rate, the power company earned around 10 percent on the common stock. In 1937 with 3.9 cents top rate to the domestic consumers, the company earned practically 75 percent on its common stock, and in 1938 the company earned 63.2 percent, and in 1939, 64 percent on its common stock. The decrease from 75 percent to 64 percent results largely from the issuance of \$5,000,000 of additional bonds during the period from January 1, 1938, to December 31, 1939, and transfers of large blocks of energy to Baltimore.

The power company stated, as justification for the issuance of these additional bonds, that \$1,500,000 of the proceeds of the issue would be applied to its working capital account to reimburse the company for capital expenditures made for extensions, additions, betterments, and improvements to its plant and property. The balance of \$3,500,000, so the company stated, would be used for future additions. To meet the criticism that I have previously raised about the amount of common-stock earnings, additional bonds have been issued. The charges on those bonds reduce, naturally, the amount available for dividends. Over 90 percent of the total investment in the company's Washington properties have been paid for by the rate payer, through the operation of this so-called sliding-scale plan.

This local company is able to operate because of congressional sanctions. This authority, when combined with the consent decree, gives the few ultimate owners of the common stock a guaranteed earning power of 60 to 75 percent annually, has built up, with little or no investment on the part of the common-share holder, a property account of from \$25,000,000 to \$80,974,758 in 1939.

How can Congress justify such unreasonable earnings? How can Congress explain to the hard-pressed American farmer, and overburdened consumers of electricity, that through its sanctions it allows a few yacht-riding millionaires a guaranteed right to earn from 60 to 75 percent annual dividends on their common stock?

#### EXCESS EARNINGS

In my previous analysis, I pointed out that the excess annual earnings of the local power company over a fair 10-percent dividend allowance amounted to \$3,981,930 per year. This figure was calculated from the latest data available at the time of my previous study. A 10-percent dividend return is a fair measure of what the common stock should earn. All the English statutes on which the Washington sliding scale plan is supposedly based, limit dividends to this amount. If the T. V. A. yardstick rates were put into effect in Washington, the immediate cost would be \$2,758,171 for the first year, or less than the excess earnings permitted. With the lowering of rates, the consumption would increase in the succeeding periods and the amount of the rate reduction would be recovered in a comparatively short time.

#### COMPANY'S EARNINGS

For the benefit of my colleagues, I am presenting data on the gross earnings and kilowatt-hour consumption for the calendar years 1938 and 1939 in order to bring up to date the data which I have previously submitted.

TABLE 2.—Revenues and consumption, Potomac Electric Power Co., years 1938 and 1939

Energy sales	Year 1938		
	Kilowatt-hour sales	Revenue	Cents per kilowatt-hour
Residential sales.....	185,095,817	\$5,092,089	2.75
Commercial sales.....	491,044,907	8,224,250	1.67
Public lighting sales.....	26,187,979	855,169	3.28
Railways and other electric companies.....	94,340,696	667,907	.707
Total.....	796,669,399	14,839,416	1.862
Other electric revenues.....		207,454	
Total gross-operating revenues.....		15,046,870	

TABLE 2.—Revenues and consumption, Potomac Electric Power Co., years 1938 and 1939—Continued

Energy sales	Year 1939		
	Kilowatt-hour sales	Revenue	Cents per kilowatt-hour
Residential sales.....	200,492,121	\$5,266,034	2.62
Commercial sales.....	547,617,192	8,798,083	1.61
Public lighting sales.....	26,235,497	867,335	3.31
Railways and other electric companies.....	99,355,515	695,570	.70
Total.....	873,700,325	15,627,024	1.795
Other electric revenues.....		215,188	
Total gross-operating revenues.....		15,842,212	

## EXCESS EARNINGS AND COST OF PRODUCTION

In table I for the calendar year 1939 I have shown that the net earnings up to common-stock dividends amounted to \$3,835,271, or 64 percent on the common stock. A 10 percent annual allowance for common-stock dividends would amount to \$600,000. Taking 10 percent as a fair guaranteed common-stock earning for a company affected with a public interest and using public property for its facilities, we find that the excess earnings in 1939 amount to \$3,235,271.

On page 2544 of the RECORD of February 22, 1939, I presented a table listing classes of service, and showing that it would have cost \$3,735,400 to reduce the 1937 average Washington rate to the T. V. A. yardstick level.

In 1937 the average sale price for all classes of service was 2.015 cents per kilowatt-hour, as given on page 44 of the Twenty-sixth Annual Report of the Public Utilities Commission of the District of Columbia. In the year 1938 this average sale price was 1.862 cents per kilowatt-hour, and in the year 1939 was 1.795 cents per kilowatt-hour. Because of sliding-scale rate reductions in 1938 and 1939 and increased use, together with the sunlight of publicity, the average rate has dropped 10.8 percent between 1937 and 1940. If the 1937 estimated cost of rate reduction to T. V. A. levels is lowered by the drop in average rate between 1937 and 1940 and further reduced by the \$575,029 reduction just granted, it is easy to see that the estimated cost of reduction to T. V. A. levels would amount to \$2,758,171 a year. This cost is 14.5 percent lower than the excess earnings over a 10-percent common-stock return.

In 1938 the reductions given amounted to \$770,080 and in 1939 to \$393,986. They should have amounted to at least \$3,000,000 a year.

The following comparative table shows the relationship between total Washington gross earnings and the average over-all rate:

Year	Total gross earnings	Average rate, cents per kilowatt-hour
1937.....	\$14,663,382	2.015
1938.....	15,045,870	1.862
1939.....	15,842,212	1.795

Under a rate reduction of 10.8 percent between 1937 and 1939 the company's gross earnings increased \$1,178,830. Again the principle which I have repeatedly cited is clearly demonstrated—and that is that when rates are reduced, both consumption and net earnings increase.

I have previously pointed out that the Washington rates could have been reduced to T. V. A. levels on January 1, 1938, without placing a hardship on the local company. I have shown herein that, based on up-to-date figures, this can still be done.

I have also demonstrated again that with the lowering of rates, consumption increases greatly. If an additional reduction of \$2,758,171 in annual charges for electricity were made, reducing the rates in Washington to the T. V. A. level, it would only be a comparatively short time before the increased con-

sumption would offset the revenue loss from such an immediate reduction.

It is interesting to observe how the residential consumption per meter here in Washington increases under successive rate reductions.

Year	Average residential rate, cents per kilowatt-hour	Kilowatt-hour annual consumption per meter
1930.....	4.682	633
1932.....	3.796	804
1934.....	3.367	938
1936.....	3.225	1,070
1938.....	2.735	1,145
1939.....	2.620	1,210

<sup>1</sup> Estimated.

A reduction of 2 cents per kilowatt-hour in the average rate results in a doubling of the unit consumption.

## THE GENESIS OF THE SLIDING-SCALE PLAN

It would be well for those interested in the electric-rate problem to read the analysis that I have previously presented. Other municipalities at the suggestion of the power companies are copying the sliding-scale plan in order to head off public ownership. Those who really want to do a piece of constructive work in this field should understand how the transplanted English plan has operated in Washington to milk the consumers and to provide extortionate profits for a select few. It would be well for my colleagues to know the record of Mr. Harrison Williams, who is the real owner of the local property, which I presented on page 2540 of the CONGRESSIONAL RECORD of February 22, 1939. It would also be well for my colleagues to follow the coming grand-jury action by the Attorney General directed against officials of the Union Electric Co., of St. Louis, Mo., another Williams company, which investigation I advocated a short time ago. If the record made in this proposed action is traced through we will realize how ineffective are our regulatory procedures.

## TAXES

Propagandists for the power companies constantly assert that the taxes paid by the power companies account for the difference between public and private power consumer rates. Let us look into this matter again. In 1937, the Potomac Electric Power Co. paid \$686,790 in local taxes, or 4.683 percent of the gross earnings. In 1938 the local tax bill of the Potomac Electric Power Co. was \$745,071, or 4.94 percent of their gross earnings. It will be noted that after I called attention to the low taxes paid in the District, the bill of the power company was raised from \$745,071 in 1938 to \$1,016,013 in 1939. This is 6.4 percent of the 1939 gross earnings. This latter figure is still some \$750,000 less than it should be. I would like to have the critics of the T. V. A. tax payments examine the tax situation of the power company in the District of Columbia. The tax bill of this company is still 33½ percent below comparative tax contribution of the Tacoma public plant. The Tacoma public plant contributes more taxes locally than the Washington, D. C., company and still has rates materially lower.

In addition to the local taxes, the Potomac Electric Power Co. pays in Federal excise taxes about 2½ percent of its gross earnings, and some 5½ percent in income taxes. The income taxes are high because of the excess common-stock earnings previously pointed out. The total tax bill of the Potomac Electric Power Co., including local and income taxes, amounts to 2½ mills per kilowatt-hour, or a trifle over 9 percent of the average rate charged the domestic consumer. The total local taxes amounted to 1.17 mills per kilowatt-hour or 4½ percent of the average rate charged in 1939 to the residential consumers.

## STEAM VERSUS HYDRO

The energy distributed in Washington is a mixture of steam and hydro generation. In 1938 the Potomac Electric Power

Co., under an interchangeable arrangement with the Consolidated Gas & Power Co. of Baltimore, delivered to the Baltimore company 107,446,000 kilowatt-hours, and received from the Baltimore company 156,317,000 kilowatt-hours, a net receipt from the Baltimore company of 48,871,000 kilowatt-hours. The receipts from the Baltimore Company were substantially all Susquehanna River hydro power, for which the Washington company paid 2.7 mills per kilowatt-hour, or 10 percent of the sale price to the residential consumers.

Under the interchange agreement, in 1939 the Washington company delivered 208,222,000 kilowatt-hours to the Baltimore company, and received from the Baltimore company 97,541,000 kilowatt-hours; with a net delivery to the Baltimore company of 110,681,000 kilowatt-hours. This reverse flow of current resulted from the low stages of the Susquehanna River, and the delivery of Susquehanna prime power to other outlets, including the Pennsylvania Railroad electrification. For this delivery of steam power the Washington company received from the Baltimore company 2.2 mills per kilowatt-hour. Baltimore was supplied with over 110,000,000 kilowatt-hours at this interchange sale price of 2.2 mills per kilowatt-hour. The residential consumers in Washington are paying over ten times the prices at which current is interchanged between the Washington and the Baltimore companies.

#### RECENT RATE REDUCTIONS

The greatly advertised reduction resulted from the operation of the so-called sliding-scale plan of annual adjustment of rate charges. This plan provides for a basic rate of return of 6 percent upon an agreed valuation or what is often referred to as the rate base. The Commission found that the weighted rate base for the calendar year 1939 amounted to \$80,974,758.54 and the unweighted rate as of December last was \$82,527,937.80.

A year ago I set out in table 6 of my presentation the rate base used for determining the allowable return for the years 1925 to 1937, inclusive. To bring this table up to date, it should be noted that the 1938 rate base was \$77,198,938.69 and the 1939 value \$80,974,758.74. It should be pointed out in this connection, that the net earnings in 1938 were \$5,420,107, or 7.02 percent of the rate base, although the rate reduction in that year was set on a 6-percent basis. In all the years that this consent decree has been in operation the actual rate of return has been 1 to 3 percent higher than the allowable return. Under the plan current excess earnings go to the company without consideration being given to the rate payer. For example, in 1938 the earnings over the rate of return amounted to \$788,171, whereas the amount used for rate reduction in 1939, the following year, was only \$394,085 or about one-half of the excess earnings. This means that under the operation of the plan the excess earnings in the accruing year are retained by the company, and in the following year half is used for rate reductions. The average over-all rate reduction over the figures submitted in my earlier analysis was only 7½ percent instead of some 25 percent needed to bring the rate down to the yardstick levels.

It will be noted also that the top residential rate in Washington is still retained at 3.9 cents although the length of the block was reduced from 45 to 40 kilowatt-hours. There is absolutely no reason why the top step of the residential rate should not be reduced to 3 cents which is the T. V. A. level, or 2½ cents which is the present top rate in Tupelo, Miss. Under the new schedules, the succeeding 90 kilowatt-hours in the residential rate were set at 1.75 cents per kilowatt-hour, and the excess consumption at 1½ cents. In Tupelo the bottom rate is 4 mills per kilowatt-hour. Compare these steps with the Tupelo rate and you will find that the Washington follow-on rates are materially higher. Under a 1½-cent bottom step it is impossible for the people in Washington to enjoy the full benefits of electricity.

The industrial rates are materially higher and the Federal Government, through its own facilities and those of the District, is paying around \$411,000 annual overcharge for electricity in the District of Columbia.

In 1937 the Federal Government and District paid excess charges amounting to \$459,200. If the Appropriations Committee is looking for means to reduce expenses, here is a splendid opportunity. The gentleman from Illinois [Mr. DIRKSEN] has a real opportunity if he develops and wipes out the overcharges the Federal Government and its subdivisions are paying for electricity in the District of Columbia. A similar Nation-wide survey would show overcharges paid by the Government running into millions of dollars annually.

I have presented some further factual information in the electric-rate situation in the District of Columbia. We are the legislators for the people of the District. We should protect them as well as the Federal Government from such overcharges. Correction of such discriminatory rate practices rests with us.

We should not allow such practices to continue.

### Federal Cooperation in Road Building

#### EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ADDRESS BY HON. WILBURN CARTWRIGHT, OF OKLAHOMA

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address that I made on January 29, 1940, at the thirty-seventh annual convention and road show of the American Road Builders' Association, at Chicago, Ill., on the subject, Federal Cooperation in Road Building.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Van Wagoner, Mr. Upham, and fellow highwaymen, I am very glad to be able to attend this great convention of road builders, executives and administrators, and leaders of the highway industry. This is the first opportunity I have had to see with my own eyes one of your big road shows. For nearly 14 years in Washington, and for a much longer period in my own State and district, I have been specially interested in the building of roads, and I am happy to have the privilege of mingling here for a day or two with you folks who actually plan and build our roads.

It has been my privilege to help draft and pass Federal legislation to provide billions of dollars which you and others have used to construct better and safer highways. I appreciate this chance to get better acquainted with you and the methods you use in your important work and service to our country, and to get at first hand your views and ideas as to how the Congress of the United States may best cooperate in the big job we still have to do if our road systems are to be adequate for present and future needs.

#### PENDING ROAD LEGISLATION

Two weeks ago today Senator CARL HAYDEN, of Arizona, and I introduced in the Congress identical bills (S. 3105 and H. R. 7891) to authorize Federal appropriations for the regular road-building programs for the fiscal years ending in 1942 and 1943. This would merely continue the long-established policy of the Congress to authorize road appropriations sufficiently in advance to enable the States to make their budgets and plans in accordance with the Federal aid to be available.

#### EARLY ACTION NECESSARY

During the year 1941 the legislatures of most of the States will meet in regular sessions and many of them will not convene again for 2 years. It therefore is obvious that in order to continue the regular Federal-aid programs of road construction in cooperation with the States without interruption it is essential that a new authorization bill be acted upon at the present session of the Congress.

#### AMOUNTS NOW INDEFINITE

It was decided that in these bills, intended only to serve as a basis for committee hearings and consideration, no definite amounts of funds to be authorized would be arbitrarily inserted, and the amounts are left blank in the bills as introduced. I hope that it will work out better for attention not to be fixed on arbitrarily determined amounts for the various road programs until detailed reports are made by the Commissioner of Public Roads and officials of all Federal road-building agencies and of the State highway departments, and until expressions are heard from re-

sponsible individuals and groups familiar with our highway needs and the ability of the Federal Government to aid in financing new improvements.

#### EIGHT FEDERAL ROAD PROGRAMS

There are eight sections of the bill providing authorizations for the several established road programs: (1) Federal aid for construction of regular Federal-aid highways in cooperation with the States and Territories; (2) Federal aid to build secondary or local roads selected as the most important by the State highway departments; (3) elimination of dangerous railroad-highway grade crossings; (4) construction of highways, roads, and trails in national forests; (5) construction of roads through public lands owned by the United States Government; (6) construction of national park and monument roads; (7) construction of national parkways; and (8) building of Indian reservation roads.

#### PREVIOUS AUTHORIZATIONS

The total of authorizations for these purposes in the Hayden-Cartwright Act of 1938, for the fiscal years 1940 and 1941, was \$357,500,000. Similar authorizations made in 1936, for the fiscal years 1938 and 1939, amounted to \$476,000,000.

#### NEED FOR HIGHWAY IMPROVEMENTS

These are tremendous sums, even to those who are accustomed to thinking at times in terms of big figures. But compared with the cost of new highway construction necessary to make our road system suitable for today's needs, let alone the requirements of the future, these amounts are small indeed.

Official reports presented to the House Roads Committee last week showed that over 100,000 miles of highway on the main routes of our State highway systems should be rebuilt, widened, or relocated at an estimated cost of more than three and one-half billion dollars. And that 21,000 bridges on important highways need to be widened or rebuilt, which would require over \$400,000,000. Summed up, the official estimates of the 48 State highway departments as to work for which there is immediate need on the most important State highways amounted to the staggering total of nearly \$4,000,000,000.

#### SECONDARY OR LOCAL ROADS

This does not take into consideration at all the need for improvement of the tremendous mileage of secondary or local roads. In my State of Oklahoma, for example, there are 91,000 miles of officially designated county roads, only 238 miles of which, according to a recent report, have been improved to a high standard. And 20,000 miles of county roads in Oklahoma are classified as unimproved—not even earth graded. In the Nation as a whole there are a million miles of county and township roads which are unimproved, and another million miles that are badly in need of further improvement. In some way, we must bring about full recognition of the importance and necessity for improvement of these accessory highway facilities, which are increasingly vital to the life and activities of the Nation. I am very much interested in this problem of improving these rural-mail-route, school-bus, and farm-to-market roads.

#### HIGHWAY RIGHT-OF-WAY PROBLEM

Of course, it takes money to build roads, and title I of the Hayden-Cartwright bill I have referred to, in its final form, probably will authorize appropriation of several hundred million dollars by the Federal Government to supplement State funds for highway-building programs in the fiscal years 1942 and 1943.

But it is becoming increasingly evident that money for construction will not solve entirely the highway problem in many of our States, particularly in the areas of greatest traffic congestion. It is necessary first to acquire the land upon which to build the wider and safer highways which are so urgently needed. And in many parts of the country the difficulty in acquiring adequate rights-of-way in the proper locations is the greatest obstacle to highway progress at this time. It is a pressing problem.

It seems evident that some new Federal legislation is necessary before any reasonably prompt and effective solution of the highway right-of-way difficulties will be possible. Inability to secure essential rights-of-way, even in small tracts, has held up many Federal-aid road projects for which construction funds are available, and this difficulty has been one of the most serious factors in delaying the grade-crossing-elimination program.

#### NEW LEGISLATION PROPOSED LAST YEAR

On August 3, last year, the last day of the first session of the Seventy-sixth Congress, Senator HAYDEN and I introduced a bill proposing to make it possible for the Federal Government to assist the States and cities in acquiring needed land for right-of-way purposes and to help with the financing at low interest rates, with repayment to be made by the States or municipalities over a period of years. The measure was introduced at that time to give everybody an opportunity to study the proposal and suggest any changes that might be desirable. It was the intention then that the Senate and House Roads Committees would consider this proposed new legislation in connection with new authorizations for highways at this session of the Congress.

Accordingly, this right-of-way proposal has been reintroduced at this session as title II of the authorization bill I have been discussing.

The House Roads Committee began public hearings on this bill (H. R. 7891) last Monday, hearing Commissioner Thomas H. MacDonald, of the Public Roads Administration, and other witnesses,

including officials of the American Association of State Highway Officials. The hearings continued all week but have not been concluded, and will be resumed in the latter part of February. Some special departmental reports now being prepared should be available by that time. Of course, we shall be delighted to have representatives of this association appear before the committee and present their views and suggestions regarding the bill or any of its provisions. As I have said, the bill as introduced was intended only to form a basis for committee consideration. I assure you that there is no pride of authorship and that full and sympathetic consideration will be given to any changes that may be proposed.

#### CAREFUL STUDY OF PROPOSAL URGED

There is some opposition to title II of the bill, or at least there have been some expressions of doubt as to the effect this new legislation might have. But in most cases those raising questions admit that they have not read the bill carefully or given its provisions any serious consideration. They just seem to think it might give some new or increased authority to the Federal Government or in some way restrict the rights of the States in a way that they might not approve.

On the other hand, from all parts of the country have come high praise and warm support of the proposal, from highway officials and others who realize the urgent need for new methods to speed up and simplify land acquisition procedure and to provide easier financing of the initial cash outlay which must be made when expensive rights-of-way are acquired.

The only object of this proposed new Federal legislation is to provide in the quickest and easiest way an effective system by which States and cities desiring to construct new highway facilities can promptly acquire the land essential for rights-of-way and not have to pay for it all at once out of current revenues. Under the procedure in effect today most State laws provide that right-of-way purchases or condemnations must be paid for in a lump sum immediately. Under the procedure which will be possible if the new Hayden-Cartwright bill is enacted, the right-of-way can be immediately acquired for the use of the State but the cost can be spread over a period of as much as 40 years.

#### STATE APPROVAL AND CONSENT REQUIRED

The bill provides that no real property shall be acquired in the name of the United States unless and until a State, municipality, or other public body has contracted to purchase the land from the United States, and it is further provided that no loan agreement shall be entered into between the United States and any city or local public body, under the authority of this law, without the prior approval and consent of the highway department of the State affected. These provisions make it impossible for the Federal Government to use its authority to acquire land or to make loans to pay for land except in instances where the State highway departments desire Federal cooperation or assistance. It seems to me that this should relieve any possible anxiety on the part of State officials or States' rights advocates who may be fearful of increasing the authority of the Federal Government in road building.

#### NO GIFTS OR GRANTS OF FEDERAL FUNDS

On the other hand, I hope that the zealous guardians of our Federal wallet will note carefully that the United States can take no action under this authority without a prior contract with a State or municipality which "will reasonably assure recovery by the United States within 40 years of the cost of acquisition of such real property, with interest at such rate or rates as may reasonably be expected to reimburse the Reconstruction Finance Corporation for the cost to it of the capital required for such acquisition; and all sums realized from all such contracts shall be deposited with the Treasurer of the United States for the account of said Corporation."

So this proposal does not contemplate any gifts or grants of Federal money to States or cities. It requires that every dollar loaned to them be paid back with interest.

#### RECOMMENDED BY FEDERAL ROADS OFFICIALS

This question of right-of-way difficulties was first brought forcefully to the attention of the Congress and the highway-minded people of the country by the monumental report, "Toll Roads and Free Roads," prepared by the Bureau of Public Roads (now Public Roads Administration), under the direction of its able chief, Mr. Thomas H. MacDonald. President Roosevelt, in transmitting that report to the Congress last April, after it had had the approval of the Secretary of Agriculture, and concurred in by the Secretary of War, referred to it as "the first complete assembly of data on the use being made of our national highway network," and said, "it points definitely to the corrective measures of greatest urgency \* \* \* to meet the requirements of the national defense and the needs of a growing peacetime traffic of longer range."

I should like to quote a part of the first and most urgent recommendation of that outstanding document:

"Considering the needs in respect to highway and street improvements described in detail in this report, it is believed that the Federal Government can most helpfully contribute to the important improvements required in the following ways:

"1. By facilitating the acquisition of adequate rights-of-way. To a great degree the early obsolescence of the rural highways previously built is due to the restrictions imposed upon their design by inadequate rights-of-way. In cities, archaic street plans are in need of major revision to permit the free flow of modern traffic. Far-sighted improvements of both rural highways and city streets are everywhere blocked by the inability of the States and local

governments unaided, to provide the rights-of-way required; and there is danger that expedient measures forced by the irresistible pressure of traffic, will result in heavy new investment destined for early obsolescence.

"The obtaining of proper rights-of-way for the several kinds of needed new facilities will involve a heavy present investment, but a virtually permanent one, and one that will pay large dividends in the avoidance of future expenditures in larger amounts.

"The aid of the Federal Government can be practically extended by supplying capital for investment in highway and street rights-of-way on a scale sufficient to protect the facilities and provide amply for their expected growth.

"Such rights-of-way acquired with Federal funds at the request of a State highway department, and in accordance with State and Federal laws, could remain the property of the Federal Government subject to lease by the State over a period of 50 years on terms that would, in that period, amortize the initial cost. Representative State highway officials, with whom this suggestion has been discussed, are unanimously of the opinion that such a provision would not only be helpful toward a solution of the difficult right-of-way problem, but would also be welcomed and utilized by the State governments."

#### ADVOCATED BY STATE HIGHWAY OFFICIALS

Bearing out the statement in Mr. MacDonald's report regarding the attitude of State highway officials, it is interesting to recall that Mr. W. W. Mack, president of the American Association of State Highway Officials, at the recent twenty-fifth annual convention of that association in Richmond, Va., stated in his annual address that "in the vicinity of centers of large population, Federal aid in the purchase of rights-of-way in the form of grants or long-term loans seems a proposal of much worth."

#### URGED BY SENATOR HAYDEN

Senator HAYDEN, who for 30 years has been a champion of and authority on Federal legislation in the interest of better roads, at the same meeting expressed his views in part as follows:

"There must be found a way whereby the Federal Government can assist the States and cities in the acquisition of real property for right-of-way purposes, particularly where construction funds are now available to build modern traffic arteries to relieve congestion and to decrease the mounting and terrible toll of highway fatalities."

I regret very much, as I know you do, that Senator HAYDEN could not arrange to be here today to greet you and to tell you personally his views about this legislation which he has given much careful thought and study.

#### NEW LEGISLATION BY STATES ALSO NEEDED

Most of the State laws applying to right-of-way acquisition are antiquated and do not serve present needs. To meet this problem fully the State statutes governing this procedure need to be modernized and made more workable, in addition to new Federal legislation by the Congress.

#### PROPOSED INTERREGIONAL HIGHWAYS

The report Toll Roads and Free Roads presents in detail, based upon factual evidence, the weaknesses of our present road system. It outlines the character and extent of the corrections that are urgently needed to serve existing and probable future traffic.

The second recommendation of public-roads officials in that notable report reads as follows:

"2. By providing, in cooperation with the States and the War Department, for detailed investigations leading to the designation of a system of reasonably direct interregional highways, with appropriate connections through and around cities, \* \* \* limited in total extent to not more than 1 percent of the total mileage of rural highways in the United States, without specific limitation in each State."

It is a pleasure to remind you that the Congress has already taken some action designed to carry out this recommendation, and perhaps all the legislative action that is necessary or desirable at this time.

The act approved July 19, 1939 (Public Law No. 195), made the authorization of the 1½-percent fund for the State-wide highway-planning surveys a permanent part of the basic Federal highway legislation and assured the continuation of this work in all the States. It further relieved the States from the necessity for matching planning-survey funds with State moneys, as was formerly required. However, it is hoped that the States will continue to support the surveys with State funds at least until the data now available have been consolidated and the reports are ready for the next sessions of the State legislatures. It is important that this work be speeded up, since certain elements are of the highest importance in the development of plans for the national defense.

Much of the authority and fullness of data of the "Toll Roads and Free Roads" report was due to the fortunate availability of the reliable and currently corrected factual information concerning the condition of the highways of the country, the amount and character of their use, the nature and costs of improvements required for adequate traffic service, and the revenues available for such improvement, which these surveys, previously carried on in cooperation with 46 State highway departments under temporary and more limited Federal authority, had made possible.

That report is typical of the character of information that we may reasonably expect to be supplied for consideration by Congress and for administrative purposes in connection with other

questions of highway policy and the detailed planning of the proposed interregional system of highways now being done, in cooperation with the States and the War Department.

#### MULTILANE HIGHWAYS

I know that there is considerable sentiment in the country, among road builders and others, for some more definite and maybe spectacular action to initiate promptly a big program to build some needed multilane roads or so-called superhighways on the interregional system, and many favor a sizable authorization for this express purpose by this Congress.

But whether or not that is done now, if title II of the pending Hayden-Cartwright bill is enacted it will greatly relieve the major handicap to progress in that direction—the land difficulty—and make it possible to start work on many big projects: in and near the large cities, while long-range planning of other work of this type proceeds.

#### MILITARY HIGHWAYS

Also from time to time there is agitation for the building of some great new "military" highways, usually conceived on a transcontinental basis by enthusiasts without much highway, military, or financial background.

There are no military roads, as such, in the continental United States. Officials of the War Department have repeatedly informed State and Federal road officials that the highways which must be constructed for commerce and national development will, in general, be identical with those required for military purposes, and that the War Department ordinarily refrains from recommending specific highway routes except in the most critical strategic areas. Army officers tell us that a general network of good roads connecting important depots, mobilization, and industrial centers, has more strategic value than transcontinental roads which merely cross the country from coast to coast or from north to south.

The War Department's primary interest is in insuring adequate highway facilities between important strategic points and vital areas. Many essential high-standard strategic roads in most sections of the United States have already been provided through the cooperation of the local communities, the States, and the Federal Public Roads Administration. These highways will be of inestimable value in the event of a national emergency.

However, my understanding is that some sections of this strategic system still need improvement, and that the Public Roads Administration is now conducting a survey to obtain information regarding the existing deficiencies of these important roads.

A War Department Committee has recently been appointed to work with the Public Roads Administration and the State highway departments in considering highway requirements in the neighborhood of military posts and garrisons, especially in the vicinity of proposed mobilization centers, and highways necessary to serve traffic requirements in important wartime industrial areas.

#### ADEQUATE ROADS NECESSARY FOR MOBILITY

As an Army official pointed out recently, we have progressed from the ox cart at 2 miles per hour to the staff car at 70 miles per hour; from a division marching 20 miles per day to a division with more than 1,300 vehicles, capable of moving 320 miles in 14 hours. The Army is being rapidly reorganized and "streamlined." Supply trains and cavalry on wheels move faster and faster. Today mobility and speed are of paramount importance. Adequate roads are necessary to increase mobility, make possible greater speed.

Our Army is small in numbers, almost insignificant in comparison with the masses of troops assembled by other world powers. There is all the more reason, therefore, that our highways should be adequate to permit swift concentration, at maximum strength, at any point that may be threatened in this broad land of magnificent distances.

By all means, everything possible should be done to eliminate promptly deficiencies in roads of special strategic value, militarily; projects for construction of essential access roads should have preferred consideration, and highway facilities in important industrial areas should be adequate to meet the highway traffic requirements of wartime industrial procurement. The Congress, I am sure, stands ready to give prompt and sympathetic consideration to any official recommendations for special legislation which may be necessary to satisfactorily expedite this work.

In these uncertain days, when our national security assumes increasing significance, I am sure that each of us, whether in public or private life, wishes to contribute his full share to our national defense. At this time, especially, I think that all loyal Americans are working toward a common end, and that end is to reasonably insure the security of America against any emergency that may arise.

I am afraid, however, that if any of us try to overplay the national defense angle in an effort to promote some of our pet road projects we will meet with disappointment. It is pretty soundly established that the national defense will be best served by a highway system that provides adequately for the traffic at all times, and that special requirements for possible wartime uses are very limited.

#### CONTINUING ESTABLISHED FEDERAL AID

The third recommendation of Commissioner MacDonald's report to the Congress suggesting desirable Federal action is for "continuance of cooperation with the States in the improvement of the Federal-aid highway system and the elimination of hazards at railroad grade crossings, with annual authorizations commensurate with those previously provided."

The fourth and final recommendation is for "continuance of the program of secondary- and feeder-road construction with appropriations equal to or larger than those authorized for the fiscal years 1940 and 1941, to be expended in such way as to give effect to the principles enunciated in this report."

This is all provided for in the first, second, and third sections of title I of the bill now under consideration. Apparently there is unanimous agreement that these proven programs of Federal cooperation in road building should be continued. The only question is as to the amounts to be authorized. Officials of the American Association of State Highway Officials who have testified before the House committee have recommended new authorizations in the same amounts as authorized for the fiscal years 1938 and 1939. These amounts for each fiscal year are as follows:

Regular Federal aid.....	\$125,000,000
Secondary or feeder roads.....	25,000,000
Elimination of grade crossings.....	50,000,000
Forest highways, roads, and trails.....	14,000,000
Public-lands highways.....	2,500,000
National-park roads and trails.....	7,500,000
National parkways.....	10,000,000
Indian-reservation roads.....	4,000,000
<b>Total.....</b>	<b>238,000,000</b>

Because of the importance of adequate highways to practically the entire population and the need not only for extending highway facilities but for modernizing the main routes in the interest of safety and economy, an increase in the Federal funds could be justified and is strongly favored by many responsible citizens and groups in all sections of the country. My own view, I repeat, is that it would be a grave mistake to reduce Federal road authorizations below the modest and orderly planned amounts we have had in recent years.

#### FEDERAL ROAD-USER REVENUES

There is a good deal of sentiment and some agitation in various parts of the country for an increase in Federal authorizations and appropriations for highways based on the argument that regular highway expenditures should at least equal the amount the Federal Government collects from road users in the form of excise taxes on gasoline, lubricating oils, tires, tubes, automobiles, motorcycles, trucks, auto parts, and accessories.

It is frequently asserted that the Federal Government "diverts" about \$100,000,000 per year of such road-user tax funds to non-highway purposes, while Federal law penalizes the States for similar diversion.

This is, of course, substantially true if we consider only the Federal funds for roads authorized by the Hayden-Cartwright Acts and expended by the Public Roads Administration, the Forest Service, National Park Service, and Indian Service—the so-called regular road-building programs.

But it entirely ignores the fact that more than \$800,000,000 of Federal funds was expended during the last fiscal year on highway, road, and street projects by the Work Projects Administration, and that similar sums of Federal money have been so expended by work-relief agencies since the Federal Government has been collecting special excise taxes on gasoline and motor vehicles. Likewise, it overlooks the sizeable amounts of Federal funds made available for highway projects by the Public Works Administration. I mention this because I think it may clear up some misunderstandings and that it will be generally helpful if we can keep in mind a broad picture which includes all the road-building activities of the Federal Government.

#### GENERAL FUNDS FOR ROADS JUSTIFIED

I have always believed that the participation of the Federal Government in the improvement of highways in cooperation with the States, using General Treasury funds therefor, is amply justified on the grounds of general welfare, national defense, post roads, and interstate commerce. When the first Federal Aid Road Act was passed in 1916, neither the States nor the Federal Government had levied any special taxes, commonly known as road-user taxes, such as the taxes on gasoline, lubricating oils, and motor vehicles.

I think it is important that these broader reasons for justifying Federal participation in highway construction be not even tacitly abandoned by road advocates by putting too much emphasis on the relationship between road authorizations and road-user tax revenues. There might come a time in a few years when these taxes would not be levied, but that would not, in my opinion, remove the justification for further Federal participation in road improvements.

#### CONCLUSION

Much valuable time could be spent in delineating the wonderful progress made with Federal cooperation in building a network of roads in this country that is interstate in character and of great commercial, social, and military value to the entire Nation, but this important work is far from completion. Our total road mileage in round numbers is 3,000,000. More than 2,000,000 of those miles are unimproved, and only about 175,000 are hard-surfaced.

It should be a matter of great satisfaction to all to realize that the funds expended for roads and bridges, in addition to giving employment in virtually every county in the United States, is adding to the permanent wealth of each community, the State, and the Nation. This work is being supervised with economy and integrity and has the approval and support of all good citizens.

## Facts of Labor in New York City

### EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

#### RADIO ADDRESS BY LUIGI ANTONINI

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am more than pleased to include a radio address recently made by Mr. Luigi Antonini, general secretary of the Italian Dress and Waist Makers' Union.

It must be noted, above all, that the laboring man in New York City is unalterably opposed to communism and Stalinism and nazi-ism. One man of labor stands out pre-eminently in this regard, and he is Mr. Luigi Antonini. As stated above, he is general secretary of the Italian Dress and Waist Makers' Union, which is an affiliate of the International Ladies Garment Workers' Union. This is a very powerful organization, and its members are thoroughgoing Americans. The said Italian Dress and Waist Makers' Union is composed primarily of Italian immigrants who came here to make their way in the New World and who have since become thoroughly imbued with everything American. Its head, Mr. Luigi Antonini, is a man of great leadership. His wise ministrations of this union have made him a national figure, and I am very glad to call him my friend.

Mr. Antonini's address is as follows:

On Friday and Saturday of last week the conference called by the executive general council of International Ladies Garment Workers' Union for a campaign for the national organization of the cotton-dress industry was held in New York.

At the conference, which was presided over by President Dubinsky, delegates participated from New York, eastern out-of-town, Boston, Philadelphia, Cleveland, Chicago, St. Louis, Kansas City, and other places in the West and South as well as representatives of the cotton-dress department.

On the first day the delegates talked about the situation in their own localities. It is apparent that the number of cotton-dress factories has increased in recent years, and that many of these have extended their activities, invading the field of silk dresses. It was noted also that there are cotton-dress factories that are now given over to the production of rayon dresses and even silk clothes. Therefore it is evident that the cotton-dress industry is a competitor of the silk-dress industry, especially in the popular-price class.

The chief object of the conference was to find a remedy for such a situation. This remedy, as indicated by all, is that of a campaign of organization of the cotton-dress industry on a national scale.

Inasmuch as the silk-dress industry is principally concentrated in New York and in the neighboring localities of the East, we are exceedingly interested in the organization of the workers of the cotton-dress industry.

The union is the most powerful factor in producing equilibrium in an industry damaged by competition, since the union makes the inequalities less profound and often succeeds in creating those conditions of uniformity in respect to pay and hours of labor which show the degree of civilization with which the industry is connected. The union is a factor of progress.

Next Tuesday special elections will be held for a new Congressman in the Fourteenth Congressional District of New York, left vacant by the recent death of Hon. Mr. Sirovich, a supporter of the New Deal.

Among the candidates only one, MICHAEL M. EDELSTEIN, has made a definite declaration in favor of the New Deal. Therefore he has obtained the support of our American Labor Party.

The Republican Party, which is opposed to the New Deal, is trying to give a national significance to this election. Putting aside its scruples, it has joined hands with the Stalinist party. The fine pair has shown itself thus in court where by subterfuge with legal quibbles, it has been able to prevent the name of the candidate of the New Deal, EDELSTEIN, from appearing also as the official candidate of the American Labor Party.

Supposing, but not conceding, that the Republican candidate should win, the tale of Maine would be repeated. It would be said that the Nation is against the New Deal.

The Communists, allied with counter revolution in Europe, are joining it also in America, and have put forward the candidacy of Earl Browder for the purpose of injuring the New Deal candidate.

Every vote given to Browder is a vote lost. Browder has been condemned to 4 years in prison because of falsification of passports, and therefore he is a candidate for one single position which is not the Congress of the United States, but alas, where they confine all common delinquents.

We of the American Labor Party appeal to the electors of the Fourteenth District of New York to vote next Tuesday for the New Deal candidate, MICHAEL M. EDELSTEIN, in order that all America may know, even from these special elections, that the sentiment of the people is more than ever supporting the policy of social justice and humanity symbolized by the banner of Franklin Delano Roosevelt.

A short time ago you heard on this program Congressman EMANUEL CELLER who spoke clearly and ably on the bills against immigrants now pending in Congress and among other things spoke of how the cause of immigrants had always been defended by our organization.

Whoever is familiar with the movement knows that our union has always raised its voice in defense of immigrants. However you might regard my personal action, you would be childish to entertain the idea even for a single moment that I am an enemy of the immigrants—I who am an immigrant and an Italian. And yet the agents of the "tovarisc" Stalin have dared to accuse me of that in their journals and have coupled me with Generoso Pope in supposed hostility toward immigrants.

It is known even to the benches of Union Square that politically there is an abyss between me and Generoso Pope. I have already said that the only point in common between me and Generoso Pope is that both are American citizens and Italian immigrants.

I find the stupid Stalinist accusation that I might be against immigrants stupid even when it is uttered against Generoso Pope because I think that he must be interested in the cause of the immigrants because of his interests as editor of the dailies which are widely distributed among the Italian immigrants. This is a question of good sense, not a political question.

I might add, whether it means much or not, that both of us were in Washington at the congressional hearing of the Dickstein committee, to plead the cause of the immigrants, Generoso Pope representing the colonial forces and I representing labor.

But why all these attacks of the Stalin agents against me? Do you know why? Because I have not played their game, because I have foiled it. I will explain.

There was created an Italian committee for the defense of immigrants. A just and noble cause, a cause exceedingly humane which could attract or ensnare any person with a heart. The banner was beautiful but, alas, it concealed contraband. The smugglers were the usual agents of Stalin whom I quickly succeeded in identifying. Again and again they have asked me to give my name to their enterprise, and many times they have waited in the anteroom of my office, but they never got my consent. But some were ensnared and inasmuch as among those ensnared I saw some of my friends and Italian-American politicians taken in good faith, I felt it my duty to put them on guard.

Imagine the fury of the Stalinists. They immediately lost their reason and therefore they bawl, shriek, and wail that I am either enemy No. 1 or No. 2 of the immigrants. The head of all this uproar was a certain Prof. Gino Bardi. Do you know who he is? A Stalinist priest infiltrating himself in the Holy Name Society? But I know him. This Bardi is not in fact a Bardi. Do you know what his real name is? His name is Bascetta. But mind he is not the singer Bascetta. He is another Bascetta. If he masquerades under the name of Bardi it may be said that he has his own reasons. I who have not his vices do not feel the need of masquerading. I call myself Luigi Antonini. And all know it.

But who is the enemy of the immigrants? It is sufficient to know that a poor immigrant is defended by the Stalinists, to facilitate his deportation or render it inevitable. It is enough to know that a "bill" is opposed by the Stalinists to induce Congress to approve it. Therefore, in this interest of the Stalinists in the fate of the immigrants, which conceals their political purposes, we see a danger, a grave danger harmful to the immigrants.

He who trusts in the devil to be accompanied to paradise, in the end finds himself on the threshold of hell.

With their disguised Committee for the Defense of Immigrants, Stalinists, in order to make an impression on the Italian community had already caused the most beautiful daisy to open. What beautiful petals? All white as snow. What fine names in the list of sponsors. All magnificent and resounding names. Dr. Alberto Bonaschi, Hon. Eduardo Corsi, Prof. Leonardo Covelli, Hon. Salvatore De Matteo, Hon. Salvatore Ninio, and the last sequestered, Hon. Charles Poletti, Hon. Anthony Di Silvestro, Frank Capra, and Hon. Anthony Di Giovanna. All enticed in good faith.

And thus commenced the dance of the "monferrina" (lively dance); the petals are now falling one by one. Salvatore De Matteo first, then the councilors of the city of New York, Salvatore Ninio and Anthony Di Giovanna, and then the young liberal senator of Pennsylvania, Anthony Di Silvestro. One by one they have distrusted the Communists. Poletti, Corsi, and Bonaschi are in direct correspondence with me in this matter. And so one by one the petals fall, I assure you. There will remain only the corolla, perhaps yes and perhaps no, with a single petal. Poor stripped Stalinist daisy.

It is well that it should be known that we do not intend to prevent the Stalinists from forming committees in defense of Earl Browder and in favor of all of Stalin's spies. But that the Italian Stalinists, with self-styled Prof. Gino Bardi, really

Bascetta, at its head be honest; leave the immigrants in peace and not compromise their fate with their kisses of death.

In almost their entirety, the immigrants wish to be faithful to the American flag. They reject the flag of Stalin, which has become the flag of all shame and treason.

The senseless insults and stupid accusations of the agents of Stalin, unmasked by us, will not make us deviate a millimeter from our path.

As always, we will be in the front line in the struggle against any bill which threatens the immigrants. We will help, as we have helped through radio, press, petitions to Congress, and brave Congressmen like Honorable Mr. CELLER, to defend immigrants, individually and collectively.

We are ready to join any honest and legitimate movement for the defense of immigrants. But we refuse to put ourselves in the retinue of the Stalinists or to be in their company in a delicate agitation like that of the immigrants, because, instead of good, they would receive harm.

To repudiate Stalin and his agents is to render a great service to immigrants. In such a way American public opinion and Congress are given clear proof that those from abroad, the immigrants, wish to be loyal and faithful citizens of this new great country, the United States of America.

## Guam

### EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1940

EDITORIAL FROM THE WASHINGTON EVENING STAR OF  
FEBRUARY 17, 1940

Mr. GIBSON. Mr. President, I ask unanimous consent that there may be printed in the RECORD an editorial entitled "Guam Loses Again," from the Washington Evening Star of February 17, 1940. This editorial is accurate as to facts with one exception, where the editorial states that Saipan, already fortified by Japan, is 150 miles from Guam. As a matter of fact, the distance is 110 miles. Japan also has the mandated island of Rota only 49 miles from Guam, and the mandated island Tinian, 121 miles from Guam.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of February 17, 1940]

#### GUAM LOSES AGAIN

Manifesting a deference to Japanese opinion out of all proportion to the realities of the situation, the House for the second consecutive year has refused to approve any appropriation for improvement of harbor facilities at Guam, the Navy's outpost in the Pacific. Last February a requested \$5,000,000 appropriation was beaten by a vote of 205 to 168; this year, when only \$1,000,000 was sought, the vote was 123 to 114.

The Guam project got off to a bad start when the Hepburn Board recommended in 1938 that the island be converted into a major submarine and air base at an initial cost of \$115,000,000. Alarmed by that proposal, Congress since then has refused to authorize even the minor harbor improvements which would benefit commercial aviation and enable the Navy to use the island as an advance base for scouting planes in event of war in the Pacific.

It is not easy to understand the unwillingness of Congress to permit the Navy to make these strictly defensive improvements at Guam. By no stretch of a rational imagination could the dredging of the island's harbor be considered as a prelude to an aggressive move against Japan. In war the unfortified island could not be defended against an attack in force and, although some anonymous Japanese naval officers have professed to see an "unfriendly gesture" in the making of any harbor improvements, Admiral Yonai, when minister of the navy last year, said Japan was not very much concerned strategically.

The anxiety of Congress not to give offense to the Japanese, despite the admiral's indifference with respect to Guam, would be less inimical to our own interests were it not for Japan's own bad conduct record in the Pacific. Under the Washington Naval Treaty we agreed not to increase fortifications on Guam and that concession helped induce Japan to accept a capital-ship strength only 60 percent that of the United States. When the treaty expired at the end of 1936, however, the Japanese decided to ignore that ratio. Nor should it be forgotten that Japan has islands near Guam which were mandated to her by the League of Nations, and which, under the terms of the mandate, were not to be fortified. But even before Japan left the League she was understood to be building naval bases

on them, and it is an open secret that Saipan, 150 miles north of Guam, is a veritable island fortress belonging to Japan.

From this it should be obvious that the Japanese, while talking of unfriendly gestures on our part, are very little concerned about giving offense to the United States, and in view of that fact it would seem that Congress, by refusing even to permit the dredging of one of our own harbors, is carrying pacification to a ridiculous extreme. Our foreign policy, particularly as it relates to our own defenses, ought not to be shaped to conform to what Japan or any other nation thinks it should be. If our vital national interests are to be properly safeguarded, Congress must be guided by the recommendations of American defense experts, not by the less-than-candid protests of foreign propagandists.

### The Late Robert Fechner

#### EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ARTICLE FROM THE MACHINISTS' MONTHLY JOURNAL OF FEBRUARY 1940

Mr. CONNERY. Mr. Speaker, it was my privilege to personally know Robert Fechner during the years he was associated with the Civilian Conservation Corps. He was a quiet, unassuming gentleman who rendered outstanding service to his Government. That splendid organization, the C. C. C., will stand as a lasting tribute to his genius and ability. I include the following article from the Machinists' Monthly Journal, issue of February 1940, page 116:

[From the Machinists' Monthly Journal of February 1940]

ROBERT FECHNER

On the last day of 1939, just as the sun peeped over the hilltops surrounding the Nation's Capital, painting the sky a roseate hue, a small group of men and women stood in Walter Reed Hospital with bowed heads as the soul of a great and good man was borne home to its Maker by the angels, leaving behind all that was mortal of our beloved brother and friend, "Bob" Fechner.

When the news of his passing was flashed throughout the Nation—yes, throughout the world—countless thousands of men and women, young and old, were not ashamed of the tears of grief which stained their faces. They mourned the passing of a man who rose from lowly surroundings to heights few attain. He was indeed a humble man, and his career exemplified that passage from the Sermon on the Mount, "He that humbleth himself shall be exalted."

Truly he was one of God's noblemen, and his passing has left an empty void not only in the ranks of the I. A. of M. but in the hearts of hundreds of thousands of C. C. C. boys who fairly idolized their chief. With saddened hearts, they realize they have lost a loyal friend and champion, and "his boys," as he affectionately called them, will always revere the memory of their leader, who left no stone unturned to see that they were given a full opportunity to receive in the C. C. C. camps training that would equip them to return to the busy stream of life with hope and courage, with clean bodies and clean minds, and a knowledge of how better to approach and solve the problems with which they are confronted than was true when they entered a C. C. C. camp.

"Bob" not only commanded the respect of his associates, immediate and remote, in the C. C. C., but he won their affection as well. One of the finest tributes we have seen was paid him in an editorial published in Happy Days, semiofficial organ of the C. C. C., captioned, "There must be trouble in heaven":

"There must have been some trouble up in heaven between the right-wing angels and the left-wing angels and they needed 'Bob' Fechner to straighten things out. For this man, who directed the Civilian Conservation Corps from the day of its beginning, could teach even the angels something about cooperation, patience, understanding, loyalty, fortitude, courage, industry, and friendliness. And if there is any sort of depression up above and 'de Lawd' is worried about what will happen to His younger angels who can't find things to do, it won't be long before Director Fechner has them building terraces in the clouds and cleaning up the celestial forests. And heaven will be a better place because of him.

"We should like to put into words some of the things we feel deep inside about the untimely death of Director Robert Fechner, but there are so many things we should like to say that they all run together, and produce an inexplicable feeling. For nearly 7 years we knew him; from the early days of 1933 when his most important job was that of getting the first 250,000 men enrolled

and enough work projects to put them on. Since then more than 2,000,000 others have come into the C. C. C. And we do believe Director Fechner had a sincere feeling for each one of them tucked away somewhere in his capacious being.

"Throughout America there are young men growing into matured men who will enjoy life more through their years because of the character of the man who directed the Civilian Conservation Corps of which they were a part. They may not long remember the name of Robert Fechner, but the imprint of his life on theirs will help guide them forever. Director Robert Fechner was more interested in them than he was in Presidents, Senators, Congressmen, or himself.

"There may, or may not, be monuments erected to perpetuate the memory of Director Fechner. Whether there are, or not, the ground in Arlington Cemetery wherein he lies is hallowed and the spirit which he bequeathed to the young men of the Nation who had the privilege of serving under him will be nurtured anew, millionsfold. And up there, we are sure, he already has found his name in the headlines."

Bob Fechner was born in Chattanooga, Tenn., March 22, 1876. He attended schools in Macon and Griffin, Ga., until he was 15 years old, when he became a news "butcher" for a short time. Later he attended the Georgia Institute of Technology, and at the age of 16 entered the shops of the old Georgia Railroad as a machinist apprentice. Shortly after becoming a journeyman he joined the I. A. of M. Like most young machinists of that day, Bob soon got the wanderlust and began his boomer days, which covered a period of about 9 years. During that time he traveled in Mexico, North and South America. Following the custom of "boomers," Bob would stay long enough in one place to get a stake, then move on. He worked on the Panama Canal when the French attempted to dig a "ditch" across the Isthmus. Returning to the States in 1905 he found employment in the Georgia Central Shops at Savannah, Ga. Transferring to Lodge No. 23, I. A. of M., he was soon elected its financial secretary, which office he held continuously until 1914, when he succeeded Bro. R. G. Cook as a member of the general executive board of the I. A. of M., in which office he continued, with the exception of 2 years, until his death.

As an officer of the I. A. of M. he covered many difficult assignments on the railroads, in the shipyards, and industrial establishments throughout the United States. His ability was recognized not alone by labor leaders, but by employers, and men and women prominent in all walks of life. Few men in labor's ranks had a more complete understanding of our economic system, and frequently he lectured at Brown, Dartmouth, Simmons College, and Northeastern University, and for several years lectured regularly at Harvard.

"Bob" Fechner was too well known in the I. A. of M. and labor circles generally to make it necessary to go into detail here concerning his career as a trade-union official; suffice to say that he commanded the respect of all with whom he came in contact and earned for himself an enviable reputation which few in labor's ranks can excel. It was his outstanding ability and achievements that attracted the attention of President Franklin Roosevelt and influenced him to select "Bob" to head the C. C. C. That the President made no mistake in this direction is now a matter of common knowledge, and his untimely death is mourned by countless thousands.

The I. A. of M. was proud of "Bob" Fechner, and its officers and members will long cherish the memory of this brother, whose accomplishments reflected credit upon the organization he dearly loved.

His funeral, which was held in Washington, D. C., January 2, 1940, was largely attended by men and women from all walks of life. Burial with Masonic honors was in Arlington National Cemetery, "Bob" being a Spanish-American War veteran, a fact which few persons knew. "Bob" leaves a widow who received literally thousands of letters, telegrams, and resolutions of sympathy, including the following from President Roosevelt:

"MY DEAR MRS. FECHNER: I have heard with deep personal sorrow of the blow which has been laid so heavily upon you in the death of your devoted husband, who was my faithful friend through many years. Please accept my assurance of the heartfelt sympathy in which Mrs. Roosevelt joins.

"As Director of the C. C. C., he brought to the public service great administrative ability, vision, and indefatigable industry. His death is a loss to the C. C. C. and to the Nation.

"Very sincerely yours,

"FRANKLIN D. ROOSEVELT."

Although the soul of "Bob" Fechner has returned to its Maker, he will continue to live in the hearts of his friends and associates, and history will record that the world was better because he lived.

"Lives of great men all remind us  
We can make our lives sublime,  
And, departing, leave behind us  
Footprints on the sands of time.

"Footprints, that perhaps another,  
Sailing o'er life's solemn main,  
A forlorn and shipwrecked brother,  
Seeing, shall take heart again."

—Henry Wadsworth Longfellow.

## If Winter Comes, Can Spring Be Far Behind?

## EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

EDITORIAL FROM THE PHILADELPHIA EVENING PUBLIC LEDGER OF FEBRUARY 12, 1940

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Public Ledger of February 12, 1940:

[From the Philadelphia Evening Public Ledger of February 12, 1940]

## IF WINTER COMES, CAN SPRING BE FAR BEHIND?

It must have crept up on a good many people over the week end that something rather sizable has happened. President Roosevelt has decided to send a special emissary to Europe on a very special mission. Mr. Sumner Welles, the Under Secretary of State, has been selected for that duty. He is to pay an official visit, first to Italy, the most important nonbelligerent nation of Europe. He is to visit Germany, which is at war with the allied British and French, and France and Great Britain, which are at war with Germany.

This plan bears the marks of long and careful preparation. The Governments of Italy, Germany, France, and Great Britain have been duly informed of the purposes behind it. They have consented to meet and talk face to face with a representative of the President of the United States and the American State Department. They know what the talk is going to be about. They know that the tremendous influence of the United States is to be swung into action. They know that America has put its hand to the task of finding a way to check or to limit the war that is tearing Europe apart. They know that "spring is coming"—and they have learned to hear in the sound of those simple words some of the more ominous overtones of the crack of doom.

The significance of America talking to Europe at such a time and in such circumstances becomes clearer. A peace effort. No flash-in-the-pan business. No holier-than-thou platitudes. This is a movement backed by all the resources of diplomacy, guided by the most exact knowledge available, based on the profoundest realities. This is a realization which must have made a good many hearts beat a little more warmly. It must have rung a bell in many a mind attuned during these last bewildering months mainly to the ting-a-ling-a-ling of the bells of hell. Some of us are still that wishful. Still inveterate camp followers of lost causes.

Your best friend will speedily disillusion you. "That man" has simply taken another step to entangle us in Europe's quarrels. "Steps short of war" likely as not will add up to involvement in war itself. If this move fails, where are we? And your Representative in Congress, who may not like the President, may be inclined to do what he can to spike the effort—not necessarily because he sincerely believes it to be dangerous or futile but to make partisan political capital.

Our representatives have a right to their opinions and the right to express them as loudly and effectively as they can. On the anvil of such debate our national life must always be shaped. But some think that internal and party politics should pause and consider in the face of important foreign policy—in the face of any genuine attempt to put the influence of the United States in the scales on the side of peace and an ordered world.

Alf M. Landon, although most of us may have forgotten we owe him any particular thanks, has made us his debtors on this count. Early in his career as a Presidential aspirant he made a remark to the effect that internal and partisan politics should end at the 3-mile limit. And on at least two specific occasions, after his defeat, he was as good as his word.

In December 1938 he attended the Pan American Conference at Lima as a member of the United States delegation. There was at the time a feeling among Latin American leaders that a change of administration would change United States policy toward our neighbors, and there was a disposition to sit tight and do nothing. In a studied and emphatic address to the conference Mr. Landon gave the Latin American members something to remember him by. He told them that American policy is American policy, no matter what party is in power, and that if they expected a different policy under a Republican administration they had drawn a wrong conclusion.

Another time he stepped into a similar breach. In April of last year President Roosevelt put forth the proposal of an international conference to settle Europe's quarrels. Chancellor Hitler made answer in terms so crude that no President of the United States could have dignified it with a reply. But Mr. Landon did answer. In a speech at Kansas City on May 3 he deliberately "crossed party lines." He did so "to support my President."

This is not to suggest that any Member of Congress should espouse this or any other move of the President if opposition is, in the individual's opinion, for the good of the country. But it is obvious to everyone that manifestation of divided counsels in this country weakens the influence of the United States abroad. Most of us will agree that the experiment about to be undertaken deserves a fair trial.

We all yearn for the return of peace. We say in our hearts that Carthage does not have to be destroyed, that the line of blood does not have to be drawn between Europe's and the world's philosophies of government and of life, that it is not necessary, under God, for Englishmen, Frenchmen, Germans, and the others to kill people off and spoil millions of lives in order to settle the current difficulties.

We may hate certain things—but it is difficult, sometimes, to hate other human beings hard enough to want to see them mowed down by machine guns or blown to pieces by bombs and shell fire. Most of us, however cynical, are capable of compassion and the quality of mercy. Not many of us but whose hearts have been troubled at the prospect of this war marching on to claim its legions of victims. A befuddled and somewhat groggy world would welcome some other way out of the slough of despond that threatens to open for all peoples.

## American System

## EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

Mr. LANDIS. Mr. Speaker, we must maintain and get back into full working order the American system of private enterprise. Industry and business should be encouraged and be allowed to continue to grow and expand without outside interference.

We must look today, as in the past, to the creative impulses of free men and women, born of the most enterprising and self-reliant stock in the world, for productive genius, for expansion of enterprise, for economic recovery, for restoration of normal jobs, for increased standards of living.

There must be confidence in the security of the job, of the business, of the savings which sustain these homes. Increased standards of living, leisure, and security can come to that home through the unshackling of the productive genius of our people. The advancement of knowledge must be translated into increasing health and education for the children. The windows of these homes must be bright with hope. Their doors must be open to initiative, enterprise, and opportunity.

Citizens as businessmen are not basically politically minded. They are interested in facts, in principles and in results consistent with these principles. Businessmen are more anxious than anyone else to see the unemployed go back to work, to see the farmers with better purchasing powers, with children in school and old people properly cared for.

Recovery will come when we establish confidence, reduce taxation, take Government out of private enterprise, and reduce Government expenditures.

America must choose between more taxes and more Government workers or less taxes and more factory workers.

We all realize that Government is necessary. Our lives and property must be protected. We must have courts and an adequate national defense.

How is our tax money spent each year by the Federal Government? This administration holds the all-time record on the number of politicians on the Federal pay roll. There are 88,000 employees in the Department of Agriculture. We have turkey-carvers, turkey-tasters, and duck-counters, and what have you.

In 1937 1 out of 5 of those who traveled on a railroad passenger train was on Federal pay. That means \$76,000,000 of tax money bought railway tickets for them. This amount would employ 76,000 workers at \$1,000 per year.

Large buildings are being constructed in order to relieve unemployment. Can we afford luxuries in hard times better than in good times? Most Government activities are not

wealth-producing in that they provide for continuous employment of men. The taxes spent to build these buildings and keep them up should go into wealth-producing activities of trade and industry.

We should restore to private enterprise Government activities which are in competition with the individual and sell the Government property now used for nongovernmental purposes.

The tremendous activities that have been wished upon the Federal Government are changing vitally the America we have always known. Ten years ago there was one Government employee for each 20 of our gainfully employed citizens. Today there are at least 1 of every 10 and they are still on the increase. The American system we have always known is one which the savings of our people, instead of going through taxation to politicians to spend, have been collected by enterprisers and put to work in wealth-producing activities.

One million men in private enterprise would contribute more to our well being than 1,000,000 men in Government activities. There is only one main problem in America today, and that is to put the 12,000,000 unemployed back to work.

America must wake up. American citizens must stand up and fight for their liberty and freedom from oppressive taxation.

American business is oppressed with unfair and destructive taxes. American farmers are being dispossessed of their farms and markets by taxation and the inability of the unemployed to purchase their products. American labor is burdened with a rising cost of living caused by taxation. American home owners are being dispossessed of their homes because of taxation, lack of business, and unemployment.

America is still the hope of the free people of the world. The self-reliance and courage of the American people will again establish the universal objectives of economic and social security in a free republic.

We have been the world's outstanding example of a constitutional democracy. Upon our success or failure, may well depend the future of the democratic principle of government throughout western civilization.

The reasons for our great strides in the past 150 years, dates back to 1776, when our forefathers decided to make the politicians the servants and the individuals the masters.

#### AMERICAN MARKETS

We should restore the American market to the American farmer and let him run his own business. To return to free-trade policies, which open the door of the American market to all other countries of the world, means simply that we are to destroy our protective system, accept low standards of living for our workers, and adopt the peasant system for our farmers. It means acceptance of our farmers of lowest world competitive prices. Our farmers do not believe in trading the best markets in the world to increase the standard of living abroad. This administration has been exporting jobs and creating prosperity in other countries.

It is impossible to solve our farm problem as long as goods come in from foreign countries at a price less than parity.

American people should be glad to pay an American farmer an American price for his products. We should buy nothing from a foreign country that we can produce at home. Practice reciprocity with nations which produce the things we need and cannot produce ourselves.

Business founded upon foreign markets instead of our domestic markets is only temporary. The whole world could not offer us enough sales to make any material difference in our home production. There are more than twice as many automobiles in Chicago alone as there are in the entire country of Argentina, yet one of the main arguments for ratification of the Argentine trade agreement is that great benefit will come to American agricultural producers because the increased sale of automobiles to that country will stimulate business activity here.

LXXXVI—App—54

More automobiles will be sold to American farmers than to all of South America combined if the home market for the things we produce is not destroyed.

The real issue is whether or not effective tariff rates on the rank and file of agricultural products shall be indiscriminately reduced, even in cases where present rates are insufficient adequately to protect the domestic industry. A great many of the tariffs listed for reduction are properly working tariffs, giving some degree of protection to domestic producers when prices are high.

It has not been possible to trace any improvement in the unemployment situation in this country to the reciprocal trade program or to show that agricultural producers have benefited in any degree by the increased employment which is supposed to come to our industries engaged in export trades.

Under these trade treaties, the American farmer has been sold down the river. Exports are decreasing and imports are increasing. Official agricultural figures of the United States Government of the first 10 months of 1938-39 show our agricultural exports in 1938 were \$689,615,000, but dropped in 1939 to \$514,283,000. Our agricultural imports in 1938 were \$794,685,000 but they increased in 1939 to \$897,051,000.

Export items that have decreased are corn, oats, wheat, barley, pears, peaches, prunes, plums, apples, oranges, cattle hides, fox furs, tobacco, and cotton.

The greatest contribution which we can make toward stabilizing our economic life would be to preserve the American market for the American farmer.

*Farm imports—United States imports of agricultural products, 10 months, 1938 and 1939*

[U. S. Department of Commerce figures]

Import items	Unit	1938	1939
Cattle	Head	330,653	664,339
Meat products (total)	Pound	123,732,000	136,552,000
Canned beef	Pound	65,833,000	78,073,000
Cheese	Pound	44,423,000	49,249,000
Eggs (in shell)	Dozen	182,844	267,325
Hides and skins (total)	Pound	131,896,000	258,889,000
Cattle hides	Pound	39,338,000	104,217,000
Sheep and lamb skins	Pound	25,496,000	50,085,000
Silver fox fur skins	Number	13,749	75,067
Casein	Pound	317,000	6,876,000
Barley	Bushel	126,000	745,000
Oats	Bushel	5,258	2,612,000
Wheat (all)	Bushel	2,433,000	9,310,000
Wheat flour	Pound	12,237,000	16,929,000
Barley malt	Pound	84,732,000	90,626,000
Hay	Ton	13,505	35,550
Wheat byproduct feeds	Ton	27,173	372,951
Chickpeas, dried	Pound	6,390,000	7,507,000
Potatoes, white or Irish	Pound	36,315,000	48,072,000
Sago	Pound	8,695,000	21,252,000
Tapioca	Pound	183,322,000	295,088,000
Arrowroot	Pound	4,799,000	7,681,000
Peas, canned	Pound	325,000	1,070,000
Tomatoes, canned	Pound	45,096,000	47,773,000
Pineapples, prepared or preserved	Pound	25,918,000	67,632,000
Apples	Bushel	8,004	24,661
Wool, unmanufactured	Pound	69,810,000	197,026,000
Cotton, unmanufactured	Pound	93,107,000	84,443,000
Tobacco, unmanufactured	Pound	60,968,000	64,544,000
Flaxseed	Bushel	12,324,000	14,724,000
Castor beans	Pound	90,570,000	116,555,000
Potato starch	Pound	4,939,000	7,316,000
Maple sugar and sirup	Pound	3,798,000	12,136,000
Wool nolls, wastes, and rags	Pound	3,275,000	15,200,000

The farmers can judge for themselves whether or not the American farmers have benefited by trade treaties under the New Deal. Now is the time to repeal the Hull trade treaties.

Abraham Lincoln, like Henry Clay, has believed in a "high protective tariff" for the benefit and protection of workingmen, farmers, and manufacturers of America. Lincoln added that the tariff is "to the Government what replenishing the meat tub is to the family."

#### UN-AMERICAN ACTIVITIES

We must preserve the constitutional liberties which our people have gained through the years of struggle. It is of primary importance to prevent the growth or spread of influence of any organization which seeks to undermine democracy. Our American policy must be maintained for the best interests of the American people and against all "isms" which seek to destroy us.

The purpose of protecting our constitutional democracy is by turning the light on activities of organizations seeking to work the will of foreign dictators in the United States. The German-American Bund, the Communist Party, the Silver Shirts, and some other similar organizations have fallen upon the darkest days they have seen yet. They are losing both membership and prestige.

The only proper and democratic method whereby un-American activities can be effectively combatted is by the duly constituted law-enforcing bodies of America, operating under our Constitution, and with the support of an informed public opinion.

It is none of our business what kind of government they have in Russia or any other foreign country. It is none of Russia's business what kind of government we have in America. It is our business to look after America and see that Russia or no other country attempts to destroy by propaganda, sabotage, or force the kind of a government we have chosen ourselves. If the radicals in our country insist on destroying our form of government, we should put them on a boat and send them back where they belong.

With foreign "isms" rampant throughout our land, their infection spreading to high places within our Government, starting a decay from within, we would do well to rededicate ourselves to our country, to our homes, and our God with the inspiration of Lincoln's words when he said:

Many free countries have lost their liberty, and ours may lose hers; but if she shall, be it my proudest plume not that I was the last to desert but that I never deserted her.

### Great Lakes-St. Lawrence Seaway Canal

#### EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

Mr. LEWIS of Ohio. Mr. Speaker, the Senate of the United States will in all probability shortly have to approve or disapprove a treaty between United States and Canada for the construction of the so-called Great Lakes-St. Lawrence seaway canal and power project.

The proponents of this scheme have given wide publicity to their claims. It is said that this canal will bring the ocean into the heart of the North American Continent and make every Great Lakes port a seaport; and it is claimed that the hydroelectric power incidentally developed in the construction of this canal will be reckoned in millions of horsepower. The proponents of the treaty have thus laid the foundation work for what they hope will be an early and overwhelming ratification.

Recently in my State a rural philosopher newspaperman, who is wide awake to the dangers of such an ambitious scheme and who is a student of business and economic problems, has written an article in vernacular, appearing in a number of eastern Ohio newspapers, but notably in the *Bellaire* (Ohio) Daily Leader of January 22, 1940, entitled "United States-Canadian Canal is National 'Headache'." The author of this article is Mr. W. H. McWilliams, of St. Clairsville, Ohio, who writes under the pen name of Hi Waters. His article is as follows:

[From the *Bellaire* (Ohio) Daily Leader of January 22, 1940]

UNITED STATES-CANADIAN CANAL IS NATIONAL "HEADACHE"

(By Hi Waters)

It's a little bit like leadin' with your right.

Or mebbly like the ostrich stickin' his head in the sand for protection and leavin' his most-valuable spot vulnerable to the enemy.

That's the way I size up this Great Lakes-St. Lawrence canal business which is supposed to bring the ocean "to the center of a continent." Jist why we would want to "leave our most valuable part" exposed to the sharp-shootin' merchants across the ocean and let foreign trade unload their starvation-wage products in the back door of every midwestern home is quite beyond imagination, or at least mine.

Of course you all understand what this Great Lakes-St. Lawrence canal project is. You all know that the first cost of diggin' the canal, broadly speakin', from Montreal to Chicago, would be \$250,000,000, without considerin' docks, piers, and such incidental items; that it will cost \$15,000,000 a year maintenance after it's done; that most of the project now proposed lies in Canada; that it is supposed to produce around 7,000,000 horsepower for electric hydro power; and is supposed to "create a direct route for products of this Nation to the huge markets across the ocean."

There's been little said about "providin' a short and easy way for the low-wage product of Europe and Asia to the center of America." But it's a well-known fact that it's the same distance from one end of the string to the other as it is from the other to the first end.

Europe could ship a ton of English coal to the central heatin' plant in Chicago's loop jist as easy as a Kansas farmer could ship a ton of wheat to Picadilly Square \* \* \* and jist as cheap; providin' he could sell the wheat.

Taken at its best, it would be a "sight-unseen" trade of American products for foreign products. All of us know what that would mean. You can't trade a \$1-an-hour product for a 20-cent-per-hour one and buy many shoes for Johnnie.

A canal such as is proposed in the comin' discussion of the Great Lakes-St. Lawrence power project, so-called, would be entirely too expensive for the people of the United States even if it was presented to us on a silver platter free of charge.

The next worst thing I could think of for American interests would be to build a pontoon bridge from New York to Hamburg and tack up signs on the eastern end saying, "Dump 'er across, boys—dump 'er across."

Now, if we both had time, there's a few particular items to point out that makes the canal dream even worse than suspected. For instance, the openin' of the waterway would allow movement of coal from Nova Scotia, England, Russia, and even Indo-China at ballast rates made to provide return cargo for ships leavin' the Lakes loaded with Canadian grain.

Already 1,000,000 tons of coal is bein' displaced monthly along the Atlantic seaboard by imported oil. \* \* \* The canal would let in more oil from abroad into the greatest bituminous coal market in the world—the great Northwest. Think how much coal that would replace.

The boosters of the canal waterway claim that they can eventually produce as high as 7,000,000 horsepower. If they're right, this would mean the displacement for power alone of 35,000,000 tons of American-mined coal every year.

Every million tons of coal displaced lops nearly \$2,000,000 annually from the revenue of coal producers, 60 percent of which goes for mine wages. Thus, if the canal proves as "valuable" as its sponsors say it will, the miners of the United States will lose \$20,000,000 a year in wages.

In other words, the buildin' of the Great Lakes-St. Lawrence canal, if it does what Army engineers say it will do, will cost every coal miner in the United States a total of \$84 each every year.

Here's another thing of some slight importance.

Eighty-five percent of the iron ore used in the United States comes from the northwest territory of Minnesota, Michigan, and Wisconsin. This ore is mainly used in the great manufacturin' regions of the Lakes. At one time these ores enjoyed big markets east of the Allegheny Mountains. This region is now supplied by imported ores.

The Lake Superior iron minin' industry—now isolated in our great protected inland "midsection," is worth some \$300,000,000, employs some 25,000 persons, it pays \$30,000,000 in taxes, operates over 300 vessels \* \* \* forms an important and big part of our economic system.

The canal, boys and girls, would do for the Lake Superior iron-ore industry and the transportation family, jist exactly what the Atlantic Ocean did for the trade it used to enjoy—slap 'er down! It would allow foreign ores, foreign pig iron, foreign iron and steel into the greatest industrial region of 'em all \* \* \* let 'em in like the Reds did for the Yanks down at Cincinnati last fall.

Another item of passin' interest—which the boosters of the canal forgot—is the railroad angle. Every foreign ship enterin' or leavin' an American port with a cargo would mean the elimination of trains at the rate of 1,000 tons a train, operated by the highest-paid labor in the world. It would be a blow at the very foundation of American stability.

There's so many other things connected to the canal project \* \* \* things like lost taxes from industry, costs, mixed-up economics, subsidies, etc., that hangs on like moss to a live oak tree in the South \* \* \* that the average American would gasp if he set down to read 'em.

But to my mind the very thing that sponsors brag about as the best—"bringin' the ocean to the middle of a continent"—is the worst. We have been thankful for generations that 3,000 miles of ocean separates us from the line-fence disputes of Europe \* \* \* let's not move the "center of a continent" 500 miles closer and open America's markets to somethin' more dangerous than alien guns and bombs \* \* \* foreign low-waged products.

Mr. Speaker, we cannot expect to create such a seaway canal and allow ocean transportation to invade the heart of a continent without completely disorganizing and in great part destroying our long-established, adequate, and essential existing transportation systems, and without also disorganizing,

and in large part destroying, the balanced internal economy of our country, which means wrecked and ruined industries, abandoned ghost towns, whole industries wiped out or so drastically curtailed as to be almost nonexistent, all of which translated into terms of human life means disaster, destruction, and despair, so widespread, so deep, and so fundamental would be the changes wrought if we ever permit such a project to reach fruition.

### Lincoln Day Address

#### EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ADDRESS BY HON. B. CARROLL REECE, OF TENNESSEE

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I wish to present a copy of an address which I delivered at Chattanooga, Tenn., at a Lincoln Day dinner, held under the auspices of the Hamilton County Young Republican Club, February 10, 1940:

Six score and eleven years ago today there was born in the obscurity of the backwoods of Kentucky the man whose memory we honor tonight—Abraham Lincoln.

Fifty-two years later this son of parents, to fortune and to fame unknown, was to become the first President of the United States elected by the new Republican Party.

He brought to the White House no background of Harvard culture but a sound knowledge of fundamental truths acquired by self-tutorship and experience in a horse-and-buggy age when individual initiative was still regarded as praiseworthy and profit-making as respectable.

The White House to which he came had none of the conveniences afforded by its present-day executive offices and staff. Yet neither did it have a welcome for such as Dave Lasser, of the Workers' Alliance, and his Communist associates.

He did not have at his beck and call a "brain trust" to work out his problems for him, nor a corps of executive assistants with a passion for anonymity. Yet, in silence and alone, he solved problems far graver than those which for more than seven years now have baffled all of the professors, economists, and witch doctors who have cluttered up the White House corridors.

He suffered from no grandiose delusion that he was the anointed savior of the people; that he, and he alone, could lead them from the wilderness of their despair. He was just "humble Abraham Lincoln."

He did not have behind him a united people who had cast aside partisan considerations to repose a blind faith in his leadership in a time of crisis. Instead he faced the heavy task of leadership of a nation divided against itself and on the brink of civil war.

He had no worshipful group of loyal advisers but could not fully trust even some in his own Cabinet.

He had no ready-at-hand prescriptions to cure the ills that beset the Nation, but only a deep and abiding trust in the processes of constitutional government and faith in the common man.

He knew nothing of the fine-spun theories of the new economy or the doctrines of Marx, but believed that economic freedom and security still had their roots in the homely virtues of honesty, thrift, individual initiative, and hard work.

He was so hopelessly old-fashioned in his ideas that he would have regarded any attempt to circumvent the Constitution and the courts as sacrilege.

He did not believe the Nation could exist half free and half slave. Nor did he believe the Nation could exist if part of it ate its bread in the sweat of the brows of others.

He did not promise a New Deal that would emancipate the Nation from the shackles of all evil and bring a more abundant life. In fact, he made no promises at all, except to do his simple duty according to his lights. Yet forever in recorded history he will be known as the great emancipator, while the New Deal era will be marked down as a period of broken promises, betrayal of trust, and of economic and political bondage.

In his time, too, wild-eyed reformers railed and ranted, but Lincoln held his peace. He did not permit himself to the luxury of name calling and invective. "With malice toward none, with charity for all"—that was the spirit of Lincoln. It is the great tragedy of our times that no such sentiment as this has been expressed at the White House in more than 7 years.

How like the harmony of a noble symphony sound those words today, "with malice toward none, with charity for all," against the

raucous discords of "malefactors of great wealth," "money changers in the temple," "economic royalists," and "Bourbons."

The keynote of the harmony Lincoln sought was tolerance. The keynote of the New Deal discord has always been "crack down."

Lincoln did not prate of liberalism; he talked of freedom. And freedom to him meant more than freedom of speech and freedom of worship. It meant free business enterprise as well. None knew better than he that all forms of freedom must stand or fall together.

How different today. No administration in the history of this Nation has so smugly and so blatantly paid lip service to liberalism as that of the New Deal. But it is a liberalism founded not on tolerance but on hate. Hate for that group of citizens who braved much, and ventured more, to make this country great; that group which most dramatically represents the spirit of individual initiative and free enterprise—our businessmen. And any liberalism which has its roots in hatred cannot but produce the fruit of tyranny.

Contrast the invective, the villification, the setting up of class against class according to the regular New Deal technique with the real liberalism of Lincoln as revealed in his remarks to a committee of New York workingmen on March 24, 1864. Said Lincoln:

"The strongest bond of human sympathy, outside of the family relation, should be one uniting all working people, of all nations, and tongues, and kindreds. Nor should this lead to a war upon property, or the owners of property. Property is the fruit of labor, property is desirable, is a positive good in the world. That some should be rich shows that others may become rich and hence is just encouragement to industry and enterprise."

"Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

So spoke Lincoln. Do we find a counterpart in the New Deal philosophy? Ah, yes. It is "soak the rich."

For all its highbrow professors and doctrinaires, the New Deal has never learned that the spirit of enterprise is more than an economic force; it is the very basis of free democratic institutions.

The New Deal has never learned that upon the willingness and ability of democracies to encourage investment will depend their ability to keep opportunity abundant and, in consequence, to preserve the free institutions which are the first casualties of severe social conflict.

Simple but profound truths are these; too profound for those who trade in the superficialities of the New Deal to grasp.

So the New Deal has pressed its war against business and businessmen vindictively and relentlessly.

Because a few of the cows in the business barn gave sour milk, small boys with sticks and mad dogs are permitted to chase the whole herd to exhaustion all over the pasture.

A few business leaders proved faithless to their trust. So put all business in a strait jacket. Now, a strait jacket will keep you out of mischief. But you can't work in a strait jacket. You need overalls.

A member of the inner New Deal circle is quoted by Raymond Moley in his book *After Seven Years* as saying: "Fighting with a businessman is like fighting with a Polack. You can give no quarter." There you have a succinct expression of the New Deal's attitude toward business.

So when a few—a very few—of our great utility holding companies abused their power, the New Deal demanded the death sentence for them all. To the New Deal "brain trusters" no Indian is a good Indian except a dead Indian. Well, I suppose killing off an enterprise is one way of instilling virtue. There is nothing so virtuous as a corpse.

It was because of this New Deal attitude that fear, deadly fear, gripped the Nation and the Nation's business and still holds all enterprise in its paralyzing clutch.

You know what I mean. The wage earner does not forget that 10 percent pay cut he had to take after a soothing voice over the radio from Washington assured him that all was well. It is true that for the most part his old wage—or nearly all of it—has been restored. But as he watches the backing and filling of the administration, as he sees the Federal debt pile up to a figure quite beyond the mental capacity of any of us to visualize in terms of goods and commodities, he fears, and well he may.

So instead of buying the new radio or the new motor car as he had planned, he is afraid to take a chance. In consequence, his money that would have been spent for a radio or a car and would have made jobs goes into the bank to still further swell that unwieldy bulk of excess reserves in the tomb-like vaults where, like the lilies of the field, it neither toils nor spins.

And if the individual fears to risk his own money, what of the heads of our business establishments and corporations who are entrusted with the funds of others? If the individual fears to risk his own money, will not those entrusted with the money of others be even more reluctant to venture it for new plants and badly needed equipment? Obviously. Ah, yes, Mr. President, the businessmen of America are not gambling with other people's money. All things equal, they would be ready to risk legitimate business hazards. But the New Deal has stacked the cards against them. All it offers is a gamble.

In his first inaugural, Franklin Delano Roosevelt told the Nation that "the only thing we have to fear is fear itself." There is no gainsaying that those words lulled the people like an opiate.

The people gave the President cheerfully and unhesitatingly more power than had ever been possessed by any President of the United States. They stifled their fear in a great but simple faith.

But as time went on and the depression deepened, as factory after factory closed its doors and an army of 11,000,000 unemployed tramped the streets, a new and concrete fear replaced the old vague fear of the unknown which afflicted the Nation in 1933. It was fear of the Government itself. And that is one of the greatest drawbacks to business and industry today.

But before we carry this thought further, let's be sure of exactly what we're talking about. Let's take a look at American business. Let's see just what we mean when we speak of the Nation's business. And then let's see what the New Deal did to hamstringing it and reduce it to its present plight.

If we visualize the several million individual business enterprises in the United States as a whole and call this aggregate the Nation's business, we find that we have plant and equipment which cost \$200,000,000,000 and which, when operating at capacity, employs 50,000,000 workers. This vast plant is capable of producing about \$1,600 worth of goods each year for every worker. This may not seem a great amount yet it is more than the industries of any other nation on the face of the earth are able to produce. It is five times as much as American industry was capable of producing when Abraham Lincoln was born.

This great business machine has been built up by free enterprise in a country which embraces only 6 percent of the world's area and 7 percent of its population. Yet because it was erected by hardy and independent men who were willing to take a risk instead of seeking security in the economic storm cellars, this Nation today has more than 45 percent of the world's wealth.

Yes; and despite the best sabotaging efforts of the New Deal wrecking crew we still have today in the United States the highest real wages, the shortest working hours, and the greatest percentage of home ownership on earth.

As a result of causes which we need not consider here but which had their genesis in the world-wide economic maladjustment which followed the World War, this vast industrial machine slowed down. Production dropped at first to about two-thirds of capacity; fell again to three-quarters. Then came a man who boasted that he knew all the answers and promised the country a New Deal. The people, in a frame of mind to try anything, everything, put him in the White House.

The new captain then began to assemble the most motley crew that ever manned the ship of state; able men, inefficient men; sane men and crackpots; experienced economists and long-haired fiscal theorists; patriotic men and parlor pinks and outright "reds."

With much tub thumping and loud huzzahs, this horde of zealots and fanatics swooped down on Washington. Their sole thought was that they had a mandate from the people to do something. They did it with a vengeance. They tried to tear up the Constitution. They tried to pack the Supreme Court. They succeeded in substituting government by men for government by law.

Then with a mighty chorus of hallelujahs, they began their business-witch hunt. That was more than 7 years ago. They haven't found many witches in the business community. But still they press the hunt with evangelical zeal. But meanwhile, most of the saner and abler administration advisers have left the New Deal dove cote in disgust. Had Lincoln been alive he would have predicted that. He knew that you may fool all of the people some of the time; you can even fool some of the people all the time; but you can't fool all of the people all of the time.

When the voodoo doctors came to Washington and were unable to find what was wrong with our ailing business, they invented a new malady of their own to suit their purpose. They called it the vanishing economic frontier. On the basis of that diagnosis, their New Deal economic brethren began to sell America short. Their red and pink fellow travelers began to spread the propaganda of defeatism.

This propaganda went something like this: America is no longer a country of boundless opportunity. The frontier has vanished. Our natural resources are pretty well developed. Population, although still increasing, is growing at a declining rate and soon will be stationary. There no longer are sufficient investment opportunities to absorb the savings of the community. If savings are not invested they pile up in idle bank deposits and the demand for goods declines. So there must be a new distribution of income—an increase in small incomes at the expense of large. Share the wealth!

I do not need to point out to you the fallacies of this reasoning. You businessmen know them as well as I. What is worth noting is the supreme heights of folly attained by the New Deal in an effort to remedy the situation which they alleged to exist. What was wrong, they said, was that there was too little investment and too much savings. But what they did was to adopt policies which could result in nothing else than still further increasing savings and still further restricting investment.

There were five such major policies adopted by the New Deal: (1) Government spending on a huge and unprecedented scale; (2) Government undertaking to supply services previously furnished by private enterprise, in other words, Government competition with private industry; (3) imposition of personal and corporate taxes which penalized investment and expansion; (4) capricious interference with business by regulatory commissions; (5) labor legislation which split labor into two hostile camps. Let us consider briefly each of these items that have resulted in the hamstringing of business and, as the Temporary National Economic Committee confesses, has left the economic machine stalled on dead center.

Through its deficit spending—pump priming, if you will—the New Deal almost doubled the national debt, until today it has reached the staggering total of more than \$42,000,000,000, dangerously close to the statutory debt limit. And now, at this late date, after all these billions have been fruitlessly squandered, it is both ironic and tragic that Dr. Charles F. Roos, former research director of the N. R. A., in a study just completed of business conditions from 1919 to 1939, states that he found—and I quote—"no significant correlation between Government spending and orders received by business."

Bad as it is, our colossal deficit, with all its inherent dangers of inflation, is not the worst feature of the Government's spending policy. The worst feature is that Government spending drives private capital out of industry and prevents exactly the kind of investment which recovery demands—voluntary spending for productive purposes by the people who have money to invest.

The public debt is created primarily for nonproductive purposes—relief payments, military expenditures, civic projects, etc. But private debt is created for industrial production, chiefly of durable goods, which represent the most conspicuously retarded of our country's industries.

Yet, Marriner S. Eccles, Chairman of the Federal Reserve Board, who, of all persons should know better, has undertaken to assure the country that there is no need for alarm over our huge public spending because it has merely replaced private spending, and that the Nation's total debt, public and private, is no larger today than it was in 1929. It is exactly for that reason that there is serious cause for alarm.

The President, himself, less than a year ago, fed the Nation this soothing sirup: "Why worry about the public debt? We don't owe it to outsiders; we owe it to ourselves."

Does it ease the burden of our tax-ridden citizens and business enterprises to know that it is not to outsiders but to American banks and large investors that the taxes they pay will ultimately go? It is the amount of the tax not the ultimate destination of the money that matters. And businessmen resent the implication of their gullibility in statements that there is no difference between public and private debt.

Every businessman, every wage earner, knows that the public debt is created by the Government and not by the people who must pay it. He had no say when this debt was contracted. All he is expected to do is to pay, and pay, and pay; not only he but his children and his children's children. On the other hand it is equally obvious to everybody that private debt is an obligation voluntarily contracted and which the debtor expects and is perfectly willing to pay off to the last penny.

Now let's look for a minute at this matter of Government competition with private enterprise. It is a matter to which I believe too little thought has been given by the rank and file of Americans. The average man in the street reads in his newspaper about Government competition with great industries—such, for instance as the electric-power industry—but it seems to him a thing remote. When it goes to the lengths of putting out of business the merchant on Main Street with whom he has been dealing all his life it will be brought home to him in all its stark reality. But then it will be too late.

In our system of private enterprise the free flow of new investment capital constitutes the life blood. But mere capital is not enough. First there is a man with an idea, either for a new business or the development of an old; then come the investors to supply the capital to finance the idea, and last, management to plan, build, and direct so that the idea may become a reality.

Quite naturally when businessmen see Government competition going on in one industry they wonder what is going to happen to their company. They are likely to decide not to build that new plant which they proposed. The investor begins to wonder too, and to fear. He fears for the investment he already has made, he decides to put no more money in the business. So business expansion halts and investment capital piles up in idle bank reserves.

And now let's see how the New Deal through its income and corporation-tax policies has helped cripple American industry. In good years more than 50 percent of the Nation's savings comes from incomes of \$10,000 a year or more and nearly one-fourth from profits. One of the first steps taken by the New Deal was to increase the yield of the personal income tax, partly by advances in the surtax rates, but in the main by changes in the exemptions.

Then it sought to discourage investment by changes in the tax on corporate incomes, which roughly doubled its burden, and by a tax on undistributed profits to discourage corporations from reinvesting a substantial part of their income. For example, corporations in 1936 paid Federal income taxes of almost exactly the same amount as in 1929, although corporate incomes were only one-half of the 1929 level.

Thanks to the Republicans in the Seventy-sixth Congress and straight-thinking Democrats who aided them, the last vestige of the undistributed-profits tax was repealed last year, and the corporate income tax was modified to permit the carry-over of losses over a period of years.

There yet remain many inequalities in the distribution of the tax burden which are a drag upon business. To the correction of these inequalities the Republican Party is pledged. Heaven knows existing business and new enterprise need all the freedom from unwise and unjust handicaps they can get. Even in the prosperous years before 1929, less than two-thirds of the established American corporations made any money. Less than one-third make any money today. These are the established corporations. Among new business ventures only 1 out of 10 ever make any money at all.

Now, consider the New Deal's capricious interference with business by regulatory commissions. It has been the consistent New Deal policy to set up a commission to administer every law that it enacts for the regulation of business. In so doing it has made our Government to a very great extent a government by men instead of a government by law.

Before the New Deal the law was plain. It was written down in black and white. Every businessman could familiarize himself with the law and act accordingly.

This new government by men—we might even say by caprice—has served only to add to business uncertainty and fear. Business cannot successfully operate under a government by commissions which may change their standards as they will and dispense their favors in accordance with the predilections of their members.

Take the Securities and Exchange Commission, for example. The complaint of the financial community is not so much directed to what they believe are unnecessary hardships imposed upon the securities business but the atmosphere of uncertainty and fear in which they operate.

A simple illustration will give you an idea of what I mean. Under the securities legislation it is perfectly lawful for an underwriting syndicate to "support the market" for an issue of securities it has sold to the public. On the other hand, it is unlawful for the syndicate to manipulate the market. But where is the line to be drawn between "supporting the market" and "manipulating the market"? Ever since this legislation was enacted, underwriters have sought to have the Securities and Exchange Commission clarify this point. The Commission either can't or won't. So every day large underwriters are harassed by the uncertainty as to how far they may go in supporting a market and the fear that if they go too far they may go to jail.

I believe all of you know what the New Deal's labor legislation has done to business; more strikes than in any comparable period in the Nation's history; labor split into two hostile camps and the employer caught between the upper and the nether millstone of jurisdictional disputes. And we are all too familiar with the biased and prejudiced attitude of the National Labor Relations Board—now, happily, in process of being cleaned up, or so at least we hope. It is not an exaggeration to say that the New Deal's labor policy has cost industry billions of dollars and has cost the workers many millions through unemployment due to strikes and permanent loss of jobs by the closing down of plants.

The picture I have endeavored to present to you of how the New Deal has crippled business and checked the flow of investment funds has been admirably sketched in a recent issue of a weekly paper by James Truslow Adams, eminent historian and economist. Mr. Adams says—and I quote:

"The capitalist today knows he may lose if his judgment is wrong, but also that if he is right, what he may be allowed to retain is so small in comparison with the risks that the game is not worth the candle. He has always been willing to take risks for the sake of great profits, but no sane man takes great risks for nothing.

"It is not merely that taxation is heavy, with every prospect of its being yet heavier in the future, but that it tends to be used punitively with the intention of not simply raising money for the legitimate needs of government but of remodeling our social system into a form unknown. Governmental regulation and red tape not only take the time of executives, but with 49 governments—State and Federal, to say nothing of local—turning out some 20,000 new laws a year, businessmen cannot know from day to day where they stand before the law. There is also too rapid change. We are told that some governmental policies are on a 24-hour basis, but business cannot afford to take great risks in the investment of millions in plants which may not be productive for years if the attitude of government toward business cannot be predicted for even a week."

It is a gloomy picture, but let us not despair. Let us remember that in his first inaugural Lincoln said, "While the people retain their virtue and vigilance, no administration, by any extreme of wickedness or folly, can very seriously injure the Government in the short space of 4 years." I, for one, am quite sure that he would have said the same of an administration covering 8 years.

So here and now tonight let us highly resolve, both in the spirit and in the words of Lincoln, "that this Nation under God shall have a new birth of freedom—and that government of the people, by the people, for the people shall not perish from the earth."

To us he passed the torch. Be ours to keep it bright.

## Taxes and Business Expansion

### EXTENSION OF REMARKS

OF

HON. ROBERT L. RODGERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

#### LETTER FROM A CONSTITUENT

Mr. RODGERS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

letter from a prominent manufacturer and businessman in Erie, Pa.:

NORTHERN EQUIPMENT CO.,  
Erie, Pa., February 14, 1940.

Hon. R. L. RODGERS,

House of Representatives, Washington, D. C.:

Noting that an economy wave is finally becoming apparent in the Congress, I hope you will use your efforts to continue that just as strongly as possible.

As you know, billions of capital are idle largely because of fear and the lack of belief that venturing capital will produce safe returns. As a corollary, excellent ideas and men to exploit them are likewise idle.

This is no theory. In the past month there have been submitted to me two propositions, each of which would mean the establishment of a new manufacturing plant. In spite of additional cash in the bank, I declined both. If I could be reasonably certain that even a little of the tax load were going to be reduced, I would go into either or both of those propositions at once.

Reduce the tax load so as to permit additional money, dormant ideas, and unemployed men to get to work.

Sincerely yours,

E. W. NICK.

## Lincoln Day Address at Fairmont, W. Va.

### EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ADDRESS BY HON. LELAND M. FORD, OF CALIFORNIA

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address to be delivered by me at Fairmont, W. Va., on February 22, 1940:

It is certainly a privilege and a pleasure to have the invitation to come to Fairmont, in the First Congressional District, of which Mr. ANDREW C. SCHIFFLER is Representative. Incidentally, I would like to congratulate and commend this district upon its selection of Congressman SCHIFFLER, for I, and many other of our colleagues, believe that he is one of the best Congressmen in Congress.

I believe it is particularly apropos at this time of the year that we do honor to one of the greatest Americans, Abraham Lincoln, and I would like to feel that the spirit of Abraham Lincoln would join us in this meeting this evening.

I have chosen tonight to speak about security, and when I say "security" I not only mean social security but I mean the security of all those who expect social security, the security of the aged, the blind, the destitute, as well as the security of business, of labor, of our own homes, all of that security for each and everyone of us. Let us pause and ask ourselves a question, each one of us, how secure are we and what security may we expect in the future. Of course you do not have to answer any such question as that to me, but you certainly do have to answer it to yourself, and you cannot sidestep it, neither can you fool yourself about it, but it must be satisfactorily answered.

I don't think it hurts to take an inventory of one's situation occasionally and make a full survey to find out exactly how one actually stands. This I am going to attempt to do. It might be possible to bring this out by comparison. Let us compare, then, the conditions that surrounded Abraham Lincoln, with his log-cabin birthplace and the other so-called social conditions that went along with it. At that time there certainly was no Farm Security Administration to turn money over to Abraham Lincoln and there was not a group of other social agencies, with pockets full of money, which money had been wrung from our people through taxation, to give to Abraham Lincoln or others like him, in order that he might get his education, continue to live, and follow his vocation. Looking into this a little further, after he had advanced in life and had become a lawyer, it was found at one time that he was so poor that he had to pawn his famous and well-loved surveyor's instruments to pay his rent. There were no new dealers around then to come to the aid of Mr. Lincoln and give him money which he did not ask in order that he might continue to follow his profession and live. It certainly is a fact that he did live. It certainly is a further fact that he had an unusually strong character and that his principal philosophy was that if he worked hard, if he was honest with himself and with his fellow men, worshiped God, had a religion, he would succeed. He did succeed, and he did become the sixteenth President of the United States, strange as it may seem, without any of the coddling of a paternalistic government. While Abraham Lincoln did not receive the so-called benefits under our new social extension, at the same time he was not called upon to pay nor be

burdened by the burdensome taxation that took from him the incentive to go forward, for in those days the Government was living within its means, paying its way, and paying off its national debt. Is this not exemplification of the statement that we have heard that "strong plants do not grow in hothouses"? I believe it is. I also believe that the type of Lincoln philosophy is just as good and just as strong today as it was then. I believe that it is, at least in part, through hardships and the ability to surmount those hardships, together with their experiences, that the thing we call character is created.

Once that character is developed, it is its driving force that motivates men and drives them forward to such heights as Lincoln reached. Sometimes I wonder if we are sapping and destroying our future security by surrounding people with conditions that will make them too soft by giving them things that they did not earn, and by the very easy way in which these things are received, and if we are not eating away that security called moral character.

In those days people at least had real security. In that time security meant the right to acquire knowledge, whether you received it in school or at your mother's knee, or whether you slaved for it with a piece of coal and a board at the hearthside as Lincoln did. After one acquired that knowledge and the ability that went with it, he had the right to use it to further himself to the limit of his knowledge and ability, and what he won in the way of financial or other rewards, no man or government did take away from him if he got it honestly. Security, then, was backed up by thrift. It meant that if a man worked hard and honestly and built a home that a man could be proud of as long as he lived, he would be somewhat protected by those things he had earned. The biggest thing, however, in this constructive effort was the building of honest, rugged men and women with real character, dependent upon no one for guidance or financial help. They were secure in their honest, rugged strength and moral character, unafraid of work, and happy in the knowledge of a job done rightfully, willingly, and well.

Let us look at our security today and wonder how secure we are, with a national debt of approximately forty-five billion and a current operating expense for 1 year—last year—of approximately thirteen billion, with a prospect of the national debt going higher.

How secure is any nation financially that owes \$45,000,000,000 if that nation is honest and expects to pay back that bill? I think our people have not been deeply enough concerned with the seriousness of this debt, with particular reference as to how it affects their security.

I think that this goes to the security of every individual in the United States, to the security of even our form of government. This debt may eventually determine whether this country is to remain an American democracy, with our Constitution, our Bill of Rights, or whether, eventually, due to the break-down of our financial structure, there may be an attempt to force upon us, in one of its forms or another—socialism, fascism, nazi-ism, or communism. I have stated that the only difference between the spread from socialism to communism is in the degree of its application.

Let us consider a few figures from the following table:

	Receipts	Expenditures	National debt end of year
Fiscal year—	Millions	Millions	Millions
1930	\$4,178	\$3,994	\$16,185
1931	3,190	4,092	16,801
1932	2,006	5,154	19,487
1933	2,030	5,143	22,539
1934	3,116	7,105	27,053
1935	3,800	7,376	28,701
1936	4,116	8,880	33,545
1937	5,294	8,105	36,427
1938	6,242	7,626	37,165
1939 <sup>1</sup>	5,520	9,492	41,132

<sup>1</sup> Estimated.

In this connection you will note the last year's expenses shown as nine-billion-plus came closer to being 13 billion. You will notice how the national debt has risen from 16 billion in 1930 to approximately 42 billion in 1939. This 1939 figure does not include the liabilities and guaranties of any other departments of Government. These figures are beyond the average man's comprehension, and, ladies and gentlemen, I want to tell you that they certainly are fraught with much danger and they show several things, not only with reference to our finances themselves, but one of the biggest dangers is in the tremendous tax load that our business structure has to bear and how it might affect its ability to maintain itself as private business, due to this tax load. The other is to security. How much security are any of you going to have from a bankrupt Government. Who will pay? And with what can a bankrupt Government pay all the social security benefits, veterans' benefits, aged aid, and all the others? This, then, leads us to the question of the encroachment upon private business of socialism, nazi-ism, fascism, or communism, whichever you choose to call it. I think this is proven by the encroachment of the Federal Government on what used to be termed "private business." We find the Federal Government in the banking business, the real estate business, the insurance business, the brokerage business, the power business, and I believe there are some 89 businesses, all told, which this Government is now engaged in operat-

ing. Whenever these businesses sustain a loss, of course, this loss must be charged back in the form of taxes. These businesses, therefore, must not necessarily be run on an efficient basis, because any deficit is charged back to taxes and collected from our people.

Is not this Government ownership and operation, then, actually socialism? And is not socialism the first step toward fascism, nazi-ism, and communism?

Are private business, labor unions, individual liberty, and all those rights that we hold dear under our Constitution and democratic form of government, wiped out and destroyed under any of these so-called "isms"?

I think these are fair questions. You ought to know the answers. Your welfare and security are at stake. You will eventually have to answer these questions, and upon your answer your future will depend. Give your answer before it is too late.

As a particular illustration of some of these things about which I have been speaking, let us consider the ownership and operation of the T. V. A. Here is Government ownership and operation, with millions of the taxpayers' money spent to compete against whom? Our fellow citizens. Assume the T. V. A. program in its complete form. What are going to be the effects upon that community and upon you, in your community? First, I don't think there is any question but that private business in this line will be driven out of business. The rates may be low temporarily, or they may not be, in the long run, but that remains to be seen. People usually pay for what they get. Usually, Government operation is far more costly than private business because those who run Government operations are selected primarily on account of their political importance and not on account of what they know about the operation of that particular business, nor their efficiency to operate it. If the plant is not efficiently operated, it does not have to close down as a private business does, but the dear old taxpayer is again stuck for the taxes to pay for the political mistakes of those who do not know. Also how will labor unions fare under Government ownership?

In that district I understand that some of the counties are now beginning to worry as to their revenue produced by taxation, because these T. V. A. projects, being Government-owned, are tax exempt. This is one of the effects immediately upon the county, and, having been a county supervisor, I know that one of two things will have to happen, valuations will be increased to obtain the additional revenue, or the rates will be increased, in other words, there will be an increase in taxes.

How is this going to affect you? And when I say you, I say the employer and the employee, the owner of the business and the laboring man, and all in between, because all are affected. Does this mean that electricity, which was formerly generated in plants wherein they used coal and oil, will take the place of the coal and oil and the plants will now be cleared up and scrapped? And, if that is true, what is going to happen to those who have been furnishing the coal? Are you going to close down the mines so far as the owners are concerned, and lose the benefits from your capital? And is labor going to be denied the opportunity to work these mines and lose the benefit from its capital, which is labor? When one takes into consideration the ramification of the effects of this governmental ownership, with its socialistic trend, he had better pause and ask himself the further question: Where are we going, and what is our future destination? My answer, after giving some thought to that question, is that we are going down the road to ruin, to a certain loss of American form of government, if this governmental encroachment continues to grow as fast in the next 20 years as it has in the past 7. The time to stop these things is now, and I hope, by the time election gets around, every man and woman voter will have turned these things over in their minds, seriously, and have the proper answer.

Now, these things that I am telling you either are or are not true, and it is up to you people individually to determine whether they are or not. I believe they are, and I believe their effect, if continued, is going to vitally affect the security of every businessman in this country. The reason I say this is that of all of these tremendous expenditures every single penny must come from one source only, and that source is taxation, and every dollar collected in taxes comes from some of the ramifications of business. That, in turn, of course, affects employment. Business cannot use the same dollar with which to pay taxes and give employment to our people. This has been tried for the last 7 years, and after the expenditure of twenty-five thousand million dollars we have approximately the same number of unemployed that we had 7 years ago, and I think we are in worse condition because we certainly owe that twenty-five thousand million dollars more than we did, and are not in as sound financial condition as we were, and neither is business. In addition to this, the incentive of security has been taken out of business and business feels it is no longer safe to go ahead as private business, that gradually, but surely, socialism is creeping in and Government is engaging in that business in a socialistic or communistic manner, thereby destroying business, and with it security.

I say to you that no Republican, nor any Democrat, has any right to support any such socialistic trend.

Having looked at conditions as they are, and I believe this to be true, how secure is any business, any bondholder? How secure are any of our people who have been led to believe that they are going to have social security in their old age? How secure is any savings bank? How secure is any holder of a mortgage or any other security? As a matter of fact, how secure is labor under this encroachment of socialism?

We have only to look to Europe within the last 25 years to see these different types of encroachment work, and look at the European countries in which they have been tried, to see what they have done. In contemplating those things, I certainly do consider that inflation and deflation are dangerous to all security, and so is repudiation of Government debt. Of course, this country has not gone so far as some of the European countries, but I think the time to stop this socialistic-communistic encroachment is now, and every group of our people should back us up in stopping all these Europeans "isms" and demand that our people get back to an American form of Government and stay there.

I am going to ask labor a question, and it is this: If we depart from an American form of Government and adopt any other form of government, in whole or in part, in a range from socialism to communism, where does labor expect to get off? I am asking labor, and I defy labor to point out to me, where they may find one labor union in Russia, one labor union in Italy, or one labor union in Germany. They have been destroyed by so-called liquidation. Those of you who may be interested in religion have seen religion restricted in Italy, much more restricted in Germany, and finally wiped out in Russia.

We have also seen business, individual liberty, and all rights as we have come to know them in America, wiped out in the same way. Therefore, I say to you that this country cannot successfully engage in socialism, or in any "ism" except Americanism if we are going to maintain our ideas of individual liberty.

I have not given you many figures, but I could, with respect to the tremendous taxation that this country has to bear, and I believe that this country can and will pay its way out and give back to us that security we have known and have expected in this country, if we will stay away from European "isms" and stick to the American form of government, which gives us our incentive to go forward, known as individual liberty.

In my experience as a county official I know definitely it is not the cost of American government that is breaking the American businessman and bringing the tremendous tax load upon the people. I believe that it is this outside social extension of things that are not proper, reasonable, desirable, or necessary functions of government that is increasing the cost. As a matter of fact, I know definitely that within my own county of Los Angeles 52 cents out of every dollar goes for this new program and for things that are not strictly governmental functions. This should mean to the average man, if many of these things should be discontinued, that the tax bill could be cut more than 50 percent. This should further mean that when this tax bill is cut there would be more money left with which to meet pay rolls in employment, so I think it is safe to say that it is not the cost of the American form of government that is breaking us down but it is the cost of these imported European "isms" that have attached themselves to our Government like leeches which is really ruining us. It is not sufficient just to criticize, and I offer this as a suggestion, that the Government of the United States announce a policy, and when they announce it mean it, that first they are going to balance their Budget and quit spending more than they take in.

Secondly, that when these expenditures have been curtailed the amounts so secured shall be passed on to business in the form of reduced taxation.

Thirdly, that the United States will get out of private business and stay out, and return to the functions of government only and never engage in competition with its citizens.

I believe if those things were done and actually carried out, the incentive for business to go ahead would be there, that confidence would be restored in business, and business would go ahead and make that expansion that it is crying to make, and in that expansion our unemployed would again be absorbed, back on the pay rolls of business and industry where they permanently and properly belong and off the public dole. In other words, it would be a return to the American idea of government which would bring us real security.

Let us, with Lincoln, believe that the vigilance of a free American people will see to it on next November 5 "that this Nation under God, shall have a new birth of freedom—and that American form of government, of the people, by the people, for the people, shall not perish from the earth."

### A Mission of Exploration

### EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

EDITORIAL FROM THE PHILADELPHIA EVENING BULLETIN OF  
FEBRUARY 12, 1940

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Bulletin of February 12, 1940:

[From the Philadelphia Evening Bulletin of February 12, 1940]

### A MISSION OF EXPLORATION

President Roosevelt's dispatch of Sumner Welles, Under Secretary of State, on a mission of inquiry among Europe's great powers has aroused much speculation at home and abroad as to his purpose. In the allied countries there is uneasiness as to the possibility of peace overtures unsuited to the present state of Europe's war.

The allied governments think peace on any terms now obtainable would leave Hitler with the fruits of his aggression and in position to resume his attacks on the independence of minor countries.

There are those in the United States who view the President's step as a move toward dangerous involvement in affairs overseas. While the President's representative is visiting the three belligerent nations, and Italy as well, Secretary Hull will be discussing with the neutrals the chances of an enduring peace based on an end of economic war.

The President has already put on record his desire to cooperate to bring about peace in Europe in his message to the Pope, telling of his decision to name Myron Taylor as his representative at the Vatican. There are many reasons outside considerations of humanity why the President must wish the conflict terminated. The war will place on the financial and economic resources of the nations participating, and on their social structure, a terrible strain, from some of the effects of which the United States cannot hope to escape. Already dislocations are occurring in our foreign trade, as instanced by the blow to tobacco exports caused by British preference for the Turkish product.

A prolonged war might well mean a world-wide depression, making domestic recovery the more distant. The zero hour in which the Nazi spring offensive may come approaches. Exploration of possibilities that the allied democracies may be spared that ordeal seems desirable.

The President's hatred of dictatorship is too well established to make it credible that he would let American policies serve in any way Hitler's purposes. The manifest demand of the people to keep the country out of war and the President's own assurances on that subject are all on the record. They seem adequate safeguard against the dangers conjured up because of the Welles mission.

### Freight-Rate Differentials

### EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the February 11 edition of the Spartanburg Herald:

[From the Spartanburg Herald of February 11, 1940]

### ONLY A SQUARE DEAL IS ASKED

Again the South must go before the Interstate Commerce Commission and ask that body to sustain its recent ruling which gave part relief from the burdensome freight rates that southern shippers have suffered in past years. Northern interests have filed a complaint against the ruling and are asking the I. C. C. for a reopening of the case.

As far back as 1931 Commissioner Eastman declared that the differential "is in open conflict with the principle of equality; moreover, it is a cruel doctrine." That seems to state the case of the South as completely as it can be stated. The rate differentials have caused Southern States to lose millions of dollars which should have been used in the development of industry. But that is just what the manufacturers and railroads of the Northern States seem to want.

The South is "up and coming." In spite of all handicaps, its natural resources are being developed. The decision of this case should not hinge upon what effect it may have upon certain sections of the country but upon the benefit to the whole. The South is the greatest potential market of the Nation. Given the opportunity, its people will be buyers of eastern and western products and the southern consumption will stimulate nationwide business and industry.

The South asks nothing but an equal chance in the commercial and industrial structure of the Nation. Less than that is rank injustice. This repeated effort to get a square deal has become an "old southern custom."

Mr. Speaker, the editor of the Spartanburg Herald is correct in asserting that the South is "up and coming." It is true that in spite of certain man-made economic barriers, in spite of all handicaps, the natural resources of the South are being developed rapidly.

Public officials in every section of the country must realize that the abomination of freight-rate differentials is unfair and hurtful, not only to the South, but also to the Nation as a whole. As pointed out in the Spartanburg Herald editorial, the South is the greatest potential market of the Nation. In the National Emergency Council report on southern economic conditions, the South is described as "the Nation's greatest untapped market and the market in which American business can expand most easily."

In another part of this same report to the President on economic conditions in the South, it is stated:

The major problem which faces almost all industry in the South is that of freight-rate differentials. \* \* \* In effect, this difference in freight rates creates a man-made wall to replace the natural barriers long since overcome by modern railroad engineering. \* \* \* The southern producer, attempting to build up a large-scale production on the decreasing cost principle, finds his goods barred from the wider markets in the Nation's most populous areas. In marketing his products over the wall, he is forced to absorb the difference in freight charges.

To those who still contend for freight-rate differentials I call attention to the following explanation offered in this same report:

Two chief reasons for higher freight rates have disappeared. One was the greater expense of railroading in the South due to physical difficulties. This has been minimized by modern engineering. Another was the comparative lack of traffic density that prevented the spreading of the cost. This no longer is the case, since many important southern roads have as great a traffic density as those above the Ohio River. The operating costs of southern lines today are lower than those in the eastern territory.

On what grounds, then, are the complainants contesting the recent ruling of the Interstate Commerce Commission? My answer is that, if this be a question of removing an injustice against the South, which at the same time benefits the Nation as a whole, there are no grounds for opposing the recent freight-rate parity ruling of the Interstate Commerce Commission. As the Spartanburg Herald puts it, only a square deal is asked.

### Polish Relief

#### EXTENSION OF REMARKS

OF

HON. RAYMOND S. McKEOUGH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

LETTER FROM THE POLISH-AMERICAN COUNCIL, CHICAGO, ILL.

Mr. McKEOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Polish-American Council of Chicago, with reference to Polish relief in Poland:

POLISH-AMERICAN COUNCIL,  
Chicago, Ill., February 16, 1940.

HON. RAYMOND S. McKEOUGH,  
Member of House of Representatives,  
United States Congress, Washington, D. C.

HONORABLE SIR: For your consideration and official action we hereby respectfully submit to you, as directed by the mass meeting which unanimously adopted them, the following resolutions, with our respectful plea to personally help in carrying them out in letter and spirit and to have them spread upon the official CONGRESSIONAL RECORD for perusal, consideration, and action of Congress:

"Resolved, That we, assembled here this Saturday evening, February 10, A. D. 1940, 20,000 strong, in the Chicago Stadium in Chicago, Ill., as American citizens, in accordance with American ideals and traditions, hereby petition our President of the United States, the Honorable Franklin Delano Roosevelt, the Congress of the United States, Hon. John Nance Garner, the Vice President, as President of the Senate, and Hon. William B. Bankhead, as Speaker of the House of Representatives, to support and have Congress make the necessary appropriations for Polish relief and to take steps officially to answer the cry of distress and pleas for help of millions of suffering people of Poland, now temporarily in the toils and grip of the German Nazi and the Russian Soviet invaders; and

"Resolved, That our United States Government hasten in bringing aid and relief to the suffering innocent people in Poland and to the refugees and exiles therefrom in other countries, in order to save the lives of men, women, and children in accordance with the traditions of America and the soul of the American Nation and in accordance with the dictates of humanity, civilization, and the law of God; and

"Resolved, That the aid and relief from our American Government, as well as all other aid and relief of the different and various humanitarian agencies of America, be distributed by Americans and that it be carried on under American supervision in accordance with precedents and justice; and

"Resolved, That we hereby further petition our Government to see to it that all aid and relief from America for the suffering, needy, and starving people of Poland is carried on, distributed, and supervised by Americans for the benefit of the people of Poland and not for the benefit of their enemies and invaders; and

"Resolved further, That we hereby solemnly pledge our continued aid and support to the cause of giving aid and relief to the suffering, needy, and distressed people of Poland until they are again free and independent, and are, with other free and civilized people of the world, permitted to carry on their mission for the benefit of freedom, humanity, civilization, and peace."

The demonstration at which the foregoing resolutions were presented and adopted was under the auspices of the Polish-American Council of the United States, which represents and combines the large organizations of Americans of Polish ancestry, their churches and their institutions, in the work of raising funds for helping the cause of Polish relief.

Attorney Francis X. Swietlik, of Milwaukee, Wis., as president of the Polish-American Council, presided, and Hon. Herbert Hoover; Gen. Joseph Haller, of Poland; United States Circuit Court of Appeals Judge Otto Kerner; Mayor Edward J. Kelly; Chauncey McCormick, president of the Commission for Polish Relief; and Jan Klepura, the Polish grand-opera star, delivered addresses at the demonstration. Anthony Czarnecki, of Chicago, presented and read the foregoing resolutions which, upon motion made and seconded, were adopted unanimously without a dissenting vote by the vast assemblage of more than 20,000 people.

Respectfully submitted for your kind consideration and action by direction of the mass meeting and by order of the Polish-American Council, for them and in their name.

FRANCIS X. SWIETLIK,  
Chairman of the Demonstration and President of the  
Polish-American Council of the United States, Milwaukee,  
Wis.

HONORATA WOLOWSKA,  
Vice President of the Polish-American Council, Chicago, Ill.  
JOSEPH L. KANIA,  
National Treasurer of the Polish-American Council, Chicago,  
Ill.

ZYGMUNT STEFANOWICZ,  
Secretary General of the Polish-American Council, Chicago,  
Ill.

ANTHONY CZARNECKI,  
Chairman of Resolutions Committee, Chicago, Ill.

### What Do the People Want?

#### EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

STATEMENT BY HON. ROY E. AYERS, GOVERNOR OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Gov. Roy E. Ayers, of Montana, before the Interstate and Foreign Commerce Committee:

Governor AYERS. Mr. Chairman and gentlemen of this subcommittee, I am glad to see all of you again and I am glad to see the chairman [Mr. LEA] of the whole committee here this morning; I am also glad to see the faithful senior member of this committee [Mr. CROSSER]. With much pleasure do I remember, while a Member of Congress, having talked with all of you about many problems of governments. And today I am just going to talk to you again and not talk at you; hence I am just going to try for a little while to be one of you again.

My text—that is a good word, isn't it?—will be What Do the People Want? And, answering it briefly, permit me to say they want less legislation, less direction, and more opportunity to work out their own problems.

Now, Mr. Chairman, I am an administration man. I was an administration man while I was here in Congress. I am faithful to the administration. What I say here I hope will be construed

to be what I firmly believe for the benefit of the administration as I see conditions today. This administration is my administration. I am a part of it. Although I am not officially connected with the national administration any more, yet as chief executive of one of the Nation's 48 separate units (the States), I am both as a State official and in a personal capacity doing all I can to make the national administration a success and my remarks here and now will be directed to that end.

With that purpose in mind, I say that I believe the time has come when the people are demanding less legislation, less interference, and less direction from the National Government, and more opportunity to work out their own problems. The National Government with its remedial legislation since March 4, 1933, has actually saved us as a people, but the time is here when we must get back to our own responsibilities and be our own selves again in order that the recovery program promulgated, supported, and pushed forward by the National Government may become permanent. To do that, don't misunderstand me to mean that the Government shall forthwith withdraw and discontinue its so well-meant and so effective help; however, what we need now is not more law, not more power, and not more direction by the Government, but less law and less direction to the end that we have more modifications and more consolidations rather than increased additions and multiplications of governmental authority.

We have too many national "laws of don't," and that didn't start with this administration either; and we have too much national interference with private industry and too much national control of what the people determine to be entirely State affairs.

I will be brief, but that you may get my viewpoint, I wish to call your attention, first, to one of the outstanding "laws of don't," a law which the Government itself finally corrected. Then, second, as to Government interference in private business, private industry, I shall call your attention to the outstanding instance of all time, in which instance the Government again corrected the error, so far as law is concerned, but only after irreparable injury had been done to one of the most outstanding, Nation-wide industries. And, third, I shall rely upon this committee's own outstanding good judgment in the protection of the sovereign right of the States in the management and direction of their own affairs. These things are material arguments against the "reporting out" of the Cole bill by this committee.

Now, first, as to the "laws of don't," all of you committee members well remember what happened in this Nation and how a general disregard of law grew up while we had a constitutional provision known as the eighteenth amendment, and to enforce it we had all kinds of laws saying "don't" and "thou shalt not," the principal one of which was the Volstead Act. But they just didn't work. The American people do not stand for a "don't" law unless it has to do with the prevention of some actual wrongdoing, in which event they get back of it and see that it is enforced to the limit.

Now, let me ask you in all seriousness, what conscious wrong has been shown to exist requiring that the Cole bill be given life to prevent such wrong; or, if by any stretch of the imagination, any conscious wrong is shown to exist in the course of oil production, has there been anything shown to indicate that the State or States in which the wrong exists cannot be better corrected by the State or States themselves than by enactment of the Cole bill?

The second objection against the instant bill, as I heretofore stated, is Government interference and control of private business—private industry. We all remember when the Government took over the control of the railroads of this country. And since you have a railroader and a real one on this committee, Mr. CROSSER, I am sure he can discuss this matter with you in committee conference more ably than I or anyone here. I shall repose my confidence in him to do that when you have the subject of Government control under consideration. However, I shall briefly call your attention to some outstanding features in that respect. It was wartime then and if ever in all our history the Government had a right to take over a private industry it had it then, and if it would ever have support in doing such a thing, it should have had it then. Yet, during that period and for a long time after the railroads were restored to their rightful owners, the courts of this country were literally swamped with litigation in which McAdoo and then Hines, as Directors General of Railroads, were defendants in more litigation than was ever had in this country on any one subject. I know that as a fact, for I was on a trial bench in my State then and I followed it both in State and Federal courts. A great portion of this litigation was encouraged by railroaders themselves and by shippers and patrons, brought on in order to discourage the Government in its operation of private industry and to encourage it to turn the railroads back to their rightful owners at the earliest possible moment. This demonstrated to us that the people did not approve of that class of government control and government administration of private affairs.

Now let me ask you, What has grown out of the situation in that instance? Well, I can answer that question, too, and very briefly. It put some of the railroads out of existence entirely; others into receiverships; it has put others actually on relief—yes; they are actually leaning on shovel handles—they are on relief in fact; and others, the most successful of them all, have established a credit rating with Jesse Jones down here at the Reconstruction Finance Corporation, and that is the only reason they are success-

ful; private money was not and is not now available for that purpose.

Everyone well knows the place the railroads have always taken in the industrial world and no one ever believed or even had an idea that the control which was exerted over them at the time it was exerted could have started them on a downward trail. As a matter of fact, a great agitation was prevalent then for a continued government control and even for a government ownership of railroads, but the Congress was too wise to take any such step. That experience and other experiences have taught us and I am sure we have learned that such things just don't fit into our scheme of governmental affairs.

Now, the oil industry, the second largest industry in America—as I recall it, second only to agriculture, will be subjected, if the Cole bill passes, to run the gauntlet of every class of Federal control and management which has not heretofore proven successful. Surely we do not desire to start on an experimental tour with an industry so far reaching as the oil industry. There are thousands upon thousands of byproducts of mineral oil. It is found upon the shelves of every drug store, every grocery store, and every dime store; it is in every home medicine cabinet, on every dining table; there is not a single girl clerk here in Washington who does not contribute her bit to gasoline, which is the highest of the oil products. She rides the taxis or drives her own car. The hand of labor and the skill of the expert commences with the discovery of the field and the drilling of the well, and it ends in the use of the refined product. As a matter of fact, the industry affects practically every citizen of the country.

Mr. COLE. You can hardly speak of anyone who is not affected.

Governor AYERS. Really, Mr. Chairman, that is true. It is far-reaching. I am told that doctors are now prescribing castor oil which comes from the ground.

Now, Mr. Chairman, since we have all agreed that the oil industry is so far-reaching, surely no person desires it to get into the condition of the railroads—on relief.

Third is the question of the right of the State to deal with and handle its own affairs and of those things originating within its borders and that are developed under its authority and that are protected by its police power and that become a success by reason of the primary knowledge and interest of its citizens. I am sure this honorable committee will agree that we have authority under our Constitution and under our form of government to the right of jurisdiction unless we fail in the purpose designed for the benefit of all. And the only way we could do that is to commit waste of a natural resource. And unless we are actually committing waste in this instance, we have and should retain jurisdiction. We have such right, among other reasons, by reason of the law of discovery and by reason of the law of pursuit, so long, at least, as we do not abuse such right. While I make this statement, I am mindful of the Interstate Commerce decisions declaring that oil is a subject of interstate commerce from the cylinder of the pump at the bottom of the well all the way to the consumer. Yet the control of the industry proposed by the Cole bill cannot exist under any theory of law now existing; hence the Cole bill.

So now let us discuss briefly how, if in any way, have we failed to protect a natural resource; and if we have failed, how in the name of "conservation" can "interstate commerce" interfere?

We as States do not claim to be perfect any more than the National Government can claim to be perfect, nor any more than any individual can claim to be perfect. But we as States, like the Government, do claim that we will correct our errors when we know them and when we have the opportunity to do so. And that same rule may go on down to the individual, which, after all, makes up the States and makes up the Government—yes; after all, we as officers of the State and of the Government are responsible to the individual—the people, in whom I, and I am sure you, have every confidence, for this is a Government in which constituted authority is derived from the people.

And now, since we have agreed that practically all of the people are affected by the oil industry of this country, I believe we may further agree that the great overwhelming majority of the people affected are consumers, and who, so far, has appeared before this committee in behalf of the consumer? While I am not desirous of taking in too much territory, that is oftentimes more dangerous to the person who attempts it than otherwise. As a matter of fact, a then Congressman from my State and while a member of this committee, and not so long ago either, brought disaster upon himself by attempting to take care of the affairs up in New Jersey and over in Spain—so with his experiences fresh in mind, I shall try not to go too far afield. Yet, I do think somebody ought to mention what the Cole bill will do to the consumer of the products of the oil industry. Just briefly, I am sure you will agree with me that from gasoline, lubricants, and hard oils at the top on down to barn paint and shoe blacking, it will raise the cost to all consumers because naturally the cost of the administration of the things set forth in this bill will be passed on to the consumer; that is the ordinary sequence of all things of this kind. As administrative boards, bureaus, and commissions, and as executive and administrative offices and officers are created to effect the functioning of this law, the expenses thereof just naturally go on down to the pocketbook of the consumer. It always has been that way and it just seems that no cure has been offered yet for it, so we will and must expect it in this instance. Let the camel get his head under the tent and he is

going to see the show at the expense of those who bought tickets.

The States are now receiving the benefit of the extensive research of the Geological Survey and of the National Bureau of Mines, all of which is very beneficial to the States and all of which is duly appreciated by them. In most of the public-land States, the Government rules of drilling, or rules of development whether the oil is produced or not, and the rules of production if the well is productive, have been adopted by the States, and if any error occurs there in the matter of conservation which may amount to waste, the State can be blamed only for having followed the Government. In all public-land States where oil is produced on public land, the Government is a lessor, and I have never yet heard of it having made complaint about waste.

Surely it has not in my own State, and there it is one of the large lessors and has the Bureau of Mines agents in the fields at all times. I believe that individuals as lessors are like the Government as lessors. If they see or know of waste being committed, they will be the first to make complaint, and when that complaint is made and when the State fails to correct it, then and only then should the Government step in and say, "Thou shalt not." But I cannot conceive that any State will sit idly by and see any of its natural resources wasted.

The wild rush to frontiers is a thing of the past. We have learned the folly of slaughtering million of buffaloes for their hides, because they have become extinct; we have learned the folly of plowing up the lands that Nature had created to raise its own grasses, because by so doing we developed the Dust Bowl; we have learned the folly of the promiscuous cutting off and permitting the uncurbed fires in our forests; we have learned the benefit of curbing our waters near their source for reclaiming and benefiting of the agricultural and livestock industries and for flood control farther down the rivers; likewise we have learned the necessity of conserving our oil and gas for present use and for the benefit of posterity. You don't hear any more of open-earth reservoirs for crude oil. But you do hear of every act that is possible being practiced in every State for the conservation of its oil and gas and all other natural resources. So now I cannot see why with this great education program going on that we should pass any more "laws of don't," nor enact any more laws taking authority from the States. In aid of this educational program we have and we welcome the services of the Geological Survey, of the Biological Survey, of the Bureau of Mines, of the Irrigation and Reclamation Service, of the National Park Service, of the Bureau of Public Roads, and many other governmental agencies which are designed to help, and while the title of this proposed law (the Cole bill) is along that line, the text of it is absolutely different. The text is a "law of don'ts"; it is a law of "thou shalt not"; it is a law of absolute control, in which the executive appointed thereunder shall have absolute power, from which there is no appeal. And to me as a lawyer and an ex-judge, it just doesn't seem to be in accord with the fundamental legal principles of this country.

Having absolute faith in the people and realizing that States are made up of people, I cannot conceive of any State running wild, or even half wild, or even just a little wild at this day and age in the waste of any of its natural resources. The people must have first in their minds the conservation of the things which make their State a success and if we let them do it, I am sure they are going to feel a whole lot better among themselves, and as a whole they are going to feel a whole lot better toward the Federal Government. And if the Federal Government knows of some mistake in this respect that the State is making, I am sure that the State, which is the people, will feel a lot better if it is called to their attention by the Government through its instrumentalities, rather than having the Government step in upon them and take or attempt to take their authority from them.

After all, governmental authority from which springs government control and government regulation is, in this country derived from the consent of the governed, and an unjust use of it is bad.

We, the Governors here today, are answerable back to our people, and don't you suppose we know what they desire in our respective States? And while we are here talking primarily for them, we must in order to completely do so, talk for the great mass of consumers in all the other States, for if it were not for such consumers, our products would not be salable, we would not have any market, hence, after all, the program is Nation-wide. We have the product in our State and you in the other States have the purchase power—so let us work together. We will not knowingly waste our product for we hope to transport and sell it to you in other States at a price you can afford to pay, and there is where the Interstate Commerce fits in—from and after the time it is produced and on until it reaches the consumer.

If, as is proposed by this bill, in the name of conservation, a commissioner is appointed from whose order there is no appeal, by the authority of the bill he can tell us what to produce and what not to produce, and when to produce it and when not to produce it; he can also tell us when and for what purpose the product can be used. He can say to the driver of a pleasure car "Don't," or "Thou shalt not," or "We must conserve this product for other purposes." Then he could go on and without any appeal on my part, tell me that I cannot use lubricants or crude-oil products to run the tractor on my ranch and that would force me back to the work-horse. Well, maybe that would be better so far as I am personally concerned, because my ranch is adapted to the raising of horses and I don't believe there is any oil under it. But would that be right or proper or even decent as a governmental policy? Yet I cannot

find anything in this bill that would prevent it being done if the commissioner appointed to administer it thought it should be done.

Now, what is all the hurry about the passage of this bill? Can it be that it is some oil trust secretly operating and looking for special favors in the way of buying up fields that are not permitted to produce, or can it be a concerted effort on the part of somebody or some organization to build up another all-powerful Government bureau here in Washington? Well, I will not attempt to answer that question. I do not know. Either one is bad enough. But I do know that mighty few Members of Congress are hysterical about creating any more bureaus, boards, or commissions, and I feel sure no spontaneous waste has prompted this move, and in view of all I can learn, I feel sure there is no particular hurry about the passage of this legislation. I have read the testimony of those who testified before this committee heretofore, and in that testimony I find a report by the National Geological Survey prepared by Dr. Misner, long-time geologist of the Geological Survey, wherein he and his associates say, "Should coal be called upon to supply the demands now met by oil and gas, the coal reserves of the United States would, according to independent estimates by Hendricks and Fieldner, last about 2,000 years" (p. 104, first vol. hearings on H. R. 7372—Cole bill). Those estimates, together with the present estimates of mineral oil, as I am told, which has in sight between 17 and 20 years of production, would mean that we can see ahead for from 2,017 to 2,020 years of oil and gas production. So I just cannot see why we should not take a little time to discuss this matter with the States, rather than to hasten this legislation on to the statute books. The States, together with the Geological Survey, the Bureau of Mines, and the oil industry itself are getting the job done pretty well, and doggoned if I can see why they should not be helped to perfect the job, rather than to take it entirely out of their hands and create a bureau of "don'ts" and "musts."

In my own State (Montana) wasteful practices in the production of either gas and oil have not been practiced to my knowledge. If they have, the Government is at fault and I feel sure it is not at fault, and this is why I feel that way, namely: Commercial production was brought in in the State concurrent with the passing of the Federal permit law for production on public lands in February 1920. We then adopted the rules prescribed under it by the Interior Department, so far as development was concerned. And in 1925, we enacted a law in conformity with the Government law providing that our public-utility commission should supervise the drilling, the abandonment, the plugging, and the supervision of production. In addition to that, we have always cooperated with the Bureau of Mines of the Interior Department which has offices in our fields. Hence in the eyes of the United States Government and particularly if it is looking through the glasses of the Interior Department, we could not have committed waste.

In 1933, after the enactment of the National Industrial Recovery Act, which incorporated provisions intended to control production, transportation, and storage of crude products, at a special session of our Legislature there was created an Oil Conservation Board against which no word has been said by the United States Government, although it is a large lessor of producing lands in our State.

Now, Mr. Chairman, don't misunderstand me. We still need the help of the National Geological Survey and of the National Bureau of Mines. They are interested in us and we are interested in them. But so far as this class of legislation is concerned, the Cole bill, we are actually howling to be let alone. We are actually howling to be permitted to pursue our own industries and to work out and settle our own problems. It is our work, it is our lives, and we desire to work out our own salvation among ourselves and with those with whom we deal and with whom we compete. We will not intentionally commit waste of oil or gas or any other of our national resources, and if any waste should, through our ignorance, be known to any government instrumentality or agency, we would have it call the same to our attention to the end that we may hasten to correct it.

I am glad to have seen you all again. Thanks for your consideration of these few remarks.

Mr. COLE. We are glad to have seen you again, Governor, and indeed glad to hear from you.

## The American Federation of Labor and the Poll Tax

### EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

STATEMENT BY PAUL SCHARRENBERG

Mr. GEYER of California. Mr. Speaker, organized labor has always been on the firing line in the course of bettering

conditions for the great plain people. In keeping with this policy, we find it on record in opposition to the poll tax.

The poll tax was abolished by initiative in the State of California at the general election of November 5, 1912.

The poll-tax law on the books prior to this date was not written so as to require its payment as a prerequisite to voting as is the case in eight of our States at the present time.

Nevertheless the California State Federation of Labor sponsored the measure for its repeal.

Mr. Paul Scharrenberg, the present national representative for that organization, was at that time secretary to the California State Federation of Labor.

He wrote the argument favoring this measure that appeared in the official State pamphlet distributed to the electors just previous to the election date. Although this was almost 23 years ago, its logic is still good. It follows:

[Statement taken from Amendments to Constitution and proposed Statutes with Arguments Respecting the Same, to be submitted to the electors of the State of California at the general election on Tuesday, November 5, 1912]

#### ARGUMENT IN FAVOR OF ABOLITION OF POLL TAX

The poll tax has been handed down from the period when the people were classed as property and taxed as chattels.

Originally it was a perfectly just tax, because it was levied on the feudal baron and paid by him according to the number of serfs he owned. As he was getting all the benefit from the labor of the people under him, there was every reason why he should contribute to the support of the Government in proportion to the number of people he controlled, and the head tax was the best way to determine that.

The poll tax, therefore, was simply the application of just principles of taxation to feudal age conditions. The feudal baron enjoyed a privilege conferred by law, and he paid into the public treasury what the privilege was thought to be worth.

In course of time, however, the barons managed to shift the burden so that each man had to pay his own head tax. Thus the original reason for the tax ceased to exist, and it became an injustice.

Originally a tax upon property, the poll tax is now a tax upon persons, upon life itself. The basic assumption remains the same as before; namely, that the right to life, like the right to property, is a privilege granted by the state.

The poll tax is a survival of despotism and a denial of democracy. For these reasons nearly all civilized nations have abolished the poll tax. The only large nations that still levy that tax are Russia, Turkey, Persia, China, and a rapidly decreasing number of States of our country.

In 1895 the poll tax was not recognized in 20 States; in 1900, 35 States in the Union had no State poll tax.

No one attempts to defend the poll tax on ethical grounds. Those who oppose its abolition cannot refute the demonstrated charge that the tax is unjust and unfair and inflicts an unnecessary hardship on those least able to bear it.

The poll tax is not necessary for the support of the public schools. The amount the State school fund now derives from the poll tax will not be lost, nor will it have to be made up by some other equally objectionable method of taxation. The deficiency can easily be made up from the tax on corporation incomes.

An unjust and oppressive tax cannot be justified on the ground that the proceeds are devoted to a useful purpose. It is not necessary to tax the poor in order to maintain the schools and to pay the teachers a decent salary. California is a rich State—the richest State per capita in the Union—therefore it is erroneous to assume that a head tax is necessary to maintain the schools.

The poll tax is objectionable because it has never been uniformly collected. The State comptroller's reports prove that in some counties only 21 percent of the population pay this tax, and as high as 68 percent in others. Wealthy citizens sometimes pay the poll tax; laborers always pay it through deductions from their wages.

The poll tax is a double tax. The class of persons from whom it is chiefly collected pays (indirectly but nonetheless certainly) the greater part of the taxes levied directly upon the owners of property. The latter class shifts the burden on the former class. The propertyless class pays both the direct and the indirect tax.

The poll tax has not even the poor excuse of being justified because it taxes aliens, as this class contributes less than one-eighth of the total amount collected. Hence we penalize our citizens to the extent of \$7 for every \$1 we manage to extract from aliens.

The poll tax is despotic because it classes human life as a species of property. It is unjust because it places an additional tax on those who in other ways pay a share of the so-called direct taxation out of all proportion to their means. It cannot be considered necessary so long as private property—the true creation of the State—suffices for the purpose of taxation.

PAUL SCHARRENBURG,  
Secretary, California State Federation of Labor.

Hon. James A. Farley

## EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ARTICLE FROM THE ATLANTA CONSTITUTION OF JANUARY 23, 1940

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Atlanta Constitution for January 23, 1940:

[From the Atlanta Constitution of January 23, 1940]

ONE WORD MORE

(By Ralph McGill)

THE GENTLEMAN FROM GRASSY POINT

It will be recalled that before Mr. Franklin D. Roosevelt was catapulted into the national political scene in 1931, a gentleman from Grassy Point, N. Y., went on tour.

This was Mr. James A. Farley. He went about. He shook hands. He asked a question here and there. He did, for the most part, however, an excellent job of listening.

True enough, Mr. Roosevelt had been advanced here and there as a Presidential possibility. But it was not until Mr. Farley returned from his tour that Mr. Roosevelt was catapulted, so to speak, into the spotlight—and kept there.

Mr. Farley again is on tour. He is touring the south and south-east. He is dedicating post offices, assisting in the ceremonies attendant on the retirement of a faithful employee, and making an occasional talk.

He was in our town yesterday afternoon. On Wednesday he will speak in North Carolina on the subject of Industry and Agriculture at the Gateway of the New Era.

Without any information as to what Farley will say in that speech, it is well to recall he never once has retreated an inch from the progressive and liberal policies of the Democratic administration. It may be expected that he will speak practically as befits him. He always has been, in business and in politics, a practical person.

A GREAT AMERICAN

Jim Farley is a great American. In fact, I think the liberals, who have gone off chasing rainbows and who go along shouting in the wake of some impractical theorist, miss the boat by not joining up with Farley.

Farley never has quit the liberal policies of the New Deal. Time after time he has spoken out for them and warned all those who would desert that the party cannot be successful if it deserts the cause of the people.

That Farley might have some ideas which would put into effect new plans to meet the emergencies may very well be true.

After all, we have spent billions on our plan to abolish unemployment, yet the problem is as great as ever and we have enjoyed for some months a mild industrial boom.

After all, Secretary Wallace has labored long and sincerely in behalf of the farmers, but Congress never helps out by abolishing the tariffs which make impossible any real rehabilitation of the farmer and his markets.

A new set of plans might not be a bad idea. Perhaps Mr. Roosevelt himself is looking about for a new set of blue prints for the economy of the Nation.

AN EXCELLENT MAN

As far as I am concerned, Jim Farley would make an excellent President. On occasion I have suggested this to some of those who are following in the thin dust which their prophets have been able to stir.

"Why Farley," they all but shriek, "is a politician."

This is true. There may be one as good. If so it is Mr. Roosevelt himself.

I like honest politicians because this form of government cannot be conducted by any save politicians. We have so few who are honest. An honest politician is a practical politician.

In the bright lexicon of the idealist there is no such word as compromise. But the honest politician must make progress through compromise. Mr. Farley is practical. Government would be all right in his hands. Not even the most rabid of prohibitionists could object to Jim Farley. In all his life he never took a drink of booze.

Being practical, I doubt if Mr. Farley could win the nomination. I rather imagine Mr. Garner will, within a short time, withdraw. There remain Cordell Hull and Jim Farley.

It will be interesting to see what develops from this pleasant tour by Mr. Farley.

## AN AMERICAN STORY

His story is an American story. He came up the hard way. He played baseball, took a commercial course, began as a bookkeeper, developed his own business, and got into ward politics.

He was town clerk of Stony Point, N. Y. He went to the legislature. He was a member of the State athletic commission and later its chairman. He joined the Knights of Columbus, the Elks, the Red Men. He became a member of the State Democratic committee and now is chairman of the national committee. He has been a successful Postmaster General.

He has never made the mistake of losing touch with the people. He wants to know what they say, how they feel, and what they think.

Yes; the tour will be of interest.

## The Church and Social Order

## EXTENSION OF REMARKS

OF

HON. ARTHUR D. HEALEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

## EXCERPTS FROM A STATEMENT OF THE ARCHBISHOPS AND BISHOPS OF THE ADMINISTRATIVE BOARD OF THE NATIONAL CATHOLIC WELFARE COUNCIL

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks, I hereby include the following excerpts from a statement of the archbishops and bishops of the administrative board of the National Catholic Welfare Conference on social and economic problems which has been recently issued:

12. Man is truly the steward of his possessions in the sight of God and has therefore definite responsibilities both of justice and charity toward his fellow man with respect to the use he makes of his property.

13. From divine revelation we learn that physical labor was decreed by God even after the fall of man for the good of body and soul (p. 42). The laborer is worthy of his hire. If, however, human labor is treated as a mere commodity to be bought and sold in the open market at the lowest price, then it ceases to fulfill its proper function in society. What a sad perversion of the wholesome plan of Divine Providence that "dead matter leaves the factory ennobled and transformed, where men are corrupted and degraded" (p. 43).

14. From divine revelation we learn, moreover, that each human being has an infinitely precious personality. Pius XI in his encyclical *Divini Redemptoris* sets forth this truth with clarity, force, and beauty:

"Man has a spiritual and immortal soul. He is a person, marvelously endowed by his Creator with gifts of body and mind. He is a true 'microcosm,' as the ancients said, a world in miniature, with a value far surpassing that of the vast inanimate cosmos. God alone is his last end in this life and the next. By sanctifying grace he is raised to the dignity of a son of God and incorporated into the kingdom of God in the mystical body of Christ. In consequence he has been endowed by God with many and varied prerogatives; the right to life, to bodily integrity, to the necessary means of existence; the right to tend toward his ultimate goal in the path marked out for him by God; the right of association and the right to possess and use property" (p. 19).

Man cannot in consequence be treated as a mere chattel, but rather with dignity and respect as a child of God. His labor is not a thing to be ashamed of, but an honorable calling, whereby he achieves a necessary livelihood and fulfills the divine plan of an earthly economy.

18. In existing circumstances the obligation of the church is manifest. Who can deny the close relationship between economic injustice and a long train of evils, physical, social, and moral? Unfair wages due to a greed for excessive profits and insecurity due to false and immoral economic principles lead directly to undernourishment, bad housing, inadequate clothing, and indirectly to irregular family relations, child delinquency, and crime. Excessively long hours of work in some industrial areas and in some industrial processes create dangers to life and limb, impair the health of workmen, and impoverish whole families through infection, disease, and premature death. Because human beings and not animated machines toil in industry, therefore the church cannot abdicate her right and duty to speak out in defense of the rights of human personality nor fail to declare uncompromisingly the moral obligations of industrial and economic life.

19. Today most controversy concerns itself with these questions: (1) Ownership, (2) property and labor, (3) security, (4) wages, (5) establishment of social order. We shall here present the

Catholic doctrine regulating these matters and in doing so we shall follow the exposition given by our late chief pastor of souls, Pope Pius XI, in his celebrated encyclicals.

## I. OWNERSHIP

20. The church has always defended the right to own private property and also to bequeath and to inherit it. We have vindicated this right even to the point of being falsely accused of favoring the rich against the poor. The church teaches that the right to own property is based on the natural law of which God himself is the author. By the law of nature man must provide for himself and his family and he can fully discharge this obligation only if there exists an established system of private ownership (p. 16).

21. It is essential to remember that ownership has a twofold aspect, the one affecting the individual, the other affecting society. To deny the individual character and aspect of ownership leads to some form of socialism or collective ownership; to deny the social character or aspect of ownership leads to selfish individualism, or that form of exaggerated liberalism, which repudiates duties and ends in complete irresponsibility to other persons and to the common good.

22. The two great dangers which society faces in the present state of economic organization are first, the concentration of ownership and control of wealth and secondly, its anonymous character which results from some of the existing business and corporation law, whereby responsibility toward society is greatly impaired if not completely ignored. The civil authority, in view of these dangers, must so regulate the responsibility of property that the burden of providing for the common good be equitably distributed. It must furthermore establish such conditions through legal enactment and administrative policy that wealth itself can be distributed so each individual member of society may surely and justly come into possession of the material goods necessary for his own livelihood. It is not however the Government alone which has this responsibility, as will become clear from the further considerations to be noted.

23. Pius XI states:

"It follows from the twofold character of ownership, which we have termed individual and social, that men must take into account in this matter not only their own advantage but also the common good. To define in detail these duties, when the need occurs and when the natural law does not do so, is the function of the government. Provided that the natural and divine law be observed, the public authority, in view of the common good, may specify more accurately what is licit and what is illicit for property owners in the use of their possessions" (p. 17).

In the application of the principles of social justice, an important instrument, therefore, is governmental authority. As Pius XI asserts, the civil authority has the obligation to adjust "ownership to meet the needs of the public good," and by so doing "it acts not as an enemy, but as the friend of private owners" (p. 17).

## II. PROPERTY AND LABOR

24. Manifestly, if every man worked either on his own land or with his own tools and in his own business, there would be no labor problem. Self-employment, however, is not the characteristic of our present economic organization. With the advent of machine industry, and especially with the development of mass production, there has developed an intensification of the individualistic spirit, creating new problems for labor.

25. It is freely admitted that modern industry requires considerable concentration of capital, but it is not admitted that concentration of ownership and control is consequently necessary or beneficial to the common good. The concentration of capital, however, with mass employment does create a new and more impersonal relationship between capital and labor. The problem is one of providing equitably for the distribution of income between those who supply capital and those who supply labor.

26. In too many instances an undue portion of the income has been claimed by those who have ownership or control of capital, whilst those, on the other hand, who have only their labor to invest have been forced to accept working conditions which are unreasonable and wages which are unfair. This condition arises from the fact that labor policies have been dictated by false principles in the interests of the owners or capitalists. Secondly, it arises from the fact that labor frequently has had no voice in the regulation or the adjustment of these problems. Labor can have no effective voice as long as it is unorganized. To protect its rights it must be free to bargain collectively through its own chosen representatives. If labor, when unorganized, is dissatisfied, the only alternative is to cease work and thus undergo the great hardships which follow unemployment.

27. To remedy the situation, it is necessary to adopt right principles for the distribution of the income of industry. These principles must be both economically sound and morally just. The principle that labor should be compensated to such extent only that it remains physically efficient and capable of reproducing itself in new generations of working men, is a vicious principle, devoid of all respect for human dignity and opposed to all sense of social responsibility. It is true that this principle was never widely held in theory, but it has been frequently applied in practice. One such application is found in the policy that labor should be compensated solely according to the principle of supply and demand. This reduces labor to the position of a commodity and makes the work-

ingman accept the fluctuating price in a labor market irrespective of the needs of himself and family. Neither present sufficiency of income nor security for the future play a part in determining his wage standard according to this immoral theory and practice. Such theory or practice is antisocial and anti-Christian, for it denies both social responsibility and the claims of Christian ethics and in their place substitutes the principles of selfishness and force.

28. New developments in the organization of labor under the great impetus which has been given by recent legislation and governmental policy, make it opportune to point out that the principle of force and domination is equally wrong if exercised by labor under certain conditions by means of a monopoly control. To defend in principle or to adopt in practice the theory that the net result belongs to labor and that capital shall receive only sufficient to replace itself is an invasion of the rights of property. This is only a more subtle form of the contention that all means of production should be socialized. Clearly all such proposals disregard the contribution which the owner of property makes in the process of production and are palpably unjust.

It is not, however, the excessive claims of labor on the income from industry which constitute the most immediate problem in labor relations today, but rather the abuse of power which not infrequently results in violence, riot, and disorder. Employers at times abuse their economic power by discriminating unfairly against unions, by establishing lock-outs, by importing from outside the community strikebreakers who are furnished with arms, and by provoking in other ways ill feeling which precipitates violent disorder. Employees on their part allow themselves at times to be misled by men of evil principles so as to engage in the criminal use of violence both against persons and property. Leo XIII in his Encyclical *Rerum Novarum* spares neither group in his denunciation of such immoral conduct. He calls upon the public authority to protect and defend vigorously the rights of all, forestalling preferably the rise of disorder by eliminating the economic abuse from which this disorder springs (pp. 12-24).

29. False principles generate false policies and as a consequence there grows and develops a false economic system which sins both against the true interests of human society and against the true principles of Christian morality. Pius XI insists that owners and employers may not hire working people exclusively for their own benefit and profit, nor divert all economic life to their own will, but must guard social justice, the human dignity of labor, the social nature of economic life and the interests of the common good (p. 32).

30. The far-reaching need of social justice and its demands are seen from the following words of the Sovereign Pontiff Pope Pius XI:

"Now, not every kind of distribution of wealth and property amongst men is such that it can at all, and still less can adequately, attain the end intended by God. Wealth, therefore, which is constantly being augmented by social and economic progress, must be so distributed amongst the various individuals and classes of society that the common good of all, of which Leo XIII spoke, be thereby promoted. In other words, the good of the whole community must be safeguarded" (p. 20).

### III. SECURITY

31. Our present economic order rests upon the sanctity of private property. Private property however is not well distributed at present among the members of human society. Whilst it is dangerous to exaggerate the disproportion between those who possess adequate property and those who constitute the proletariat or the propertyless, nevertheless, it is certainly within the bounds of truth to state that the existing situation constitutes a grave social evil. Private property in the judgment of many thoughtful men tends to become less and less the characteristic note of our present society. If the majority of our citizens possess insufficient private property to be independent of a wage income for even a short period of time, then there is grave danger to the entire social fabric. Social stability rests upon this basis of individual ownership of property. There should be more of it and not less of it, if our existing economic system is to remain secure.

32. The lack of sufficient private property leads to various forms of insecurity. This insecurity not only leads to the creation of a strong social tension expressing itself in social disorder but is also contrary to the prescriptions of Christian morality. There can be no question but that in our country we possess adequate resources both in respect to raw materials, technical or scientific skill, and mechanical equipment sufficient to provide both a high standard of living and also comprehensive security for all classes of society. Workingmen should be made secure against unemployment, sickness, accident, old age, and death. The first line of defense against these hazards should be the possession of sufficient private property to provide reasonable security. Industry therefore should provide not merely a living wage for the moment but also a saving wage for the future against sickness, old age, death, and unemployment. Individual industries alone, however, cannot in each single case achieve this objective without invoking the principle of social insurance. Some form of Government subsidy granted by the entire citizenship through legislative provision seems to be a necessary part of such a program.

33. We cannot overlook the fact that an important factor making for insecurity is the "immense power and despotic economic domination which is concentrated in the hands of a few and that those few are frequently not the owners but only the trustees and directors of invested funds, who administer them at their good pleas-

ure" (p. 32). Pope Pius XI then singles out one group in an especial manner as exercising this domination and despotic power.

"This power," he states, "becomes particularly irresistible when exercised by those who, because they hold and control money, are able also to govern credit and determine its allotment, for that reason supplying, so to speak, the life-blood to the entire economic body, and grasping as it were in their hands the very soul of production, so that no one dare breathe against their will" (pp. 32-33).

34. That there exists a serious problem from the standpoint of security for working men is clearly manifest from the present state of unemployment and the present huge demands on government for public relief against dire poverty. Very significantly our present Holy Father Pius XII writes in his letter addressed specifically to the American hierarchy:

"May it also be brought about that each and every able-bodied man may receive an equal opportunity for work in order to earn the daily bread for himself and his own. We deeply lament the lot of those—and their number in the United States is large indeed—who though robust, capable, and willing, cannot have the work for which they are anxiously searching. May the wisdom of the governing powers, a far-seeing generosity on the part of the employers, together with the speedy reestablishment of more favorable conditions, effect the realization of these reasonable hopes to the advantage of all." ("To the Church in the United States" (*Sertum Laetitiae*), N. C. W. C. edition, p. 18, 1939.)

35. We do not wish to imply that individual employers as a class are willfully responsible for this present state of insecurity but we do claim that a system which tolerates such insecurity is both economically unsound and also inconsistent with the demands of social justice and social charity. Security of the workingmen therefore as against unemployment, old age, sickness, accident, and death, must be frankly accepted as a social responsibility of industry jointly with society. The distribution of the burden justly between the various groups must be determined first through mutual council and honest agreement between the employers and the employees, and secondly through the regulation of government acting in its sovereign capacity as promoter of the common good.

36. Not all responsibility rests upon government. In truth, a large measure of responsibility rests upon the proper collaboration of employers and employees or of property owners and wage earners. The economic system itself and the principles which guide its executives must help to achieve security by establishing a fair distribution of income between capital and labor. It must strive to establish an equilibrium between farm income and city income. If the rate of wages (not the annual income) of the industrial worker in the city is out of balance with the rate of returns of the farmer in the country, then there is bound to be unemployment and insecurity. Hence the duty of both groups is to work for a just balance between themselves instead of encouraging selfishness and greed, which defeat the interest of both and violate the principles of morality.

37. The same can be said of the various classes of industrial labor. Here also there must be a balance between various groups both organized and unorganized. Unless this be true the economic system cannot function smoothly and there will inevitably be unemployment, because the one class of workingmen cannot buy the high-priced products of the other class of workingmen with their limited income. If skilled laborers, who, through rigid organization, have a monopoly control of their craft, raise their rate of hourly wages too high, they do not gain their advantage exclusively from the wealthy but from the poor also, in terms of excessive prices. Higher wages as a rule should come out of excessive profits and not out of increased prices.

38. Heartening indeed are the beginnings toward the greater security of the people that have already been made through legislative enactment and public policy. The immediate benefits of these laws to working people may be small and some modifications perhaps desirable, but it is highly gratifying that the principle upon which they rest has become a part of our national policy.

### IV. WAGES

39. In view of the fact that at present many industrial workers and also farm laborers do not possess sufficient private property to provide either a present livelihood or security for the future, the problem of wages assumes outstanding importance. At the outset it is necessary to state that the wage contract itself is not unjust nor in itself vicious as some theorists have falsely contended (p. 22). It is of course true that a contract between employers and employees would serve the purpose of individual and social welfare more effectively if it were modified by some form of partnership which would permit a graduated share in the ownership and profits of business and also some voice in its management. It is not intended that labor should assume responsibility for the direction of business beyond its own competency or legitimate interest; nor has labor a right to demand dominating control over the distribution of profits. To set up such claims would amount to an infringement on the rights of property. Labor has, however, certain definite rights which have been frequently ignored or largely discounted.

40. The first claim of labor, which takes priority over any claim of the owners to profits, respects the right to a living wage. By the term "living wage" we understand a wage sufficient not merely for the decent support of the workingman himself but also of his family. A wage so low that it must be supplemented by the wage of wife and mother or by the children of the family before

it can provide adequate food, clothing, and shelter together with essential spiritual and cultural needs cannot be regarded as a living wage.

41. Furthermore, a living wage means sufficient income to meet not merely the present necessities of life but those of unemployment, sickness, death, and old age as well. In other words, a saving wage constitutes an essential part of the definition of a living wage.

42. In the effort to establish a criterion or standard of measurement of wages it is necessary to consider not only the needs of the workingman but also the state of the business or industry in which he labors. Pope Pius XI states clearly that "it is unjust to demand wages so high that an employer cannot pay them without ruin and without consequent distress amongst the working people themselves" (p. 24). Bad management, want of enterprise, or out-of-date methods do not constitute a just reason for reducing the wages of workmen. It still remains true that a living wage constitutes the first charge on industry. If a business is prevented by unfair competition from paying a living wage, and if such competition reduces prices to such a level that decent and just wages cannot be paid, then those responsible are guilty of wrongdoing and sin grievously against moral principles as well as against the common good. The remedy lies, first, in the adequate organization of both employers and employees in their own proper associations and in their joint action; secondly, in adequate regulation and supervision by the state through proper legislative enactment.

43. No criterion or standard of wages, however, can be determined independently of price. A scale of wages too low, no less than a scale excessively high, causes unemployment (p. 25). Likewise, a scale of prices too low, no less than a scale of prices too high, leads to unemployment. Both create hardship and throw the economic system out of its proper equilibrium, causing unemployment for the community and hardship even for the individual who is employed, for he must pay too high a price in view of his wages or he receives too low a wage in view of prices. What is needed is a reasonable relationship and a harmonious proportion. Pope Pius XI states:

"Where this harmonious proportion is kept, man's various economic activities combine and unite into one single organism and become members of a common body, lending each other mutual help and service. For then only will the economic and social organism be soundly established and attain its end, when it secures for all and each those goods which the wealth and resources of Nature, technical achievement, and the social organization of economic affairs can give. These goods should be sufficient to supply all needs and an honest livelihood and to uplift men to that high level of prosperity and culture which, provided it be used with prudence, is not only no hindrance but is of singular help to virtue" (p. 25).

44. Wages are an essential element in the determination of prices. In the final analysis the cost of raw materials cannot be segregated from wage costs, for the production-cost of raw materials presupposes a multiplicity of wage costs as a component element. If wages continuously change then there must be a continuous change in prices, unless it is assumed that all wage changes will affect only the profits of owners. As a matter of fact, they do not. The economic organization might function just as easily on one price level as another, but it cannot function well if the price level is frequently changing. Rapid or frequent fluctuations disturb the harmonious proportions between income and prices not only for owners and employers, but also for the workmen themselves.

45. This consideration is no argument against a necessary increase of wages whenever and wherever the wages are inadequate to provide a decent living. But it is an argument in favor of attaining a relative degree of stability in the price level as soon as commutative justice and social justice permit. A cogent reason for aspiring to such a condition of stability is the higher interest of the family as against the single or unmarried workingman or employee. The single man benefits more from a wage increase than does the family man if the end result is an increase in prices. The family man is penalized in multiple fashion with every increase in prices. Stability in the price level therefore and even a reduction in prices as a secular trend is desirable as one means of distributing our national income more widely and more effectively for the common good. Such a long-range policy will supplement the benefits of an increased family wage in view of increased family burdens as recommended by Pius XI.

46. We do not wish to imply that a universal increase of wages will automatically solve our problem of unemployment and idle factories. Some wage increases come not out of the profits of the wealthy but out of the increased prices for the poor. The first requirement therefore is that the lowest-paid workmen be the first to receive an increase of wages and simultaneously that prices be not raised but excessive profits be reduced. The ultimate aim, therefore, must be a reasonable relationship between different wages and a reasonable relationship between the prices obtained for the products of the various economic groups (p. 25).

47. Because economic society has not followed the moral laws of justice and charity, the principles of interdependence have been violated and we have precipitated unemployment with all its consequent hardships and misery. To withhold just and reasonable wages from the workingman has injured him directly and immediately, but it has also injured the common good and the interests of the very owners of property. Their factories, their commercial establishments, and their equipment have frequently stood idle as a result. Unless workmen as a class have sufficient income to purchase their share of the goods which our economic system is

capable of producing, the markets will automatically be closed to the sale of goods, and idle factories and unemployment are the disastrous result.

## Our Country! Yours and Mine!

### EXTENSION OF REMARKS

OF

## HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ADDRESS BY HON. FRANK GANNETT

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an address delivered by Hon. Frank Gannett before the National Republican Club in New York City, on Saturday, February 3, 1940. The efforts of Mr. Gannett to prevent enactment of several New Deal proposals which would have fundamentally altered our constitutional system of government are well known to the country. He is a man of constructive thought and action, and his utterances on matters of national concern merit thoughtful deliberation.

The address is as follows:

Speaking before you last April on America's future, I said President Roosevelt should resign. I have not changed that opinion—and I don't believe you have.

Of course, the President will not resign. But the New Deal can be brought to an end by next January. No emergency has arisen since last April, and none can arise, not even a war emergency, that would justify continuance of an administration that has been such a failure.

It was suggested that my topic today should be Our Country.

Our country! How these two words thrill us! They may talk of Hitler's Germany, Stalin's Russia, Mussolini's Italy. But here it is our country—yours and mine.

Furthermore, it is the best country in all the world. It is something we all hold dear; it is a precious heritage. For it we are ready to work, to sacrifice, to fight, yes, even to die, as countless thousands have done before us, that we might enjoy life, liberty, and the pursuit of happiness.

What happens to this wonderful country should concern every one of us. When its welfare is at stake, then we should forget party lines, and not be merely Democrats or Republicans but real Americans.

Today I believe the situation in our land is so critical that we—every one of us—should put first of all our country. It is threatened not by attacks from without but by assaults from within, and by grave dangers that have resulted from 7 years of misgovernment.

Totalitarianism is on the march in Europe and Asia, spreading like a terrible plague over a large part of the world, blacking out liberty and freedom.

This frightening situation is the result of unbearable economic conditions. We shall not be safe from such tyranny of the state until we improve conditions here.

We must better the lot of the poor and the unfortunate.

We must throw off the shackles that restrict our development.

We must afford opportunity for youth and for all who have ambition.

We must have recovery and prosperity—and have all this soon, or what has happened in Europe may happen here.

#### PROBLEMS UNSOLVED

My reason for saying last April that the President should resign, was that the New Deal had solved not one of the Nation's major problems. I said that the manager of a private business who had made such a mess of his job would be fired outright.

Mr. Roosevelt has been given more power and more money to spend than any ruler in history.

He has taxed and spent and added \$20,000,000,000 to the Nation's debt—but he has not brought recovery.

He has spent \$3,000,000,000 to help about 10 percent of our youth—and left them and millions of other young people without jobs at productive work.

He has spent \$7,000,000,000 to help agriculture—and farmers are still short one-third of their normal income and purchasing power.

He has built up a vast bureaucracy, nearly doubling the number of people on Federal pay rolls—now averaging almost 2,000 for every congressional district.

He has stifled private enterprise with Government controls, and started the country down the road to collectivism.

Was it an exaggeration when I said to you last year that the New Deal was a tragic failure? I ask you:

Has the New Deal improved your lot? Are the poor, whom we want to help, better off? Is the workingman better off? Is the owner of a home or a little business better off?

Why, today, even the largest financial supporter of the New Deal says it has failed in every particular.

I take it that if you had not approved my criticism of the New Deal administration a year ago, you would not pay me the high compliment of this second invitation. I do appreciate and thank you for it.

Speaking as a candidate for the Presidential nomination, you may expect me to state my reasons for believing that the New Deal is wrong in principle as well as bad in practice. I will do that now, and as time permits I shall, in this and in future discussions, tell what I believe should replace the New Deal.

#### PRINCIPLES, NOT PERSONALITIES

If the New Deal violates American principles; if it is, in fact, reaction disguised as reform; if it is leading straight to the destruction of the American system of government—then let us not hesitate to say so, and prove it. But let us be sure in our analysis, fair in our statement. Let us stick to principles, and have this election decided on principles, not on personalities.

We must start with, and hold to, this fundamental truth.

Our Constitution is the best plan ever made to assure freedom and to release the creative powers of men. It has given the highest standard of living, the greatest freedom in religious, civil, and personal lives that any people ever enjoyed.

We can have recovery and prosperity, jobs for all, opportunity for youth, restored normal income for farmers without subsidy or Government controls, renewed hope for the poor and the unfortunate. We can keep government the servant, not the master, of the people.

Starting from here, we must face the hard, cold fact that our Constitution has been threatened with destruction, and still is in danger; that liberty, everywhere, is in danger; that the rights and privileges guaranteed to us by our Constitution have been undermined while we slept. From near and far that fact is plain to all people who are not fooling themselves and who can read history.

For a distant view let us look through the eyes of H. G. Wells, who in 1934 had long talks with both President Roosevelt and Dictator Stalin. Wells came to the conclusion that both Stalin and Roosevelt had a common objective. "The end sought," wrote Wells at the time, "is precisely the same." It is noteworthy that 6 years later, and in the light of recent events, Mr. Wells has not changed that view. In the current issue of Liberty magazine he says:

"Collectivization, with a crude disregard of proprietorship and individual enterprise, has taken possession of Russia and the totalitarian states, and in the form of the New Deal it struggles to take possession of America. \* \* \* This collectivism, which is rolling down on us from the East, knows nothing of the tradition of personal rights \* \* \* it is bound to blunder into paternalism, absolutism, dishonesty, inefficiency, confusion, and disaster."

Let us never forget that with the coming of collectivism our personal liberties—freedom of speech, freedom of religious worship, freedom of the press, the right to assemble, and the right of trial by jury—will perish.

#### TWO PHILOSOPHIES

And for a nearer view let us turn to an elder statesman whom we all respect, that great leader of thought and great Republican, Dr. Nicholas Murray Butler. He sounds the same warning as H. G. Wells. The present World War, Dr. Butler says, is a conflict between two irreconcilable philosophies, between supremacy of the state and liberty of the individual. It is a world-wide struggle between two types of civilization, two ideals of government and social order, between two types of life.

Informed people will agree with Dr. Butler's further statement that the world is nearer a complete black-out of liberty than at any time since the fall of the Roman Empire.

Bread and circuses lulled the Romans to sleep while their liberties were taken away. Shall we permit New Deal bread and circuses to lull Americans to sleep in 1940?

Fortunately we have passed the stage where danger to our form of government and our social and industrial order can be laughed off by that silly phrase, "It can't happen here." The undermining of liberty is happening right here—carefully planned, and often carefully disguised in the dress of "liberalism" and "reform."

Bread has always appealed to the hungry, and circuses to the thoughtless. We must show the people—the hungry as well as the thoughtless—that they cannot be fed forever out of the Public Treasury or amused forever on the New Deal merry-go-round.

We must show them why the Utopia promised by the New Deal is receding into the distance, with unemployment, increasing debt, mounting taxes, less new wealth being created, and the people's average income going lower and lower.

We must make plain as a school-child's problem the historic truth that dictatorships rise by just such methods as the New Dealers have used; and that dictatorships finally must explode, inflicting untold suffering on everybody.

#### STRAIGHT TO COLLECTIVISM

We cannot pussyfoot and walk the fence on this fundamental issue. The New Deal is leading America straight into collectivism.

To conceal their purposes as well as their failures, the New Deal strategists are busy painting war scenes on a new curtain. But their play is the same. They have again marched out their

old actor, "Emergency." In the name of "emergency," the new dealers are reaching for more power—such power, for example, as the President's assumed right to ignore the limits on appropriations set by Congress.

Another example, the power, still exercised indirectly, to censor radio and suppress free speech on the air.

And still another example, the bill to give the President war powers in peacetime.

Constitutional government, designed to protect the people from the Caesars, the new dealers shove aside. They believe that with the personal popularity of their Caesar, and with the money our children must sometime earn, they can continue to fool the voters while hiding from them the real principles of the New Deal.

Therefore, we must make the people conscious of the methods and concealed purposes of the New Deal, as well as its fallacies and failures. We must make plain the ultimate disaster it will bring to every man, woman, and child.

I challenge anyone to name a country which has escaped from a series of long-continuing deficits such as we are having except by one of the following three routes: Repudiation, inflation, or revolution.

If the Federal deficit continues, how much do you think you will in a few years be able to get for your salary, for your bonds, for your savings-bank deposits? What will your life insurance be worth to your family?

Do you know of any nation which has succeeded in obtaining steady, dependable purchasing power by any device, except that of producing goods or services which can be sold? And yet, the Roosevelt administration has followed a policy of restricting production on field and in factory.

The new dealers, many of them conscientious and sincere, did not know the fundamental error of their gorgeous plan. They imagined they could graft a socialist economy onto a capitalistic profit system—the American system of free private enterprise—and produce the abundant life. They didn't know, and they still are reluctant to learn, that a social order cannot exist half collectivist and half free enterprise.

#### THE NEW DEAL EMBLEM

The new dealers stole the Democratic Party, and they have attempted to appropriate its emblem. But the New Deal party is not the party of the donkey. Its proper emblem is a mule—a hybrid creature barren of reproductive powers. The offspring of their strange experiment is really a "throw-back" to benevolent despotism. This creature of the New Deal, half collectivist, half free but fettered private enterprise, is incapable of reproducing itself. If the American people should permit it to live long enough, it will turn into out-and-out collectivism.

The only way to head off collectivism is to return to free enterprise—and then restrain by orderly and just processes of law the few over selfish and antisocial individuals who take undue advantage of their liberty.

Four more years of the New Deal, under Mr. Roosevelt or anyone satisfactory to him, would put this country so far into collectivism that it might never get back. If we permit a war psychology to develop and become involved in the European conflict, we shall be forced to surrender many of our liberties. Liberty surrendered is slowly, if ever, regained. Let us not forget—

"A thousand years scarce serve to form a state;  
An hour may lay it in the dust."

Our first duty is to make very plain to the people just what the New Deal is. Many only know what the New Deal pretends to be.

#### OUR RESPONSIBILITY

The Republican Party faces in 1940 the gravest responsibility and the greatest opportunity for service since the crisis of the Civil War. It has been preparing for that responsibility during the past 3 years. Cooperating with like-minded men and women of all parties, Republicans have beaten back the New Dealers' most open attacks on the principles of American constitutional government. Lest those attacks be hidden behind the curtain of war excitement, I will recall them very briefly.

First, the attempt of President Roosevelt to destroy the independence of our courts, which would have meant the end of our constitutional government.

Second, his attempt through his reorganization bill to undermine Congress through seizing control of its administrative agencies.

Third, his misuse of Executive power and patronage to "purge" opposition and himself dictate who should be the people's representatives in Congress.

Fourth, his attempt through a lending-spending scheme to make billions available to buy the elections of 1940.

These New Deal betrayals of a public trust must not be forgotten, even though they were defeated. They amply justify public suspicion of the New Deal's every act and every proposal.

#### DON'T DRIFT, MARCH!

But warnings are not enough. We cannot get rid of the New Deal unless we offer something better, something more real than promises—even though the New Deal promises haven't been fulfilled. The Republican program must appeal to the common sense of the independent men and women who will decide, by their votes in 1940, what shall be the future of our country.

The Republican Party cannot drift to victory on the mistakes of the new dealers; it must march. It must be a united army,

inspired by emotion and patriotism, crusading as in a holy cause, fighting as we never have fought before.

One of the sins of the new dealers was their readiness to barter legislation for the votes of minorities. And that sin seems to have found them out. The \$500,000 campaign contribution has a loud voice.

Just why have Franklin Roosevelt and John Lewis come to the parting of their way? Both are wrong. Both have built a following by appeals to prejudice and class antagonism.

Cemented by Lewis' half-million-dollar campaign contribution, the Roosevelt-Lewis alliance resorted to practices outlawed for corporations. There is no difference, morally, between campaign contributions from a corporation, which is a group of stockholders, and campaign contributions from a labor union, which is a group of dues-paying members. Both kinds—all kinds—of mortgages on government must be outlawed.

#### WAGNER ACT UNPOPULAR

The Wagner Labor Relations Act has become the most unpopular of the New Deal's ill-considered legislation. It was represented to be the Magna Carta of Labor. It was supposed to bring industrial peace. Its intended beneficiaries were permitted, according to their own public statements, to assist in writing it. But the wage earners—have they benefited so much by this New Deal measure? Has it reduced unemployment? Has it created jobs and opportunity for youth? Has it ended strikes and strife? No; it has increased them.

What has the New Deal's hate-creating labor legislation done for the workers that compares with the real service of one Republican administration? I refer to the almost unheralded ending of the 12-hour day and 7-day week in the steel industry. That was brought about by a Republican President talking quietly, reasoning with the steel employers, and bringing acceptance of the 8-hour day without coercion, without legislation, without building up a useless bureaucracy.

To promote better labor relations, more cooperation, more production, we should have more sharing of profits with labor. Labor warfare has destroyed employment and retarded recovery. Both workers and employers suffer from industrial warfare. They both want peace. We must find a formula for producing peace and employment, not strikes and unemployment.

Two basic rights must be protected. One is the right to organize or not to be organized, with assured freedom to bargain collectively. The other basic right is the right to work or not to work. Coercion should have no place in democracy—or it won't long be a democracy.

#### REWRITE THE WAGNER ACT

Our labor-relations laws, State and National, should be rewritten in the public interest and in the spirit of even-handed justice. The rights of all workers and employers, and the public as well, must be fully protected.

Slow downs and other forms of sabotage, like any lawlessness, hurt all honest workers and endanger democratic institutions. Law enforcement, with equal protection of the civil rights of all people, should be unflinchingly required of public authorities.

The law-making functions of government should not be on the auction block—to buy the votes of the highest bidder. Nor should the administrative powers of government be a bludgeon to coerce citizens. The complete break-down of democratic government is sure to follow, whether the beneficiaries of special privilege are capitalists or wage earners.

If the Wagner Labor Act is permitted to deny free speech between employers and employees, the loss of free speech for everybody is sure to follow in time. Some other group will make its bid to write and enforce a law in its own interest. And so the temple of liberty will be torn down, pillar by pillar. Our Constitution was devised to prevent just such destruction.

#### TRUE LIBERALISM

Perhaps you think by now that I am against the New Deal. Well, I am. I am against it from principle, not from partisanship. But I am not against sane, workable reform. I never have been. I yield to no one in my adherence to true liberalism—liberalism that liberates men instead of shackling them.

False liberalism, that promises Utopia in return for votes and then sells the voters into slavery to the state, is not liberalism in any sense. Russia and Germany have that brand of liberalism.

The young men who wrote our Constitution were the greatest liberals in history, and we who uphold their work are the liberals of our times. The Republican Party from the day of its birth has been the party of true liberalism, the party of liberation. And that is its mission today, to keep the light of liberty ablaze in a darkening world.

Our first problems are the adoption of policies that will surely keep us out of foreign wars, cure unemployment, and restore agriculture to economic equality with industry and labor.

A stalled motor requires a mechanic who knows how to make it run. Boys who never built or ran a motor shouldn't be expected to make it work. So with the private enterprise system. If we believe in it, if we don't want to substitute collectivism for it, then we'd better put people in charge who are products of private enterprise and know how to make it function.

#### LEADERSHIP NOW

We must release again the energies of private enterprise. I have several times suggested definite steps toward that end, and I will enlarge upon them later. A year ago, here before this club, I presented a constructive, detailed program that would bring recovery. That program stands.

I believe the Republican Party should assume leadership now, not wait until next year, to demand repeal of the blank-check powers of the Presidency. Government must be restored to its proper function as umpire, not player in the game. We are fed up on the umpire playing quarterback, dictating the rules, changing them in the middle of the game, calling the signals, running the ball, and throwing pop bottles at anyone he happens to dislike in the grandstand or the bleachers.

The President's present dictatorial power over radio is only one of the vast and dangerous accumulation. Freedom of speech on the air is a constitutional right which should be abridged only in time of war. Yet this speech which I am making on the air is by sufferance, not by right. I have tried to buy time on broadcasting networks to discuss constitutional questions and have been refused. I am given time, by courtesy of the National Broadcasting Co., and I appreciate that courtesy.

Nevertheless, every radio station in the country could be censored, closed, or placed in charge of a Government appointee today at the President's sole discretion. He got that power by declaring that an emergency exists—although no one knows what the emergency is.

And the President's power to cut off free speech on the air, or to load the air, as it is being loaded, with administration propaganda paid with taxpayers' money, is only one of the several dangerous dictatorial powers now lodged in the White House.

Still the new dealers continue to reach for power—and they want more and more power. Senator Borah's last utterance was against the latest New Deal demand—the bill put forward by Secretary of the Navy Edison. That bill, if enacted, would give the President power in peacetime, if he declared an emergency, to seize and confiscate factories, to cancel or modify contracts, to fix prices and wages, to interfere with the personal rights and personal liberties of the citizen. That was Senator Borah's estimate of the bill.

#### BORAH'S WARNING

We must keep alive that last speech by Borah. It is a prophetic warning of danger to the Republic, an alarm that should stir its citizens to save the Republic.

Would that Borah might have lived. The Nation never needed him more. I wish his last words in the Senate might be heard from every radio station, printed in every newspaper, and heeded by every citizen.

To clothe the President in time of peace with the powers proposed in the Edison Act would be, in Borah's words, "arbitrary and clearly unconstitutional, a violation of the most fundamental principles of constitutional government and of democratic processes."

"This bill," said Borah, "is only a sample. Many have been introduced based upon the same principles. The Congress could render no greater service for free government, and bring it to greater distinction, than by denouncing and striking down these measures one after another."

Further, Borah said: "The most vicious enemies of human liberty, the most dangerous to free institutions, are the treacherous foes who seek shelter under the laws and institutions which assure free speech, free press, and personal liberty, and then make use of this shelter to destroy the Government which protects them."

Borah went on: "It is living up to our own teachings and principles which really counts in this great struggle for the preservation of free institutions. Introducing bills and passing laws which strike at the letter—and if not the letter, then the spirit—of democratic principles—these are the things which undermine and break down faith in democracy."

What an indictment!

And let me add on my own account: The reason why I oppose the New Deal and the new dealers is their long record of attacks on democratic principles. They have been undermining and breaking down faith in democracy while giving it lip service.

"The glory of our Bill of Rights," said Borah in his last great speech in the Senate, "is that it is a restraint upon government as well as upon individuals; that it protects the rights of the people against those who have been entrusted with power and who have betrayed their trust. If human liberty is sacred, the Constitution is sacred."

So said Borah—and I believe him. Don't you?

Borah was my friend. He asked me in 1936 to be on his ticket as Vice President when his supporters sought for him the Presidential nomination. Later, calling me to his office in Washington, he asked that I go out and arouse voters to protest against packing the Supreme Court. He said that only by the miracle of a quick mobilization of supporting public opinion could the lines be held in Congress and this threat to our Constitution be defeated.

#### FUTURE AT STAKE

I am proud of and inspired by Borah's friendship. As his spirit watches the continuing battle to preserve the Constitution and the Bill of Rights and the American way of life, I hope he may think that we have not failed.

In the decision of this year our own and our children's future is at stake.

We can, we must, carry on. We can win; we must win; we will win.

America's frontiers of opportunity are not closed. Its real greatness is still ahead.

If we keep out of war abroad, restore peace and prosperity at home, and use our experience and understanding to solve the economic and social problems that a changing world has brought upon us, there is no limit to the future of "Our America." It will surpass all our dreams.

## Legislative Hurdles

## EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ARTICLE BY MILLARD W. RICE

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Millard W. Rice, which was published in the Foreign Service Magazine for January 1940:

[From the Foreign Service magazine for January 1940]

## LEGISLATIVE HURDLES

(By Millard W. Rice, Legislative Representative, V. F. W.)

Many preliminary steps must first have been taken before proposed legislation is enacted and becomes statutory law.

Born in the mind of some V. F. W. member, a legislative objective, formulated into a resolution, after being endorsed by his own post and State department, can finally be adopted by the national encampment, possibly with several changes, and then drafted as a proposed bill.

The proposed bill is thereafter introduced, at the request of the legislative representative of the V. F. W., by some Member of Congress. Printed copies, appropriately identified by a title and a number, are furnished the following day by the Government Printing Office to the House and Senate document rooms. A small supply is promptly delivered to the chairman of the particular congressional committee to which such bill may have been referred, as determined on the basis of House and Senate rules.

The House Committee on World War Veterans' Legislation receives more legislative bills in which the V. F. W. is interested than any other committee, but some of them have also been referred to and considered by the House committees on: Pensions, Invalid Pensions, Military Affairs, Naval Affairs, Appropriations, Civil Service, War Claims, Ways and Means, Interstate and Foreign Commerce, Immigration and Naturalization, Judiciary, Labor, Expenditures in the Executive Departments, Census, Accounts, Agriculture, Merchant Marine and Fisheries, Post Office and Post Roads, Printing, Foreign Affairs and Relations.

Senate bills interesting the Veterans of Foreign Wars are more frequently sent to the Senate Committee on Finance than to any other committee, but its bills have also appeared in the Senate Committees on Military Affairs, Pensions, Naval Affairs, Civil Service, Appropriations, Claims, Interstate Commerce, Education and Labor, Immigration, Judiciary, Post Offices and Post Roads, and Foreign Relations.

After receipt of a referred bill, the committee chairman will, if interested therein, request the appropriate governmental agency to submit a detailed report, analysis and recommendations relative thereto. Thereupon, the chairman may, and will, if sufficient interest has been displayed in the bill, schedule the committee members to come together to hear the testimony of one or more of the officials, legislative representatives, and individuals who may be interested therein.

Most bills, incidentally, because of the indifference of their sponsors, die in committee, without either any report or any testimony having been received. Very frequently, too, even after the submission of departmental reports and committee hearings, no further action is taken.

If favorable interest has been aroused, the majority of a committee's members can decide to recommend a particular bill for passage. Containing an analysis as to the purposes and probable costs of the proposed bill, a printed report will then be submitted to the House by the committee outlining its recommendations and suggested amendments. If favorably reported, a bill is then given an identifying docket number and placed on the House Calendar, from which it can be taken up, considered, and voted upon by any one of six different methods.

The committee chairman, or the author of the bill, can, if agreeable to the Speaker of the House, arrange with him to be recognized for the purpose: (1) Of making a motion that all rules be suspended and the bill given immediate consideration (which motion must pass by a two-thirds vote); or (2) of securing unanimous consent to consider the bill. These methods can be used only when the leaders of the House have decided—generally after conference with the steering committee of the major party—to be favorable to the proposed legislation. Consequently, comparatively few bills receive House action by these two procedures.

By arrangement with the House Clerk, a bill can be placed on the Consent Calendar, which ordinarily comes up for call on the first and third Mondays of each month. When a bill is first called from the Consent Calendar, if one objection is voiced from the floor, it is set aside until the next call, and if there then be three objections, the bill is stricken from the Consent Calendar.

LXXXVI—App—55

Most controversial bills, however, must generally await action until the committee in charge of the bill gets its turn to bring up bills on a Calendar Wednesday. Inasmuch as there are 47 standing committees in the House, each such committee generally receives only one opportunity during each 2-year period of a Congress to bring up bills on a Calendar Wednesday call.

If it appears that a committee will not receive a Calendar Wednesday call during the remainder of a session of Congress, and there is a strong demand for bringing up a certain bill, then a House resolution can be submitted to the House Committee on Rules, asking for a special rule that the bill be scheduled for action at a certain time. The Rules Committee is generally reluctant to grant such a special rule, especially where there is administrative opposition, and will then do so only when a majority of its members have become favorable thereto by reason of their own convictions or the persuasion of others.

Active interest by Members of Congress can generally be brought about only by such letters from their own constituents, setting forth pertinent facts and opinions, as have convinced them that it would be highly desirable and justifiable for such proposed legislation to receive favorable attention.

If a committee has failed or refused favorably to report a bill, or if the Rules Committee has failed to report a special rule for a prompt call of such bill, then a petition to bring it up can be filed, which, if signed by a majority of the House Members, compels its early consideration on the House floor.

It may be seen, therefore, that there are many hurdles which opposing leaders can throw in the path of a legislative bill to hinder its progress toward enactment.

The rules in the Senate are more flexible than they are in the House, and, generally speaking, a majority of the Senators can bring about action on a committee-reported bill when they really want to. Senatorial courtesy, not to mention a filibuster, on the other hand, can be used to defer action for a long time.

If a bill, finally passed by one House, with or without liberalizing or restrictive amendments, has been amended and passed by the other, then, if the body in which the bill originated refuses to concur with such amendments, conferees are appointed by both Houses and attempts are made to arrive at an agreement concurred in by both Houses. Generally, such an agreement is arrived at within a few days, but sometimes negotiations go back and forth for many weeks. Disappointing compromises between the viewpoint of one House and the other frequently result from such conferences.

After a bill has been agreed upon by both the House and Senate, it then goes to the President for his approval or disapproval. If he approves and signs it, or if, while Congress is in session, he should fail to sign it by the end of the tenth day thereafter, it then becomes public law and an appropriate number is then assigned by the Department of State.

If the President formally disapproves a bill, while Congress is in session, he sends a veto message to Congress, stating his reasons therefor. It then becomes the privilege of the Congress, by a two-thirds favorable vote of the voting Members in each of the two Houses, to pass the bill over the President's veto, whereupon, after signature by the Secretary of the Senate, it becomes public law.

If Congress has adjourned before the end of the tenth day after a bill has been sent by it to the President, then, if he fails to sign such bill, it is pocket vetoed, without the necessity of any message to Congress. Several veteran bills have been pocket vetoed during the term of practically every President that the Nation has had. It has been customary for President Roosevelt, however, to file a memorandum of disapproval, even as to bills which are pocket vetoed.

Where there has been a pocket veto, there is, of course, no opportunity for the Congress to pass the bill over the President's veto. The above-outlined legislative procedure, therefore, must be started all over again during the next session of Congress, if so desired by the sponsoring group.

Bills which Members of Congress prefer not to vote against, such as the Philippine Travel Pay bill, are often, one suspects, purposely delayed in their passage until just a few days before the adjournment of Congress, in order to make it possible for the President to dispose of the bill by a pocket veto.

For these reasons, it is highly desirable that any controversial bill should be impelled forward toward action by both Houses of Congress just as early during the session of a Congress as possible. Indifference, altogether too frequently, stultifies action on most bills which are introduced in Congress. Some 11,000 bills have been introduced so far during the Seventy-sixth Congress. Before the end of next year the total number will probably exceed 15,000. Not more than a few hundred will have been enacted into law.

Legislation sponsored by the V. F. W., therefore, on the basis of the law of averages, stands very little chance of receiving favorable action by Congress. The V. F. W. can, however, be responsible for very much increasing its chances of moving forward its various legislative objectives, by an intensified interest on the part of its own, and its ladies' auxiliary, members and eligibles, and their friends, and by their official and personal letters to Members of Congress setting forth facts which prove the need for, and justification of, each type of proposed legislation. Members of the Seventy-sixth Congress will, during 1940 (an election year), be particularly responsive to public sentiment for and against various legislative proposals, as estimated by their individual contacts by letter, and in person.

## South Dakota Speaks Back to Darkest Maryland

## EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

EDITORIAL FROM THE SIOUX FALLS (S. DAK.) DAILY ARGUS LEADER

Mr. MUNDT. Mr. Speaker, somebody up in Baltimore, which if memory serves me correct is in Maryland, writing with a morning-after head and a vision clouded with provincialism, recently took it upon himself to insult the people of South Dakota, and to expose his own rather pitiful ignorance of the vast American domain lying west of the city limits of Baltimore. This sadistic scribe from Baltimore expresses curiosity about the manner of men who live in the Sunshine State of South Dakota.

The attached editorial from South Dakota's greatest newspaper, the Sioux Falls Daily Argus Leader, and from the pen of its editor, Fred C. Christopherson, whose knowledge of America is not limited to any one city or any one State, may serve, in part, to satisfy the curiosity of this bilious Baltimorean whose good manners are apparently so much less developed than his vocabulary of unpleasant language.

[From the Sioux Falls (S. Dak.) Daily Argus Leader]  
SOUTH DAKOTA SPEAKS BACK TO DARKEST MARYLAND

Some dyspeptic scribe on the Baltimore Sun noticed the map in Life magazine recording Mrs. Roosevelt's travels and the fact that the only State she had never visited was South Dakota.

Republishing the map, the Baltimore writer said:

"Life has discovered, more or less by accident, something which the Evening Sun has long believed but never conclusively proved, to wit: That South Dakota is darkest America. The map charts the traffic movements—by air, railway, highway, and water—of Eleanor Roosevelt, the busy wife of the President. It is self-explanatory. Mrs. Roosevelt gets around more, probably, than any other American woman. Yet in her years of strenuous—we almost said frantic—journeying she has never once set foot in South Dakota. It was only after Life's map makers had undertaken to chart her course that this discovery was made. We hail it as proof positive that our suspicions were right, and that South Dakota really is the State nobody knows. There may be a Livingstone somewhere in darkest Dakota (South). Some day a Stanley may go and find him. Meanwhile, we pledge to listen sharply for any reports which may emanate from that unknown region indicating something of the nature of the inhabitants."

When a former South Dakotan now residing in Baltimore submitted the foregoing to the Argus Leader for its consideration our first reaction was one of irritation. But that spasm passed, and we decided to ignore the boorish screed of the provincial Baltimore editor as just another indication that the citadels of stupidity are in the East.

A headline in the Argus Leader yesterday, however, induced us to resurrect the Baltimore Sun clipping.

This head line read: "Two Women Rescued from Lynch Mob." It was over an Associated Press dispatch from Snow Hill, Md.—yes; Maryland, the Baltimore Sun's State.

The first paragraphs of the dispatch read as follows:

"SNOW HILL, Md., February 14.—Heavily armed State police poured into this Eastern Shore community to restore calm today after a night of wild disorder climaxed when four State troopers waded in to rescue two Negro women from the hands of a threatening mob of 1,000 men.

"After hours of milling around the Worcester County jail the angry men bashed in a window last night, ripped a cell door from its hinges, and made away with the women who were held for investigation in connection with the slaying of an elderly farmer.

"The troopers, taking up the trail, caught up with the crowd at Stockton, where Harvey Pilchard was shot to death Sunday night by three Negro men who seriously wounded his wife.

"There, led by Lt. Ruxton Ridgely, they battled apparently hopeless numbers briefly but viciously, seized the women—a mother and daughter—and dashed to safety across the Delaware line 50 miles away. Sgt. W. H. Weber suffered painful head injuries and at least two civilians were hurt."

Reflecting about this we wondered if the Baltimore editor wasn't a bit confused in his South Dakota comment.

Mobs don't attack women in South Dakota but obviously they do in degenerate, dark, and barbaric Maryland.

South Dakotans, we are quite sure, don't care to discover Maryland.

But it might be to the advantage of the benighted citizens of Baltimore and Maryland to discover South Dakota and learn something about civilization.

And if the Baltimore editor wants to rejuvenate himself from the decay of the years in his home State, he should travel westward this summer—westward to the rolling prairies, the Great Plains, and the mountains and forests of South Dakota.

Here he would see a civilized country—a country where a mob of 1,000 men does not attempt to lynch two women. Mrs. Roosevelt may not have visited South Dakota, much to our regret and to her misfortune, but civilization has.

## Honor to a Great Woman—Susan B. Anthony

## EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 16, 1940

SUSAN B. ANTHONY, FEBRUARY 15, 1820–MARCH 13, 1906

Mr. BENDER. Mr. Speaker, we are told that Susan B. Anthony's last words on the public platform were, "Failure is impossible." If she were with us today she would be proud of her handiwork. She was right. To women like Susan Anthony, failure will always be impossible. To women like the women of America, who have captured the indomitable spirit of Susan Anthony, failure is equally impossible.

There must be some divine providence which leans with great partiality toward the month of February in our country. Somehow, the guardians of human liberty came grouped within the shortest month of our year. If we were mystics, we should look for some occult beneficent power to explain this phenomenon. But we are practical people. We know that human liberty is an ideal which spans the days and weeks and years wherever men and women live. We know that it refuses to be crushed, no matter how desperately tyrants seek to destroy it.

The great patriots whose memory we revere this month knew this fundamental American truth. Their very greatness stems from this knowledge. We honor them because they were makers of human freedom. George Washington freed his people from the tyranny of a long-distant dictatorship. Abraham Lincoln freed the slaves. Susan Anthony freed her sisters. The achievements of Washington and Lincoln need no recitation. We all know them. Yet in at least one respect they were victories less notable than Miss Anthony's. A tremendous body of supporters lent their aid to the father of our people. Abraham Lincoln had the assistance of thousands in his battle to preserve the Federal Union. Susan B. Anthony fought her struggles almost alone.

The one hundred and twentieth anniversary of her birth should remind us of the story of her life. It is a story as heroic as any in the records of American history. Today we look back at the years of Susan Anthony's life to blush with shame. We did everything within our power to discourage her. We mocked her. We caricatured her. We hissed and booed her addresses for over 50 years. Nothing stopped her. Her own sex was almost as hostile. She was accused by them of "aping men." She was denounced as a betrayer of womanhood. She did not falter.

Every boy and girl who studies American history in our schools should know something of the life of this great woman. When she began her life on the 15th day of February, 1820, no respectable woman permitted herself to speak in public or participate in a public meeting. When Miss Anthony was 20 years old the American Antislavery Society was refusing to acknowledge the right of women to speak, to vote, or even to serve on committees of the organization. A clergyman told some of Susan Anthony's followers:

Wifehood is the crowning glory of a woman. In it she is bound for all time. To her husband she owes the duty of unequalled obedience. There is no crime which a man can commit which

justifies his wife in leaving him or applying for that monstrous thing, divorce. \* \* \* If he be a bad or wicked man, she may gently remonstrate with him, but refuse him, never.

Under the law women were regarded as if they were chattels, the property of man, their lord and master.

Things have certainly changed since Miss Anthony's day. And it was Miss Anthony who was largely responsible for these changes. She was fortunate enough to be born in an American Quaker home, where equality between the sexes was a major premise. When she was 15 years old she began to teach school at the princely salary of \$1 per week. Ten years later she was earning \$2.50 weekly. Men were receiving three or four times as much for precisely the same kind of work.

In 1852 Susan Anthony attended her first woman's rights convention. She had found her task in life. From her thirty-second birthday on, for 54 years, she worked day and night for the cause in which she believed. The work she did is almost unbelievable to us today. When we stop to consider the difficulties of travel in the 1850's, the discomforts, the uncertainties, the prejudice which greeted her wherever she went, the accomplishments listed to Miss Anthony's credit are really incredible.

She lectured in almost every city in the North and in the West. For 45 years her name was known in every section of the Nation. She spoke to the committees of every Congress from 1869 to 1897. She arranged for delegations of women to appear in the New York Legislature. She pushed through legislation extending the property rights of women. At the end of the Civil War she threw herself, body and soul, into an effort to have women, as well as Negroes, included in the fourteenth amendment. She led the organization of the American Equal Rights Association and founded its famous magazine. For more than 50 years Miss Anthony held the highest offices in the women's suffrage movement. She gave her life to the cause, sacrificing her time, her money, her recreation.

To get the ballot she was willing to give her life. Mrs. Carrie Chapman Catt called her the most unselfish woman in all the world. In her half century of work she never received 1 cent of salary, but, on the contrary, put into the cause every dollar she had ever earned. Her intimate friend, Mrs. Elizabeth Cady Stanton looked upon Susan Anthony as the greatest human being she had ever known.

I am inclined to think that she was all that her friends called her. When she died on March 13, 1906, flags flew at half mast across the entire Nation. Ten thousand people passed by her bier to pay her homage.

Those who had attacked her work during her lifetime were silenced. They were silenced by the record of her achievements. Two years after her death, hundreds of American colleges were admitting women to their courses. They had burst the boundaries of the medical profession, the legal profession, the ministry. A thousand women's organizations were discussing every issue of the day. State legislatures had lightened the restrictions upon their women, and just 100 years after her birth, Susan B. Anthony's dream was realized, national woman's suffrage.

The fight is not yet over. There is still much which must be done before equal rights are assured to every man and woman in our Nation. Susan Anthony's spirit must continue to live; it must continue to work; she would not want it to rest for a moment, so long as there remained areas in life where women are unequal before the law.

None of those objectives will be easily attained. But opposition is the testing ground of every worth-while activity of the human spirit. When her followers feel like quitting, when they become discouraged and think the task hopeless, they think of Susan B. Anthony. She traveled thousands of miles on dirty, dusty roads; she rose to speak at meetings where men sat with loaded pistols to protect her right to say what she thought; she was rescued from angry mobs time and again; she was jailed, she was persecuted. But she fought on.

This month we join in tribute to the memory of a true American heroine, a woman whose life was spent for human freedom.

## President McKinley's Last Speech

### EXTENSION OF REMARKS

OF

## HON. JAMES SECCOMBE

OF OHIO

### IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

ADDRESS OF PRESIDENT MCKINLEY AT BUFFALO, N. Y.,  
SEPTEMBER 5, 1901

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the last speech of President McKinley, delivered at the Pan-American Exposition at Buffalo on September 5, 1901, as follows:

President Milburn, Director General Buchanan, Commissioners, ladies, and gentlemen, I am glad to again be in the city of Buffalo and exchange greetings with her people, to whose generous hospitality I am not a stranger, and with whose good will I have been repeatedly and signally honored. Today I have additional satisfaction in meeting and giving welcome to the foreign representatives assembled here, whose presence and participation in this exposition have contributed in so marked a degree to its interest and success. To the Commissioners of the Dominion of Canada and the British colonies, the French colonies, the republics of Mexico and of Central and South America, and the Commissioners of Cuba and Puerto Rico, who share with us in this undertaking, we give the hand of fellowship and felicitate with them upon the triumphs of art, science, education, and manufacture which the old has bequeathed to the new century.

Expositions are the timekeepers of progress. They record the world's advancement. They stimulate the energy, enterprise, and intellect of the people, and quicken human genius. They go into the home. They broaden and brighten the daily life of the people. They open mighty storehouses of information to the student. Every exposition, great or small, has helped to some onward step.

Comparison of ideas is always educational, and as such instructs the brain and hand of men. Friendly rivalry follows, which is the spur to industrial improvement, the inspiration to useful invention, and to high endeavor in all departments of human activity. It exacts a study of the wants, comforts, and even the whims of the people, and recognizes the efficacy of high quality and low prices to win their favor. The quest for trade is an incentive to men of business to devise, invent, improve, and economize in the cost of production. Business life, whether among ourselves or with other peoples, is ever a sharp struggle for success. It will be nonetheless so in the future. Without competition we would be clinging to the clumsy and antiquated processes of farming and manufacture, and the methods of business of long ago, and the twentieth would be no further advanced than the eighteenth century. But though commercial competitors we are, commercial enemies we must not be.

The Pan-American Exposition has done its work thoroughly, presenting in its exhibits evidences of the highest skill and illustrating the progress of the human family in the Western Hemisphere. This portion of the earth has no cause for humiliation for the part it has performed in the march of civilization. It has not accomplished everything; far from it. It has simply done its best, and without vanity or boastfulness, and recognizing the manifold achievements of others, it invites the friendly rivalry of all the powers in the peaceful pursuits of trade and commerce, and will cooperate with all in advancing the highest and best interests of humanity. The wisdom and energy of all the nations are none too great for the world's work. The success of art, science, industry, and invention is an international asset and a common glory.

After all, how near one to the other is every part of the world. Modern inventions have brought into close relation widely separated peoples and made them better acquainted. Geographic and political divisions will continue to exist, but distances have been effaced. Swift ships and fast trains are becoming cosmopolitan. They invade fields which a few years ago were impenetrable. The world's products are exchanged as never before, and with increasing transportation facilities come increasing knowledge and larger trade. Prices are fixed with mathematical precision by supply and demand. The world's selling prices are regulated by market and crop reports. We travel greater distances in a shorter space of time and with more ease than was ever dreamed of by the fathers. Isolation is no longer possible or desirable. The same important news is read, though in different languages, the same day in all Christendom.

The telegraph keeps us advised of what is occurring everywhere, and the press foreshadows, with more or less accuracy, the plans and purposes of the nations. Market prices of products and of

securities are hourly known in every commercial mart, and the investments of the people extend beyond their own national boundaries into the remotest parts of the earth. Vast transactions are conducted and international exchanges are made by the tick of the cable. Every event of interest is immediately bulletined. The quick gathering and transmission of news, like rapid transit, are of recent origin, and are only made possible by the genius of the inventor and the courage of the investor. It took a special messenger of the Government, with every facility known at the time for rapid travel, 19 days to go from the city of Washington to New Orleans with a message to General Jackson that the war with England had ceased and a treaty of peace had been signed. How different now. We reached General Miles, in Puerto Rico, and he was able through the military telegraph to stop his army on the firing line with the message that the United States and Spain had signed a protocol suspending hostilities. We knew almost instantly of the first shots fired at Santiago, and the subsequent surrender of the Spanish forces was known at Washington within less than an hour of its consummation. The first ship of Cervera's fleet had hardly emerged from that historic harbor when the fact was flashed to our Capitol, and the swift destruction that followed was announced immediately through the wonderful medium of telegraphy.

So accustomed are we to safe and easy communication with distant lands that its temporary interruption, even in ordinary times, results in loss and inconvenience. We shall never forget the days of anxious waiting and suspense when no information was permitted to be sent from Peking, and the diplomatic representatives of the nations in China, cut off from all communication, inside and outside of the walled capital, were surrounded by an angry and misguided mob that threatened their lives; nor the joy that thrilled the world when a single message from the Government of the United States brought, through our Minister, the first news of the safety of the besieged diplomats.

At the beginning of the nineteenth century there was not a mile of steam railroad on the globe; now there are enough miles to make its circuit many times. Then there was not a line of electric telegraph; now we have a vast mileage traversing all lands and all seas. God and man have linked the nations together. No nation can longer be indifferent to any other. And as we are brought more and more in touch with each other the less occasion is there for misunderstandings and the stronger the disposition, when we have differences, to adjust them in the court of arbitration, which is the noblest forum for the settlement of international disputes.

My fellow citizens, trade statistics indicate that this country is in a state of unexampled prosperity. The figures are almost appalling. They show that we are utilizing our fields and forests and mines, and that we are furnishing profitable employment to the millions of workmen throughout the United States, bringing comfort and happiness to their homes and making it possible to lay by savings for old age and disability. That all the people are participating in this great prosperity is seen in every American community and shown by the enormous and unprecedented deposits in our savings banks. Our duty in the care and security of these deposits and their safe investment demands the highest integrity and the best business capacity of those in charge of these depositories of the people's earnings.

We have a vast and intricate business, built up through years of toil and struggle, in which every part of the country has its stake, which will not permit of either neglect or of undue selfishness. No narrow, sordid policy will subserve it. The greatest skill and wisdom on the part of manufacturers and producers will be required to hold and increase it. Our industrial enterprises, which have grown to such great proportions, affect the homes and occupations of the people and the welfare of the country. Our capacity to produce has developed so enormously and our products have so multiplied that the problem of more markets requires our urgent and immediate attention. Only a broad and enlightened policy will keep what we have. No other policy will get more. In these times of marvelous business energy and gain we ought to be looking to the future, strengthening the weak places in our industrial and commercial systems, that we may be ready for any storm or strain.

By sensible trade arrangements which will not interrupt our home production we shall extend the outlets for our increasing surplus. A system which provides a mutual exchange of commodities is manifestly essential to the continued and healthful growth of our export trade. We must not repose in fancied security that we can forever sell everything and buy little or nothing. If such a thing were possible, it would not be best for us or for those with whom we deal. We should take from our customers such of their products as we can use without harm to our industries and labor. Reciprocity is the natural outgrowth of our wonderful industrial development under the domestic policy now firmly established.

What we produce beyond our domestic consumption must have a vent abroad. The excess must be relieved through a foreign outlet, and we should sell everywhere we can and buy wherever the buying will enlarge our sales and productions, and thereby make a greater demand for home labor.

The period of exclusiveness is past. The expansion of our trade and commerce is the pressing problem. Commercial wars are unprofitable. A policy of good will and friendly trade relations will prevent reprisals. Reciprocity treaties are in harmony with the spirit of the times; measures of retaliation are not. If, perchance, some of our tariffs are no longer needed for revenue or to encourage and protect our industries at home, why should they not be employed to extend and promote our markets abroad? Then, too, we have inadequate steamship service. New lines of steamships

have already been put in commission between the Pacific coast ports of the United States and those on the western coasts of Mexico and Central and South America. These should be followed up with direct steamship lines between the western coast of the United States and South American ports. One of the needs of the times is direct commercial lines from our vast fields of production to the fields of consumption that we have but barely touched. Next in advantage to having the thing to sell is to have the conveyance to carry it to the buyer. We must encourage our merchant marine. We must have more ships. They must be under the American flag, built and manned and owned by Americans. These will not only be profitable in a commercial sense; they will be messengers of peace and amity wherever they go.

We must build the isthmian canal, which will unite the two oceans and give a straight line of water communication with the western coasts of Central and South America and Mexico. The construction of a Pacific cable cannot longer be postponed. In the furtherance of these objects of national interest and concern you are performing an important part. This exposition would have touched the heart of that American statesman whose mind was ever alert and thought ever constant for a larger commerce and a truer fraternity of the republics of the New World. His broad American spirit is felt and manifested here. He needs no identification to an assemblage of Americans anywhere, for the name of Blaine is inseparably associated with the Pan-American movement which finds here practical and substantial expression and which we all hope will be firmly advanced by the Pan American Congress that assembles this autumn in the capital of Mexico. The good work will go on. It cannot be stopped. These buildings will disappear; this creation of art and beauty and industry will perish from sight; but their influence will remain to "make it live beyond its too short living with praises and thanksgiving." Who can tell the new thoughts that have been awakened, the ambitions fired, and the high achievements that will be wrought through this exposition?

Let us ever remember that our interest is in concord, not conflict; and that our real eminence rests in the victories of peace, not those of war. We hope that all who are represented here may be moved to higher and nobler effort for their own and the world's good, and that out of this city may come not only greater commerce and trade for us all, but, more essential than these, relations of mutual respect, confidence and friendship which will deepen and endure. Our earnest prayer is that God will graciously vouchsafe prosperity, happiness and peace to all our neighbors, and like blessings to all the peoples and powers of earth.

## Woman's National Democratic Club

### EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable James A. Farley, chairman of the Democratic National Committee, at the forum of the Woman's National Democratic Club, Washington, D. C., the evening of February 6:

I always feel at home addressing a gathering of Democrats, especially when the subject under discussion has a bearing on party unity and party responsibility.

Not so many years ago, the idea of Democratic unity usually evoked a faint smile of derision in certain quarters. There was a belief that the party of Jefferson and Jackson had degenerated into an ill-fitting collection of noisy minorities and sturdy individualists who distrusted each other only slightly more than they distrusted the political foe. In fact, I recall one Republican statesman who often predicted that the Democrats would never be able to rule the country because they were never able to rule themselves.

The picture has changed considerably since the Roosevelt administration first came into power, even though the opposition is still pinning its slim hopes of victory on a Democratic split. Our party is, beyond question, the majority political party in this country, and it has won that place of eminence not by evading responsibility but by the direct process of carrying out the wishes of the majority of the electorate.

A few disgruntled individuals, who dislike the course of political events, profess to see the program adopted by the administration has something that has been pressed down on the people without their knowledge or consent. These are the unhappy few who see dictatorship lurking in every suggestion made by the Chief Executive and the doom of the country in every measure adopted by

Congress for the sake of promoting the public good. But the fact remains that the Democratic Party has won four successive national elections, after every issue had been carefully thrashed out in public debate; and if that does not constitute rule by majority, then I have no idea what does.

The Democratic Party has gone along now for more than a century, surviving national perils and changes in popular opinion that have brought disaster and doom to weaker political parties. Of course, the party has been torn and divided on many occasions by the sharp disagreement of its members over vital issues. But that has been true of every organization, political or otherwise, that has attempted to deal with crucial questions of national import. The thing to remember, however, is that the party has survived because in the main it has remained loyal and steadfast to the major purpose for which it was founded, and that purpose is the promotion of the welfare of all the people.

A number of reasons have been offered to explain the decline of the Republican Party during the last decade. There were many contributing factors, of course; yet the one outstanding reason is the fact that the party lost touch with the great mass of common citizens. In the 12 years of Republican rule that followed the World War, there was nothing done by those in power to indicate that they had the slightest understanding of the needs of agriculture, of labor, or of the lower-income groups, and when the day of reckoning came, the Republican Party paid the penalty.

The Democratic Party, then, may look to a continuance in power if it remains united on essential principles and if it continues to make a sincere effort to translate those principles into reality. The people have little faith in a declaration of purpose that everyone knows will become a dead letter as soon as the election is over.

One of the truly fine contributions to public life made by this administration has been the revival of party government and party responsibility. A decade or so ago there was a spirit of indifference abroad; it was frequently said the two parties were so much alike that it made no difference which side won—the result was all the same. A large element of the public had even given up hope that anything could ever be accomplished under the two-party system, believing that inaction and dry rot had destroyed the effectiveness of both.

With the advent of the Roosevelt administration, however, the old charge that political parties are all alike was soon forgotten. The Nation was treated to the refreshing spectacle of a political party that had the energy and the initiative to undertake grave emergency measures and the courage to accept responsibility for those measures once they were undertaken. In all the charges that have been hurled against the Roosevelt administration during the past few years, no one has yet said that it was timid or afraid to accept the consequences of its own program.

In considering the question of political unity, it is well to bear in mind that political parties, national in scope, are absolutely necessary to the well-being of this country and to the success of democratic government. The United States is so vast in extent, with such a wide variety of economic and geographic interests, that the task of sifting down national sentiment into something approaching unity is a task of compelling magnitude. The fact that it can be done at all is due to the existence of the two major political parties, and I firmly believe that the disruption of this system would be a disastrous blow for the Nation.

The only substitute for a national party would be a series of minor political groups, each one concerned almost solely with its own peculiar economic or sectional problem. Under such a system the election of a majority President or a majority Congress would be well-nigh impossible. The result could only be a confusion and disunion.

We have a duty, then, as a matter of patriotism, to keep alive the Democratic Party in all its vigor, to maintain its ideals and objectives, and to preserve the national scope of its unity. There will be conflicts of opinion between members as to methods and policies, as there have been in the past. These conflicts are unavoidable; but in disputing over methods we must not be led into the fatal error of drifting apart on fundamental objectives.

The recent history of the United States shows that practically every worth-while piece of progressive and liberal legislation has been written into law under a Democratic administration. The Wilson administration brought about many needed reforms and then nothing was done until our party came back into power. The record should convince any fair-minded person that the cause of liberal government is lost except when a Democratic majority has it in hand.

In view of the vast program of reform and reconstruction which the present administration was compelled to undertake, it is not unusual that there should be divergence of viewpoint within the party. The remarkable fact is the degree of unity that prevails as the party approaches the coming election. While it may pain some individuals who hoped otherwise, the Presidential campaign will find the Democratic Party enjoying a higher degree of internal harmony than its ancient enemy, the Republican opposition.

The G. O. P. is trying to ride the horse of progressive government in its customary cautious manner. It has one foot in the stirrup and the other planted firmly on the ground. The method is not only difficult but the rider seldom gets anywhere.

The goal of every sincere Democrat is a united party. With that easily within our grasp, we shall go forward pursuing those policies which have made this a peaceful, prosperous, and united country.

## Property Owned by the United States in Foreign Countries

### EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

Mr. STEFAN. Mr. Speaker, during the debate on the bill making appropriations for the Departments of State, Justice, and Commerce several questions were asked of me by Members interested as to the number of buildings owned by this Government in foreign countries. I indicated in my reply that perhaps this information could be secured in the hearings of the committee of which I am a member, but I find that the hearings do not contain this information.

I feel that it is quite important that the Members should know that the total investment in land and buildings owned by the United States Government in foreign countries amounts to \$12,877,294.59, and that the investment in furnishings in these buildings was originally \$574,017.34.

It would be somewhat difficult at this time to give the Members a break-down of the total investment in land, buildings, and furnishings in each of the 45 foreign locations in which we have property, but that information can be secured from the Department of State by any Member, if he is interested in any one particular mission. For your information, I include here a list of the foreign-service buildings and sites and part of the information I agreed to furnish during the debate on the Department of State appropriation bill:

#### LIST OF FOREIGN-SERVICE BUILDINGS AND SITES

Aden, Arabia: Site only. For office and residence.  
 Amoy, China: Consular residence and office.  
 Ankara, Turkey: Site only. For embassy office and residence.  
 Bangkok, Thailand: Legation residence, consulate, and secretary's residence.  
 Berlin, Germany: Combined office building.  
 Buenos Aires, Argentina: Ambassador's residence and an unimproved site to be used for office building.  
 Calcutta, India: Two sites only. For consulate office and residence buildings.  
 Ciudad Trujillo, Dominican Republic: Chancery building. Minister's residence now under construction.  
 Corinto, Nicaragua: Site only. For consular residence and office.  
 Habana, Cuba: Site only. For residence.  
 Helsinki, Finland: Combined offices and residence.  
 Istanbul, Turkey: Residence and chancery.  
 Keijo (Seoul), Chosen, Japan: Consulate general office and residence.  
 Lima, Peru: Site only. For ambassador's residence.  
 London, England: Ambassador's residence.  
 Managua, Nicaragua: Minister's residence.  
 Matanzas, Cuba: Office building.  
 Mexico, D. F., Mexico: Embassy residence, chancery, and consulate general office.  
 Monrovia, Liberia: Combined offices and residence.  
 Montevideo, Uruguay: Legation residence under construction.  
 Mukden, China: Site only. For consulate office and residence.  
 Nagasaki, Japan: Consular residence and office.  
 Oslo, Norway: Office and legation for minister.  
 Ottawa, Canada: Office and legation for minister.  
 Panama, Panama: Site only. For office building.  
 Paris, France: Office and embassy residence buildings.  
 Peiping, China: Office building and 16 small residence buildings.  
 Penang, Straits Settlements: Consular residence and office.  
 Port-au-Prince, Haiti: Legation residence. Also site only for office building.  
 Prague, Bohemia: Consulate and residence.  
 Rio de Janeiro, Brazil: Combined office, garage, and residence.  
 Rome, Italy: Combined office.  
 San Jose, Costa Rica: Combined office and residence.  
 San Salvador, El Salvador: Combined office and residence.  
 Santiago, Chile: Ambassador's residence.  
 Santiago de Cuba: Ambassador's residence. Site only.  
 Seville, Spain: Consulate office and residence.  
 Shanghai, China: Site only for consulate office.  
 Tahiti, Society Islands, Oceania: Consulate office and residence.  
 Tangier, Morocco: Combined office and residence.  
 Teheran, Iran: Legation residence and chancery.

Tirana, Albania: Legation office and residence (unoccupied), secretary's residence.  
 Tokyo, Japan: Ambassador's residence, chancery, two apartment houses.  
 Vienna, Germany: Consulate general office and residence (this must be remodeled before using).  
 Yokohama, Japan: Consulate office and residence.

### Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

EDITORIAL FROM COLLIERS' WEEKLY FOR FEBRUARY 17, 1940

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in Colliers' Weekly for February 17, 1940:

[From Collier's Weekly for February 17, 1940]

LET TRADER HULL TRADE ON

It's generally agreed that no member of the New Deal Cabinet has done a better all-round job than Secretary of State Cordell Hull. And the Hull enterprise that has earned the loudest applause has been the closing of the reciprocal-trade agreements with 20 nations.

It is so much the more shocking, then, to see such a storm of petty and partisan agitation dust up in Congress against the proposal to extend for another 3 years the State Department's power to make these agreements. Present expiration date of power is next June 12.

Farmers are being told that hams from Germany's part of what once was Poland are forcing American hams off the American market \* \* \* that Canadian wheat and beef, let into this country under reduced tariff schedules, are running down American prices for those commodities \* \* \* that Argentine beef is coming into the United States, in million-tin lots.

Therefore, it is urged that the State Department be stripped of power to make these agreements whenever and wherever it can spot a good dicker for the United States. It is further urged that the agreements themselves be thrown overboard as fast as may be.

For all this the correct word is nonsense—plus a few adjectives such as selfish, narrow-minded, and, in more cases than one, false.

The fact is that the State Department in negotiating these pacts has leaned over backward to avoid cutting United States tariffs on any foreign goods that would seriously compete with similar goods produced here. The negotiations with Argentina, for example, fell through because the State Department declined to give Argentina so much as a shred of the American shirt in the matter of reducing tariffs on Argentine wheat. And this is the spirit that has governed the American end of these negotiations ever since Mr. Hull and his associates began them about 5 years ago.

Some of the tangible results have been that 10 nations have reduced their tariffs on our pork, ham, and bacon; 9, Great Britain among them, have cut tariffs on our lard; while wide reductions have been made in duties on our grains and grain products, our fruits, and our vegetables.

Some American toes have been stepped on, yes; but so have some toes in the 20 countries on the other ends of the trade agreements. One of the net results, though, has been that from 1935 to 1938 our exports of farm products to trade-agreement countries went up almost 50 percent. Another of the net results is that our export trade has been healthy and has been growing healthier since 1935, whereas it was in the deep blue dumps for many years before that year.

In the matter of the Mexican and Bolivian oil steals, the State Department in our estimation has been a one-sided good neighbor, which is to say that it has been a sucker and a sap.

But it has done brilliant work on the trade agreements, and it has not bartered away any American markets to the villainous foreigner—who isn't any more villainous than we are, anyway.

Even more important, in a world gone mad with tariff mania and export-subsidy insanity, our State Department has stood by the proposition that a nation that wants to sell must also buy; that to get business you have got to be willing to do business. On the survival of this principle depends much of the hope for a livable post-war world.

Hull has done and is doing one grand job. We are for letting the State Department carry on with the trade-agreement work—if not for the proposed 3 years after next June 12, then at least until after the next Congress has convened and the next administration has had plenty of time to get its bearings.

### Makers of American Policy

### EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

ADDRESS BY HON. STEPHEN BOLLES, OF WISCONSIN, AT HILLSDALE, MICH., FEBRUARY 17, 1940

Mr. SHAFER of Michigan. Mr. Speaker, under leave to extend my remarks, I include an address by my colleague, the gentleman from Wisconsin, the Honorable STEPHEN BOLLES, before the annual Lincoln banquet of the Hillsdale County Republican Club at Hillsdale, Mich., Saturday, February 17, 1940.

The address is as follows:

Mr. Chairman, ladies, and gentlemen, February is a hallowed month to Americans. It has been even more important to liberty-loving and demanding people of this inhabited globe.

It gave to us and the world out of the travail of motherhood two of history's greatest human figures—George Washington to direct and lead an isolated people into a national life, and Abraham Lincoln to pilot the ship of state through the hurricane of fratricidal strife into the safe haven of national unity.

These two sons of February, born 77 years apart, were strangely different. One was the child of a colonial aristocracy, the other born in circumstances as lowly as the child Jesus in the stable at Bethlehem. One led a defiant and defensive army of ragged, ill-paid, and undisciplined men, the old continentals in their ragged regimentals, against the trained forces of a ruthless British colonizer and conqueror. The other man in grieving patience held together that union of States which Washington had cemented. Both succeeded. Both inherited the love and gratitude of a great people.

Both of these men, differing as they did in birth, background, environment, and heritage, founded and preserved the American way of government. The Constitution, which, thank God, in spite of efforts to tear out its pages and erode it, still lives as a virile and vital document, was signed by one of these February children and upheld and preserved by the boy of the Kentucky cabin—the boy whose tears bathed the rude coffin, fashioned by his father, and who began to live in a land of rough reality when that mother was buried in the stony soil of his nativity.

We have met here tonight to pay tribute to these two great Americans and to rededicate ourselves to the support of the Constitution. In 1859 Abraham Lincoln said in a speech in Cincinnati:

"The people of the United States are the rightful makers of both Congress and courts—not to overthrow the Constitution but to overthrow the men who pervert the Constitution."

In the last 7 years we have been bewildered by the constant erosion of the Constitution. We have been astonished and disturbed by repeated assumption of executive power and the establishment of incompetent collective authority in a new autocratic plan of government long known in old despotisms and totalitarianisms as bureaucracy.

Now, my friends, bureaucracy—government by independent agencies—was never contemplated in the Constitution by its authors, nor has it any place in a free republic. Bureaucracy adds to the power of the state—the centralization of government. It is an attribute of dictators, of tyrants, and an agency of absolutism. The Turkish Sultan, the Russian Czar, the Asiatic Satrap equipped his government with bureaucrats. The more power to the state, the less liberty and freedom there is to the individual.

Lincoln, I believe, had the eye of prophecy. With a long look into the future, right into the White House in the past 7 years, he said:

"The President is in no wise satisfied with his own positions. First, he takes up one and in attempting to argue us into it he argues himself out of it, then he seizes another and goes through the same process, and then, confused at not being able to think of something new, he snatches up the old one again, which he has some time before cast off. He knows not where he is. He is a bewildered, confused, and miserably perplexed man. God grant he may be able to show there is not something about his conscience more painful than all his mental perplexity."

So we have had those years of experience. We have seen a President, a successor to Lincoln, flit from flower to flower, trying to extract the honey of content from the useless thistle of planned economy.

If what we have had for 7 years is planned economy, there have been some frightful errors in the blueprints. It has had some startling results.

Planned economy has given us a debt greater than the total cost of government for 100 years prior to the World War.

It has spent almost twice as much each year as our income.

It has trebled the pay roll and put 980,000 people into Government jobs.

It has wobbled around with a foreign policy so that we have none. It has not relieved unemployment, the greatest problem of our time.

We live in a republic. A republican form of government is a government by representatives of the people selected by ballot. There is no place in it for a rule or administration by a bureaucracy. There is no place in it for the fog ends of old, discarded, and discredited political and social philosophies. There is no place in it for experimental political adventures transplanted from foreign capitals or adopted from waterlogged concepts of economic writers who know nothing of this, our America, in its reality. There is no place in the Republic for those who have to don a different colored shirt for every new "ism."

We need not evade or avoid changes that have come to us through inventions and the progressive march of what we call civilization. We have tossed away in careless abandon the hitching posts and snubbing posts of our real civilization. We have been thrown about with anchor lost and the life line stolen by economic dreamers who have hidden it in the bottomless well of experiment.

One of our troubles is that we have adopted a new vocabulary. The old one is discarded by the uncombed-haired, hook-nosed economists of our time. They speak mostly of democracy. I wonder if any of them know what is a democracy. The United States never was a democracy; is not now. It is fast getting to be a bureaucracy.

Neither George Washington nor Abraham Lincoln wrote or spoke of America as a democracy. This appellation is of comparatively recent origin here. The word is not in the Declaration of Independence. It is not in the Articles of Confederation nor the Ordinance of 1787. It does not appear in the Constitution. The word is not used at all in any of the famous state papers. It does not appear in the speeches of Webster or of Charles Sumner.

The Constitution—in section 4 of article IV of the Federal Constitution—expressly provided that the United States "shall guarantee to each of the several States a republican form of government." This is a republic with a republican representative government and not, nor ever has been, a democracy as the term "democracy" is so glibly and so misunderstandingly applied. Not even Jefferson, founder of the Democratic Party under the name of Republican, uses the term "democracy."

So let's speak of our Government as that of a republic. Painted high on this ship of state is the word "republic." This ship of state once captained by a Washington and a Lincoln has been floundering in seas with a pilot who has been sailing in all directions but never toward the home port. Its crew has been made up of those who believe the old order in the United States is ended; that much of what has been American tradition, not only politically but economically, is about dying or dead.

And, my friends, we cannot depend for salvation on the intellectual leaders with gossamer threaded theories led into a maze of impracticality. Nor on business leaders who are over cautious and fearful and who have been intimidated by the scourge wielded in Washington. Nor can we depend on the pulpit fallen under the alien philosophy spell. We must depend on the great middle class—the same breed of men who founded this Nation, who pioneered into the wilderness and wrought a miracle in making an empire from that wilderness.

I cannot conceive of a Washington or a Lincoln going ahead to the music of the dead march of communism or the totalitarianism of the Fascist or the Nazi.

In this year of 1940, the clock has struck the hour to rededicate ourselves to America. It is time to dump the foreign garbage of ideology we have been carrying along for far too many years into the sea of oblivion.

This Nation was built on private enterprise and individual initiative. Destroy that and you destroy America. This Nation of Washington and Lincoln was not built into its present greatness by government. It was built by individuals who made the Government. The wealth of the people is not the property of the State or Federal Government. It belongs to the people. Some group in this country of ours conceived the idea a few years ago of redistributing wealth. It was an old Communist idea. It was the basis of Marxian socialism. What is the wealth of America? Is it in Wall Street or on LaSalle Street in Chicago? Is it in the General Motors or the railroads? Where do we find it?

Let us analyze it. It is in the garages and stores; in the farms and barns and grain in the bins of the farmers; in the houses and the furniture; the kitchen utensils, the plows and harrows, and other implements on the farm; in the little and big merchandise places with stocks of goods; in 29,000,000 autos and trucks and motorcycles on our roads; in wagons and homes; in fattening cattle and sheep; in the poultry yard; in the equipment of thousands of offices; in little or big homes owned by working people; is even in the dinner pail.

Wealth! Yes; in America it belongs to all and everybody. And remember that money—currency—is not counted in the figures of wealth in the United States.

Some years ago a friend of mine, a great editor, Casper Yost, of the St. Louis Globe Democrat, wrote a series of articles on the American Way. I quote a paragraph from him most pertinent at this time and place:

"In no other country in the world is the wealth of the Nation so widely distributed as in America. In no other country is there so large a proportion of the people able to live on a scale of comfort

that would be regarded as luxury elsewhere. Of course, there are too many at this time, but under normal conditions this number is relatively small. We cannot fairly measure what America has always been and what it can be again by what we have now. Of course, there is no equality in the distribution of wealth. That is a vain dream, utterly impossible of fulfillment, and even it could somehow be fulfilled for a moment it could not last 30 days, for the differences in human dispositions and capacities would immediately create differences in possessions. The ideal of the American way has always been 'the greatest good for the greatest number for the greatest number,' and, unquestionably, under that way it has accomplished more good for the greatest number than in any other land under the sun. Our way of individual effort, highly stimulated as it is by the principles of liberty and equality of opportunity, has through the past years made the average conditions of life in America better and its standards of living higher than in any other land. Under the collective systems, whatever form they may take, it is not the good of the people that is sought, but the good of the state, to which not only the liberties but the individual welfare of the citizens is surrendered. There is no distribution of wealth at all under such systems, because all wealth is directly or indirectly in the possession of the state."

This Nation has gained its wealth and position by and under the profit system. In the last 7 years it has been the profit-and-loss system. Nor industry, nor farm, nor business, nor yet the laborer can succeed without the profit system, coupled with thrift.

Out beyond the seas, west or east, there is a disordered world. Fear dominates public opinion. We are not escaping entirely unscathed. We cannot be entirely isolated from events in Europe or Asia. Invention of communication means has enlarged the world's nervous system and made it more sensitive. In the days of Washington and Lincoln a war could be fought in Europe or Asia before we knew about it. Now Gandhi has a cold today, and we are told in detail before nightfall that he has added a new loin cloth. Because of these things we need to be more careful, more cautious, more discreet in our foreign policy, if we have any at this time. We as a people are determined to keep out of war. Fifty thousand overseas headstones whitening the hillsides, thousands in veterans' hospitals here at home, graves in every city, village, and town cemetery cry out either in voice or by example against this Nation's ever going again into war to save a world for democracy or for any other excuse.

My friends, America is safe from without. No conquerors of the United States have yet been born. The temple of liberty here erected by Washington, preserved by Lincoln, is not to be destroyed by a totalitarian Europe or an Asiatic horde. If that temple is destroyed, if its facade is marred, it will be from enemies nurtured—nurtured and suckled, from within our gates—nurtured by spineless officials and a Congress with angleworm backbones.

America should be careful, watchful, determined. We should now be even more emphatically committed that here in America groups preaching war or attempting to use America as a propaganda field for any foreign nation or alien doctrines should be summarily submerged. America must not be used as a breeding ground for snakes of communism or any other ism.

We are doing some work in Congress to combat this subversive activity. There is no room here for these groups. We need the room for American citizens.

Another thing we want is an American market for the American producer. I am speaking of the reciprocal trade treaties. They are not reciprocal. They are like the rabbit sausage made by the Detroit butcher. It was complained that he was using horse meat. He admitted it, "but my sausage is 50-50," he said, "one horse and one rabbit."

While we reciprocally sold the rabbit, the foreign nations have sold us the horse. I believe in the reciprocity first proposed by James G. Blaine, and in 1901 by William McKinley in his Buffalo speech made the day he was assassinated. That was real reciprocity. If a nation produced an exportable surplus of industrial products or farm commodities in no way competing with our products, they would be allowed practically free entry, providing we sold an equivalent amount of our products.

Then there is another element in reciprocity that should be, but now is not considered, and that is the labor cost. Every product of this Nation has in it a higher labor cost than any equivalent product from anywhere else in the world. We are proud of that. We take pride in a high wage paid people. That is the American way, and always has been. We should not be asked to compete with cheap foreign labor. We should consider this item in any reciprocity. You cannot put a dollar an hour against 9 cents an hour. That is destructive to every American ideal. If we have reciprocity, I want it on an even keel. That is the only reciprocity that is good for the people of the United States.

We started on the idea of reciprocity about 60 years ago. It was a Republican party plan. President Chester A. Arthur in 1884, advocated it, "with the free admission of such merchandise as the country does not produce," in return for tariff concessions to other nations.

This was a suggestion by James G. Blaine, who for a short time was Secretary of State in Arthur's term. And so we move along to the days of the McKinley tariff bill. It had a reciprocal trade amendment and it passed. No farm product was affected. It was a protective measure. It was to aid exports of machinery and industrial products and permit imports that in no way were in competition with what we made or grew, especially of farm commodities. We concluded some trade treaties under this law. But

what happened? The Democratic Party came into power in 1893. The Wilson bill of 1894 killed all the reciprocal treaties with Latin-American states and the United States Government abrogated all these treaties without even the courtesy of notifying the governments involved. Exports to Latin-America fell off \$15,000,000 in the first year after the Wilson bill was passed.

You may remember what that did to us. You may recall that old parody:

"Mary had a little lamb  
She loved it every minute,  
But Wilson took the tariff off  
And then she had to skin it."

Business went into a slump, farm prices fell, we got the free-silver craze, had a fright because our gold reserve went to a low ebb. We got the ship of state out of the dead calm of stagnation when McKinley was elected President and our feet came to solid ground.

Mr. Chairman, I'm for a policy of reciprocity. I am for this particular principle as in the Republican platform of 1900: "We favor the associated policy of reciprocity so directed as to open our markets on favorable terms for what we do not ourselves produce in return for free foreign markets."

And in 1896 the Republican platform had declared: "Protection and reciprocity are twin measures of Republican policy and go hand in hand. \* \* \* Both must be reestablished—protection for what we produce; free admission for the necessities of life which we do not produce. Protection builds up domestic industry and trade and secures our own market for ourselves; reciprocity builds up foreign trade and finds an outlet for our surplus."

Ladies and gentlemen, the American way is to keep our home market for our American farmers and manufacturers. Our own market is equal to that of the rest of the entire world. That open American market for United States producers is the doctrine of the Republican Party. It was the doctrine of Abraham Lincoln. It has made this Nation the marvel of all times, written the epic of a great people on imperishable granite.

The Republican Party wants a policy that will not punish the farmer by theft of his market.

The Republican Party wants a policy that will not punish industry with irritating legislation and handcuffing penalties to retard growth, expansion, bar new capital, and curtail employment.

The Republican Party believes the best way to solve the relief question is to put people to work in private enterprise. Until that time they must be cared for by public funds.

The Republican Party—the party of Lincoln—is a party that builds. It does not destroy, nor does it discard what is good.

It is clear to all that we cannot go on spending with reckless abandon without being punished for such a policy. That end is inflation and confiscation. We are not going to be destroyed by the Communists. They may aid in setting fire, but the Communist will be the arsonist sneaking at the edge. The destroyers will be those who have spent more money for less results than has been known since Tubal Cain hammered metals in the first blacksmith shop.

On two commandments hang all the economic law of America—it is the American way:

First. Run the Government within our income.

Second. Give private enterprise and individual initiative, on farm, in factory, store, and shop greater freedom.

Let some of the minds that are not warped and atrophied with Federal pay checks do some thinking. Then all may see a new rising sun and the dawn of a new day of confidence and happiness.

### Bonneville Appropriations and How They Are Spent

#### EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

Mr. SMITH of Washington. Mr. Speaker, on yesterday my colleague the gentleman from Washington [Mr. LEAVY] placed in the RECORD a tabulation of expenditures by States for the Grand Coulee project in eastern Washington. I am today placing in the RECORD a similar statement pertaining to the Bonneville project in my district in western Washington.

We are marketing the electric power generated at Bonneville so rapidly that we are unable to meet the public demand. We already have applications for the purchase of more power than the maximum ultimate capacity of the entire project. It is very evident that the cost of the project will be amortized much sooner than was originally

anticipated, due to new markets in the rural communities and new industrial development in the urban centers. In addition to the project being economically sound and absolutely self-liquidating, the money appropriated for its construction by Congress is being expended for materials and supplies in 28 different States of the Union.

I append a statement showing the distribution of the item of \$8,800,000 expended by the Bonneville administration:

Alabama	\$1,103.33
California	268,356.93
Connecticut	15,412.71
Delaware	13.05
District of Columbia	2,976.43
Georgia	309.32
Indiana	3,641.24
Illinois	106,329.85
Kansas	78.76
Maryland	6,114.50
Massachusetts	39,845.24
Michigan	18,630.80
Minnesota	55,092.81
Missouri	36,793.91
Nebraska	19.80
New Jersey	4,095.45
New York	4,054,924.56
Ohio	243,370.12
Oregon	335,082.28
Pennsylvania	1,705,007.98
Rhode Island	762.93
Tennessee	3.00
Texas	738.68
Utah	57.97
Virginia	27.00
Washington	1,479,911.52
West Virginia	10,132.89
Wisconsin	11,813.63

Total..... 8,860,034.42

### Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

#### ARTICLE FROM THE MODERN DAIRYMAN

Mr. ALEXANDER. Mr. Speaker, it is plain to be seen from the following article, taken from the current—February—issue of Modern Dairyman, of St. Paul, Minn., that there is considerable divergence of opinion on the reciprocal trade agreements program. I also have the following telegram from the head of the Minnesota Farm Bureau Federation:

ST. PAUL, MINN., February 17, 1940.

HON. JOHN G. ALEXANDER,

House of Representatives:

Regarding House Joint Resolution 407, renewing Trade Agreement Act, I support program of American Farm Bureau.

F. W. WHITE,

President, Minnesota Farm Bureau Federation.

The article from the creamery patrons' paper is as follows:

[From the Modern Dairyman of February 1940]

FIGHT TO EXTEND TRADE TREATIES GROWS BITTER—OPPOSING FORCES LINE UP FOR FINISH FIGHT ON LAW'S EXTENSION—OUTLOOK FOR VICTORY OR DEFEAT BY SMALL MARGIN

WASHINGTON.—Increasingly bitter is becoming the fight to extend the reciprocal trade treaty law as proponents and opponents of the measure gather new support beneath their banners.

Right now the odds are slightly in favor of the passage of the bill, but only by a narrow margin.

The law was designed to make it possible for the Secretary of State to negotiate trade treaties without the usual Senate confirmation. The idea, of course, is that the treaties shall encourage foreign trade by making some concessions in the form of lower import duties in return for concessions made by foreign countries.

#### CLAIM FARMERS HURT

Opponents of the trade pacts claim that the farmer is bearing the brunt of the concessions made by this country. Charles W. Holman, secretary of the National Cooperative Milk Producers'

Federation, in a hearing before the House Ways and Means Committee, called them "a vainglorious sacrificial ceremony which is victimizing large groups of farmers and unorganized industrial workers." Holman seeks to prevent reenactment of the law when it expires June 1, or failing in that to require Senate confirmation of the treaties.

The administration and other proponents of the trade pacts hold that they have stimulated foreign trade without hurting the farmer. In this stand they are backed by the American Farm Bureau Federation, but the Grange opposes the treaties.

As a matter of fact, both sides make claims which rest on a pretty flimsy foundation. It is almost impossible to judge as to the real merits of the reciprocal-trade law, because the European war has caused too much interference with normal international trade and, on one hand, has prevented the anticipated benefits from realization, while, on the other, it has brought about business which would have come had there been no trade law.

Import figures for last year do not indicate that the dairy industry has been materially affected thus far, at least. Butter imports in 1939 were 1,106,856 pounds, while in 1938 they were 1,623,666 pounds. Less butter was imported in 1939 than was exported from this country.

Last year's imports of cheese amounted to 59,071,059 pounds, while in 1938 they were 54,431,870 pounds.

Casein, that valuable byproduct which is made from skim milk, showed a tremendous increase in imports last year, 15,832,462 pounds, compared with only 417,366 pounds the year before, but a considerable portion came from Argentina, with which there is no trade treaty.

### Maj. Gen. Frederick Funston

#### EXTENSION OF REMARKS

OF

### HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

Mr. WELCH. Mr. Speaker, it is with a deep sense of gratitude for the remarkable service rendered to the people of San Francisco by Maj. Gen. Frederick Funston that I take this opportunity to pay my respects to his memory and urge further honor to his glorious attainments.

The majority of the American people remember General Funston because of his exploits in the Philippine Islands during and following the Spanish-American War. After participating in the Spanish-American War as a colonel of the Twentieth Kansas Infantry, which embarked from San Francisco for the Philippines late in October 1898, he was discharged from this commission and accepted the higher rank of brigadier general in the United States Volunteers on May 5, 1899, to carry on his service against the insurgents. He was awarded the Medal of Honor for his bravery in the action at Rio Grande de la Pampanga on April 27, 1899, and was wounded in action at Santo Tomas on May 4, 1899.

On March 14, 1901, General Funston, with 4 other Army officers and 78 Macabebe Scouts, landed near Baler, on the east coast of Luzon, and marched inland for nearly 600 miles to Palanan, Isabela, where he surprised and captured the insurgent Emilio Aguinaldo and most of his staff and escort of 40 men. This exploit of sheer bravery and fortitude in traveling such a great distance through enemy territory is one of the greatest in the annals of American history. To complete his mission he then brought his prisoners all the way back to Manila, where they arrived on May 25, 1901. In later years he again rendered valuable military service by leading the troops in the Mexican intervention at Veracruz.

But the people of San Francisco and of California have a more intimate regard for the remarkable service he rendered to them. General Funston was stationed at the Presidio in San Francisco at the time of the great fire, and it was he who organized the United States troops so effectively as to bring order out of the chaos which followed in the wake of this devastation. It was his remarkable genius for organization and speed of action that almost instantly restored order and protected the lives and property remaining to our harassed people. He lived in San Francisco with his family for several years, and today his remains, with those of his wife, rest in the Presidio.

It is particularly appropriate that I call attention to this great man at the present time, for there is now being completed an approach to the Golden Gate Bridge from one of the most beautiful avenues in the world, Funston Avenue, through the Presidio. This approach is a continuation of Funston Avenue to the Marina. The War Department, recognizing the value of this approach to the Golden Gate Bridge granted a temporary permit, and the present Congress, in the first session enacted a law (Public, No. 227, 76th Cong., 1st sess., ch. 369) granting to the State of California a retrocession of jurisdiction of the necessary rights-of-way through the Presidio of the San Francisco Military Reservation.

This new approach to the Golden Gate Bridge has been known as the Funston Avenue approach from the very inception of the idea and if the State highway department departs from its custom of simply assigning numbers to roads and bridges, it is sincerely hoped by every patriotic citizen of San Francisco that it will further honor this great general of the United States Army by officially designating it as Funston Avenue. Indeed, it is particularly fitting that this approach should be named after General Funston, for, in addition to being a continuation of the avenue San Francisco has named in his honor, it will pass the very trees casting their shadows over the graves of General Funston and his wife in the Presidio.

### Protection From Irresponsible Agencies

#### EXTENSION OF REMARKS

OF

### HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

EDITORIAL FROM THE SANTA MONICA (CALIF.) EVENING OUTLOOK OF FEBRUARY 16, 1940

Mr. LELAND M. FORD. Mr. Speaker, I beg leave to insert in the RECORD the following editorial from the Santa Monica Evening Outlook of February 16, 1940, and under the caption "Protection from irresponsible agencies":

[From the Santa Monica (Calif.) Evening Outlook of February 16, 1940]

#### PROTECTION FROM IRRESPONSIBLE AGENCIES

The House investigation of the National Labor Relations Board and the operation of the Wagner law under it, has not yet been concluded, but it has brought into the broad light of day acts which provide conclusive proof that the present system of independent boards infringes on the liberty of thousands of American citizens and places in the control of bureaucrats powers which they frequently use unjustly.

The revelation that an agreement has existed between the National Labor Relations Board and the Reconstruction Finance Corporation by which firms that had so-called unfair labor practice cases pending against them before the National Labor Relations Board would be prevented from getting financial assistance from the Reconstruction Finance Corporation is an assumption of authority and power by these bureaucrats which Congress never intended to confer when these agencies were established. An arrangement of this character places in the hands of the National Labor Relations Board a club against which some employers have no defense. In these instances it is a threat of financial ruin unless they accept the dictates of the National Labor Relations Board no matter how unjust they may be.

The injustice of the rulings of National Labor Relations Board is revealed in many cases in the testimony before the investigating committee. Perhaps the most glaring was that where the Board ordered an employer to hire two men who had never been employed by him and to pay them back wages from the time since they applied for employment. The charge was that these men were not employed because they were union men.

Whether that charge was true or not does not affect the outrageous injustice of such bureaucratic action. Surely an employer has a right to hire men if he needs them, and not hire them if their services are not required. Such an order as this gives the N. L. R. B. dictatorial powers under which they can compel an employer to hire men whether he chooses to or not.

It is not possible to recount the many instances of collusion between the attorneys and other employees of the N. L. R. B. and the C. I. O. The evidence on that point is voluminous and is not contradicted. Letters written to the Board establish that agents and attorneys in the Board's employ worked for the approval of the union and did not hesitate to use means and methods that were far from ethical.

Of a different character is the evidence showing that the Board used its power and influence to lobby with Congress both for appropriations and to prevent any change in the labor law. This doubtless is a common offense by all Government agencies, but the extent to which the N. L. R. B. went exceeds that of any that is on record. The evidence establishes that members of the Board promoted testimony before House committees by men favorable to them. It organized, through regional directors, opposition to any proposals to amend the act.

When asked whether it was appropriate for the Board to engage in a lobbying campaign against such amendments, Chairman Madden said that he did not know what the proprieties ought to be. That is a strange confession from a man who is a lawyer of experience and whose position is one of the most powerful in the Federal Government.

The evidence before the investigating committee has established the need of important amendments to the labor law. With the Presidential election in the offing, it is probable that Congress will daily with this subject and that the law will stand until the next session before the report of the committee is given the action it ought to have immediately.

Hope does exist, however, for the passage of the Walter-Logan bill, which prescribes regulations and rules governing all the multitude of Federal agencies which have been created, with little consideration, during the last 7 years. It is recognized by the thoughtful Members of Congress that they cannot abdicate with safety their powers in favor of appointive officials who have no responsibility to the public. Especially is it true that these appointive officials cannot safely be permitted to make the rules and regulations that shall govern their actions. To do so is to permit the court to make its own laws.

This is a crying evil brought out by the N. L. R. B. hearing. It applies not only to the operations of that Board but undoubtedly has been true of many of the other alphabetical agencies. This delegation of its power by Congress to appointive boards is a menace to personal rights and personal liberty. It is a hopeful sign that this Congress is seriously considering the Walter-Logan bill, which will apply to all these agencies and which will fix standards for their proceedings. It provides protection against arbitrary rules and star-chamber methods in the procedure of boards whose appointed members feel responsibility only to the appointing power.

If the Walter-Logan bill is enacted, it will not affect the ability of the alphabetical agencies to perform their proper tasks. It will protect the public from what amounts, in some cases, to arbitrary and tyrannical methods in their procedure.

### The Tax Problem

#### EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

ADDRESS BY HON. C. ARTHUR ANDERSON, OF MISSOURI, AND OUTLINE OF TAX PROBLEM FACING THE SMALL-BUSINESS MAN, PREPARED BY THE GREATER ST. LOUIS AUTOMOBILE ASSOCIATION

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, which I delivered in the city of Philadelphia on February 17; and include, also, a brief outline of the tax problem confronting the small-business man as prepared by the Greater St. Louis Automobile Association.

The matters referred to are as follows:

ADDRESS BY HON. C. ARTHUR ANDERSON, OF MISSOURI

A good many years ago Chief Justice Marshall, in the course of rendering an opinion, made the now famous statement "the power to tax involves the power to destroy." The years that have passed since Mr. Marshall made that concise pronouncement have borne out his premise to the fullest extent of its truth. Especially in the last decade we have seen the taxing power extended, expanded, and enlarged until it is hard to envision the exact spot where the serpent will strike next.

In these days a great emphasis is placed upon the danger to the future of our democracy from organized efforts of Communists, Nazis, Fascists, and others of their ilk. This emphasis is accentuated

to such a degree that the really great dangers that plague our democracy from within are going without attention and almost without restraint.

I don't for one moment propose to abandon the fight now being waged against all un-American propaganda, especially by the Dies committee. It is a splendid work for which the future generations of Americans will be increasingly grateful. But let us not be so blind as to permit the entire force of our patriotic zeal to be spent in this one direction when equally devastating attacks are being made upon our liberties from within. In my opinion, the greatest single danger facing us today is our apparent inability to curb the alarming increase in taxes, not only Federal but State and municipal as well.

A great political writer once said, "In constitutional states liberty is a compensation for the heaviness of taxation." To a great extent that is true, of necessity, and generations of Americans have been glad to pay that price for their liberty. But we cannot lose sight of the fact that "the power to tax involves the power to destroy." Yes, destroy; first, confidence, then initiative, then democracy itself.

During periods of great national stress, such as war or extended depression, the people are most willing to assume an added tax burden in the realization that their sacrifice is contributing toward a hasty reestablishment of the regular order. But their willingness to sacrifice in this manner; their tolerance, if you will, of added taxes has a very definite limit. Once the emergency which has justified the added burden has passed the people soon look upon a continually rising tax burden as an assault to democracy.

It is folly to presume that we can reapproach the tax levels of the days of Jefferson, Jackson, or Lincoln. Our Nation has grown tremendously since that time and the very elementary purpose of the Nation's existence—the preservation of human liberty—demands that we must pay a higher price for our liberty than our grandfathers did. The higher standards of living, the necessarily larger machine of national defense, the better systems of schools, and modern methods of life have provided us with a greater degree of happiness and comfort. For these things we pay higher taxes. We are more than willing to do this. But we are not willing to sit by idle and complacent while a system of taxes grows up to encircle and enslave this and future generations and squeeze the liberty out of America's veins.

Many people will say "how can we reduce taxes while the budget of the Nation and every State and city is in the red with all our taxes today." The riddle sounds tough on its face, and I do not mean that the solution is by any means easy but a solution there must be—if we are to preserve the liberty of the individual which is the cornerstone of democracy.

There are those who would solve the problem—they say—by stopping all spending and by cutting off all public works. The consequences of such action would be chaotic and inhuman.

I realize that there must be a definite limit to Government spending, and I have differed with my own party leaders on this issue many times. The real solution lies in the proper approachment and conquest of the more basic ills which plague our economy and give birth to depression which in turn is the parent of relief and Government spending.

There are certain elementary, basic principles or concepts upon which our whole structure of democracy rests. We enumerated them in broad outline in the Declaration of Independence as "life, liberty, and the pursuit of happiness," for the preservation of which we specified "Governments are instituted amongst men." Still later we placed a written guaranty of these basic principles in the supreme law of the land, the Constitution of the United States, when, among other things, we stated "no person shall be deprived of life, liberty, or property without due process of law."

The whole history of our Nation since that time has been a constant battle to maintain untarnished and untrammelled these basic concepts of liberty and freedom. The fight has been waged through the halls of Congress; through the courts; in the press, and from the pulpit, and yes, upon the field of battle in civil strife to settle once and for all if a government so conceived would continue to live. Victory has been accomplished because, underlying all our efforts, and all our sacrifices, the liberty of the individual has predominated. To keep the light of individual liberty burning it is unquestionably necessary to refrain from acts or laws which are in effect destructive of initiative and enterprise in the individual citizen. We cannot take away the incentive to save, to invest, to venture, and expect to retain a virile individual capable of contributing his share to the betterment of himself and his nation and the preservation of democracy.

When we attempt by legislation, as I feel we have, to eliminate the fundamental prerequisites of a successful American; when we, by law, attempt to obviate the necessity to save, to invest, and to venture, then, we actually have dealt a severe and critical blow to individual liberty. Not only that, but we hold out encouragement to those who feel that the Government owes them a living. The Government does not owe anybody a living. What it does owe is the proper measure of security in the exercise of individual freedom which will enable a man to make his own way. When millions of people hold the belief that the Government owes them a living even to the extent of feeding and clothing them and entertaining them, we have gone a long way toward losing our national self respect.

If this or any other democratic nation is to survive it will do so, not by providing Government jobs for all the unemployed, but

by adopting means that will get the unemployed back to work in private industry and agriculture. A hypodermic of public spending may help but it is certainly not a real solution to the problem or a cure for the disease itself.

After years of experience as an individual citizen and as a public official I am convinced that the readjustment and equalization of our tax system is one of the most imperative necessities of our time. First, let me tell you of my experience and observation as an ordinary individual citizen. I am not an old man, as you can probably guess. But I am old enough to have had some experience in the homely problems of the taxpayer. I am far from being a wealthy man, but I do manage to own my own home and a little piece of property back in St. Louis. In the past 10 years my taxes have more than doubled. It is a very homely example, I'll admit, but it is typical of millions of Americans like you and me. My problem is a very simple one. My tax bill is just twice as much as it was 10 years ago, so I dig down and pay the tax collector just twice as much money. But what about the businessman whose taxes are not only doubled but whose mind is strained to the breaking point just trying to figure out if he has actually paid all of the taxes that are assessed against him, because a mere oversight might very well get him a vacation without pay in Atlanta or Leavenworth? Oh, I'm not in sympathy with the tycoons of industry and finance who have been exposed and deflated as tax dodgers, but my sympathy is for the little fellow who is trying to live a normal life as a corner grocer, druggist, or automobile dealer.

Understand, I'm not a part of the so-called new era that would destroy all big business. I feel that the big fellow properly restrained is an essential part of American industry. But it is unquestionably true that the big fellow has the means to retain the services of experts and advisers, who enable him to get the most favorable interpretations of the law and take care of all of the problems arising out of the complex tax system of the day. On the other hand, the little fellow is plagued with practically all of the problems of his big brother, but on a smaller scale, of course. But to him they are big problems. He has to figure them out for himself, because he cannot afford the services of experts. Sometimes the problem of getting his Federal, State, and municipal taxes adjusted requires that he retain the services of an expert, and a large portion of what he had hoped would be profits must be paid out in fees. This is where we meet the twilight zone, where the tax serpent begins to sink its fangs into American business and suck out the lifeblood of initiative and enterprise. I have personally observed too many instances of once successful men throwing up their hands in despair or losing their business entirely because they are unable financially and otherwise to successfully cope with the problems of our supertax system under which we labor today.

The names of many of these men who once occupied a position of respect and pride in their community can be found in my files today as applicants for Government jobs. I assure you it is not encouraging to get letter after letter reading, "I had my own business for 20 years, and now I am appealing to you to help me get a job." I get thousands of them every year, and so does every Congressman and Senator.

Congressmen don't get home to "patch the fences" as frequently as in the past because we average about 8 months in regular session and we no more than get home when a call for special session is heard. But I have been among my people long enough to spend considerable time talking at length to the men who were once in business and now implore my help to find a job. I interrogated them at length to discover the real reason for their collapse. Almost invariably the depression is blamed. But underlying the vast majority of cases is the fact that a man has simply lost his initiative and it is difficult, if not impossible, to rekindle the old spirit. Initiative and self-confidence are indispensable attributes of an American citizen. Our complex and chaotic tax system is destroying those attributes and younger generations are growing up without these essential tools of individual liberty.

The smooth working of a democratic form of government depends to a large extent upon the state of mind held by the people living under it. The majority of the people must feel that success depends principally upon their individual efforts and not upon their neighbor or the Government. They must have the incentive to save and to utilize their savings to better themselves and to feel secure in the exercise of these elementary rights of free men. Nothing is so destructive of this state of mind as a steadily mounting tax burden.

We are not giving sufficient encouragement to frugality and we are suffering because of this mistake. You men are in business. You are interested in convincing your customers to invest in your idea or buy your goods and you know what you run into today. People don't feel safe in making absolutely sound investments and many are resigned to tie up their funds for a mere day-to-day existence. How different from the men and women who went forth from this very city to push on into an unconquered wilderness and among savages to conquer the West and to build this great Nation.

I have talked to you about generalities for some time and I want to speak about particulars for a few moments. A little while ago I mentioned the corner grocer, druggist, or automobile dealer—all typical local merchants who are afflicted with the almost insurmountable task of meeting the various and multiple tax problems confronting them. I have before me a chart which I have obtained from the Automobile Dealers Association of St. Louis. It is called the 1940 tax calendar. Month by month the chart shows what the man who sells automobiles must do to fulfill his tax obligations to

the Federal, State, and municipal governments. In all, he must make 82 distinct and separate operations on his books during the current year. This will mean a disproportionate number of man-hours of work for the merchant and his personnel just to keep all his taxes adjusted and paid. The list is too long to read item by item, but I will give you the number of operations for each month: January, 16; February, 5; March, 10; April, 6; May, 2; June, 10; July, 12; August, 3; September, 4; October, 9; November, 1; and December, 4. In all, 82. The process of furnishing the required tax returns and statements is a complicated and exacting task requiring the utmost precision and care to enter a correct return. Failure to do this can meet with serious consequences and prosecution.

All of this detailed effort is necessarily expended and with it all not one single productive step has been made. More than anything else, we need a codification and consolidation of our revenue laws and tax-gathering agencies. This is necessary to save time and expense not only to the businessman but to the Government as well. The duplication of authority and effort that exists today is not good business practice.

The principal reason for the complicated and difficult system of revenue levying and collection we have today lies in the fact that as the Nation grew its need for new revenue grew proportionately. New laws were passed to meet the needs of the time, and new agencies were authorized in conjunction with them, with little or no regard to a possible consolidation of them with already existing agencies or bureaus. The existing agencies might very well have handled the new work with a little alteration. But oversight combined with political maneuvering has given us a government of bureaus wielding tremendous power and influence. Finally, after many years, the system became so notoriously complicated and wasteful that Congress passed the reorganization bill, from which considerable progress has been forthcoming. But much remains untouched and further strides should be made without delay in order to attain any substantial objective in the consolidation and elimination of bureaus.

You men who have attained success in business well know that duplication of authority and activity makes for inefficiency and waste, which in turn might well mean the difference between success or failure in business. It seems obvious, therefore, that the greatest business concern of all—the United States Government—ought to hasten its steps to put its house in order.

It is probable that no other branch of government so closely touches the everyday life of all the people as the tax-collecting agencies. In them lies the power to drain the lifeblood from business, both large and small, by the obliteration of initiative and enterprise through complicated and cumbersome procedure, which requires unnecessary effort and expense to the taxpayer. In them also lies the power to give new life and new hope to American business and new hope to a tax-ridden people by simplifying the revenue-collecting procedure.

It is the constitutional duty of the administrative branch of government to execute the laws passed by the Congress. It is the job of the revenue-collecting agencies as part of the administrative branch of government to simplify the procedure and make it as easy as possible for business to meet the tax demands. Congress being in close touch with the people and knowing of their present plight is more than willing to cooperate by legislation where that may be necessary.

I feel confident in saying that no real progress will be made in getting our revenue-collecting agencies and processes simplified and unified as long as we have new bureaus springing up on almost every street corner in the Nation's Capital. These bureaus today wield power and authority that the people never intended them to have and which should properly be reposed always in the legislative branch of government, which is directly accountable to the people. Consequently these bureaus become defiant and arrogant, and their paramount objective to which their principal efforts are expended is to grow larger and fatter with power and visit upon the people of the Nation a horde of bureaucrats for generations to come.

It has been said and repeated many times that America's greatest contribution to democracy is to preserve it here in our own Nation. Whether we will succeed depends in a large measure upon our ability to reincarnate the true spirit of enterprise and initiative in the individual citizen. This is America itself. Early solution of the tax problem will be the first victory of this great campaign.

Thank you.

#### 1940 tax calendar

Date	Nature of report or payment	Authority to whom made
Jan. 1	Automobile license fee is due State. Annual license fee of motor carriers is due. Federal unemployment insurance pay-roll tax on wages (up to \$3,000 annually) continues at 3 percent. Missouri unemployment insurance pay-roll tax continues at 2.7 percent. 1-percent tax for old-age benefits continues on equivalent of wages (up to \$3,000 annually) paid by employer to each employee. 1-percent tax for old-age benefits continues on wages (up to \$3,000 annually) paid to each employee in employment (collected by employer).	Secretary of State, 1701 Chestnut. State treasurer.

## 1940 tax calendar—Continued

Date	Nature of report or payment	Authority to whom made
Jan. 1	Secure permit to produce, import, or haul solid fuel. Employer hereafter required by Federal law to furnish employee in suitable form for retention, annual, quarterly or pay-period statement of wages paid, amount of tax, etc. State of Missouri requires similar statement at least monthly of total amount of deductions.	Commissioner of smoke regulation.
4	Last day for employers with fewer than 8 employees for 13 different days in 13 different weeks in 1939, desiring exemption from coverage under Missouri unemployment law, to file application for termination of coverage.	Missouri Unemployment Compensation Commission.
15	Make motor-fuel tax return for preceding quarter. Last day for motor carriers to pay annual license fee.	Comptroller. State treasurer.
	Last day to file statement of retail sales for month of December.	State auditor.
25	Last day to pay motor-fuel license tax for preceding quarter.	License collector.
	Last day to make employer's quarterly wage report and pay tax for fourth quarter in 1939.	Missouri Unemployment Compensation Commission.
31	Last day to make return for 1939 Federal tax for unemployment insurance and pay first quarterly installment.	Collector of internal revenue.
	Last day to make tax and information return on summary of taxable wages paid for old-age benefits in last quarter of 1939.	Do.
Feb. 1	Automobile license is due city.	License collector.
15	Federal information return for calendar year of 1939.	Commissioner of Internal Revenue.
	Report by corporations of dividend payments of \$100 or more to any person.	Do.
	Last day to file statement of retail sales for month of January.	State auditor.
28	State board of equalization meets first time in year.	Jefferson City, Mo.
Mar. 1	Last day to file report of Missouri income tax information at source.	State auditor.
	Last day for corporation to make annual franchise report.	Missouri Tax Commission.
	Last day to file annual report of receipts from retail sales.	State auditor.
4	Board of equalization in St. Louis County meets.	Clayton, Mo.
15	Last day to file statement of retail sales for month of February.	State auditor.
	Make return for Missouri income tax.	Assessor.
	Make return of Federal income tax withheld at source.	Collector of internal revenue.
	Last day to make return of Federal income tax and pay first installment.	Do.
18	Meeting of St. Louis Board of Equalization begins on or before.	City Hall, St. Louis.
20	Tax commission shall determine amount of capital of each corporation employed in State.	
Apr. 15	Last day to file statement of retail sales for month of March.	State auditor.
	Make motor-fuel tax return for preceding quarter.	Comptroller.
25	Last day to pay motor-fuel license tax for preceding quarter.	License collector.
	Last day to make employer's quarterly wage report and pay tax for first quarter of 1940.	Missouri Unemployment Compensation Commission.
30	Payment due on second installment unemployment-insurance tax.	Collector of internal revenue.
	Last day to make tax-and-information return on summary of taxable wages paid for old-age benefits in first quarter of year.	Do.
May 15	Last day to file statement of retail sales for month of April.	State auditor.
	Payment due Missouri corporation franchise tax.	State treasurer.
June 1	Missouri corporation franchise tax delinquents certified to attorney general.	
	Property owned this day is basis for assessment of State, school, and city tax.	Assessor.
	Listing of taxable property for State, school, and city purposes begins and continues as served until Jan. 1 following.	
	Pay first quarter of Missouri income tax.	Collector.
3	Return statement for merchants' and manufacturers' license is due.	License collector.
15	Pay Federal income tax withheld at source.	Collector of internal revenue.
	Pay second installment Federal income tax.	Do.
	Last day to file statement of retail sales for month of May.	State auditor.
18	Last day for filing return for merchants' and manufacturers' license.	License collector.
	Meeting of Board of Merchants' and Manufacturers' Tax Equalization to equalize valuation of merchants' and manufacturers' statements.	City Hall, St. Louis.
July 1	Registration, statement, and antitrust affidavit filed by corporation.	Secretary of state.
	Fee is due for annual registration of corporations.	State treasurer.
	Last day to pay merchants' or manufacturers' license tax.	License collector.
8	Board of Merchants' and Manufacturers' Tax Equalization meets to hear reasons against increase in valuation for license tax.	License collector's office.
15	Last day to file statement of retail sales for month of June.	State auditor.
	Make motor-fuel tax return for preceding quarter.	Comptroller.

## 1940 tax calendar—Continued

Date	Nature of report or payment	Authority to whom made
July 25	Last day to pay motor-fuel license tax for preceding quarter.	License collector.
	Last day to make employer's quarterly wage report and pay tax for second quarter of 1940.	Missouri Unemployment Compensation Commission.
30	Last day to make capital stock tax return for 1940.	Collector of internal revenue.
31	Payment due on third installment unemployment-insurance tax.	Do.
	Last day to make tax and information return on summary of taxable wages paid for old-age benefits in second quarter of year.	Do.
	Last day for corporations to pay annual registration fee without penalty.	State treasurer.
Aug. 1	Pay second quarter of Missouri income tax.	Collector.
	Penalty accrues on delinquent Missouri corporation franchise tax.	
15	Last day to file statement of retail sales for month of July.	State auditor.
Sept. 2	St. Louis County Board of Equalization meets to equalize valuation of merchants' and manufacturers' statements.	Clayton, Mo.
15	Pay third installment of Federal income tax.	Collector of internal revenue.
	Last day to file statement of retail sales for month of August.	State auditor.
23	St. Louis County Board of Equalization meets to hear reasons against increase in valuation of merchants and manufacturers for license tax.	Clayton, Mo.
Oct. 1	Pay third quarter of Missouri income tax.	Collector.
15	Last day to file statement of retail sales for month of September.	State auditor.
	Make motor-fuel tax return for preceding quarter.	Comptroller.
24	Minimum rate per hour for covered employees remains at 30 cents under Wages and Hours Act. Time and a half for each hour in excess of 40 per workweek must be paid covered employees under Wages and Hours Act.	
25	Last day to make employer's quarterly wage report and pay tax for third quarter of 1940.	Missouri Unemployment Compensation Commission.
	Last day to pay motor-fuel license tax for preceding quarter.	License collector.
31	Payment due on fourth installment unemployment-insurance tax.	Collector of internal revenue.
	Last day to make tax and information return on summary of taxable wages paid for old-age benefits in third quarter of year.	Do.
Nov. 15	Last day to file statement of retail sales for month of October.	State auditor.
Dec. 1	Pay fourth quarter of Missouri income tax.	Collector.
15	Pay fourth installment of Federal income tax.	Collector of internal revenue.
	Last day to file statement of retail sales for month of November.	State auditor.
31	Last day for paying, without penalty, State, city, and school property tax.	Collector.

### Motor Industry Takes Products From 2,500,000 Acres of Farmland

#### EXTENSION OF REMARKS OF

HON. JOHN G. ALEXANDER  
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

#### ARTICLE FROM AUTOMOBILE FACTS

Mr. ALEXANDER. Mr. Speaker, here are some surprising facts and figures of interest to all of us regarding the great automotive industry.

[From Automobile Facts]

AUTOMOBILE DOLLARS FLOW THROUGHOUT UNITED STATES—6,000,000  
JOBS CREATED BY MOTOR INDUSTRY

MOTOR PAY CHECKS GO TO 1 OUT OF 7

North, South, East, West—throughout the United States, the motor transportation industry provides a powerful stimulant to the output of goods and services, being responsible for one-seventh of the Nation's pay envelopes.

Cities and towns which cannot boast the production of a single car or truck are automobile centers in their own right, deriving their chief source of livelihood from parts and supplies furnished to motor plants.

The sales and servicing of motor vehicles found in numerous other communities, the construction and maintenance of highways,

the commercial operation of cars and trucks, and the supplying of motor fuels combine to make more than 6,000,000 jobs.

On the farm, too, the financial stake in the motor industry is important. Agricultural products from nearly 2,500,000 acres went into the manufacture of motor vehicles in 1939.

The South, traditionally the home of many essential raw materials and scene of many growing industries, furnishes typical examples. Basic is the fact that automobiles produced last year required 10 percent of the cotton sold in the United States, the equivalent of the average crop of 100,000 cotton-farming families.

#### SOUTH

To cite specific areas, five automobile companies support a weekly pay roll of approximately \$80,000 in Atlanta, where two of them assemble cars, another builds bodies, a fourth has a sales branch, and still another operates a parts depot.

In such southern cities as Dallas, Houston, Memphis, Oklahoma City, and New Orleans manufacturers of motor cars have direct investments.

Tire companies have mills and plants at Gadsden and Decatur, Ala.; Hogansville and Cedartown, Ga.; Winnesboro, S. C.; Shelbyville, Tenn.; and Cumberland, Md. Major-parts companies are represented at Richmond, Va.; Jacksonville, Fla.; and in many other cities below the Mason and Dixon's line.

A considerable investment in the South is represented by automobile dealers. Numbering upward of 10,000 in 17 Southern States, they account for a total employment of 60,000 persons.

Great quantities of the South's lumber, its turpentine, its minerals, and its metal ores find their way into the production of motor vehicles.

Directly or indirectly, the automobile industry as a whole is estimated to provide employment for more than 1,500,000 persons in the South.

#### WEST

On the coast, nearly 2,500 miles from Detroit, the city of Los Angeles has become the leading national center of secondary automobile assembly. Five automobile companies there are currently building eight lines of cars, while a sixth company builds trucks. The motor industry at present employs 5,000 people at wages and salaries exceeding \$7,000,000 annually, according to the Los Angeles County Chamber of Commerce.

Motor plants in that county have a capital investment of more than \$17,000,000 and provide facilities for producing about 250,000 units a year.

Attracted by the motor activity, a host of parts and equipment manufacturers, employing thousands of additional workers, add to the industrial well-being of Los Angeles. Four tire-manufacturing companies, having an aggregate capital of \$15,000,000 invested in plant facilities, firmly established this area as second only to Akron in production. Wage earners in these tire plants number 5,000, according to the last census report. Other companies include a bumper and spring firm, catering to coast-wide car makers, which has a capacity of 5,000 bumpers and 6,000 springs per day; one making back cushion springs and automobile seats, another producing padding material for cushions, and a storage-battery plant which supplies both motor plants and the replacement market.

Up the coast, in the San Francisco area, two assembly plants and a body plant are active, while a dozen firms are listed as suppliers of various automotive equipment. In Washington nearly a score of companies make special bodies for motortruck chassis.

#### EAST

Across the continent to New England, in such cities as Boston, Lynn, Malden, Worcester, Middletown, New Haven, Norwalk, and other cities, there are a liberal scattering of automotive suppliers.

In Worcester, Mass., for example, 1 out of every 8 industrial workers is, in a sense, an automobile worker. The Committee on Business Information in that city reports 4,500 factory employees working for concerns that supply automobile manufacturers with essential parts and tools. The wages of these workers average \$6,500,000 a year.

What is, in effect, a city the size of Pontiac, Mich., in which every person depends for his livelihood on the automobile industry, is found at the Niagara frontier around Buffalo. Here more than 64,000 people receive support from the numerous branches of the automotive industry, which employ more than 16,000 workers, with annual wages of \$25,000,000, the Buffalo Chamber of Commerce reports.

Two cars in the low-priced field are assembled in the area, and one of them has erected a motor and axle plant. From one Buffalo accessory plant come windshield wipers, rear-view mirrors; from another thousands of car radios; other Buffalo-made parts and accessories are mufflers, radiators, batteries, tool kits, and innumerable fittings, coming from 18 establishments in the area.

One-fourth of the Niagara area's steel production, amounting to \$7,096,500 in pay rolls for 3,596 workers, goes into automobiles. Pittsburgh, Bethlehem, Youngstown, Gary, and other steel-producing centers also claim sizable volume of employment resulting from motor demand.

#### NORTH

From Cleveland, which boasts that it "makes the parts," \$150,000,000 of them yearly, on through the tier of North Central States, there is a long list of cities sharing this huge automobile business. Merchants in Toledo, Akron, Fort Wayne, South Bend, New Castle,

Muncie, Kokomo, Indianapolis, Evansville, Louisville, Cincinnati, Milwaukee, and Kenosha find automotive dollars in their tills.

A survey of about 277 automobile-parts manufacturing plants, representing just a small portion of the total in the business, shows total annual pay roll of \$170,000,000 being paid out to 110,000 workers.

This particular offshoot of the automobile manufacturing industry is Nation-wide. One listing of 800 parts manufacturing plants shows representation in 32 States.

From Michigan, which has 180 of these plants, the list extends through Ohio, with 130; Illinois, 92; New York, 76; California, 55; Indiana, 54; Pennsylvania, 48; Wisconsin, 41; Massachusetts, 26; Connecticut, 16; Missouri, 15; Minnesota, 12; Iowa, 10; and to States as far from the center of the motor industry as Utah, Colorado, Florida, Oregon.

## Price Fixing in Our American Economy

### EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

ARTICLE BY PROF. LOUIS B. WARD

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a comprehensive and timely article by Prof. Louis B. Ward, editorial director of the national weekly, *Social Justice*, founded in 1936 by the Reverend Charles E. Coughlin.

#### PRICE FIXING IN OUR AMERICAN ECONOMY (By Louis B. Ward, editorial director)

It is amazing the number of people one meets who are confident that the totalitarian states and not the democracies, are wedded to a system of price fixing.

In the economics of the nations of the world, price fixing has at one time or another played a determinative part. The entire guild system of the Middle Ages has been criticized by those who do not understand the cause of its price fixing of labor's wage and of finished goods.

America, which at the start was dedicated to a free economy under the principles of the Manchester school, and particularly under the then dominating ideas of Adam Smith and Ricardo had no price fixing whatever in its economy.

In the last 150 years, however, there has grown to be a new economy far different than that of the Middle Ages, but nevertheless permeated with price fixing.

The first recognition of price fixing, perhaps, came coincidental with Adam Smith or at least shortly after his great work, the *Wealth of Nations*, was written.

#### INTEREST

On severing the political ties which bound us to Great Britain, many of the newly formed States fixed either in their fundamental law or by statute a legal rate of interest. Although the regulation rate of interest need not necessarily be charged, the fact remained that interest generally followed this legal rate.

So, for example, the great bulk of the mortgages on farm and urban homes in New York State carried a rate of 6 percent, while in Michigan mortgages and land contracts were generally written at the legal rate of 7 percent.

There came to be the saying particularly in the East, "Money is worth 6 percent."

As the States weakened and passed, one after another, the small loan acts the legal rate for this type of loan varied from 6 to 126 percent and the actual rate, usurious even under the small loan acts, rose as high as 240 percent.

We repeat, the first price fixing in our economy was with respect to the price of money itself, namely, interest.

To indicate just how "fixed" interest has become in our economy, let us take 7 years between 1929 and 1936 as proof.

Mr. R. B. Nathan, of the Division of Economic Research of the Department of Commerce, compiles statistics on national income of this country and upon its distribution.

In the year 1929 our income was approximately \$81,000,000,000, the interest bill was \$5,100,000,000. Therefore, approximately 6 percent of the national income was paid out in interest on debt.

That was the most prosperous year for America.

In the following year, as we entered into a depression, our national income dropped to \$67,000,000,000, yet the interest charge was higher than in the year of prosperity. As the principal of debts has increased through inability to pay, the interest charge rose to \$5,300,000,000, or 7½ percent of the national income.

In the depression's low, the year 1932, the national income dropped to \$39,000,000,000. In number of dollars paid out, interest dropped. It likewise dropped partially because of foreclosures started on a grand scale.

The interest charge in the low year of the depression was \$4,900,000,000. That was 12½ percent of the national income.

One dollar out of every eight earned went for interest alone in the year 1932.

As national income rose from the \$39,000,000,000 in 1932 to the \$63,000,000,000 in 1936, the interest bill of the Nation gradually lowered, partially because rates were forced down but mostly because foreclosures had caused the passing of the security from the debtor to the creditor.

There was less debt. Nevertheless, despite the frightful depression of the last 10 years, America, irrespective of its income, has always had to set aside from \$4,300,000,000, at the low, to \$5,100,000,000 at the high.

Never did the creditor go with less than 6 percent of the entire national income as his share in interest.

At one time, we repeat, that share in the national income was 12.9 percent. The price of money is the first fixed charge upon our economy.

It is true that those who can most afford it pay 1 percent only and that those that can least afford it pay the frightful legal rates of the small loan and most frequently the usurious rates to personal finance companies.

Interest has become a constant fixed charge upon our economy.

#### TRANSPORTATION RATES

The vast network of railways of the country have their rates fixed by the Interstate Commerce Commission.

One of the leading transportation authorities of America gave the Interstate Commerce Commission itself the strange unbelievable statistical fact that there were over four quadrillion separate freight rates in America today.

Price fixing applies not only to freight rates but to the passenger rates on railways. It applies to bus rates, streetcar rates, boat rates, and all forms of public transportation for both passenger and freight.

These rates are fixed with the idea of providing an income covering cost of service plus a profit to provide earnings on capitalization.

The vast transportation services of the Nation are on a price-fixing basis in our economy.

#### THE UTILITIES

The utility commissions of the various States fix the rates at which electricity and gas services may be charged for.

This is the third major branch of our economy with price fixing its basis irrespective of the income of the people to meet those charges.

They can take the services or leave them.

In a depression hundreds of thousands of telephones are removed from the homes and offices of the people and millions deprive themselves of light and gas by returning to the older form of coal oil or kerosene, or spend the evenings in darkness.

Price fixing, however, established by the State for the benefit of the utilities is the principle upon which these utilities operate for income.

#### COMMUNICATION

All rates for the communication system of the Nation, including telephone and telegraph, are fixed by law.

At the height of our prosperity, 1929, \$928,000,000 was the bill under the price-fixing system of our economy. This was 1.14 percent of our national income.

At the depth of our depression, the bill was \$791,000,000. This was 2 percent of our national income.

This fixed price for communication never dropped below \$719,000,000 from the high of 1928.

#### DIVIDENDS

One would think that dividends were directly dependent upon national income—that national prosperity would be the key to dividends. Yet in a certain sense dividends have become more or less a fixed charge.

For example, in 1929 we had a national income, we repeat, of approximately \$81,000,000,000. In 1930 the first year of the depression, it dropped to \$68,000,000,000. The dividends of 1929 were \$5,089,000,000. The dividends paid out in 1930 were \$5,269,000,000, an actual increase over the preceding year of \$180,000,000.

In 1932 when national income had dropped to its all-time low of the present era, namely, \$39,545,000,000, the dividends paid out were \$4,930,000,000.

Let us examine this astounding fact.

In 1929 the dividends taken out amounted to 7.3 percent of our national income. In the depth of the depression, the year 1932, the dividends taken out amounted to 12.4 percent of our national income. Though dividends dropped later, yet in 1936 they were 7.1 percent of the national income and amounted to \$4,573,000,000.

There never was a depression year wherein the dividends were less than \$2,200,000,000.

#### ENTREPRENEURIAL WITHDRAWALS

In classic economy, the entrepreneur was the man who brought together capital, labor, and land in a manufacturing enterprise.

This little group withdrew \$12,342,000,000 in the boom year of our prosperity, 1929. This was 15.2 percent of our national income.

In the depth of our depression, the entrepreneurial withdrawals were \$8,081,000,000. This was 20 percent of the national income.

These withdrawals never dropped below \$7,258,000,000 during the depression. This was in the year 1933, when they represented 17 percent of the national income.

#### TAXES

Of all things, death and taxes are most certain.

Of all the fixed charges of our economy, taxes represent the uttermost.

Government taxes actually increase as national prosperity and income fall.

One thing is certain, that no matter how business may be, the taxes are inevitable.

#### LABORER AND FARMER

After prices have been fixed in our present economy in those certain charges of interest, utilities, communication, transportation, dividends, taxes, and entrepreneurial withdrawals, we find pushed out on the end of the limb the two great classes upon which our prosperity is predicated, namely, labor and agriculture. There is no constant or fixed income to protect them.

In the year 1929, when our national income was \$81,000,000,000, there was paid in total compensation in wages and salaries \$51,200,000,000. This is slightly over 63 percent. In the depth of the depression there was paid out \$31,000,000,000. This was 78 percent.

The percentage of wages and salaries paid increased. Nevertheless, in dollar volume they dropped \$20,000,000,000.

This \$20,000,000,000 loss of income to the gainfully employed can never be overestimated in its importance. The depression found the money changer increasing not only his percentage of income but likewise his dollar volume from interest received. The wealthy were found taking not only an increased percentage of national income but also an increased dollar volume.

The entrepreneurial withdrawals were enough to satisfy the most avaricious. Labor, on the other hand, took the brunt of the depression. Twenty billion dollars was withdrawn from the worker and his family.

In 1929 the average which the gainfully employed received was approximately \$1,340 annually.

At the depth of the depression the average income of the gainfully employed was reduced to \$816. Out of the gainfully employed we select for illustration the factory pay roll. Factory wages were cut from \$11,700,000,000 in 1929 to \$5,200,000,000 in 1932, a loss of \$6,500,000,000 in normal factory wages alone. The loss was reflected in unemployment, lesser hours of labor, and lower wages, with not one iota of governmental protection, for price fixing has no place in our economy when it comes to labor wage.

In every American home there were the same demands and needs for food, clothing, shelter, transportation, and recreation that existed in 1929. But there was simply no money comparable to the income of 1929 to pay for these goods or services.

But this is only part of the story.

The high-salaried class went on with scarcely a cut, and with bonuses granted year after year, while millions upon millions were thrown on the charity of the world.

Man is more important than things.

The income of the average family is infinitely more important to the economy of the state than the income of a small group of wealthy who own the debt of the Nation, the debt of the several States, the debt of the municipalities and local government, and the debt on the homes and farm lands of America, to say nothing of the private personal debts of the people.

The income of the average man is infinitely more important than even our dividends under a capitalistic system with entrepreneurial withdrawals.

In the Middle Ages, in Italy, not under the Mussolini of today, the Government guaranteed the annual living wage for all artisans.

Today we guarantee, through price fixing, the per unit income for every mile a passenger or goods are traveled in the railroad, where every kilowatt of electricity consumed, for every thousand cubic feet of gas, for interest on debt, for dividends, and for entrepreneurial withdrawals.

We always leave out two items, the laborer and farmer.

Farm income, which was in excess of \$17,000,000,000 a year, has dropped to \$7,000,000,000, including Federal payments and bonuses out of the Treasury.

A true economy is a Christian economy which would guarantee, through price fixing, the dependence of the American farmer living with his family on his own farm and the income of the laborer. Price fixing should start on the farm and with the laborer, and end, if needs be, by listening to the special pleadings of railroad and utility at the other end of the list.

The following table illustrates the farm income from 1929 to 1938, and must be contrasted to the \$15,900,000,000 essential income:

#### Farm income

1929	\$11,900,000,000
1930	9,500,000,000
1931	7,000,000,000
1932	5,300,000,000
1933	6,400,000,000
1934	7,300,000,000
1935	8,500,000,000
1936	9,500,000,000
1937	9,800,000,000
1938	7,500,000,000

## INSURANCE

From the week's issue, February 3, 1940, of Collier's, comes an advertisement of the Metropolitan Life Insurance Co. of New York. It is captioned, "Say, Mr. Clark, what is an actuary?" Excerpts follow:

"For example, in order to arrive at premium charges which will be both safe and fair, the actuary must make detailed analyses of the past and present death rates among many different groups of people. From these studies he is able to compile mortality tables which provide an amazingly dependable yardstick for his guidance in computing premiums.

"The actuary must also take into account the interest rate which the company may reasonably undertake to earn on the investments it makes for the benefit of its policyholders.

"And in a mutual life-insurance company, such as Metropolitan, the actuary prepares data which enables the board of directors to determine the annual divisible surplus which will be returned to the policyholders in the form of dividends. \* \* \*

"In short, because of the nature of his work, an actuary might well be defined as the 'engineer' who helps design the 'product' a life-insurance company offers \* \* \* and then figures out what the policyholders should reasonably pay for the benefits provided by their contracts."

Now, the Metropolitan, like every well-organized business, is simply securing the cost of services and charging for that service, plus the little item of dividends, which in the case of a mutual company automatically go to the policyholders.

The whole point is that the billions of dollars of life insurance written in America constitute an illustration of price fixing, and the hundreds of insolvent insurance companies became insolvent generally not because they did not figure their cost of services but because they were lamentably weak in investments.

Price fixing is a determinative in the insurance business.

## MANUFACTURED GOODS

It is assumed that every man in America knows that every article of manufactured goods by any responsible manufacturer is budgeted to include every item of cost entering into those goods.

When a great motor manufacturer builds a car, he counts in the rent for the land, the items of plant, machinery, and tool equipment, the direct and indirect overhead, the cost of materials, the wages to be paid labor, and taxation. When the car leaves that factory it bears a price tag destined to return all items of cost which went into it plus a profit to the manufacturer.

Frequently price fixing goes further. The transportation charge to the distributing outlet, the advertising, the cleaning up, and preparation of the car for delivery, the extras, the distributor's discount—all are known costs borne by the consumer.

The dealer knows the cost of financing, the cost of insurance, and every item from the rent of the land on which the plant is placed to the tax on gas at the point of sale, is carefully counted.

## CONTRAST BETWEEN MANUFACTURER AND FARMER

The manufacturer produces the car under modern factory conditions with a roof over the workmen's heads, with temperature regulated, with all materials in easy reach on the assembly line, and with design, engineering, and plant layout predetermined for the niceties of production.

Contrast this type of economy with that of the farmer.

The farmer sows the seed in a spring delayed by flood or retarded by frosts. He goes out under the open sky to face the vagaries of Nature. The wind may be his enemy. The dust storm may rob his topsoil. The flood may wash out his crop. The drought may burn it. There are no "niceties of production" on any farm in America.

But assume he "makes" a crop. Debt-ridden farmer that he is, under duress of goods, he is forced to market it as it matures. The creditor awaits the crop.

What has he for a price tag?

He opens his daily newspaper or listens to the market quotations on his radio and he takes that which is offered by the gamblers irrespective of cost.

Price fixing is reserved for those that have. It is denied the farmer and the laborer.

## PRICE FIXING DISTASTFUL

Only a few Americans desire a price-fixing economy.

It is repugnant to our traditions and repugnant to our sentiments if not to our reason. Nevertheless, it is with us and with us in a form which protects precisely those elements of an economy least worthy of protection.

It protects the rich, as it is not applied to the poor.

Thus comes into play once more the sixteenth principle of social justice. "We prefer the sanctity of human rights to the sanctity of property rights. Government's chief concern should be for the poor, for the rich have ample means to take care of themselves."

If we are to have permanently a price-fixing economy, let the legislation be first on behalf of the farmer and the workingman.

For once again let it be asserted, "We prefer the sanctity of human rights to the sanctity of property rights. Government's chief concern should be for the poor, for the rich have ample means to take care of themselves."

## THE COST OF A SOUND PRICE-FIXING ECONOMY

Cost of production as applied to every manufactured product and cost of service as applied to transportation, communication, public utilities and insurance, has firmly fixed upon this Nation a new economy.

If price fixing, we repeat, is to dominate our economy, let it start with the masses of people; namely, the farmer and the laborer.

Normal farm income of America based upon the elements which entered agriculture in the year 1926 should be \$15,590,000,000. In that year the element of land and buildings was estimated at approximately \$49,000,000,000. The operating capital used was in excess of \$43,000,000,000. These two items should earn, respectively, \$2,946,000,000 and \$2,600,000,000.

The operating expense paid out in 1926 was \$2,900,000,000. The taxes were \$557,000,000. The wages, \$932,000,000, and the farmer's labor at 25 cents an hour on a 10-hour day, silly as that seems, are valued at \$5,654,000,000. Nor are these figures, of a total of \$15,590,000,000, at all fantastic.

Farm income passed this figure in 1919.

Apply the same price-fixing principles to the 6,800,000 farms of the Nation. We can estimate its value to our economy when we contrast the income to be derived in our present competitive system.

## A \$100,000,000,000 NATION

If President Roosevelt is sincere in desiring a \$100,000,000,000 nation, there is a way to get it.

That way is to use the same fundamental principles successfully used by the Nation and the various States in securing price fixing as respects legal rates of interest, passenger and freight rates in our transportation system, rates on our communication system, and the other instances quoted in the table immediately preceding.

Start with the farmer, for it is on the farm that newly created wealth, which is annually consumed, originates.

Start with the factory worker, for he is the contributor, in part, of newly created wealth, some of which is annually consumed and some of which lasts for years.

Guarantee the American farms the cost of production for that portion of his crop consumed among the Nation.

Guarantee 14,000,000 factory workers the living, annual wage, the saving wage so forcibly commended by the bishops in their pastoral letter under date of February 7, 1940.

These two items would amount respectively to approximately \$39,000,000,000. They would cover approximately 10,000,000 on the farms and 14,000,000 on the factory pay rolls, a total of 23,000,000 or less than one-half of the gainfully employed of the Nation.

Extend the living annual wages to the gainfully employed outside the farms and the factories which would distribute an additional \$14,000,000,000, making in all 30,000,000 American families average a minimum of \$54,000,000,000.

This is the basis for a \$100,000,000,000 nation.

This is the basis of a new prosperity.

There is no need to point a finger of scorn abroad to the totalitarian states with price fixing.

Once price fixing was on a right foundation.

It came from the ages of faith, from the medieval guild system.

It exists in America, but we have it at the wrong end of our economy.

It should start, we repeat, with the farmer and the laborer—with those who need the help of government, for, as the figures show, the rich have ample means to take care of themselves.

Legislation should be on behalf of the poor.

## Muck Farmers Oppose Low Tariffs On Onions

## EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

## RESOLUTION ADOPTED BY MICHIGAN MUCK FARMERS' ASSOCIATION

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include the following resolution adopted by the Michigan Muck Farmers' Association in convention at East Lansing, Mich., February 2, 1940:

*Resolved*, That we, the Michigan Muck Farmers' Association, assembled in our twenty-second annual convention at East Lansing this 2d day of February, realizing the difference in labor conditions in the United States as compared with other nations, go on record as being strongly opposed to any reciprocal-trade agreement whereby onions and other vegetable crops ordinarily produced in the United States, can be imported from other countries at a tariff rate which will allow them to compete with vegetable crops produced in this country; and be it further

*Resolved*, That a copy of this resolution be forwarded to the President of the United States and to the Senators and Representatives of the State of Michigan.

## Lincoln Day Address

## EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ADDRESS BY COL. ROBERT R. MCCORMICK

Mr. MICHENER. Mr. Speaker, the Lincoln Club, of Jackson, Mich., held its annual banquet on the evening of February 15, 1940. The principal speaker was Col. Robert R. McCormick, editor and publisher of the Chicago Tribune. The address was broadcast.

Pursuant to the privilege given to me to extend my remarks in the RECORD, I include Colonel McCormick's address, which is as follows:

## OBJECTIVES OF NEW DEAL BECOME PLAIN AS YEARS GO BY

The men who met in the Jackson oak grove in July 1854 to create the Republican Party would not ask us to spend our time here in considering what they did. These Republicans of almost a hundred years ago would say to us, the Republicans of this day, that we have our own job and to get on with it.

It would be apparent to them, as it is to me, that the New Deal has been a persistent effort to overthrow our political and economic systems and substitute dictatorship and socialism.

They would have understood that the efforts of the Democrats in Congress, during the last years of President Hoover's administration, to hamstring all efforts to overcome the panic of 1929 could be put down merely to unworthy political ambitions, and so could the conduct of Mr. Roosevelt, tending toward the same end, in his campaign for the Presidency—so of his efforts to increase the chaos during the months that intervened between election and inauguration, if after his inauguration he had endeavored to bring back economic recovery.

## MOVES FOR DICTATORSHIP

The fact is that with the country stunned by the depression, which he had so ably aggravated, Mr. Roosevelt struck for a dictatorship.

A coterie of conspirators drafted a law fraudulently named the National Recovery Act, which purported to create codes of fair trade practice and to increase wages and decrease hours of work.

Under this camouflage a tyranny was set up with a chief commissar and deputy commissars, appointed by the President, not confirmed by the Senate, and not subject to civil service. These commissars, when acting with the approval of the President, were dictators over the industries they dominated, their powers extending to the enactment of laws enforced by prison sentences; to the imposing of licenses upon all persons in business; with the power to revoke the license and drive the victim out of business.

This usurpation was at first accepted without protest. A nation which had grown from an absolute monarchy to a parliamentary monarchy, and by revolution to a republic, was unable to grasp the significance of this law.

## SEES RISING NAZI-ISM

In the early summer of 1933 I attended a meeting of the directors of the American Newspaper Publishers' Association, called to discuss what attitude the association should take toward this apparently popular but obviously unconstitutional and tyrannous legislation; then embarked on a pleasure tour through northern Europe with no idea of political observation. Progress through England and Holland followed this plan. My notebook refers only to the picturesque and the amusing.

Arrival in Germany marked an abrupt change. Hitler had been Chancellor of Germany for 6 months. Nazi Germany had come into power. Its manifestations had hardly reached the newspapers, had not penetrated the perceptions of the readers. The traveler immersed in the country received impressions in every pore.

Uneasiness, apprehension, and fear were on every hand. Secret police might be in every room. Citizens were disappearing without trace.

## BROWN SHIRTS IN CONTROL

The Hotel Adlon, in Berlin, was perhaps the best hotel in Europe. Its proprietor had spent a lifetime serving thousands of people, encouraging buyers to visit Berlin, and travelers to spend their money in Germany.

While I was talking to this kindly benefactor I was astounded that an arrogant youth in boots and brown shirt (who had never done a service even to an individual) entered and addressed him in that rough and overbearing manner which was a shocking surprise then, but which we have now become accustomed to expect from New Deal functionaries.

A visit to a celebrated newspaper found brown shirts in control. Already the censorship of what might be printed had expanded to orders what to print.

In consequence, that newspaper and all other newspapers in Germany were prostrate.

The American consul told me that it would be unwise for Americans to attempt any business in Germany because the courts were not free.

## DECIDE AGAINST LICENSE

The report of this visit that I brought back fortified the resolution of the publishers not to accept government licensing. Thus they remained free to tell how tyrannously the National Recovery Act was administered; how men were incarcerated for doing business in their own shops in their own way; to publish the claim of the Attorney General that whoever accepted a code waived his constitutional rights.

When the old free Supreme Court unanimously declared the law unconstitutional the country heaved a sigh of relief—and so did those elements of the party in power who believed in a continuation of the Republic.

Mr. Roosevelt received the judicial overthrow of his dictatorship with great bitterness and immediately began to rebuild it.

## INVADE TENNESSEE VALLEY—MILLIONS SPENT AND SPENDING ON PROJECT

The Tennessee River runs down a narrow valley in the Appalachian Mountain range, flanked by steep hillsides and barren hilltops. The country is sparse in natural resources and because of its mountainous character, unsuitable to transportation and therefore to industry.

Twenty-five years ago, under the alibi of war necessity, a large Government expenditure was wasted at the now famous site of Muscle Shoals.

In the spring of 1933 the Tennessee Valley Authority was created under the pretext of finding out the cost of electric power.

To date this organization has expended \$304,000,000 of our money constructing dams to overflow what little alluvial land the valley affords, under the false pretense of improving navigation in a river which will never carry any commerce; and a disproportionate part of the expense of the dams was deceitfully charged to navigation which should have been charged to developing electric power.

Forty-six million dollars were spent to purchase a successful going enterprise—the Tennessee Electric Power Co.

## SEEK THREE HUNDRED AND TWENTY MILLIONS MORE

A bill now before Congress proposes to spend three hundred and twenty million more in this defile.

One of the allegations in support of the project was that it would extend the supply of electricity to residents of the valley and vicinity. The record shows that virtually all those receiving electricity from T. V. A. were already being served by other utilities. Great and wealthy corporations took a large part of the new development's added supply; in 1939 they purchased more than half the power sold by the Authority.

How fraudulent was the claim that the dams were constructed to improve the river and create water power became plain during low water last fall, when the steam plant of the Tennessee Electric Power Co. was run at full capacity by a padded pay roll of politicians. This fully exposed the plan as a purpose to engage the Government in the development of electric power.

## OTHER POWER PROJECTS

The Government has embarked on other power projects, notably in Nebraska and in Texas, where criminal fraud has come to light, but has not been prosecuted, and on a vaster scale in the State of Washington to the extent of four hundred and sixty eight millions.

An effort to develop a huge power project on the St. Lawrence River under pretense of a waterway from the Great Lakes to the sea is now on foot.

Why is the Government embarking on vast power projects for which there is no need and which, when and if needed, can be supplied in the normal course of industry? The answer is found in Raymond Moley's book *After Seven Years*. It relates a conversation between Mr. Moley and Tom Corcoran, who succeeded Mr. Moley as policymaker for the White House.

## QUOTES FROM BOOK

Here is what Tom said to Moley and what Moley said to Tom, according to Moley:

"Tom assured me that the utilities were licked. I asked whether that meant that the T. V. A. was going to try to take over the Commonwealth & Southern. 'And you're damned right it will—and all the rest of them, too,' Tom said.

"You realize what that means?

"Well, we're going to squeeze them for a couple of years, at any rate," Tom said.

"I remarked that you don't do that kind of thing 'for a couple of years.' If you did it, it stayed done.

"Yes; I suppose so," was the answer. 'It won't come fast, but 20 years from now the Government will own and operate all the electrical utilities in this country.

## LENIN'S ELECTRICITY THEORY

Let us now quote Lenin:

"If we get electrification in 10 or 20 years, the individualism of the small agriculturist and the freedom of trade exercised by him locally are not dangerous in the least. If we do not get electrification, the return to capitalism is in any case inevitable."

Lenin's theory was:

(a) Small-scale production gives birth to capitalism.

(b) The Communists must get rid of the small commodity producers.

Lenin said: "Communism is the Soviet government plus the electrification of the whole country," and his solution of the problem was:

"Electrification on a mass scale."

#### CONTROL OF COAL MINING—HOW C. I. O. WAS FAVORED IN DIVERS WAYS

After the National Recovery Act had been declared unconstitutional the Guffey Coal Act was urged upon Congress, with the request that Congress disregard any conscientious scruples it might have as to the unconstitutionality of the act.

The act was passed, and what result do we find? By arbitrary fixing of prices, coal production was forced into those districts dominated by the C. I. O., so that the C. I. O. miners could be held up for the \$600,000 paid to the Democratic Party for the campaign of 1936—the payment which bought the national administration and the State administrations of Michigan, Pennsylvania, and Minnesota.

When the C. I. O. tried to take over the industries in those States, and did take illegal, violent possession of factories, the C. I. O. was repaid, first by the Governor of Michigan—Murphy—calling out the National Guard to prevent the local police from enforcing the law and compelling the C. I. O. storm troopers to evacuate the plants.

#### TROOPS PROTECT STRIKERS

In Pennsylvania the threat was made that 70,000 C. I. O. coal miners would march into Bethlehem and close the factories there. The \$600,000 was then repaid by Governor Earle calling out the National Guard—not to protect innocent citizens from rapine and massacre, but to compel the factories to shut down and throw out of employment workmen who wished to work.

In Ohio when workmen were besieged by Communists and C. I. O. storm troopers the \$600,000 was repaid by the Postmaster General refusing to allow the United States mail to pass through the blockade and bring the necessities of life to law-abiding citizens.

It was at this time that Secretary Perkins urged Governor Davey to kidnap Tom Girdler and Frank Parnell and hold them until they ransomed themselves from the C. I. O.

In Minnesota the \$600,000 was repaid by the Governor of the State, Olson, calling out the National Guard and putting the whole city of Minneapolis under siege.

#### WHY IN MICHIGAN?

Has it occurred to you why the abortive C. I. O. revolution was started in Michigan?

The Bolshevik revolution of 1917 came out of the factories of Viborg, the industrial suburb of Petrograd, and out of the marine centers at Kronstadt, in the Baltic Provinces, and in Finland. Without the factory workers and the sailors, Lenin would have failed. These plants were centralized in Viborg, just as your plants are centralized in Detroit, Flint, and Pontiac.

The Bolsheviks obtained control of the workers of Viborg and of the sailors in the fleet and in the ports. These workers and sailors formed the vanguard with which Marxist strategists say they can win if they can attack a bewildered and disorganized majority suffering from economic ills.

Bear in mind that the Department of Labor has put our merchant fleet in the hands of a Communist union, and the dock workers under the control of Harry Bridges, the Australian Communist who was suffered to remain in the country by the Perkins-Landis conspiracy.

Is not the parallel complete?

#### FIELD OF COMMUNICATIONS

Let us pass on to the field of communications.

Early settlers followed the coast line and the short eastern rivers. After the conquest of the West from Great Britain, Congress built the national road. It was not successful and was abandoned. Then canals were dug in imitation of Europe, but the distances were too great; ice in winter and drought in summer obstructed them and they failed.

A certain amount of transportation was developed upon the Mississippi River, but again dry summers and shifting channels rendered this method of transportation abortive.

#### RAILROADS DEVELOP COUNTRY

Came railroads and the country was girded with steel. Bound together with iron bands, the country became too strong for any further centrifugal movements. The greatest material benefit the population had known was conferred upon them by the railroad men.

Human they were, and made mistakes.

To correct these mistakes the Interstate Commerce Commission was created—a benign tabby cat to catch the mice and rats in the railroad house. Its function was to enforce the common law governing carriers.

Sixteen amendments to the act have changed tabby into a ravenous tiger, whose hunger has not been appeased by the destruction of railroads, railroad transportation, and railroad securities.

The public has suffered by the increasing costs it has paid for transportation during the last 50 years. One-third of the railroad mileage of the country is today insolvent. Railroad securities have been massacred. If the average value of railroad stocks is taken as 100 in 1926, the stocks sold for an average price of 63.65 in 1937.

LXXXVI—App—56

They are now selling at 30.5. On the other hand, industrial stocks, until recently free from the Government kiss of death, sold for an average price of 30.5 in 1937, and are now selling at 116.3.

#### ADVENT OF AUTOMOBILE

Many of us remember the arrival of the automobile. We saw it first as the hobby of an eccentric; next as a luxury of the rich; then, developed by extraordinary men, it has become a source of pleasure, of profit, of usefulness, to the large majority of our population.

Ingenious men have developed the motorcar into many forms, of which the truck and the omnibus next to the private car are the most common. More livestock is now brought to the Chicago stockyards by truck than by rail. Hardly a country child that does not go to school by bus.

This vast achievement, the greatest of our age, has been accomplished entirely by free men working in a free society.

#### GOVERNMENT SEIZES CONTROL

And when the Government reached out its mailed fist to take control of motor operation, what did it give as its excuse? That it has so hamstrung the operation of railroads that, in fairness to them, it must cripple the operation of motor transportation.

Nor need anyone be deceived that regulation of trucking companies will not be followed up with tyranny over every man who owns and operates a car.

The purpose is not regulation. The purpose is political domination of transportation, which means political domination of all citizens.

The internal-combustion engine has made possible a limited use of some of our rivers and of some artificial waterways connecting natural bodies of water. These uses are strictly limited and can only be developed by ingenious men adapting them to special circumstances. The same New Deal desire to dominate would subject these ingenious men, who alone understand these special conditions, to the whim of an arbitrary autocrat incapable of understanding such difficult problems.

#### DEVELOPMENT OF AIRPLANE—WORK GENIUS HAMPERED BY BUREAUCRATIC ACTS

I will never forget the thrilled multitude that saw Orville Wright fly around the parade ground at Fort Myer in 1909.

The dream of centuries, apparently impossible of realization, had been accomplished by two bicycle-repair boys where all of the professors of the Smithsonian Institution, backed by the United States Treasury, had failed.

Taking up Wright's great invention, genius after genius has pushed it further and further along, like successive men of the football team carrying the ball to victory. Glenn Curtiss immediately improved upon Wright's warping wing tips with the first ailerons and also developed the first flying boats.

Dr. Junkers produced the first all-metal airplane. Igor Sikorsky the first large airplanes. Elmer Sperry created precision instruments. Thorpe Hiscock produced the first practical aircraft radio. Rickenbacker led our aces in war. Lindbergh flew the ocean; Post and Gatty around the world. Jackson and O'Brien flew an airplane for a whole month without landing.

#### FIRST AIR-MAIL FLIGHT

Calbraith Rodgers carried the first air mail in the year 1911, when he completed a transcontinental flight in 85 days. The Government began flying the mail in 1919, but President Coolidge wisely turned the job over to private operation in 1926, to make commercial aviation possible.

Step by step the passenger plane was evolved. If my observations were right, Lockheed first had the correct idea of construction—using the internally braced wing and monocoque fuselage.

Boeing improved on Lockheed, but it was Donald Douglas, who had been a witness of Wright's epochal flight, who developed the first entirely successful passenger plane. This airplane also far surpassed every military plane then in existence.

#### MAIL CONTRACTS ANNULLED

Adventurous, enterprising, able young men laid out and began operating scheduled air transportation lines. Success was in their grasp when they were struck down by as outrageous an act of tyranny as any Hitler ever perpetrated—their mail contracts were arbitrarily annulled and the mails turned over to the Army Air Corps.

In an occupation too complicated for any Government bureau, 13 gallant young soldiers lost their lives—victims of tyranny, martyrs to communism.

The indignation aroused by these martyrdoms forced the tyrannous Government to turn the mails back to those who had flown them safely, could fly them safely, could make aviation successful, and are making it successful, though hampered by an organization of bureaucrats, none of whom could invent any part of an airplane, design any part, obtain financial backing for an airplane company, or administer one, if formed. They are there not to help, not to regulate, but to lay the hand of the tyrant over this form of transportation.

#### TRANSPORTATION OF MANY KINDS

Transportation is of many kinds—transportation of articles, transportation of individuals, transportation of ideas either in articles, as letters, or by electric impulse as by the telegraph, the telephone, and the new wonder of science, radio—and in a strictly limited sense, in oral communication from one person to those within sound of his voice.

Our Constitution has said that Congress "shall make no law abridging the freedom of speech, or of the press," but what do we find? Letters transported by the postal department are also censored. Telegrams and telephone messages and radio communication of all kinds lie under the heavy hand of another arbitrary government commission, whose purpose is to control the public, not to serve it.

Only personal conversation remains unabridged.

#### RULE OVER SECURITIES—PRIVATE INVESTMENT PERILED BY REGULATIONS

During his 4 years as governor of New York, which included the entire speculation period of boom and collapse, Mr. Roosevelt did nothing to interfere with speculation.

Yet his proposal for United States regulation of securities had a plausible ring, and the Securities and Exchange Commission was created as a pretended measure to help investors.

In fact, it was a measure to destroy private investment, as the actions of the Commission and the results of its conduct have shown.

Some time since, the President made a public demand that utilities increase their facilities to promote the national defense, and increase employment. The utilities were only too anxious to comply.

#### BOND ISSUE REFUSED

In December the Consumers Power Co., of Michigan asked permission to issue \$28,500,000 worth of bonds, eighteen and one-half millions to reduce the rate of interest on an old debt, and ten millions to pay for additions to its plant, but the Commission allowed only the eighteen and one-half millions for refunding, but not one cent for plant expansion. Not even to the extent of allowing an issue which would keep the interest charge at its former level.

It has now forbidden public utilities holding companies from making advances to their subsidiaries on open-book account.

Is the President demanding that utilities expand, and the Commission preventing them from expanding, so that the President can say that the utilities have failed to cooperate with him and therefore must be destroyed?

Bear in mind also that Leon Henderson is one of the commissioners of the Securities Exchange Commission. He is Tom Corcoran's man—the same Tom Corcoran who told Mokey:

"Twenty years from now the Government will own and operate all the electrical utilities in the country."

#### SMOTHERS BUSINESS ACTIVITY

How thoroughly the Securities Exchange Commission has destroyed business activity can be seen from the fact that in the years of 1936 and 1937 the total of security offerings amounted to approximately one and one-quarter billion dollars each year. This compared with the 1929 total of eight billions, and four and one-half billions in 1930, the first depression year.

Now, listen to this: In four of the last 6 years of S. E. C. rule less than one-half billion in new money has been raised. In 1939, with the war boom on, business has been allowed to raise only \$371,000,000 of new money for expansion. In view of these facts, what reasonable man can doubt that the S. E. C. is bent on destroying our existing form of civilization?

The S. E. C., however, has not confined its activities to strangling investment. It has joined the parade of agencies and committees organizing propaganda to arouse mob hatred of every form of private enterprise. And it has done so by the same blustering, brutal, illegal invasion of private rights that has marked the other agencies.

#### ATTACK ON INSURANCE COMPANIES

One of the G. P. U. auditors of the S. E. C. came to Chicago to blacken the American Life convention in order to injure all insurance companies. He demanded the association's correspondence file. When permission was denied him to go through private papers, he threatened, "If you do not give us access to your papers, we will get them anyway through subpoena."

He did not use a subpoena, of course, because the fourth amendment to the Federal Constitution says: "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized."

#### DINNER-PARTY PLOTS

Let us now remember the recent dinner party at which it was arranged to buy forged documents to injure the Dies committee, and the dinner party before that at which John L. Lewis and Senator LA FOLLETTE conspired to have the La Follette committee blacken the corporation which Lewis would take over by force; and before that let us remember the Black Inquisition, when agents of a Senate committee stole a large number of private papers hoping vainly to find something to incriminate or besmirch prominent citizens.

With Hugo Black's record as a violator of the law and a violator of the fourth amendment, is it not entirely logical to assume that his appointment to the Supreme Court was made so that the fourth amendment would no longer be enforced?

And, by the same reasoning, was not Governor Murphy appointed to the Supreme Court so that the courts would no longer protect private industry from capture and confiscation by mobs?

And was not Douglas, former chairman of the S. E. C., appointed to the Supreme Court to keep private enterprise from finding refuge from oppression in the courts?

And lastly, was not the appointment of Felix Frankfurter, the teacher of Felix Frankfurter's "hot dogs," who wrote most of the subversive legislation I have described in the Little Red House in Georgetown, a further step in removing the protection of the Constitution from the citizens of the United States?

#### VISIBLE FROM BEGINNING—"RED" TRAIL SHOWS FROM BEFORE ELECTION

The "red" trail has been visible from the beginning. An observing man could have seen its tracks in some of Mr. Roosevelt's speeches before the election.

Editors identified it in the N. R. A. and charged it in their defense of freedom of the press.

When President Roosevelt made the treaty with the Soviets in December 1933, and entertained one of the arch-murderers of Russia in the White House, the truth should have been apparent, and the acceptance of Soviet support in the election of 1932 might have been suspected.

#### WIRT EXPOSES PLAN

It was Dr. William A. Wirt, of Gary, Ind., who first exposed the plan to overthrow our civilization. He related the thing he heard at a dinner party of minor New Deal bureaucrats in the previous September.

"I was told," Dr. Wirt testified before a committee of the House of Representatives, "that they believed that by thwarting our then evident recovery they would be able to prolong the country's destitution until they had demonstrated to the American people that the Government must operate industry and commerce. I was told that, of course, commercial banks could not make long-time capital loans, and that they would be able to destroy by propaganda the other institutions that had been making capital loans."

"I was frankly told that I underestimated the power of propaganda; that since the war propaganda had been developed into a science; that they could make the newspapers beg for mercy by threatening to take away much of their advertising; that they could make the financiers be good by showing up at public investigations the crooks in the game, that the power of public investigation in their hands alone would make the cold chills run up and down the spines of business leaders and politicians—honest men as well as crooks."

The Federal Trade Commission has confirmed Dr. Wirt's testimony by attacks on individual publications, and in seeking legislation calculated to reduce the advertising revenue of all newspapers.

#### "REDS" SUPPORT NEW DEAL

Two years later, while Dr. Wirt was being hounded to death, on August 8, 1936, Donald Day cabled from Riga, Latvia, that Communist international headquarters in Moscow felt that the Republican Party must be defeated at all costs, and accordingly had forwarded instructions to the American Communist Party to support the candidacy of Roosevelt in the November Presidential election.

Day quoted from the official Journal of the Comintern as follows: "We are going to work for the election of Roosevelt because we wish to strengthen our influence among America's many radical groups."

"We all have a common aim. It is to defeat Landon, who represents forces which oppose the development of class war and revolution in America."

New Deal newspapers, one of which posted a bet that the facts could not be substantiated, immediately began a campaign of abuse against the Tribune for printing the story. But the Tribune supported the integrity of its correspondent in its editorial columns. On August 12 it stated editorially:

"Communist Russia is supporting the Roosevelt administration in the United States. Why do the Communists desire the reelection of Mr. Roosevelt? The New Deal is so frankly collectivist that the Russians could not mistake its purposes. . . . The Russians are for Mr. Roosevelt, because they think he must, with another 4 years, produce the conditions favorable to them."

#### ASSERTION IS REPEATED

The New Deal newspapers continued their vituperation, but on August 29 the Tribune published an article, in which it was said of the Communist purposes in supporting Mr. Roosevelt:

"Understanding that its ultimate aim of sovietized United States of America is not at once obtainable, Moscow does the next best thing. Recently it was reported that the Bolsheviks had decided to throw their influence to Franklin Roosevelt. To the Communists his candidacy is merely a stopgap. They want a people's front; then the Soviets."

The story was based on comment published in the journal of the Third Internationale in Moscow relative to the American Presidential campaign.

#### PRESIDENT DENIES CHARGES

On September 19 Mr. Roosevelt asserted the charges were designed to "frame" the American people.

However much Mr. Roosevelt might choose to protest, the Communists continued to find him and his policies to their liking. After Mr. Roosevelt was reelected, Carl Browder, general secretary of the Communist Party, stated:

"If President Roosevelt will let us work out things for ourselves, we will promise him the 100-percent unconditional support of the Communist Party."

In the 1938 election for congressional and State offices, Communists were called upon by Browder to support New Deal candidates. The comrades had their orders to vote for anyone with the New Deal tag.

#### BROWDER TELLS REASON

There must have been reasons, and there were: Mr. Browder had stated one of them:

"Developments to date show that penetration of the Democratic Party is possible and produces good results."

Four days before the 1938 election Mr. Browder spoke in the Chicago Stadium. He was pleased because Mr. Roosevelt had been interjecting himself into the quarrels and concerns of foreign nations, and he said:

"President Roosevelt was right and should be supported."

Mr. Browder must have found some good reason why Mr. Roosevelt deserved support. He had:

"Our views are strongly supported on the inside of the Democratic Party."

#### BROWDER CHANGES TUNE—CONVICTED BY NEW DEAL, HE STRIKES BACK

Mr. Browder was last heard from, in somewhat more plaintive tone than usual, a few weeks ago. He spoke in Madison Square Garden, New York, to his followers after he had been convicted of passport fraud. I will let Earl Browder make his final answer to Mr. Roosevelt and the new dealers. Said Earl Browder:

"Governor Lehman, of New York, occupies his position instead of Thomas E. Dewey on account of the votes of the Communist Party. \* \* \* We were a part of the progressive bloc that protected New Deal legislation against the assaults of the reactionaries. \* \* \* When these gentlemen thought that they could use the support of the Communists we became almost respectable. \* \* \* They knew us then. They knew almost everything about us. \* \* \* When we were in agreement on protecting New Deal legislation and a peace policy, these gentlemen were very glad to receive our support as long as we did not make too much noise about it."

#### GIVE MURPHY SUPPORT

"When the Governor of Michigan in 1938 was deserted by his own political machine and faced a stiff fight with the Republicans without a machine behind him he was glad to get the support of the Communist Party in conducting his campaign for reelection. He will not deny it. He is a God-fearing man. He would not lie about it. He would not deny he had long, intimate conferences with Communists as to how best to conduct his campaign for Governor. But he lost his election by 2 percent of the vote. We were not able to win the election for him. And he was a hero only for one campaign. \* \* \*

"They even need us often to help them draft their speeches. They didn't know how to do it. \* \* \* In the days when they did want to rouse the masses we had the peculiar experience with them that we had to restrain them. They were ultraleftist, and very often we had to warn them that that kind of tactics is not good; you had better lay off of it. We were a sobering and restraining influence upon them."

#### POPULAR FRONT BLOWS UP

It would seem from the foregoing speech, from John Lewis' recent tirades, and Mr. Roosevelt's denunciation of Russia, that the popular-front government of Communists, C. I. O., and Fellow Travelers has broken up—or broken down.

One wonders what has caused the disruption of this alliance, which has ruled America for 7 years—has brought so many sinecures to its members, such damage to the country, and peril to its future?

The open avowal of the alliance by the Communists was plainly injurious. The secret alliance, covered up by ridicule, abuse, and mendacity, was valuable, but not the public one.

Matters were not helped when it became known that the party in power had been bought with \$600,000 extorted from poor mine workers.

#### NOT POLITICAL ASSET

The elections in 1938 showed that the C. I. O. civil war was not a political asset. After the Hitler-Lenin alliance was announced, communism was dead on Broadway, and that large element of the New York vote which has kept New York Democratic for 10 years would no longer brook a popular front with Russia.

The publicly announced reason—that 98 percent of the Americans sympathized with the Finns in their heroic sufferings—would seem enough to govern a vote-seeking politician.

Nor must we ignore the royal influence on one who has invited a veritable parade of princes to honor his house on the Hudson.

All of these reasons combined would appear to furnish an overwhelming motive for the change of face. Be that as it may, repentance comes too late. Americans have no fatted calf for this prodigal son.

But doubts of this repentance persist. Lewis remains on the best of terms with half of the White House.

#### A SMALL SACRIFICE

A 4-year jail sentence—with time off for good behavior—would be a small sacrifice for an enthusiastic Communist like Browder.

The American Ambassador remains in Moscow. The Government is still buying Russian gold and Communist Mexican gold and silver. Communists swarm in all the offices of Government. The N. L. R. B. is still the handmaiden of the C. I. O.

The new Supreme Court daily strikes down the rights which for 160 years the Constitution has guaranteed the citizen.

Eighty years ago, when our country once before faced destruction, the great man we are honoring tonight spoke the following parable:

"We cannot absolutely know that all these adaptations were the result of preconcert. But when we have seen a lot of framed timbers, different portions of which we know have been gotten out at different times and places and by different workmen—Stephen, Franklin, Roger, and James, for instance—and we see these timbers joined together and see they exactly make the frame of a house or a mill, all the tenons and mortises exactly fitting, and all the lengths and proportions of the different pieces exactly adapted to their respective places, and not a piece too many or too few, not omitting even scaffolding—or if a single piece be lacking, we see the place in the frame exactly fitted and prepared to bring such a piece in—in such case we find it impossible not to believe that Stephen and Franklin and Roger and James all understood each other from the beginning, and all worked upon a common plan or draft drawn up before the first blow was struck."

#### MORE SLEIGHT OF HAND

On this occasion of national peril it is surely possible to suspect that Earl and Franklin and Hugo and John all understood each other from the beginning and all worked upon a common plan, or draft, drawn up before the first blow was struck.

In view of the tortuous past, may this not well be another such a piece of political sleight of hand as has been successful in three elections? Is this another Communist strategical retreat—a move to enlist pro-American votes, while the Communists and the C. I. O. deliver secretly as before?

Heed well the warning that has come down to us from martyred Lincoln.

For the life of our Republic is at stake.

### Sometimes We Sit and Think and Sometimes We Just Sit

#### EXTENSION OF REMARKS

OF

#### HON. CLARE E. HOFFMAN

OF MICHIGAN

#### IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

#### SOMETIMES WE SIT AND THINK AND SOMETIMES WE JUST SIT

Mr. HOFFMAN. Mr. Speaker, that seems to be the attitude of Congress with reference to the amending of the N. L. R. A. For more than a year everyone who cared to inform himself was advised of the inequalities of the N. L. R. A., of the bias and prejudice of the N. L. R. B.

Last session the Senate committee held extensive hearings, as did the Labor Committee of the House. The result so far as legislation went was a goose egg. The House, impatient and indignant because of the failure of the House Labor Committee to act in accordance with the overwhelming public demand, created the Smith committee—the object apparently being to wet nurse the House Committee on Labor.

The Smith committee has held hearings in a judicial and efficient manner, and the net result has been to prove from the Board's own files what many employers and many workmen knew from experience; that is, that the Board is biased and prejudiced, has caused and fostered strikes and labor disputes, has placed upon employers a ruinous burden, and that its major accomplishment has been to assist the C. I. O. in its organizing campaigns.

It is generally understood that the Smith committee will shortly conclude its hearings, but that is not assurance that the people will get the legislation they are demanding. To show that we are not fooling the folks back home, let me quote from two editorials from two daily newspapers of February 5, and I have no doubt that I could multiply these citations many, many times. From the Sturgis Daily Journal, Sturgis, Mich., I quote:

#### MR. MADDEN'S APOLOGY FOR THE N. L. R. B.

Chairman Madden, defending the National Labor Relations Board, says its difficulties are due chiefly to the A. F. of L.-C. I. O. controversy and organized opposition from employers.

That is to say, if neither element of organized labor had objected to the Board's unfair decisions and employers had taken their unjust punishment lying down, everything would have been just lovely.

The C. I. O. and A. F. of L. have resented rulings overturning contracts and complained of other prejudiced proceedings, although the John L. Lewis outfit seems to have enjoyed many instances of special favoritism.

As for employers, Mr. Madden charges that an organization of manufacturers had the temerity to attack the Wagner Act on the very day the Supreme Court upheld its validity. But the Supreme Court never said it was a just law that ought to be kept on the statute books.

The House investigating committee, in an effort to be fair, has given Mr. Madden and his associates the unusual privilege of rebuttal in presenting their defense. It would also appear that it has given them enough rope to hang themselves, judging from the kind of defense Mr. Madden is putting up for the N. L. R. B.'s arbitrary proceedings.

From the Dowagiac Daily News, Dowagiac, Mich., I get the following:

The N. L. R. B. seems to be out of step with everybody except its own pay rollers and the radical new dealers. William Green and John L. Lewis both have castigated it severely from the standpoint of labor. Employers generally have hated it because it has made their burden almost intolerable. It has probably lessened employment. Congressmen of all parties have berated its administration and even now it is being investigated. But with all this united opposition we doubt if any constructive amendments can be secured. The opposition is not agreed upon what must be amended, that's the reason. Each wants something different and while they squabble the New Deal radicals chortle with glee, and both labor and industry chokes. In time, no doubt, some rescue work may be done.

Madden's excuses, the statements of the Board's defenders, have not gone over.

The Dowagiac News apparently realizes that this time we are not sitting here thinking; we are just sitting, on this question at least.

A farmer in the district has another way of putting it. He suggests that our trouser seats must be exceedingly thick and soft; otherwise, we would be covered with callouses, for, so far as he observes, we have not given any indication of getting up and going about our business of protecting either the city workers or the farmer from the racketeering demands of those who are collecting dues from employees who have no desire to go on strike or have trouble with their employers.

To get rid of the excuse that no remedy has been offered, no constructive legislation proposed, last March, almost a year ago, I introduced a bill to enact fair and just labor legislation. Nothing has ever been done about it; so I have put on the Clerk's desk a discharge petition. It is No. 23; perhaps that number is significant. In any event, any Member of the House who really wants to see some labor legislation can walk up and sign that petition and if 218 do it, we will get action.

Now you can sit and think, or you can just sit. If the Democratic majority just sits, we Republicans will have one of the finest campaign issues next fall that anyone could desire. Failure to amend the Wagner law, coupled with the President's idea that he has been anointed by a modern Samuel to reign as king over these United States, will, we hope, just about end the New Deal, which is but an imitation of the campaigns carried on by Hitler and Mussolini prior to their seizure of power.

### A Summary Survey on the Farm Front

#### EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

STATEMENT BY HON. HENRY A. WALLACE, SECRETARY OF AGRICULTURE, BEFORE THE HOUSE OF REPRESENTATIVES COMMITTEE ON AGRICULTURE

Mr. GEARHART. Mr. Speaker, on Thursday last the Honorable Henry A. Wallace, the Secretary of Agriculture, ap-

peared before the House of Representatives Committee on Agriculture and delivered an address which will be, I am sure, of tremendous interest to those who are engaged in the agricultural industry.

Because of the importance of his conclusions and recommendations, findings which reflect a lifetime study of the intricate problems of the agricultural industry, as well as 7 years of official experience in its governmental phases, I am convinced that he should have had a wider audience than the small though attentive group which crowded the hearing room. For that reason, and in the hope that the suggestions he made and the recommendations he offered may receive the serious consideration of the country, I am constrained to ask that the text of his statement be spread upon the pages of the CONGRESSIONAL RECORD as a part of this day's proceedings.

The unanimous consent of the membership of this legislative body having just a moment ago been given, I am privileged to hand a copy of Mr. Wallace's remarks to the Public Printer for the purpose just hereinbefore indicated.

The statement is as follows:

At the outset I wish to say, not as a formal amenity but as a heartfelt recognition of genuine public service, that this committee and its able chairman have made an incomparable record of contribution to the public interest, especially since the committee began its work in the winter of 1933 on the worst agricultural situation that has ever confronted the Nation.

Seven years ago, in the face of utter distress and despair, this committee displayed the courage and practical foresight to master chaos and lay the sound foundations for the splendid farm program that we have today. At that time farmers were suffering the privations that had come from such ruinously low prices as 5 cents for cotton, 32 cents for wheat, 19 cents for corn, and 3 cents for hogs. By 1932 the annual cash income of farmers had rapidly shrunk to the drastically low level of about \$4,500,000,000. After deducting farming expenses, if they could all have been paid, this would have left only \$1,200,000,000 for the support of all farm families. That would have been equal to an incredibly low figure of less than \$40 per capita for the persons living on farms. An engulfing wave of mortgage foreclosures was dispossessing farmers of their homes and land. Farmers saw their export markets disappearing as tariff barriers were erected to destroy foreign trade. Merchants in farming communities were going into bankruptcy, and country banks were closing by the thousands. Farmers were driven to mine the fertility of their land. Nothing had been done to bridge the gulf between unmarketable surpluses in the hands of farmers and the hunger of families whose idle bread earners were walking the city streets in a futile search for work. Spontaneous farm strikes were occurring. It is not necessary to recall more of the painful memories of the grim and desperate situation with which this committee was faced in the dark winter of 1933.

The great recovery and progress that have been brought about in the past 7 years are evident on every hand. Since 1932 the annual cash income of farmers has been increased more than 80 percent to a total of \$8,500,000,000. Soil conservation and rebuilding have replaced soil erosion and mining. The ever-normal granary and a system of crop insurance have been made part of the farm program to protect both farmers and consumers against the crop failures of drought years. The farm program also includes facilities for commodity loans to prevent the former emergencies that almost invariably accompanied bumper crops. The heavy tolls of farm tenancy on men and land are being checked. Farm surpluses have been removed to the benefit of needy people in the cities. Farm mortgages have been reduced more than \$2,000,000,000. Interest rates have been lowered. Agricultural production has been brought more nearly into balance with industrial production. Farmers are better able to deal with their problems through their own local, county, and State committees and national farm organizations. The country banks have reopened, and their demand deposits have increased twofold. Rural merchants have had their business restored. Industrial activity has responded to the recovery in agricultural purchasing power. The sales of farm equipment have more than doubled.

Not least among the basic gains are the great increases in general knowledge concerning farm problems, and in the understanding of the interdependence of agricultural and industrial welfare, that have replaced the widespread confusion of 7 years ago. Much of this is attributable to the work of the national farm organizations and to the democratic method of administration that has been employed to carry out the farm program. Farmers everywhere attend their own local, county, State, and national meetings, at which sound and practical solutions must be developed for complex problems and fitted into the total and ever-changing economic patterns of agriculture, the Nation, and the world.

The advances since 1932, advances won in the face of bitter and formidable opposition, are the result of hard and unselfish work by this committee, by most Members of the Congress, by the farmers themselves, and their leaders, and by an administration under a President who was never surpassed in understanding and sympathy for the problems of agriculture.

More perhaps than any other one factor in the success of these programs has been the unity among farmers themselves. Southern farmers have recognized that their interests are the interests of western producers and producers all over the country. The farmers have refused to listen to sectional pleas and to familiar partisan, political arguments. So long as this unity continues I have no fears for the continuance of sound national programs for agriculture. I hope that any action taken by the Congress with respect to agriculture at this session will protect, and in no sense sacrifice, every advance that already has been made. I hope, too, that whenever feasible, self-financing and permanent methods will be employed for bringing about further advances on the agricultural front.

It is most gratifying that we begin this eighth year of work with such a rich background of progress and solid achievement based on a long record of effective and cooperative action. It was with much pleasure that I received your invitation to discuss with you today some of the major needs of agriculture which require additional action. In view of the great stress to which American agriculture will almost certainly be subjected by the present war, this is a particularly appropriate time to resurvey the farm front and strengthen our protective farm program wherever necessary. To this end I would like to summarize major present needs and alternative solutions.

#### I. BASIC NEEDS OF AGRICULTURE

Three basic needs of agriculture are: The need for increased farm income; the need for strengthened production adjustment; and the need for additional soil conservation.

##### A. The need for increased farm income

(1) Unfortunately, there are many persons who, upon learning of the great progress of agriculture during the past 7 years, jumped to the conclusion that no serious need remains for increased farm income. Those persons clearly cannot be mindful of the great depth from which the upward march was begun in 1933, and they have no real concept of the existing deficiency in agriculture's participation in the national income. It is not necessary for me to tell this committee that many farm families are still suffering from malnutrition, lack of medical services, deficient educational facilities, and even inadequate shelter. One great group of farm families, namely, sharecroppers and tenants, must struggle for their existence today on annual incomes far less than those received by urban families whose wage-earners are engaged on relief projects. You are aware of the existing relative deficiency in farm purchasing power as compared with historical periods when the price the farmer received balanced the price he had to pay. Agriculture today has approximately 24 percent of the total population, and 31 percent of the Nation's children, but only 11 percent of the national income.

(2) Some persons seem to feel that the war will result very soon in a substantial increase in farm prices, and that the farm problem will be solved for the time being. But agriculture is not profiting from the war in Europe, and is not likely to profit at any time in the near future. And for some groups of producers, the war has been an economic calamity.

Early in the war when farm prices were carried upward sharply in a speculative boom, some people thought that these prices would reach parity in the market place and that no further action would be necessary to carry out the policy of farm income parity established by Congress in the Agricultural Adjustment Act of 1933.

But the anticipations of the speculators were not borne out by subsequent events. The net effect of the war on agriculture has been to shut off a large part of the world market for our farm products. Great Britain and France are using their dollar exchange to buy airplanes and munitions in this country. For farm products they are turning wherever possible to countries where they can acquire these commodities in exchange for their own goods or buy them with sterling or on credit. Even our trade with the neutral countries has been badly upset by the operations of the belligerents.

The effects of the war are especially harmful to the export trade in tobacco and fruits. Very little cotton is now being sold for export. Through the previous operation of the cotton export subsidy the commitments for cotton exports since July have already reached a total of more than 6,000,000 bales, but the outlook for export sales of cotton in the future is not bright if the war continues.

The present strength of wheat prices is due not to war demand but to drought and the prospects for a short crop in this country. Export of pork and pork products has not increased and is not likely to increase to any great extent unless Great Britain, our chief potential customer, turns to the United States as a source of supply.

Thus it will be seen that the war is likely to have a bad rather than good effect on the prices of export crops and the incomes of farmers producing the export crops. The war is likely to make farm programs for these crops more necessary rather than less necessary.

##### B. The need for production adjustment

A reasonable balance between agricultural and industrial production is essential to the welfare of the Nation. In order to attain and preserve such a balance, it is necessary not only to adjust farm production to compensate for the loss of markets for agricultural products but also to counterbalance the greater inherent tendency of agriculture, as compared with industry, to increase production.

(1) At the close of the World War we had a large foreign market for agricultural commodities. Since the World War, and primarily as a result of the erection of trade barriers in various forms and of the shift in our country's position from a debtor to a creditor

nation, agriculture has lost much of its foreign market. Even after taking into account the gains made under the trade-agreements program this loss is still equal to the production of thirty to thirty-five million acres of land. In addition the substitution of tractors and automobiles for horses has decreased the market for feed crops in an amount equal to the production of twenty-five to thirty million acres.

(2) High prices stimulate the production of both industry and agriculture, but speaking generally the response of agriculture to the pressure of low prices is basically unlike that of industry. Low prices for the products of industry usually cause a large and prompt decrease in industrial production, whereas low farm prices tend to drive agriculture into an increased production of cash crops and an abandonment of soil-conserving practices. This greater inherent tendency of agriculture to increase production is one of the fundamental causes of farm distress and of the lack of balance between industry and agriculture. The adjustment of agricultural production to offset this tendency is not a scarcity program. Nothing could be further from the truth than to say that the farmers want, or propose to bring about, a scarcity of farm products. They want balanced production not underproduction. When agricultural production increases without accompanying increases in industrial production we do not have a balance and the results are not beneficial either to farmers or to consumers. Reasonably balanced production, to be brought about through greater industrial activity, is a basic requirement not only for urban prosperity but also for the full recovery of agriculture.

##### C. The need for more soil conservation

The welfare of any nation fundamentally is dependent upon the conservation of its soil resources. History is replete with records of civilizations and governments that have fallen into decay as a result of soil depletion and erosion. Fortunately, we have come to realize before it is too late the danger of abusing and neglecting our soil resources. A farm program has been developed under which we are progressing simultaneously toward the two essential objectives of balanced production and soil conservation. Under this program farmers have substituted soil-conserving and home-consumption crops for approximately 40,000,000 acres of surplus soil-depleting crops, and more than 80 percent of the total crop land has been brought under the program. I am confident that the American people will permit nothing to interfere with their resolute completion of this great work.

#### II. ALTERNATIVES FOR INCREASING FARM INCOME

Four principal alternative methods are available for increasing farm income: It could be undertaken by increasing Government payments; by fixing farm prices at higher levels through governmental decree; by increasing commodity loan rates and export subsidies; or by applying the principle of marketing certificates. There are significant differences among these four alternatives not only with respect to their practical ability to increase farm income even temporarily, but also with respect to their ability to sustain an increase in farm income over a long period, to meet the needs for production adjustment and increase soil conservation, and to meet certain other practical requirements. Let us examine briefly the main aspects of each of these alternatives.

##### A. Increased governmental payments

(1) Federal payments for production adjustment and soil conservation since 1932 have been a vital factor in making the farm programs effective and in increasing farm income. I do not believe any money expended by the Government has done more to help recovery than the money spent on farm programs. Farm payments of the past 7 years have been made in ways which not only relieved untold suffering but also helped, in conjunction with increased wages, monetary policies, and other recovery measures in bringing about an increase of approximately \$7 in farm income for each \$1 of farm payments. The \$3,000,000,000 of farm payments during the past 7 years still left farmers with a deficiency of \$12,000,000,000 under parity income. For every dollar in payments that farmers received they contributed to consumers free, comparatively speaking, \$4 worth of commodities.

(2) Recognizing the loss of foreign markets and changes in domestic consumption, the Agricultural Adjustment Act of 1933 authorized parity payments for cotton, rice, wheat, tobacco, and corn. Since 1936 parity payments have protected the farm programs and the income of the producers to whom they were made. The need for the payments remains and so does the need for some self-financing plan which will provide a continuing source of revenue for such payments and additional payments that are needed to safeguard and strengthen the programs and to supplement farm income.

(3) While the Budget did not provide for parity payments, the President's message on the Budget recognized that they might be needed for the crop year 1941. I quote the President's Budget message:

"Agricultural programs: Under the broad heading of agricultural programs I have included agricultural adjustment benefits, the surplus removal program, and parity payments arising from 1940 appropriations.

"Despite a gratifying general increase in farm income, agriculture is still not receiving its proper share of the national income. I am therefore proposing to continue substantially undiminished the various agricultural programs.

"I have not, however, included estimates for new appropriations for parity payments in 1941. I am influenced by the hope that

next year's crops can be sold by their producers for at least 75 percent of parity. I do not suggest in any way abandonment of the policy of parity payments heretofore adopted, and future events may call for some appropriation to this end. I note, however, in passing that the Congress has failed to make any provision for the financing of these payments already made or obligated for 1938 and 1939 crops."

(4) The Budget provided specifically for payments for conservation. The need for better care of our soil has become all too evident during the past few years. I feel certain also that the overwhelming majority of the people are convinced of the soundness of conservation and want to see it continued permanently. But while appropriations for conservation seem assured, these appropriations do not meet the need for parity payments and other payments which are necessary to offset the handicaps of agriculture.

(5) One general aspect of this alternative, increasing governmental payments in order to increase agricultural income, seems clear: It is the only available means for certain purposes, such as meeting the problems of tenancy and surplus product removal and for meeting the special requirements of certain crops. These crops, such as corn, are not well adapted to the use of other alternatives because a majority of the production does not pass through a single processing or marketing channel so as to make possible the administration of some other practical method of aid.

All of us recognize the uncertainty of reliance upon direct appropriations for all the income needed by agriculture. As a safeguard for all concerned, some sound method should be found to assure the continuance of adequate funds for the farm programs and a more adequate income for the producers.

(6) When the original Agricultural Adjustment Act was enacted in May 1933, Congress tried to make the farm programs self-financing. Through the medium of processing taxes, the programs did almost pay their way until the decision in the *Hoosac Mills* case in early 1936. This decision invalidated the processing taxes, because the Supreme Court considered them a part of a production-adjustment scheme.

Since that time Congress has shown a remarkable conception of the needs of agriculture. But I am sure that we will all agree that some sound plan for self-financing a large part of agricultural appropriations is in the interests of the farmers, the Treasury, and the general welfare.

(7) The history of the efforts of most groups to improve their circumstances through governmental aid has emphatically demonstrated that for a variety of reasons the appropriation route, as compared with increased prices, is the hard and disappointing way. Long ago the manufacturing industries as a whole were compelled to recognize and act on this phenomenon. When in search of Government aid, they usually pass over the possibilities of obtaining appropriations of public funds and confine their requests to various devices, such as tariffs and quotas, for increasing their selling prices. This practical situation determines the result to such a great extent that it is impossible to believe that farmers are going to have a fair and equitable share of the national income so long as they are handicapped, as compared to industry, by being obliged to receive increases in their income primarily through appropriations rather than through improved prices. This in no way, however, lessens the importance of appropriations in the absence of other means of increasing farm income.

#### B. Price fixing

(1) Several of the proposals that have been made for increasing farm income would call for the fixing of minimum farm prices by governmental decree for the domestically consumed portion of farm production. The variations in these proposals are mostly matters of either the mechanical methods of operation or the standards for determining the levels at which prices would be fixed. On the whole, fixed-price programs seem to represent a desperate effort to avoid budgetary difficulties by making it possible for farmers to obtain reasonable incomes through market prices. I have nothing but sympathy for their objectives, but I have not yet found any price-fixing proposals that do not involve some grave objections.

(2) Most of the price-fixing proposals that I have seen omit any provision for production adjustment either on the theory that the export markets will take an unlimited quantity of low-priced surpluses, or on the theory that if farmers were guaranteed an adequate price for the products consumed in the domestic market, they would not produce an additional quantity for which only very much lower export prices could be obtained.

These theories seem to me to overlook certain important factors. In the first place, it is no longer true that unlimited surpluses of products can find world markets. Consequently, an emergency call would probably be made on the Treasury at the end of the first year of operation. If farmers did not produce anything beyond domestic needs, the fixed-price program would bring about such drastic adjustment of production that we would be confronted with a colossal increase in farm unemployment. The American farmer needs more than the American market. It is extremely doubtful that any price-fixing program could long endure in the absence of effective production adjustment. And apparently the proponents of price fixing have found it difficult to envision how an adequate production-adjustment program could be made effective under a price-fixing plan.

(3) It would be necessary under price fixing—especially in the case of export crops—for the Government either to take over much of the buying and selling functions from the established and normal channels of trade or to undertake the policing of literally

millions of transactions. Thus, price fixing seems to present an inescapable dilemma. Both the Government's going into business and Government policing are fundamentally undesirable.

#### C. High loans

(1) My comments on this alternative are directed to the question of whether the present moderate loan rates should be greatly increased in an effort to bring about an improvement in farm income. Credit, handled with necessary restraint, can be exceedingly useful. We have employed credit with great advantage for certain continuing fundamental needs, such as the ever-normal granary, and also to meet great farm emergencies such as those which occurred in cotton in 1936-37 and in tobacco this past year. But it is difficult to avoid the excessive use of credit. We have all seen many demonstrations of the fact that credit is unduly alluring. It is a temptingly quick and certain way to get money and defer the day of reckoning. The great overattractiveness of credit sometimes leads to its injudicious use in futile attempts to cure situations which are really not credit problems. The sound course of action in most instances is to make certain that a problem involves credit and that the need for credit cannot be removed, before any credit is extended. I hope that we shall not resort to those unnecessary uses of credit which could only harm farmers in the end. I trust that we shall not turn to the increased use of credit without first having exhausted the other possibilities.

(2) We may always expect demands that the increased use of credit be employed as the alternative for increasing income. At times it will be difficult to avoid becoming so blinded by credit's temporarily brilliant effects that we shall walk into its pitfalls. As we receive demands for a march up the credit route, I hope we shall not lose sight of certain fundamental considerations:

(a) The greater the commodity-loan rates fixed by the Government, the greater will be the appropriations of funds required for export subsidies.

(b) If a high price-pegging loan program were to be successful, the production would have to be decreased and domestic prices thereby advanced to a point that would permit liquidation of the loans without loss. These higher domestic prices, however, which could be brought about at least temporarily through high price-pegging loans, would tend to encourage increased production. Many persons would withdraw from the present adjustment and soil-conservation programs in order to take added advantage of the increased market prices. This in turn would defeat the higher loan program by placing a large supply on the market to drive down prices and thereby make it impossible to liquidate the high loans without incurring large losses. Thus what had started out to be a high loan program would have been converted into a system of increased governmental payments through the appropriations that would be required to cover the loan losses; and in the meantime it would have destroyed the incentives for those other two basic requirements of agriculture, namely, strengthened production adjustment and additional soil conservation. Any loan program can be swamped by continued excesses of production. Furthermore, the excessive and unnecessary use of credit aggravates maladjustment and only defers for a brief time the inevitable reckoning in appropriations to cover loan losses.

#### D. Marketing certificates

My recommendation is that the principle of marketing certificates be adopted as an addition to the present farm program in order to meet the needs for increased farm income, for strengthened production adjustment, and for additional soil conservation.

(1) A marketing-certificate plan could be administered very simply. First, we would allot marketing certificates to farmers who cooperate in production adjustment and soil conservation, in such amounts and having such values as would be necessary to cover their allotted normal production and assure them an income equivalent to parity prices on the domestically consumed portion of their crops. Second, we would require manufacturers and importers, upon the sale of finished products, to acquire the certificates in amounts which would assure a market for the entire supply, and return them to the Government. No certificates would be required from manufacturers on sales for export. And, third, we would establish a Government revolving pool to purchase certificates from farmers and sell them to manufacturers whenever necessary in order not only to maintain the market price of the certificates at their face values but also to make buying and selling a convenient operation and to assure that an adequate supply of certificates would be available for the needs of manufacturers and importers at all times.

(2) A marketing-certificate plan would achieve the benefits of processing taxes without entailing their difficulties. No appropriations would be required for a marketing-certificate program; the certificate requirement would not be a tax; the program would be based on the power of the Congress to regulate commerce.

(3) A marketing-certificate plan would be readily adaptable to most of our export crops. As illustrations, such crops might include wheat, cotton, tobacco, rice, prunes, and raisins. For certain crops, such as corn, which do not pass through a centralized manufacturing process, the only practical alternative for increasing income, appears to be through appropriations. For those crops to which it is adapted the superiority of the marketing-certificate approach, as compared with the other alternatives, may be summarized as follows:

(a) A marketing-certificate program would promise to do more than any of the other alternatives as the principal method for bringing about a fair participation of agriculture in the national income, since it would constitute the most practical arrangement

for obtaining the additional income through increased domestic prices. It seems clear that neither a system of price-fixing nor a system of high loans could be expected to provide as much income over a long period as could be obtained through a marketing-certificate plan.

(b) A marketing-certificate plan would also give agriculture a more dependable and permanent form of financing than the other alternatives, and one that would be more nearly comparable to those now enjoyed by industry through tariffs, quotas, franchises, and patents.

(c) A marketing-certificate plan would contribute more than any of the other alternatives toward production adjustment and increased soil conservation. It has already been pointed out that proposals either for price fixing or for high loans would tend in themselves to constitute incentives for the abandonment of production adjustment and soil conservation.

(d) A marketing-certificate plan is obviously superior to the other alternatives from the standpoint of budgetary considerations, since such a plan would require no appropriations.

(e) A marketing-certificate plan has several special advantages over the other principal alternatives:

It would avoid the danger of interference with the trade-agreements program, through the long-continued use of export subsidies.

It would avoid the accumulation of unmarketable surpluses.

It would avoid the undesirable encroachment of government upon business functions.

It should assist in avoiding interference with the competitive position of the product in the market. A marketing-certificate program, but not a fixed-price or high-loan program, is adapted to the use of partial or complete exemptions on those manufactured products which compete most strongly with other articles on the basis of the cost of the raw material. A compensatory tax might be levied on competing materials in conjunction with any of the alternatives, including a marketing-certificate program.

It would keep inventories out of the hands of the Government and in the normal channels of trade, and would thus facilitate and stimulate increased consumption.

(4) Two objections to the marketing-certificate proposal are often heard.

(a) One contention is that the plan might impair the competitive position of the products. Both our technical studies and the experience when processing taxes were in effect show that this objection has been overemphasized. The competition among most products is primarily based, not on small differences in their raw material cost, but on wide differences in the degree of physical adaptability of the various materials to specific uses. Moreover, the cost of the raw material represents an especially small percent of the price of products manufactured from such major commodities as cotton and wheat. Today, for instance, the cost of the wheat in a 10-cent loaf of bread is approximately  $1\frac{1}{2}$  cents, and the cost of the cotton in a dollar shirt is less than 10 cents. In other words, 85 to 90 percent of the prices of these articles is represented by items that are independent of the cost of the raw material. Consequently, the consumption of such manufactured articles fluctuates primarily with changes in industrial activity and the general purchasing power of the country rather than in response to variations in the cost of the raw materials.

(b) Another objection to the certificate plan is that it would be better to seek increased farm income exclusively through enlarged appropriations in order to avoid any increases in the prices of finished products to consumers. This objection would, of course, apply equally to any increase in prices from whatever source. My experience has led me to believe that consumers want farmers to receive fair prices for their products.

Those who oppose the certificate plan on the grounds that it would increase prices to consumers are in reality arguing that farmers should continue to subsidize consumers regardless of the injurious effect upon agriculture or the national welfare. They are arguing against fair prices for farm products and the fair play between groups that is essential for a continuance of our democratic system.

### III

The present farm program represents 7 years of steady progress and solid achievement in the welfare of agriculture and the Nation. It constitutes a broad, deep-rooted, and sound foundation for the future security and well-being of all the people. At the present time considerations of both justice and the general welfare, as well as the necessity for strengthening agriculture to withstand the stresses of the present war, make strong demands for additional action to meet more adequately the three basic needs of agriculture, namely, increased farm income, strengthened production adjustment, and additional soil conservation. These needs probably will not be met exclusively and adequately through increased appropriations for governmental payments. The other possible source of increased income is through the market. Upon turning to this we find three main alternatives—price fixing, high loan rates, and the principle of marketing certificates. An analysis of these alternatives will reveal that, not only on one or two points but, so far as I have been able to determine, in all main respects, the marketing certificate approach is clearly superior to either high loans or fixed prices. I recommend marketing certificates for your earnest consideration; and, of course, I recommend them not as a substitute for any part of the farm program but as a greatly needed addition.

## Trading Agriculture for Battleships

### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

ARTICLE FROM THE FARMER'S UNION HERALD, SOUTH ST. PAUL, MINN.

Mr. ALEXANDER. Mr. Speaker, appraisal of the action of the House in too radically reducing the farm Budget as compared to reductions on other appropriation bills, is contained in the following graphic description of the situation we now face in farm sections. The article was carried on the front page of the last issue of the Farmer's Union Herald, of South St. Paul, Minn., and contains a mouthful:

[From the Farmer's Union Herald, South St. Paul, Minn.]

*Farm budget cut to pay war's increased costs—new budget slashes farm programs*

Main items	Available July 1, 1939- June 30, 1940	New Budget July 1, 1940- June 30, 1941	Decrease proposed
Parity payments.....	\$225,000,000	-----	\$225,000,000
Soil conservation.....	499,560,000	\$498,560,000	1,000,000
Soil Conservation Service.....	23,720,000	20,195,128	3,525,456

SUMMARY OF ALL ITEMS			
Total U. S. Department of Agricul-			
ture direct appropriations.....	\$1,274,095,967	\$877,230,704	\$396,865,263
Total U. S. Department of Agricul-			
ture reappropriation.....	19,547,675	8,005,000	11,542,675
Emergency appropriation to U. S.			
Department of Agriculture.....	143,000,000	114,000,000	29,000,000
Grand total.....	1,436,643,642	999,235,704	437,407,938

The above figures represent the Budget allowances for agriculture, as presented to Congress by President Roosevelt. The House Committee on Appropriations, with a reactionary Democratic chairman, reduced the Budget allowances another one hundred millions, causing Congressman HOPE to say that the Appropriations Committee had traded agriculture for battleships.

## A Practical Child-Labor Amendment

### EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. WHITE of Ohio. Mr. Speaker, today I introduced a new proposal for a child-labor amendment which is a simplified, practical form, carefully framed to meet the objections which have prevented ratification of the original proposal submitted to the States in 1924.

The measure conforms to the new pattern suggested in Massachusetts by President Emeritus A. Lawrence Lowell, of Harvard, who is recognized as an outstanding pioneer in the child-labor movement.

This amendment would deal only with labor for hire in bona fide industrial plants. It specifies children under 16

years of age, instead of 18, in recognition of the contention that there is a legitimate and wholesome field for certain types of youngsters in the 16-to-18 classification.

It is designed specifically to meet the objections of those who have feared that the old amendment might be interpreted as giving the Federal Government control over child training and education.

It must be ratified within 5 years, in contrast to the pending amendment, which has been floating around for 15 years because of objectionable features and no time limit.

This new form does not presume to interfere with any phase of a child's life, except protection against labor exploitation, and it confines the authority of the Government to child labor in mines, quarries, mills, workshops, factories, and manufacturing establishments. Everyone can readily see that the classifications specified in this resolution cover the places where oppressive and unhealthful abuses can be practiced on the largest scale and with most harmful results.

The boy who has enough industry to mow the neighbor's lawn should not be and is not penalized by this plan. It never hurt any child to help with the work around his own home or his father's farm. In fact, this sort of training has been the making of many a young man.

There is considerable difference between a lad working out of doors, setting his own pace of production, and the boy who works inside a mine or factory and tries to meet factory standards of hours and production. One of the strong points of this proposal is that it deals with the latter, but does not attempt to regulate farm or home work, it does not affect the newsboy, the delivery boy, the caddy, or young folks engaged in similar outside work. It does not encourage idleness.

Because of the objections raised by the general public, the old child-labor amendment, pending since 1924, has not been ratified by the States, although submitted 15 years ago. Parents have feared the questions discussed in this statement. Church and farm groups have been opposed to its provisions. This proposal eliminates those objectionable features. Indirectly it has been indicated that important leaders of church and farm groups have expressed their approval. It would be supported by public sentiment and therefore could be quickly enacted into law.

The text of the proposed amendment provides:

SEC. 1. The Congress shall have power to limit, regulate, and prohibit labor in mines, quarries, mills, workshops, factories, and manufacturing establishments of all persons under 16 years of age.

SEC. 2. The power of the several States is unimpaired by this article, except that operation of the State laws shall be suspended to the extent necessary to give effect to legislation enacted by Congress hereunder.

It would demonstrate once more that there need not be unnecessary delay on constitutional amendments if they are supported with the proper degree of public approval.

### Trade Treaties and the Oil Industry

#### EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. JOHNSON of Oklahoma. Mr. Speaker, I shall support the pending bill proposing to extend the authority of the President under the Tariff Act of 1930, as amended, to make reciprocal-trade agreements with various neighboring countries. I have listened with interest to the many excuses given by Republican leaders of this House why these trade agreements should not be extended. Moreover, I am sure that many of them are confident that these agreements are not popular and already they are threatening to make it an issue in 1940.

May I remind them in the outset that many of the same Republican leaders, and would-be leaders, cried from the

house tops a few months ago against the policy of the same Secretary of State and the same President of the United States who were at that time urging Congress to lift the embargo on arms to belligerent nations and to amend the Neutrality Act. Many of the self-admitted Republican leaders boldly predicted at that time that if the embargo were lifted and the Neutrality Act changed in any way that it meant that America within a short time would become embroiled in war with certain European countries. Not only were such dire predictions made but the Halls of Congress rang with eloquence from the opposition that the policy of the Secretary of State and the recommendations of the President, if carried out by Congress, meant certain war within a very short time. Some said it would be months but others predicted it would be only weeks until we were destined to become embroiled in another world conflict.

But the Republican leaders guessed wrong then, and I submit in all candor that they might be guessing wrong now. In fact I feel very deeply that before the coming national campaign gets well under way the Republican leaders will soft-pedal their opposition to the extension of this act so important to the welfare of our country with respect to trade relations with our neighbors. They will soft-pedal and change their attitude on that issue just as they are now soft-pedaling their opposition to the lifting of the embargo. Again I insist, if they guessed wrong then they might be guessing wrong now, politically and otherwise.

Mr. Speaker, at least one amendment will be offered that I propose to support. The amendment in question will be presented by my colleague the distinguished gentleman from Oklahoma (Mr. DISNEY). This amendment is for the purpose of making definite and certain that the oil industry of the Nation shall be protected and its rights safeguarded. The amendment of the gentleman from Oklahoma proposes to prevent the executive department from treating the excise taxes on oil, coal, lumber, and copper as tariffs.

Oklahoma is one of the most important oil States in the Union. The independent oil operators of my State are especially anxious that this amendment be adopted. It has been stated in opposition that the Secretary of State is not only familiar with but very much interested in the purpose of this amendment and that he can and will without the amendment protect the rights of the oil interests of the Nation. But Secretary Hull may not always be Secretary of State. The fact is, many in my State hope that he may one day be President. But irrespective of who may be Secretary of State, it occurs to me that the oil industry of the Nation is entitled to a definite assurance, written into the bill, that it will be protected from the importation of cheap foreign oil. The Disney amendment, if adopted, will have the effect of doing that very thing. Again, may I express the hope that the amendment will be adopted.

### Construction in Peace and War

#### EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

ADDRESS BY HON. LOUIS JOHNSON

Mr. CARTWRIGHT. Mr. Speaker, on February 9, 1940, I had the privilege of listening to a very interesting and inspiring address by the Honorable Louis Johnson, The Assistant Secretary of War, delivered at the twenty-first annual convention banquet of the Associated General Contractors of America at the Peabody Hotel in Memphis, Tenn.

I ask unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD and include Colonel

Johnson's notable and timely address, which was on the subject, Construction in Peace and War.

There being no objection, the address was ordered printed in the RECORD, as follows:

Members of the Associated General Contractors of America, first, let me congratulate you on becoming of age. This, I understand, is your twenty-first annual meeting. In your relatively short life you successfully have faced the vicissitudes of depression and the temptations of prosperity without lowering your high standards of structural quality and of skillful craftsmanship. The ideal of a cooperative peace between industry and labor which you foster in the construction field is worthy of emulation in every phase of American life. May your example serve to reduce friction and war in all human relations.

Two years ago I had the privilege and the pleasure of addressing you in Washington. I took as my theme the bigness that is America. It was a time in American history when to some of our citizens the grass in foreign pastures seemed perhaps a bit greener than in our own. Apologists for strange un-American "isms" were preaching doctrines subversive to our traditions and dangling before us pictures of the apparent success of undemocratic ways of life. They thought that we worshiped success as an end in itself, and tried to convince us of the great attainments of totalitarian principles in action.

I, therefore, spoke, or, perhaps, I should say, literally preached, to you on the bigness that is America. I discussed our economic resources and our material gains. I emphasized the bigness of heart, the breadth of vision, and the strength of character that spells America. I pointed out that totalitarianism and human success can never be consistent with each other. I presented the view that any system that destroys individual freedom or crushes the human soul is doomed to failure.

Today we have the proof. The so-called totalitarian ideals appear in their true light. They are shattered idols that have fallen of their own weight and have bogged down in a morass of uncertainty. May they never rise to plague us; and, if they do, may we find the spiritual unity and the disciplined will to deny them entrance into American thought and life.

On this very night when a pall of darkness hangs over cities of Europe and Asia we gather in the light and gaiety that is Memphis. It was not always this way, even here in this great river city. There was a time, in the lives of our fathers, when they could not have gathered here from the North and from the South without credentials. Next to the State of Virginia, where I was born, Tennessee was the principal battleground in the War between the States. One historian has counted 454 battles and skirmishes that took place within its borders. Those days, thank God, are gone forever. Tonight we mingle freely, not as Yankees, nor as secessionists, not as northerners, nor as southerners, but just as Americans, drawn together by common interests with no regard for geographical, political, or religious distinctions. Are there many countries in the world today where men and women can meet on a similar basis of friendship and good fellowship?

We are able to do so because we are Americans. Americans! I wonder if we fully realize the meaning of the word. Many times in my own addresses I have tried to find a complete definition, but always I have felt my own inadequacy at expressing its full significance. A short time ago I read an editorial in the Sun, of New York City, entitled "He is an American," which, to my mind, comes nearest to expressing the ideal. With your indulgence I shall read it to you:

"He is an American.

"He hears an airplane overhead, and if he looks up at all, does so in curiosity, neither in fear nor in the hope of seeing a protector.

"His wife goes marketing, and her purchases are limited by her needs, her tastes, her budget, but not by decree.

"He comes home of an evening through streets which are well lighted, not dimly in blue.

"He reads his newspaper and knows that what it says is not concocted by a bureau but an honest, untrammelled effort to present the truth.

"He has never had a gas mask on.

"He has never been in a bombproof shelter.

"His military training, an R. O. T. C. course in college, he took because it excused him from the gym course, and it was not compulsory.

"He belongs to such fraternal organizations and clubs as he wishes.

"He adheres to a political party to the extent that he desires—the dominant one, if that be his choice, but with the distinct reservation that he may criticize any of its policies with all the vigor which to him seems proper; (or, to) any other (party) as his convictions dictate, even if it be his decision, (to) one which holds that the theory of government of the country is wrong and should be scrapped.

"He does not believe, if his party is out of power, that the only way in which it can come into power is through a bloody revolution.

"He converses with friends, even with chance acquaintances, expressing freely his opinion on any subject without fear.

"He does not expect his mail to be opened between posting and receipt, nor his telephone to be tapped.

"He changes his place of dwelling and does not report so doing to the police.

"He has not registered with the police.

"He carries an identification card only in case he should be the victim of a traffic accident.

"He thinks of his neighbors across international borders—of those to the north as though they were across a State line, rather than as foreigners; of those to the south more as strangers, since they speak a language different from his, and with the knowledge that there are now matters of difference between his Government and theirs, but of neither with an expectancy of war.

"He worships God in the fashion of his choice, without let.

"His children are with him in his home, neither removed to a place of greater safety, if young, nor, if older, ordered ready to serve the state with sacrifice of limb or life.

"He has his problems, his troubles, his uncertainties, but all others are not overshadowed by the imminence of battle and sudden death.

"He should struggle to preserve his Americanism with its priceless privileges.

"He is a fortunate man.

"He is an American."

For America to attain its full blessings, we must have a certain degree of material prosperity; and that, in turn, is reflected principally in your own construction industry. You are, indeed, a barometer of American well-being. As goes the construction industry, so goes the Nation.

When the construction industry contributes less than \$4,000,000,000 to the national income, as it did in 1933, we are in for hard times. When it approaches ten billion, as it did in 1939, recovery is well in sight.

Toward the success of the construction industry the Army has contributed liberally. From 1927, when we launched our housing program, through June 1939, we spent approximately \$366,000,000 on construction. Between July 1 and December 31, 1939, we awarded construction contracts for about \$15,000,000. In the appropriation bills now before Congress the President has recommended a total of almost \$30,000,000 for this purpose.

The variety of jobs that the Army has offered run practically the whole gamut of the construction field—barracks, temporary and permanent; refrigerating systems; special tiling and flooring; hospitals; warehouses; hangars; laboratories; radio-transmitter buildings; garages; shops; fire stations; central heating and power plants; water and sewage systems; electric distribution and street-lighting systems; concrete paving; concrete aprons, runways, and drains; concrete floors and ramps and gasoline fuel systems.

One of the most interesting construction jobs awarded during the past 6 months was that of an ammunition loading plant at the Savanna Ordnance Depot, in Illinois. A loading plant is a construction unique to the Army. There is probably nothing like it outside the ammunition field. The building must be of such type that in case of explosion it will break up into small pieces—not big chunks—and disintegrate and disappear over the countryside. Hollow tile serves admirably for this purpose. Buildings must be widely separated lest an explosion in one destroy the others. Barricades must be set up within the same building separating hazardous operations from each other. Floors must be sparkproof. Electric installations must be grounded.

In time of war the Army will need a number of such loading plants. Exclusive of barracks it is estimated that a load of approximately one and one-half billion dollars will be imposed on the construction industry for plants of various kinds that are necessary for the manufacture of special munitions that are not ordinarily produced. Civilian plants which will be called upon to convert their facilities to wartime use may create still further demands upon the construction industry; and the industry will meet them. Of that I am confident.

It will not, however, be without sacrifices. War is too serious a matter to benefit anyone. It is our job to plan industrial mobilization to reduce the difficulties of transition from peace to war, if war becomes necessary. We fully realize our difficulties. We have not forgotten the World War and the dislocation of industry caused by taking men haphazard from their peacetime occupations. We recall with chagrin the piling up of building supplies at railroad yards with an inadequate number of cars to transport them or facilities to handle them. Nor are we overlooking present experiences in Europe. We have noted carefully the dire effects on the industry and especially on employment that followed the British order, suspending private construction.

If another crisis were to face us as in 1917, we would be much better prepared. We would have the services of your experienced organization with its far-flung agencies, which we did not have during the World War. We would have the advantages of sounder banking, of more experienced control over securities, and of more sympathetic understanding of civilian problems by military men.

But let me frankly confess, we are not ready to face an M-day on the construction front. And let me add immediately, we shall be better prepared before your next annual meeting.

We, in the War Department, assure you that we will face the problems of standards, of contracts, of procurement, of skilled labor and material in the construction field without any further delay. We have been so busy on the munitions front of guns, planes, tanks, and fighting equipment that we have neglected the construction phases of industrial mobilization which are equally important toward the ultimate success of battle. That situation we propose to remedy, and with your help we shall do so.

In touching upon war needs, I trust I have not made any one of you feel that we plan or look forward to a war. We believe, however, that the better we perfect our fighting and supporting

machinery, the less the risk of war, and, more important, the less the sacrifice if a grave emergency develops. Should a crisis arise, I am confident we shall meet it with all of our characteristic strength, energy, self-sacrifice, and heroism.

In mentioning heroism in the city of Memphis, I must not overlook the opportunity to present my compliments to its fighting citizen, Joseph B. Adkison, one of the World War's greatest heroes. Adkison was an enlisted man in Company L of the old Second Tennessee of the National Guard. Overseas he had risen to the grade of sergeant, Company C, One Hundred and Nineteenth Infantry, Thirtieth, or "Old Hickory," Division.

Let me merely read you his Medal of Honor citation. It is far more eloquent than any words I could offer:

"When murderous machine-gun fire at a range of 50 yards had made it impossible for his platoon to advance, and had caused the platoon to take cover, Sergeant Adkison alone, with the greatest intrepidity, rushed across the 50 yards of open ground directly into the face of the hostile machine gun, kicked the gun from the parapet into the enemy trench, and at the point of a bayonet captured the three men manning the gun. The gallantry and quick decision of this soldier enabled the platoon to resume its advance."

A war produces but few Adkisons. The rest of us must carry on faithfully, each doing his bit, and contributing his service where it is needed most. We rightfully pay homage to our Adkisons, but let us pray that no other American mother's son will ever be called upon to face "murderous machine-gun fire" at any range anywhere.

Let us hope that our healthy preparedness program, coupled with the farsighted diplomacy in which Tennessee's own son, the illustrious Cordell B. Hull, is playing such a vital role, will preserve peace for us and our children today, tomorrow, and, let us pray, forever.

### J. Will Taylor

#### EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

RESOLUTION BY HON. C. N. FRAZIER

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks I wish to submit a copy of a resolution on the life and character of Hon. J. WILL TAYLOR, late a Representative from Tennessee and Hon. John Gore, late a United States district judge, presented by Hon. C. N. Frazier, attorney of Camden, Tenn., and adopted at the Noel Hotel in Nashville, Tenn., at the Lincoln dinner, February 12, 1940.

Whereas the angel of death has visited our State and taken from the ranks of our great party two of our outstanding leaders, Congressman J. WILL TAYLOR and Judge John Gore; and

Whereas tonight, as we celebrate the one hundred and thirty-first anniversary of the birth of the immortal Lincoln, we feel it our duty to pause for a little while and turn this meeting into a pantheon of memory for these departed friends. These two notable actors have made their final exits from the stage of human life since our Lincoln dinner 1 year ago, and we lay aside for a short while the regular proceedings of this meeting to pay tribute to the blessed dead. It was Congressman J. WILL TAYLOR who, 12 years ago, in 1928, conceived and started the Lincoln dinner as a State-wide affair.

Judge John Gore and Congressman J. WILL TAYLOR, who but a little while ago so ably filled their positions in life and who seemed so full of health, hope, and energy, in the very noontide of their splendid careers, have gone from the clamorous councils of men to the peaceful silence of the grave, but they shall not sleep alone there, for "All that tread the globe are but a handful to the tribes that slumber in its bosom." "And all who breathe today, and all the generations to come must feel the sting that stilled their hearts and go hence and make their beds with them."

We shall not have the privilege of association with our beloved Congressman, J. WILL TAYLOR, and Judge John Gore again in this world, but the influence of their personalities still lingers here tonight like the fragrance of the roses that are faded and gone. History may not write them as great as the greatest statesmen and lawyers of their day, for they did not employ their faculties as the representatives of any special interest as judge or statesmen, yet they were great in the splendid equilibrium of their intellectual and moral powers and they both towered above the majority.

They did not attempt to parade their powers as judge or as statesmen, yet they possessed the ability that but few do possess. Their sky lines were high and even and showed but few gaps in their journeys from the cradle to the grave. They both were repeatedly honored by being elected to office and were as reliable as the attraction of gravitation; they knew no shadows of turning. They

were as generous as autumn, as hospitable as summer, and as tender as a perfect day in June. They begged for the opportunity to do good, to stand by a friend, to support a cause, and to defend what they believed to be right. They always answered the roll call of duty in the offices they filled in life, until they were suddenly summoned to answer the roll call of eternity.

These two outstanding Tennesseans played their roles in life and played them well. They were stars in their chosen professions of their day and time. They believed in the people's sovereignty and their virtue, and always were ready to defend them against the assaults of the lawless elements with the courage of a lion. These stalwart citizens of the great Republican Party were absolutely honest men. Their words were gold, their promises were fulfillment, and there never has been—there will never be on the poor earth—anything nobler than an honest, loving soul.

They were lawyers and Congressmen of high attainments and close students of human nature. They both had the faculty of concentration, and there was no shield of sophistry that was proof against the shafts of their reason, no helmet of hypocrisy that would withstand the battle ax of their logic. They were as steadfast, as faithful as the stars. Their lives were full of honor and kindness and of helpful deeds. The world is poorer tonight than it was when they were among us.

We understand that they had to toil in the fields in their young lives for their daily bread; that they both had to fight to extend their way into prominence in their chosen professions, and thereby demonstrate the glorious truth; that while poverty might humble the body, it cannot beggar the intellect nor starve the aspirations of the soul. Undaunted by the frowns of apposition, they pressed on in their profession until they climbed to the very highest summit of popular favor with their people. Both Judge John Gore and Congressman J. WILL TAYLOR were indeed household words in Tennessee.

We cannot but think, as we mix and mingle around these festive boards tonight, but what the immortal Lincoln with our two departed sons of our Grand Old Party, Judge Gore and Congressman TAYLOR are looking over the battlements of heaven upon this scene here tonight. These men no doubt knew well the following philosophy of Abe Lincoln:

"I am not bound to win, but I am bound to be true. I am not bound to succeed, but I am bound to live up to what light I have. I must stand by anybody that stands right—stand by him while he is right—part with him when he goes wrong."

In many respects this is, in our judgment, one of the jewels of our literature and philosophy and contains a sentiment that was, no doubt, controlling in the lives of these departed friends of ours, and had much to do with their lives and conduct while they so-journed on this earth.

We who knew Congressman TAYLOR best know that his philosophy which he often expressed, was: "Forgive your enemies and never forget a friend." That was no doubt the ideal of Judge Gore as well. Both these outstanding citizens were loyal to their friends, to their homes, and to their Nation. Their sympathies were as broad as the sun's smiles; their manly acts and gentle deeds of love and mercy were like the gentle rain that falls alike upon the just and unjust.

These good men were not permitted to grow old and feeble, but while we cannot fathom the mysteries of life and death, let us hope and believe that He who holds the universe in the hollow of his hand, knows best when to call us all, and that our fellow lawyers, statesmen, and friends have only obeyed the summons to a higher destiny in a brighter and better world.

Major Shofner, we offer the foregoing statement and resolution on the lives and character of Judge Gore and Congressman J. WILL TAYLOR, and suggest that a copy of same be furnished Congressman TAYLOR's wife; a copy to Judge John Gore's sisters, and a copy to the press.

### California Fruit and Cotton Growers Endorse Reciprocal-Trade Program

#### EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. BUCK. Mr. Speaker, since the time allocated me to speak on the floor has necessarily been limited, it has not been possible for me to call the attention of the Members of the House to two rather important endorsements of the reciprocal trade agreements program and the extension of the Reciprocal Trade Agreements Act, which come from purely agricultural bodies directly engaged in marketing agricultural commodities and whose members and officers are thoroughly familiar with the importance of export trade.

The first letter was sent to every California Representative in Congress, and reads as follows:

DRIED FRUIT ASSOCIATION OF CALIFORNIA,  
San Francisco, February 17, 1940.

Hon. FRANK H. BUCK,  
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN BUCK: We are addressing you on behalf of the dried-fruit industry of California in support of the Reciprocal Trade Agreements Act. It is our feeling in this industry that the policy, that is, the gesture of the trade-agreements program has been of inestimable value to us in sustaining the position of our industry in the export markets, as compared with the situation we would have faced in the instance of a continued retaliatory trade restrictive battle with other nations.

On January 27, the writer was privileged to make a statement of the views of this industry before the Ways and Means Committee of the House of Representatives. For a more complete statement of our experience and our favor for the reciprocal trade-agreements program, we will refer you to the committee record. (Vol. No. 14 of first publication.)

In our opinion, the procedure in effect in the administration of the trade-agreements program is sound, and should be considered from a nonpartisan viewpoint. We trust the measure will have your support as it will shortly be considered and voted upon in the House of Representatives.

Thanking you for your fair consideration of this request, we remain,

Respectfully yours,

DRIED FRUIT ASSOCIATION  
OF CALIFORNIA,  
H. C. DUNLAP,  
Vice President.

The second letter is from the California-Arizona Cotton Association, and reads as follows:

California-Arizona Cotton Association. Officers: George Cleveland, president; Ed Peterson, vice president; W. C. Holland, secretary-treasurer; Neva B. Turner, assistant secretary. Directors: George Cleveland, Los Angeles, Calif.; Ed Peterson, Phoenix, Ariz.; R. M. Blankenbeckler, Fresno, Calif.; M. M. Bradfield, Fresno, Calif.; C. L. Clancy, Fresno, Calif.; J. Robert Fleming, Phoenix, Ariz.; Carl L. Mauldin, Los Angeles, Calif.; M. G. Scott, Los Angeles, Calif.; Charles E. Wakefield, Jr., Bakersfield, Calif. Cotton Exchange Building

LOS ANGELES, February 7, 1940.

Congressman FRANK H. BUCK,  
House Office Building, Washington, D. C.

HONORABLE SIR: After a careful study of results obtained through operation of the reciprocal trade agreements this association is of the opinion the Trade Agreements Act passed in 1934 and presently scheduled to expire June 12, 1940, should be renewed.

We, therefore, strongly urge your support of House Joint Resolution 407 now pending before Congress, extending for 3 years the authority of the executive branch of the Federal Government to negotiate such agreements with other nations.

Thanking you for your consideration, we are

Respectfully yours,

W. C. HOLLAND,  
Secretary-treasurer.

There Should Not Be a Return to Logrolling—  
Method of Reciprocal-Trade Agreements Held  
Sound

## EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

EDITORIAL BY W. L. BLAIR IN PASADENA POST

Mr. VOORHIS of California. Mr. Speaker, I believe it would be worthwhile for every Member of the House to read the following fair and careful analysis of the reciprocal trade question by the editor of the Pasadena Post:

[From the Pasadena (Calif.) Post]

THE LOOKOUT

(A column of comment edited by W. L. Blair, managing editor of the Pasadena Post)

BOTH PARTIES MUST SEEK SOUND TARIFF STAND

Neither political party can come out of this reciprocity debate with flying colors. We noticed yesterday in our brief glance at the background of the reciprocity program that some of the great men of

both parties have sought for many years to inaugurate more scientific methods of tariff making. Their aims have been to protect the consuming public and to promote international trade. Those on the Republican side have stressed the necessity of using the tariff to equalize costs of production at home and abroad; those on the Democratic side have stressed the need of opening up foreign markets for types of goods which this country can produce to the best advantage.

But these real statesmen in both parties have alike recognized that while Congress should determine general tariff policy, the making and adjusting of rate schedules should be in other hands.

This is why it has always seemed to me that the Hoover tariff commission idea and the Hull reciprocity idea are no more than different approaches to the same end. The former gives greater emphasis, perhaps, to the equalizing of costs, and the latter gives greater emphasis to the opening of foreign markets, but otherwise they are much alike.

I think it was a mistake for the Democrats to push aside the Tariff Commission without further trial. I think it is equally a mistake for the Republicans to attempt to push aside the reciprocity program at this time. Either is far preferable to the alternative, which is the enactment of fixed tariff schedules by logrolling in Congress.

The effort ought to be to bring the two policies as closely as possible into harmony, to utilize whatever is best in each, and to be prepared to go forward after the war with a strengthened and safeguarded program which recognizes equally the need of equalizing costs and the need of promoting international trade.

Proponents and opponents of the reciprocity program are alike loaded down with statistics. One set of statistics appears to prove that the program already has resulted in great benefits to the people of the United States as a whole. The other points to unnecessary importations of farm products, augmenting our domestic oversupply of such products.

There are those who argue that because our country is so nearly self-sustaining we do not need to encourage international trade. Europe and Asia are fighting over markets, they say; but we will get along, buying what we want and selling only what we must sell to pay for what we want.

This I must continue to regard as false reasoning, no matter who uses it. Europe and Asia are not fighting because of any evils which have arisen out of free markets. Insofar as they are fighting over markets at all, they are fighting over closed or discriminatory markets, over their market fears or their selfish market ambitions. The present military wars are in some measure the extensions of economic wars based on just such false theories as that of national self-sufficiency.

The Hull reciprocity program cannot be judged by the extent to which it lets goods in or keeps goods out. Letting goods in to this country may be a detriment or may be a benefit. The first test is in the effect upon the economic life of the people as a whole, in their capacity as producers and in their capacity as consumers.

The second test is in the effect upon the issues of war and peace, for the world as a whole and especially for the United States.

W. L. B.

## Lincoln Belongs to Every Church

### EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

RADIO ADDRESS BY RABBI LOUIS WOLSEY, OF CONGREGATION RODEPH SHALOM, PHILADELPHIA

Mr. DITTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include copy of an address delivered by Rabbi Louis Wolsey, of Congregation Rodeph Shalom, Philadelphia, broadcast over N. B. C., February 10, 1940, under the auspices of the United Jewish Laymen's Committee:

On Monday, the Nation again bows in reverence before the sainted figure of the immortal Lincoln as it recalls his natal day; and as a son of Israel who rejoices in the holy privilege of American citizenship, may I take advantage of this moment to bring my people's mead of tribute to his deathless memory. There was that in his life and thought which makes us all lay aside our religious differences, and commits us in reverence to the denominator which is the common possession of our total citizenship. Though we might classify him as American, as partisan of a definite political creed, and as one born in a certain State, and even faith, Abraham Lincoln was more than all these in that he belonged to none of them, but rather to that undifferentiated and undenominated minority who dare do all that may become a man. Without pedigree or even distinguished progeny, he was and is America's unique personality. Unlearned in the art of composition, he wrote

a classic prose that is still the wonder and the admiration of the stylist. Untrained in the disciplines of academy and college, he spoke with authority and exactness. Melancholy, he was a man of wit and laughter. Lonely, he walked among the kings and the lowly of earth. Member of no church, he belonged to every church.

Those millions of us who need some thought of the yesterday, or some staff of today on which to lean, stand silent before a presence that seems to come from the nowhere, but which because its influence reaches everywhere, must belong to the ages. They called him an infidel when he lived in Springfield because he gave his name to no church membership, but because he was one of the most devoutly religious men of earth, there is hardly a communion that does not claim him for its very own, and from its pulpit canonize him as America's noblest exemplification of the religious life. If I might paraphrase the poem, I would have it read thus:

Credo and confessions, high church or the low  
I cannot say; but you would vastly please one  
If some pointed Scripture you would show  
To which of these belonged America's Lincoln.  
I think to all or none. Not curious creeds,  
Or ordered forms of church rule he taught,  
But love of soul that blossomed into deeds  
With human good and human blessings fraught.

When asked by a Member of Congress why he did not join some church, he said: "Because I find difficulty without mental reservation in giving my assent to their long and complicated creeds. When any church inscribes on its altar, as a qualification for membership, the Saviour's statement of the substance of the Law and the Gospel, 'Thou shalt love the Lord thy God with all thy heart, and with all thy soul and with all thy might \* \* \* and thy neighbor as thyself,' that church will I join with all my heart and soul."

As long as creeds could wage a wordy battle as to the good or evil of the institution of slavery, as long as men believed in the social injustice of winning a fortune out of the toll and sweat of human chattel—so long could the mental and moral honesty of that great man find no peace in the compromises or in the theological juggling of the creeds. So long as the men of God could preach peace and condone an immoral institution which must lead to war, how could they hope to win to their company a man who believed in consistency between the creed and the deed. He asked for God's blessing upon all the churches, but it was because he would have them godly. He asked for the prayers of all of them, but only because he believed that the churches should bring their people nearer to God. Member of no church, he was the teacher of all the churches in his insistence upon their religious honesty. He was not unaffiliated because he believed too little, but because he believed too much. And it was not that he held himself better than the church member, but that he respected the good life more. They needed the church, but he needed them.

When he bade his fellow townsmen farewell on his journey to the Capital, he said to them: "Washington never could have succeeded except for the aid of Divine Providence, upon which he at all times relied. I feel that I cannot succeed without the same divine aid which sustained him; and in the same Almighty Being I place my reliance for support, and I hope you, my friends, will all pray that I may receive that divine assistance without which I cannot succeed, but with which, success is certain." It was a call to sincerity in prayer, to devoutness when approaching God, to the religious inspiration of men praying together, to the fraternity of the church life which asks God for a blessing, and then girds up its loins to discharge a sacred duty. When prayer and reverence and the Word of God bind men together in a holy cause, then, in the Lincoln sense, one has a religion whether in the church or out of it.

Oh, not that the churchlessness of Lincoln is a call to people to forsake the altar, or to refuse to bow down before it. He must believe himself to be another Lincoln who feels no need of prayer with his fellow men; but rather that this man of almost deified stature is a challenge to all of us to wed our speech with our hand, to refuse to translate our church or our synagogue into a mean and narrow tribalism, to exploit it as an instrument for our snobbery, or as an indulgence of our belief in our tiny superiorities. Such irreligious phenomena exist both within as well as without the appointed shrines. "For why should the spirit of mortal be proud?"—our American hero so frequently recited. The prophet Ezekiel, too, stressed the lesson when he said: "Come, I pray you, and hear what is the word that cometh forth from the Lord; and come unto Thee as the people cometh, and sit before Thee as my people, and hear Thy words, but do them not—for with their mouth they show much love, but their heart goeth after covetousness."

The prophet belonged to no synagogue. He was unlabeled as to his religious beliefs. No guild claimed him as its own. But he spoke a word that is the property of all the churches and synagogues of the world for all time—a word that called people to God and the righteous life. Even so, Abraham Lincoln without sermonizing or preaching or commanding or indoctrinating, becomes to all men of all faiths—and of none—the reverently religious figure that inspires men by the honesty of his life, by the humility of his greatness, by his holy trust in Divine Providence, and by his ineffable belief in the brotherhood of the human race. Like a prophet of humanity challenging the self-complacency of his own and of every day he could appeal to his people: "With malice toward none; with

charity for all; with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in." No holy servant at sacred altar has ever said a nobler word or uttered a more deeply religious profession of faith.

Our churches and our synagogues are frail ladders on the rungs of which we climb to truth and God. When they can see the good in one another, when they can cease to carp and chide and disvalue one another, and stretch their hands out to each other in love and service, and forget their pride of opinion and bigotry of sect—then the spirit of the great Lincoln shall have undeathly death, and rendered himself—and his posterity—the Great Arisen.

Lincoln is not dead. He lives  
In all that pities and forgives.  
He has arisen, and sheds a fire  
That makes America aspire.  
Even now, as when in life he led,  
He leads us onward from the dead;  
Yes, over the whole wide world he bends  
To make the world a world of friends.

## Problem of Agricultural Distress and Migration of Displaced Farm Families Demands Attention Now

### EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

### IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

#### LETTER FROM THE EDITOR OF THE FARMER-STOCKMAN OF OKLAHOMA CITY

Mr. VOORHIS of California. Mr. Speaker, there is no use trying to hide disturbing facts. Indeed, the time is now for us to know as nearly as we can exactly what the situation is and the full extent of the problems we face. I have seldom read a more pointed exposition of the intimate connection between the distress of our agricultural people, the exhaustion of resources, and the mechanization of agriculture on the one hand and the interstate migration of uprooted families on the other than is contained in the following letter from the editor of the Farmer-Stockman of Oklahoma City to Dr. W. W. Alexander, Farm Security Administrator:

THE FARMER-STOCKMAN,  
Oklahoma City, Okla., January 30, 1940.

Dr. W. W. ALEXANDER,  
Farm Security Administration, Washington, D. C.

DEAR DR. ALEXANDER: I have for some time eagerly read everything which came to my notice dealing with the South's problem of a dense population in relation to its resources. There is a growing belief on my part that in every sense this is the Nation's No. 1 problem.

I began to grow up with the problem as a boy on a Tennessee tobacco farm. I remember vividly all that went with growing tobacco which sold for 2 to 5 cents a pound—and very little of it at 5 cents. From there I came to Oklahoma and helped to grow cheap cotton. The last crop I actually helped to produce was in 1914, which brought 6 cents a pound. Since then I have watched the passing scene in the South.

Beginning 5 years ago, I watched the migration which began at that time from Oklahoma and which terminated in the "Oakies" in California. We here could actually see them leaving the State and know why they were leaving. All that we have learned about the problem to date argues that still more must leave despite all efforts whatsoever which may be made both privately and publicly.

The occasion of this letter is the address which you made at Nashville on January 25. I read this with keen interest, knowing your devotion to the South and your willingness to look at facts.

In my view, the situation is going to get much worse before it gets any better. Even though we might regain a large part of our export cotton market, the mechanization of agriculture is certain to continue. More farmers left Oklahoma because of the tractor than because of drought.

I am not able to observe that erosion in the South has by any means been stopped. Yes, we made a start, but the damage continues and each year it results in farms no longer capable of supporting a family on even a subsistence level.

I observe also that most houses in the South are 20 years old or over, that few are painted and few are repaired. I cannot locate any capital available for either repairing or rebuilding these

houses. Whenever one becomes inhabitable or is destroyed, another family must take to the road.

It's a long story and I know that you are familiar with all of its details. It all adds up in my mind to the fact that the Nation as a whole must prepare to take care of the surplus population of the South. The resources of the South simply will not maintain the present population. If that statement be true, then assuredly it will not maintain the surplus population which is produced every year.

Whatever the migration from Oklahoma farms has been in the last 5 years, and whether that migration represents a net decrease in the number of farmers or merely the increase in the farm population, it would have been far greater were not some 33 percent of all our farmers heavily subsidized where they now live. I refer to various programs with which you are quite familiar, which add to the family income of these farmers. Were the total of this subsidy withdrawn, farm families would pour out of the hills in search of food which they cannot produce or don't know how to produce where they are.

The point to my letter is this: The real situation is understood by only a few, a few in the field of agriculture who have the facts and are willing to look at them. The general public does not suspect the facts nor their significance. It does not suspect that it has already assumed the burden of support of a part of the South's rural population. If I am half-way right in my analysis, they must get ready to support an even larger number in the immediate years ahead.

I write because of the desperate need of a reexamination of the situation in order that the facts—and they will be unpleasant facts—can be brought to the notice of the Nation. I agree with you wholly that time itself offers no solution. Maybe we will never find an easy, happy solution, but at least we can soften the blow by an understanding of the facts.

Can't we do more than we are doing to get the story over to the public?

Sincerely yours,

CLARENCE ROBERTS, *Editor*.

### Record of the Trade Pacts

### EXTENSION OF REMARKS

OF

HON. JERE COOPER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

EDITORIAL FROM THE WALL STREET JOURNAL OF FEBRUARY 19, 1940

Mr. COOPER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of February 19, 1940:

[From the Wall Street Journal of February 19, 1940]

#### RECORD OF THE TRADE PACTS

If, during a period of most intense competition, a company were able not only to hold its share of total business done in the Nation but actually to increase it, stockholders would be justified in believing that the management was pursuing a pretty sound policy.

Despite all criticism, this is exactly what has happened to our export trade during Trader Hull's program of reciprocal agreements. All sorts of difficulties, in the form of barter agreements, clearing arrangements, quotas, and what not, have hampered international trade these past years. We have tried to avoid them. Against this background, our export business is establishing an enviable record. We have been steadily increasing our share in world markets. Significantly, the greatest percentage gain has taken place in those countries with which Mr. Hull has concluded reciprocal trade agreements.

Figures which only now have become available tell the story of development of our export trade. Let us turn to the record and compare the proportions of the leading export markets which we held in 1938 with those of 1933, which can be considered the pre-agreement year.

There are 16 foreign countries whose foreign trade the reciprocal agreements affected during that period. In 1933, these countries had total imports of \$5,980,400,000 and in 1938 a total of \$6,073,400,000, a gain of 1.5 percent. Imports from the United States during that period increased from \$732,100,000 to \$1,196,400,000, a gain of 63 percent. Imports from all other countries declined 7 percent from \$5,248,200,000 to \$4,876,900,000.

In 1933, the United States supplied 12.2 percent of the total imports of these countries and other nations 87.8 percent. By 1938, the United States supplied 19.7 percent and other countries 80.3 percent. Should any one assert that possibly special circumstances affected the figures for each of these 2 years, it can be pointed out

that the American percentage share increased during each of the intervening years while that of other countries lost ground steadily.

The record with agreement countries contrasts with that with nonagreement. During that time, there were 20 major countries not in the reciprocal program. The United States increased its hold on these markets but much more slowly.

These 20 countries had total imports of \$8,894,800,000 in 1933 and \$12,290,100,000 in 1938. Countries other than the United States increased their sales from \$7,816,300,000 to \$10,509,900,000. This country expanded its share from \$1,078,500,000 to \$1,780,200,000. Our share of these 20 markets in 1933 was virtually the same as that of the 16 agreement countries at 12.1 percent, compared with the 12.2 percent for agreement nations. In 1938, our share had increased to only 14.5 percent, as against the 19.7 percent for the agreement bloc.

The two trends which have developed are of the utmost importance to the future of our export trade. They developed during a period of intense economic warfare when every conceivable form of club was being swung by other countries to capture foreign markets and when certain countries were loud in their protestations that the day of freedom of international trade had passed and that foreign trade of the future was to be only an instrument of state policy.

Mr. Hull, on the contrary, has proceeded on the theory that export trade will develop more satisfactorily where there is the greatest attainable freedom in the exchange of goods. So far, the results bear him out.

### United States is No. 1 Source of Red War Supplies

### EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks, I include the following article from this morning's Times-Herald:

[From the Washington Times-Herald of February 21, 1940]

UNITED STATES IS NO. 1 SOURCE OF RED WAR SUPPLIES—MATERIAL BOUGHT HERE FOR FINNISH INVASION

(By John M. Fisher)

Communist Russia is leaning heavily upon American supplies in prosecuting its war with Finland, a survey showed yesterday.

Despite President Roosevelt's recent denunciation of the Soviet as an "absolute dictatorship" and expression of sympathy for Finland, the fact remains the administration has made the United States the No. 1 source of vital materials now used in its invasion of Finland.

#### SOVIET RECOGNITION FACTOR

This situation has been brought about by the following factors: (1) Recognition of the Soviet Government; (2) a commercial treaty according the Soviet Union unconditional most-favored-nation treatment, which means tariff concessions; (3) licensing of armaments for sale to Russia; (4) purchase of Russian gold which establishes credits in this country; (5) and valuable technical assistance obtained from the United States.

In 1939 Russia imported \$56,638,000 worth of American goods, and, significantly enough, approximately 50 percent of these imports into Russia were made in the last 4 months of the year, which covered preparations for the assault on Finland.

Last year's exports to Russia compared with \$69,691,000 in 1938, when the United States was also the leading exporter to the Soviet Union. The decline is chiefly accounted for by smaller shipments of metal-working machinery.

#### PRINCIPAL ITEM

But such machinery—necessary for armaments—remained the principal item on the Soviet's shopping list in the United States, amounting to about \$29,000,000 in 1939. Soviet purchases also included increased amounts of other war commodities, particularly of copper, molybdenum ore, wheat, and aluminum.

Since Europe's conflagration began last September 1, nearly 90 percent of Russia's purchases in the United States consisted of materials and machinery useful in war industries or of vital need under wartime conditions. A special analysis available at the Commerce Department shows that approximately thirty-three millions out of more than \$36,000,000 in exports to Russia in the 5 months ended January 31, 1940, consisted of items needed for warfare.

Exports in January amounted to \$11,313,000, compared with \$10,528,000 in December, and only \$2,816,000 in January 1939. Nearly all of the shipments to Russia this January consisted of

copper and metal-working machinery. A complete break-down for that month is not available, but in the preceding 4 months of the European war leading exports to Russia were as follows.

[In thousands of dollars]

	Septem- ber	October	Novem- ber	Decem- ber
Wheat.....		215	436	172
Gasoline.....	481	686	782	
Molybdenum.....	192	1,945	732	1,906
Aluminum ingots.....	535	283	2	
Refined copper and scrap.....		21	1,544	4,519
Brass and bronze.....		35	564	265
Metal-working machines.....	377	1,096	1,836	1,811
Electrical apparatus.....	22	311	437	758
Total selected items.....	1,608	4,592	6,333	9,531
Total all exports.....	1,785	5,455	7,627	10,528

According to Commerce officials, all of Russia's 1939 purchases of gasoline were made in the 3 months ended with November. The Soviet invasion of Finland began on November 30. They said, however, that none of the fuel was aviation gasoline. All of it was shipped from the Pacific coast to Vladivostok in Siberia.

#### PURCHASING AIRCRAFT

The list of arms exports licensed by the Secretary of State shows that Russia has confined its armament imports from the United States to aircraft and their accessories, indicating that machinery and materials imported sufficed for their own production of munitions and armaments.

Russia led in the amount of exports under license during 1939. Its total armament purchases of \$1,097,015 consisted of \$845,966 in assembled or unassembled aircraft, \$74,514 in parts, and \$176,536 in airplane engines. In January of this year engine shipments to Russia amounted to another \$45,192, comprising all of the arms imports for that month.

The War Department says it does not have any figures on how much other equipment is American made. But it is known that Russia has bought considerable amounts of tractors, trucks, and other motor equipment which could be easily transformed from civilian to military use.

#### EMPLOYED BY RUSSIA

Similarly, the State Department claims no count on the number of American technicians, engineers, and other experts borrowed by Russia from the United States for consultation on industrial and mining developments. But their employment by Russia is a matter of public knowledge. The State Department now thinks that most of these American technicians have left or are leaving Russia. The Army has a military attaché located at Moscow, but there are no officers "loaned" to Russia, according to the War Department.

How does Russia pay for its huge purchases in this country? The answer is principally through goods sold to this country, which amount to something less than half of exports to Russia, and through sale of the gold mined by Russia, which is one of the world's leading producers. The United States Treasury has denied until recently that it has purchased any gold from Russia within the last 2 years.

### Labor Opposes the Extension of the Reciprocal Trade Agreements Act

#### EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

LETTER FROM THE TRADES AND LABOR COUNCIL OF EAST LIVERPOOL, OHIO

Mr. LEWIS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received from the East Liverpool Trades and Labor Council, of East Liverpool, Ohio:

TRADES AND LABOR COUNCIL,  
East Liverpool, Ohio, February 17, 1940.

HONORABLE SIR: We appeal for your support against the transfer of job opportunities of American workers to workers in foreign countries. We appeal for your support against the virtual setting aside of the protective advantages of our Asiatic exclusion law, of our restrictive immigration laws, and the fair labor standards law. History warns us that at the conclusion of the present European and Asiatic wars American markets will be flooded with cheaply

produced products of the foreign nations, impoverished by war costs, unless the competitive products of American workers are protected by adequate tariff rates.

Our reciprocal trade treaties, as the enclosed analysis by representative American labor demonstrates, provide that products of the excluded workers of Asia and the quota basis entry of workers of European countries are permitted entry into American markets at total costs which are less than American costs of production. What protection is accorded the jobs and the living standards of American workers through our Asiatic exclusion law, our restrictive immigration laws, our fair labor standards law, if dollar-minded foreign and American distributors can market in America foreign-made competitive products at total costs, which are less than American costs of production?

We are interested solely in protecting the job opportunities and maintaining the standards of living of our American workers now made possible, under normal conditions, for American workers. We ask your help and your legislative support.

Our city is the center of the American pottery industry. Our industry, affiliated with the American Federation of Labor, is organized 95 percent. We have the capacity to produce all the tableware needed for the American market. We have thousands of idle pottery workers seeking work. Yet, for illustration, while our American laws prohibit the entry of Asiatic workers into our country, the products of such workers, according to a survey made and published by the United States Tariff Commission, supply some 40 percent of the tableware yearly sold in the United States. Such a condition naturally transfers the badly needed job opportunities of American workers to the slave wage paid workers of Japan. That which is true of our condition is likewise, no doubt, true in many other industries.

We appeal for your support. We ask that you vote against the continued authorization for our entry into reciprocal trade treaties, unless such legislation provides that no foreign-made products, competitive with products of American workers, which American-made products are commercially available, be admitted to American markets at total costs which are less than American costs of production or American wholesale selling prices of competitive American products, and unless such legislation provides that such trade treaties are ratified by the United States Senate.

Trusting that we may have your support in protecting the job opportunities of American workers and your support in making effective our Asiatic exclusion law, our restrictive immigration laws, and our fair-labor standards law by restricting the authorization to continue reciprocal trade treaties as above outlined, we are,

Sincerely yours,

GEORGE C. SALSBERY, President.  
JAMES H. GRAFTON, Secretary.

### The Finnish Situation

#### EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. BRADLEY of Michigan. Mr. Speaker, what is the true situation with respect to aid for Finland at this time? All of us are entirely sympathetic with Finland. All of us admire the brave stand she is putting up. All of us abhor the ruthless invasion by Russia. What can or are we as a nation doing about it? What can or are we as a people doing about it?

To understand the present situation, let us go back into a little history. Not long ago Italy ruthlessly invaded Ethiopia. We enacted and invoked a neutrality bill prohibiting the shipment of arms, ammunition, and implements of war to belligerent nations. We also passed the Johnson Act, prohibiting loans to nations who were in default to the United States. A civil war broke out in Spain, supported on the one hand by the Communists and on the other by the Fascist-Nazi axis. And then Germany took over Austria and Czechoslovakia, and with Russia took over Poland.

Let us understand that in all of these cases of aggression we had not as a nation or as a people given any of the vic-tims any material aid either in the form of cash, munitions, or implements of war.

When England and France went to the aid of Poland, Congress was called into extraordinary session because it had failed to enact a new neutrality bill demanded by the administration last year.

We were told that the arms embargo, which had previously been hailed, when enacted, as "the greatest action ever taken toward the peace of the world," should be lifted to permit defenseless nations to arm themselves against aggression by dictator nations. A cash-and-carry provision was invoked on arms and munitions—as it had been before on everything else—and American ships, seamen, and passengers, were prohibited from entering danger zones included in the new neutrality bill. Also, we insisted that credit could not be extended by individuals, firms, or corporations to belligerent nations who were affected by the Johnson Act. In addition that bill legalized for the first time the manufacture and shipment of gas and liquid fire and flame throwers. I am proud to say that I voted against it. I will discuss that a bit later. In his address at the opening of this session, the President took occasion to chide the late Senator Borah and other so-called isolationists who he said in effect had claimed superior knowledge of impending world events and yet could not foresee the future as accurately as himself.

Now, here is the case of Finland, an outstanding democracy. The one nation that qualifies under the Johnson Act with respect to war debts. The little nation that borrowed \$100,000,000 from this Nation during, and after, the World War and has repaid it entirely on schedule. It finds itself invaded by a nation many times its size.

On January 17 the President sent a message to the Speaker of the House from which I quote as follows:

There is without doubt in the United States a great desire for some action to assist Finland, to finance the purchase of agricultural surpluses and manufactured products, not including implements of war. There is at the same time undoubted opposition to the creation of precedent which might lead to large credits to nations in Europe, either belligerents or neutral. No one desires a return to such a status.

The apparent need of Finland is for implements of war and manpower, rather than agricultural surpluses and manufactured products. Now, the administration dictated the neutrality bill. There is no question about that. Would it not have been possible to have exempted in that act—if we could foretell the future—those who came under the Johnson Act provision and thereby make it possible for us now, under that act, to permit Finland to purchase munitions on credit or loan, which she needs, while at the same time maintaining the status desired by the President and by us all?

Senator Brown introduced a bill to provide a \$60,000,000 loan to Finland, generally without strings attached. A Senate committee apparently desired to avoid such a status, with which I agree, because I do not want to open the doors of our Treasury to every nation that goes to war unless we tie it strictly to those who qualify under the Johnson Act. Hence, striking out the enacting clause, the Senate put out a new bill providing for an increase of capitalization authorization of the Export-Import Bank in the amount of \$100,000,000 and stated that no loan to be "hereafter made" to any nation or the nationals thereof should exceed at any one time \$20,000,000. The papers immediately picked this up as the Finnish loan, and said that the Senate had agreed to a \$20,000,000 loan for Finland.

I have carefully examined the records today to determine the facts introduced in evidence before the House Committee on Banking and Currency, before which this bill is being considered and hearings held.

In testimony today, February 20, letters were introduced from the Finnish Government and the Russian Government, both officially denying that the nations were at war. Consequently, Mr. G. W. Hackworth, legal adviser to the Secretary of State, testified that a loan to either nation would not technically violate our neutrality law nor international law. Personally, I believe most of us in this Nation—and in Finland—agree that a war is in progress. I believe we all agree that there is a war in progress in China. Yet our Neutrality Act has not been invoked either by Presidential proclamation or act of Congress in either case. Mr. Hackworth testified that it had not been invoked in the Finnish-Russian dispute because of the fact that American interests were not in jeopardy. When questioned about the Sino-Jap war, he

stated that American interests would be more greatly jeopardized if the act were invoked. Rather a paradox, I would say.

Through the Export-Import Bank, we have loaned to China \$25,000,000 with no restrictions attached, and they have purchased implements of war with it. We have loaned the Finnish-American Trading Co. of Finland, through the same agency, \$10,000,000 of which \$8,000,000 has been expended and the balance will be expended shortly. But in the case of Finland and all other nations now, they are specifically prohibited from expending these credits for war materials.

Mr. Jesse Jones, head of the R. F. C. and, therefore, of the Export-Import Bank, testifying before the House committee said:

There is no reason for Finland to be mentioned in this bill at all. This is the same bill we came up here with last year. We consider it an authorization to make further loans to Finland up to \$20,000,000, but not a direction.

He testified further that in this case and in all cases they predicated their loans upon adequate security and decided from events as they occurred from day to day the conditions which determine adequate security. And that, therefore, a loan of \$20,000,000 would not necessarily be authorized to Finland unless they had a reasonable assurance that Finland would succeed in her war. When asked why they would prohibit purchases of arms and munitions by Finland, Mr. Jones testified that they get their interpretation of the President's proclamation or of international law from the State Department or the President. The gentleman from Connecticut, Representative MILLER, asked Mr. Jones if he did not consider that the position the Government was now taking was entirely contrary to the position taken during the special session. Replied Mr. Jones, "On the neutrality question, I would think so." So, then, it would appear that even though we increased the Export-Import Bank capitalization by \$100,000,000, Finland is not definitely sure of a loan, and if granted will not be permitted to purchase war materials with it. I might add that the loan, if granted, is only in the form of credit to American industry to finance materials which they ship to Finland and the loans themselves are guaranteed either by the Finnish Government or possibly, as in the previous case, by a Finnish-American trading company which is either owned by the Government of Finland or by Finnish capital.

In addition it appears from the testimony of Mr. Jones that they have made loans to date to 55 different countries, and they have already made commitments in advance under this proposed increased authorization of from forty to fifty million dollars additional, including others of the Scandinavian countries, but in no case permitting the purchase of war materials, despite the fact that those nations are not now at war with anyone. By far the principal requests come from South American countries. To me it appears as if the rest of the world regards Uncle Sam as opening his pocketbook again and saying, "Come on, boys, come and get it."

May I add also, at this point, that Mr. Jones testified that they did not consider that the Export-Import Bank or R. F. C. was in any way restrained by the Johnson Act because they were a Government corporation. This despite the fact that Congressman WOLCOTT offered an amendment to the 1939 Neutrality Act to specifically include all corporations, Government-owned or not, but we were assured by administration spokesmen it was unnecessary, and the amendment defeated. Hence, while private banks are prohibited, R. F. C. may loan all its wants to whom it wants.

But now returning to Finland. There are two ways of helping a man who is in a fight. Either help him or desist from helping his adversary. We are selling implements of war to Russia today; right now they have 450 of our bombing-plane motors, which, no doubt, they are using over Finland. In addition, for a number of years, we have been paying Russia \$35 an ounce for the gold which she shipped us and which cost her about \$12 an ounce to produce—which is a rather handsome profit to build up a war chest. Anyone can build a plane, but our superior motors and the gas to fly them is real aid.

Now, in conclusion, let us take stock of whether or not we are actually involved in this war. Not only are England and France financing in this country, but there is also the possibility they are dumping some three billions of securities upon an already sick market in this country. Our foreign trade suffers from the expansion of Allied exports to the rest of the world to pay war bills. By having to pay cash in this country for war materials they purchase their agricultural commodities elsewhere on credit to conserve cash for American planes and ammunition. They sell commodities elsewhere for cash, no doubt loaned by us, to secure more cash for purchases in this country. Our warehouses are stuffed with unsold and unsalable tobacco and cotton. Prodigious increases in the cost of war preparation and defense are before us in Congress. We sold millions in materials to the Japs to kill the Chinese and to the Chinese to kill the Japs.

Aside from our gold purchases, Russia owes us over three hundred and eighty-five millions, which she will not pay in order that she may use that cash to buy materials from us to destroy Finland. Finally, we were told that if we would keep American ships out of the danger zones, we would keep out of war. Well, about a few days ago we had transferred—*theoretically sold*—to foreign flags 114 ships out of our Merchant Marine and the other day we were informed that the United States Line had “sold” 8 ships, including the President Harding, to a Belgium company for trade into the war zone. It had previously attempted to turn these over to the Panamanian and Norwegian flags. The United States Line chartered the ships, worth \$4,000,000, on a bare-boat charter without any American crew for a down payment of only \$137,000. Or, in other words, continued to hold a first mortgage of 97 percent interest on those boats. Is that not a violation of the spirit at least of our Neutrality Act? Certain it is that these bottoms will go into the war zones carrying American dollars and subject to sinking by any of the beligerent warships. On the other hand, hundreds of American seamen are added to our already overheavy unemployment rolls. And the owners come to us for hundreds of millions annually to subsidize the rebuilding of the American Merchant Marine.

What a farce it all is!

Legally, Finland can borrow from private banks all it wants for whatever it wants to buy, but, hopelessly outnumbered, I doubt any banker would dare risk his depositors' money on such a loan. If we as a Government loan, are we not opening our Treasury to all future victims of aggression—or earn their just displeasure in future world trade—assume the “status” feared by the President? I would prefer to see an outright grant by the people of the United States with no strings attached. But let us stop fiddling around about it. Let us stop fooling Finland and let us stop fooling ourselves about the whole thing.

### The Gold Hoard

#### EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

EDITORIAL FROM THE COLUMBUS (OHIO) SUNDAY DISPATCH  
OF FEBRUARY 18, 1940

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Columbus Sunday Dispatch of February 18, 1940:

[From the Columbus Sunday Dispatch of February 18, 1940]

THE GOLD HOARD—A SINISTER SHADOW OVER UNITED STATES WELFARE

Among the many follies the New Deal has perpetrated on the Nation, none is more outstanding than that embodied in the accumulation of nearly \$18,000,000,000 in gold, which, in time, will

adversely affect the financial and property welfare of every citizen, alter to their detriment prices to farmer and consumer, lessen labor's purchasing power and depreciate all classes of salaries and other income.

If New Deal policy continues to add to this increasingly unusable gold hoard, most of it buried in the hills of Kentucky, and which has been continuously swollen by 6 years of world-wide purchases at a fantastically high price, this Nation, at a not remote time, will find itself confronted with one of the greatest fiscal crises of its history.

It is probable that this crisis may be preceded by a basically unsound rise in quoted prices for nearly everything vendible. It was with the hope that it would bring about an inflationary prosperity, that the original Roosevelt brain trust thrust on the country the unsound system of paying \$35 an ounce for gold. The then currency value of \$20.67 per ounce for that metal had been established by generations of experience by mankind with the cost of producing gold. It was the belief of these theorists that such inflation could be controlled from time to time by altering the gold content of the dollar, although this had never been accomplished by any nation in all financial history.

Until a weak New Deal Congress, upon his demand, gave the President authority to devalue the Nation's currency by permitting him to fix the amount of gold in the dollar, the metal had been used for decades here and generally throughout the world as a circulating medium on which all currency was based. Prior to the Roosevelt gold devaluing act there was in the United States an average gold stock of coin and bullion of around \$5,000,000,000. This was ample for the commercial and financial purposes and transactions of the Nation and for the settlement of our trade balances abroad, even in the years of the greatest prosperity and business expansion and it circulated freely as coin among our people. This condition had obtained for nearly three quarters of a century previous, during which the United States recovered from the ravaging effects of the Civil War, endured several financial depressions, and emerged from each to enjoy an ever expanding and profitable business. Labor was generally employed and the national resources continuously developed. During these decades America outdistanced all other countries in almost every economic and business field and created more wealth than any nation in any period of history.

There was only one serious threat to financial solvency during the long period in which gold was in free circulation, and it was one which almost exactly paralleled a phase of the New Deal monetary tinkering of today. In the late 1890's, as again during the present regime, the silver-producing and a few strictly agrarian States, using the force of their political voting power, induced Congress again to legalize and force the purchase of silver to coin on the basis of \$1.29 an ounce, when its commercial price was much less than half that amount. The actual operation of the silver purchasing law of 1890 soon threatened bankruptcy to the Treasury. President Cleveland ordered it to stop the silver purchases only in time avert a financial catastrophe. The Silver Act was one of the principal causes of the unprecedentedly severe depression of 1893.

The same silver forces and influences, with the assistance of President Roosevelt, caused a subservient Congress in May 1933, to attach a rider to an agricultural bill by which the President received power to decrease the gold content of the dollar and in a later act to purchase all silver offered the Government at a price much higher than its commercial selling value. There was thus again started the whole process which had, of necessity, been abandoned by the Cleveland administration in order in its day to preserve national financial solvency. The New Deal theorists, defying all precedent and world-wide experience for centuries, proceeded to devalue the dollar by 40 percent and in addition again overvalued silver by accepting it for coinage at \$1.29 an ounce when its market price averaged about 38 cents. Huge quantities of the white metal thus were and still are being purchased in a vain attempt to make one-fourth of the monetary reserve of the Nation consist of silver. Another hole has been dug in the ground, this one at West Point, to hold this unusable accumulation.

For nearly 7 years the United States Treasury has felt the impact of these unsound fiscal laws. Into its gold and silver hoards have flowed into one ownership or another \$12,000,000,000 yielding many billions in profits to the sellers in foreign lands. Millions of ounces of these metals have come to us from Australia, from South Africa, from India, from China, from South America, from Canada, from England, from France, from Holland, from Switzerland, from Germany, from Scandinavia, from Mexico, from Japan, and even from Russia. And this at untold profit to people of other nations, but for Americans a charge against their present and future tax bills to pay these unnecessary subsidies to every corner of the globe.

The accumulation of these immense reservoirs of gold and silver have not only failed to bring to the people of the United States a sound and stable prosperity, but on the contrary have contributed to the 7 years of depression. That history repeats itself is a well-known proverb, therefore, the general national feeling of insecurity and doubt as to what the future holds, the disturbing fact that we still have millions of unemployed, business is stagnant and the savings and surplus capital of the people remain idle instead of being usefully employed for business expansion is sadly reminiscent of periods spread all through history when similar unsound financial theories prevailed. The inner concern over the gold and silver Frankenstein which the New Deal has created is shown by the recent reported suggestion of a prominent ex-

brain trusters that we give back to the nations of Europe a considerable part of this gold, but the result of such benevolence doubtless would be that it would be offered back to us again at the same inflated price of \$35 an ounce.

For the new dealers it is only a matter of politics. For the individual American citizen it is a matter of the deepest concern although he may not yet have taken sufficient time to delve deeply into the operations of these monetary laws which so vitally affect his everyday life. Economists and students of finance who are sincere in their interest in the public welfare realize that we are faced with what was once a fanciful theory but is now a deeply disturbing condition. The theory has failed but the condition remains in the possession of unusable gold and silver at a terribly overvalued price.

How to get rid of it and stop the flood of both metals now pouring on America from every corner of the globe is a problem that no new dealer can solve, and the Nation will be fortunate if at the end it escapes paying a limitless price for this, probably the greatest of the New Deal blunders.

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

RADIO ADDRESS BY HON. PATRICK J. BOLAND, OF PENNSYLVANIA

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by the gentleman from Pennsylvania [Mr. BOLAND]:

As a Member of the House of Representatives, and a member of the Committee on Ways and Means, I want to talk about a piece of current legislation, the continuance of the Trade Agreements Act. The President in his message to the Congress on January 3, 1940, indicated the necessity of this legislation in the following language:

"For many years after the World War blind economic selfishness in most countries, including our own, resulted in a destructive mine field of trade restrictions which blocked the channels of commerce among nations. This policy was one of the contributing causes of existing wars. It dammed up vast unsalable surpluses, helping to bring about unemployment and suffering in the United States and everywhere else."

The House began today the debates for the continuance of the Trade Agreements Act for another 3 years. In my estimation there is no question as to the final outcome when the vote shall have been taken, although the opposition is waging a major and determined offensive against this important part of our foreign policy. Campaign speeches for 1940 are now being made with respect to this program.

Incidentally this offensive is being waged against the advice of some of the elder statesmen of the Republican Party, such as Col. Frank Knox, former Secretary of State Stimson, William Allen White, and others. A number of prominent businessmen who are members of the Republican Party appeared before our committee advocating that the trade-agreements law be further extended. I think I can assure these gentlemen that their wishes will be granted. The weight of the evidence before our committee was for the extension of this act, and I base my prediction on the passage of this resolution through the House largely on this evidence. I am afraid, however, that the majority of my Republican colleagues in the House will not follow the advice of these elder statesmen and business leaders of their party.

I note that Roger W. Babson, a statistician who used to stand high in Republican ranks, after criticizing some of the things done by the New Deal, said in his syndicated article a week ago: "It seems like mighty poor strategy for the Republican shock troops to assault the one position on which the New Deal is economically impregnable—its foreign-trade policy! As a statistician, I believe that the Hull trade pact should be backed to the limit by every straight-thinking, unselfish, and honest American."

There should be no place for politics in this legislation. I say this first as an American citizen and secondly as a Democrat.

The minority members of the Committee on Ways and Means have issued as their report in opposition to the extension of the Trade Agreements Act a purely political document. I search the report in vain for any evidence that its authors have gotten beyond the days of Mark Hanna.

Without the slightest appearance of any sense of humor, they talk about the need for making a study with a view to setting up a substitute foreign-trade program that would "protect our vital interests," be "truly flexible," and "deal with foreign trade upon a realistic basis along constitutional lines."

A "study" of these things. Where, in the name of heaven, have the authors of these "mouth-filling" phrases been for the past 7

years? Where have they been since 1930, when the Hawley-Smoot Act was passed with the guarantee that it would have everybody swimming in prosperity within 30—or was it 60—days?

Their report plainly shows that they cannot or will not grasp the fundamentals of the problems of foreign trade. Every criticism and every suggestion they make in their report is directly or indirectly refuted by the testimony. All that remains, when their so-called facts and arguments are exposed to the light, are the floundering and futile efforts of some modern disciples of outworn and discredited tariff policies to sell the American people another package of Hawley-Smootism. I think the American people will carefully examine any such package, although it may be nicely tied up with a pink ribbon.

The atmosphere is so full of uproar and confusion about trade agreements that I hope it will not be amiss for me to take a few minutes to clarify some of the issues involved. The trade-agreements program was formulated in order that our industrial resources and labor might be directed, by businessmen, in the most profitable channels conducive to American standards of living and efficient production. This program was brought forward for the purpose of fostering an enlightened application of the protective principle, whereby a maximum opportunity of employment, purchasing power, and production would be possible. Furthermore, it was promulgated for the mitigation of unfair discriminatory and war-breeding trade restrictions which had such an enormous growth throughout the world during the Hawley-Smoot era. These objectives ought to be enduring principles; we should not lose sight of them just because the purveyors of fear are exceptionally busy at the present time.

The experience of the last 5½ years contributes to the conclusion that the administrative process of framing trade agreements is sound. Again referring to the hearings before our committee, I was surprised to find so few even making claims of injury because of reduced tariff rates. The majority of those appearing in opposition to the extension of the act admitted that they had not been hurt and only expressed a vague fear of some future injury. Furthermore, the witnesses appearing and favoring extension represented a diverse cross section of the American public, including representatives of civic and peace groups, of labor unions, manufacturers, farmers, shippers, traders, boards of trade, housewives, and others from all sections of the country. If legislators are to be guided by such hearings, the preponderance of evidence suggests strong support for the extension of the act for another 3 years.

#### PUBLIC INTERESTS IN TRADE AGREEMENTS

I want to call attention to another significant reason for my prediction as to the passage of the Trade Agreements Act. This is the preponderance of support of the press, irrespective of party affiliations. During the recent hearings one of my colleagues had more than 50 favorable editorials from various sections of the country made a part of the RECORD, many of them from outstanding Republican papers. In a recent newspaper poll support of the reciprocal trade agreements was tabulated at 82 percent of all the papers analyzed.

A recent Gallup poll showed that a great majority of informed public opinion supports Secretary Hull's trade-agreements program.

Seventy-one percent of those answering the poll were favorable to this program. I hope that a number of our friends on the Republican side of the House will be converted during the next few days, but I know the heat is being turned on some of them who are inclined to agree with the program principally by the powerful lobbies.

#### TRADE GAINS FROM AGREEMENTS

The trade-agreements program has contributed to a general increase in the foreign trade of the United States. Studies made by nonpartisan agencies presented evidence at the hearings before the Committee on Ways and Means to the effect that the program has done a good job. Without going into too many details, it has been proven that export trade with agreement countries has increased much more than trade with nonagreement countries. Attempts were made before the committee to discount these conclusions by hand-picked figures prepared to show an unfavorable picture by those opposing the act. The evidence of this greater increase in trade with the agreement countries could not be weakened by enemies of the program. The over-all results with agreement countries in comparison with nonagreement countries presents the true picture of the results. Of course, special circumstances have been important in affecting individual countries or particular products so that the volume of trade as a whole is the best test of the effectiveness of the agreements.

In the trade agreements thus far concluded with 21 countries, the foreign governments concerned have lowered their trade barriers on a wide range of American farm and factory products. The concessions obtained by the United States include duty reductions, enlarged quotas, and other mitigations of restrictive measures, as well as the binding of existing duties or free entry, on thousands of items which enter into our export trade.

Taking the years 1934 and 1935 as substantially a preagreement period, exports from the United States averaged \$2,200,000,000. During the 2-year period 1937 and 1938, with 17 agreements in effect for most of the time, exports averaged \$3,200,000,000. While friends of the program do not claim that this entire trade increase was due to the advantages for American exports obtained by the United States in trade agreements, it is significant that during the period 1937-38 exports from the United States to countries with which reciprocal-trade agreements were in operation averaged 61.2 percent greater than during the 1934-35 period. Over the same period our

exports to nonagreement countries averaged only 37.9 percent greater.

There was little difference between the rate of increase in imports from the agreement and nonagreement countries for the respective comparison. Surely this shows that trade agreements have not caused a flood of imports.

#### REASONS WHY THE PROGRAM SHOULD NOT BE SIDETRACKED

The central fact about trade agreements which we must remember is that we cannot hope to maintain a satisfactory economic situation in the United States without an adequate volume of foreign trade. This is true of both exports and imports. It is fundamental.

Our national economic machine has long been geared to the production of a number of important commodities in quantities which exceed our domestic requirements. Substantial portions of our output of cotton, tobacco, corn-hog products, wheat, fruits, refined copper, certain petroleum products, machinery of various types, iron and steel products, and many others must be marketed abroad, if these branches of production are to prosper. Once they are deprived of adequate foreign outlets, the people involved in these branches of production would find their purchasing power impaired. As a result, they would buy less of our goods produced in this country and a shrinkage of purchasing power would be the result.

The loss of foreign markets for our exportable surpluses leads to a shrinkage of our domestic market as well. This effect is influenced by the reduced volume of business done, in consequence of the shrinkage of markets, by our ports, our railroads, our other means of transportation, our banks, our merchandising establishments, and so forth. Loss of foreign markets leads to stagnation, depression, unemployment, and general distress, which spreads throughout the whole domestic economic system.

Now the value of exports is said to be no more than 10 percent of the value of our total production of movable goods. This fact leads some people to the dangerous conclusion that, therefore, our export trade is not of any appreciable importance to us, and that its reduction or complete elimination would not hurt us. There is an inherent fallacy in this view. I believe it was ex-President Hoover, as Secretary of Commerce, who said that the exports represented our "margin of prosperity."

It is obvious that our economic system is not organized into two watertight compartments, one of which, representing 90 percent of our productive effort, supplies our domestic market, while the other 10 percent works for the foreign market. If that were the case, we might be able to lop off the 10-percent compartment more easily, if it were desirable to do so, without much injury to the 90-percent compartment. But that is not the case. The branches of production which produce exportable surpluses depend upon export markets, for far more than 10 percent of their total sales, and these industries are essential parts of the whole intricate economic system. Impairment of these branches of production through loss of their foreign markets causes loss of efficiency throughout the entire system. Its destruction would be like a man losing the use of one hand. It simply is not necessary to make that sacrifice. We have found a way to maintain at least a part of our foreign trade through agreements.

Our imports are usually somewhat less in value than our exports. We would not, however, be justified in concluding from this smaller ratio that imports are of little or no importance to us. Here again, as in the case of exports, it is necessary to look at the nature of the things we import and appraise their significance in the light of the necessities of our economic system. We must not get away from the fact that some of the commodities which we import from abroad are not and cannot be produced in this country.

#### TRADE AGREEMENTS AND THE FUTURE

It is with a record of achievement as a background that we are going to extend for another 3 years the authority to enter into trade agreements, to maintain and extend the gains already made, and to enable this country to meet changing conditions in foreign markets as they arise in the coming years. The Trade Agreements Act was originally passed as an emergency depression measure. We are in another kind of emergency now. We shall need the flexibility which the trade-agreements program affords as greatly as we needed it in the emergency of the great depression. What conditions may bring forth in these future years no one can foresee. The countries constituting our largest markets have unfortunately become engaged in war. No part of the world will be able to remain unaffected by this war. As a great neutral nation, we ought to hold ourselves in readiness for influencing peace.

We can be sure that our foreign trade will be profoundly affected by the war. It is to be expected that the character of our exports, particularly to belligerent countries, will naturally be shifted. Some industries will find their export markets greatly reduced, others whose products are more essential to war purposes will be stimulated. This is a condition with which we must deal. Even our trade with neutral countries has already been changed. In some cases we shall find new export outlets by filling the gaps created by the inability of belligerent countries to supply their former customers. In other markets we shall find increased difficulties because belligerents will seek to force bartering arrangements upon countries from which they procure foodstuffs and raw materials.

While we cannot yet foresee all these changes themselves, we can, at least, foresee the inevitable fact of rapid change in the nature and directions of the world's trade and in the trade controls and trading arrangements adopted by both belligerent and neutral nations.

If our country is to be in a position to meet emergency conditions, to resist discriminations against its commerce, and to shield our domestic economy from the disruptive effects of war abroad, the Executive will need a flexible instrumentality for dealing, within the limits of policy laid down by the Congress, with the other countries of the world. We now have that instrumentality in the Trade Agreements Act and we shall need it more than ever during the war and post-war years.

We need to keep alive the principles embodied in the trade-agreements program as an important American contribution to a more stable peace than that which followed the last war. War inevitably brings with it a system of intensified controls over all forms of economic life, including foreign trade. If these controls are not to persist into peacetime there ought to be a reasonable prospect that every nation, by devoting its productive energies to those lines of activity in which it is most effective, may obtain through the ordinary channels of trade those things which it does not produce for itself. No nation should be forced into the position of having to wage war for raw materials and markets. It can be truly said that the principles of the trade-agreements program are indispensable to the establishment of an enduring condition of peaceful commerce and therefore of an orderly world.

I want to conclude by quoting another brief passage from the President's message to the Congress on January 3 on the importance of carrying out the program. He said, in part:

"But what is more important, the Trade Agreements Act should be extended as an indispensable part of the foundation of any stable and durable peace."

"I emphasize the leadership which this Nation can take when the time comes for a renewal of world peace. Such influence will be greatly weakened if this Government becomes a dog in the manager of trade selfishness."

### Third-Term Myth

#### EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

ADDRESS BY DR. D. ORMONDE WALKER, ST. JAMES LITERARY FORUM, FEBRUARY 11, 1940

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by Dr. D. Ormonde Walker, prominent Negro educator and president of Wilberforce University, Wilberforce, Ohio, at Cleveland, Ohio, Sunday, February 11, 1940, at the St. James Literary Forum. The address is as follows:

Mr. President, ladies and gentlemen, I want to congratulate the St. James Literary Forum for keeping open a platform for the discussion of vital questions affecting the welfare of the citizens of America. If democracy is to be saved, it can be saved only through the enlightenment of those who enjoy its benefits. Our American democracy is in danger today in that there is an attempt to stop the hand of progress and turn the thoughts of our citizens to the period which I will designate as the "era of pilfering privilege."

Whenever our country has been faced with a crisis, it has always found a man upon whom it could rely for guidance and for salvation. Such a man has always had the confidence of a majority of all the people to guide the Nation through the dangers that arise in its pathway.

The distressed American people have found a ray of hope in meeting their difficulties through the wise planning of the so-called New Deal. Democracy to them means more than the right to life and liberty. It means the right to eat, for liberty would be nothing and life would be impossible without the right to eat. A democracy, therefore, must secure to every citizen this fundamental right. Any form of government or any society that fails to provide food for its citizens is doomed to be set aside either by the peaceful method of the ballot, as was done in 1932, or by a reversion to the primitive type—each man for himself and God for us all.

There is much that is being said about a third term for a successful President, and those who would prostitute our democracy for their own selfish ends are seeking to create a smoke screen by making a false issue out of the third term. It is therefore my purpose to speak to you today on the third-term myth.

A myth is a "might have been" repeated until it becomes a "has been." The question of the third term was raised at the very beginning of our democracy; in fact, a third term was offered to George Washington, who refused it on the following basis: Being

65 years of age, he declined to run for a third term, and in his Farewell Address of September 6, 1796, he said: "Every day the increasing weight of years admonishes me more and more that the shade of retirement is as necessary to me as it will be welcome. I have the consolation to believe that while justice and prudence invite me to quit the political scene, patriotism does not forbid it." It will be clearly seen that Washington did not think here would be any violation of law or the intention of the Constitution should he become a candidate for a third term, but declined to run because of the increasing weight of years.

The question arose during the time of Jackson, who, at the age of 70, refused to run because of bad health, age, and his promise to support Van Buren at the end of his second term.

Again the question arose during President Grant's term of office, and he said, "I do not want it any more than I did the first; I would not write nor utter a word to change the will of the people in expressing and making their choice. I am not, nor have I ever been, a candidate for renomination. I would not accept a nomination even if there were tendered unless it should come under such circumstances as to make it an imperative duty, circumstances not likely to arise."

It is clearly evident, then, that the people, whenever they feel it necessary, have the right to continue any man in office as long as the service of that man is acceptable.

There are those who raise the question of a dictatorship, but again the public is being fooled, for a dictatorship is self-perpetuating, while no man can be maintained in the office of the President of the United States unless it is by the expressed will of the people.

Democracy has the right to experiment with a third term. If the people do not believe that the President should serve more than two terms the people themselves should have the right to say so, and today we have the best opportunity to put this matter to a test. Mr. Roosevelt may not want a third term, but the people may want to experiment with him for a third term, since he suits their purpose.

The question that faces us today is whether we desire to continue the progressive era in the development of our democracy, whether the forces of liberalism shall prevail in our country, or whether standpatism and donothingism shall again become dominant in our national thinking. I do not believe that the American people are ready to go back into the wilderness and into the chaos out of which the New Deal has brought us. The fight between the conservatives and the liberals in our political system has always been clearly defined. Jefferson, with his lofty sense of agrarian freedom, rescued the American people from the landed gentry and the wealthy merchant and for 8 years the common man enjoyed Jeffersonian freedom.

Again the conflict arose between vested interests and the rights of the common people and out of the hickory-covered hills of North Carolina came Andrew Jackson, who brought about the emancipation of the poor farmer and the wage earner from the shackles of an economy that kept him tied to pauperism. The forces that were allied against Jackson were the same forces allied against Jefferson.

In 1860 the slave economy of the South sought to thrust its dark and vicious shadow upon the North, which resulted in a conflict of arms with the resultant triumph of the forces of liberalism and freedom. Steadily, with painful steps and slow, we have moved forward, having always to battle with the same forces interested in selfish greed and in personal economy rather than national economy.

With the growth of industrialism came the problems of distribution and between 1890 and 1900 there was a great barbecue, a mighty killing as the industrial potentates arose to control the life of our democracy. Under the Republican Party that aided and abetted in this great killing, the poor of the land became poorer while the rich became richer. Poverty became the legitimate child of riches. Invisible government was set up; Senators and Congressmen were controlled; Presidents were elected with the flare of torchlighted processions, while the common man languished with his mortgaged farm, his mortgaged home, and his helpless children. Here and there a voice was heard in defense of the prostrate worker. Ortgill, of Illinois, spoke out; Theodore Roosevelt, of New York, spoke out; Bob La Follette, of Wisconsin, spoke out, and soon a new movement for the emancipation of helpless laborers and prostrate farmers was well on its way. Theodore Roosevelt called it the "square deal"; Woodrow Wilson called it the "new freedom"; and Franklin Delano Roosevelt called it the New Deal, all a part of the same movement to take government out of the hands of a few and put it where sovereignty resides—in the hands of the American people.

The people who would have government serve their selfish purposes are speaking today as Frederick Townsend Martin spoke some years ago: "We are not politicians or public thinkers; we are the rich; we own America; we got it God knows how, but we intend to keep it if we can by throwing all of the tremendous weight of our support, our influence, our money, our political connections, our purchased Senators, our hungry Congressmen, our public-speaking demagogues into the scale against any legislature, any political platform, any Presidential campaign that threatens the integrity of our state."

The third-term myth would have been exploded by Theodore Roosevelt had he been a true liberal at heart. His liberalism was a milk-and-water liberalism. He lacked the courage needed for a

continued fight in the interest of the common people. All the forces of reaction, all the illiberal elements converged to deny him the nomination of his party which forced him into the open to seek the establishment of a third party. His third party in the election became the second party, and if he had continued his fight this question would not be before the American people today.

The present President of the United States came upon the scene during a very dark hour in our Nation's history. The forces of pilfering privilege had wrecked our economy and were ready to flee from the scene of the wreckage. He came at a time when ordered government was at a crucial testing point. It was his duty to rescue civilization and to save democracy. Now that the perpetuity of our democratic government has been assured, they are saying to us, let us return to the days of individualism, of personal enterprise, the days of individual initiative when again we will have the right to enslave the workers and to bind the farmers with hoops of mortgaged steel. But the millions of common people in America will say like the brave General Joffre during the last World War, "They shall not pass."

The vaporous twaddle about national bankruptcy is only a smoke screen to hide the intentions of those who would prostitute our Government for selfish ends. The people are satisfied to have their Government remain at Washington, and not to have it removed to Wall Street. We are now in charge of our Government, and we intend to use it for permanent security. No nation whose bonds are selling on the open market from \$1 to \$19 over par is in danger of bankruptcy.

Despite the persistence of unemployment and its legitimate son, Relief, the level of our American life has been raised, the national wealth is being distributed over a wider surface. Under the old order there were tremendous peaks of wealth with deep chasms of poverty. Today these peaks are being leveled off, and the chasms are being filled.

The social gains made during the past 7 years should not be allowed to go with the wind of Republican windjammers. The New Deal is democracy crusading militantly. Some are saying that the New Deal has not worked, that unemployment is as great today as when the New Deal took over the reins of government, but remember that the old deal had more than 52 years of trial in which to do its work. Why stop the New Deal with only 8 years' trial. Let the New Deal remain in power for 52 years and a newer and a happier America will be the result.

The Good Book has said: "By their fruits ye shall know them," and I add: "Not by their roots." Let us examine the fruits of the old deal. The old deal brought us bank failures where the life savings of the old and the young went with the wind. The old deal brought the slums. The old deal brought the sharecroppers, the migrant farmer, and grapes of wrath. The old deal brought us the usurious money lenders. The old deal brought us inequality in transportation rates. The old deal brought us high tariff and low wages. The old deal brought us unregulated stock exchange where the price of the food of the poor was raised to create riches to make a Roman holiday. The old deal brought us invisible rulers who felt no responsibility either to God or man. The old deal gave us government of the few, by the few, for the few. The old deal gave us government without relief.

What are the fruits of the New Deal? Today banks are secured with the solid backing of the Government of the United States. The stock exchange has been regulated and placed under governmental supervision. Nonexisting stock cannot now be sold on the existing stock market. Old-age security has come as a result of the New Deal. Educational opportunities have been extended to the poor under the National Youth Administration. The prostrate farmer has been given relief in the Agricultural Adjustment Act. The slums of our great cities are being cleared under the Federal housing project. The harassed home owner burdened with a mortgage has been relieved by the Home Owners' Loan Corporation. Farm credit banks have been further extended. Inequality of railroad rates has been removed. Labor has been granted the right to organize for collective bargaining. Unemployment insurance has come to mitigate some of the suffering due to technological displacement of workers. Taxes are now being paid according to ability to pay. Farmers in the hinterland of our country now have the use of electricity, through the Tennessee Valley Authority and other Federal agencies designed to carry light where there was darkness. Unemployment is being relieved by the extension of constructive governmental projects, and everywhere in America there is hope for the future.

I cannot close a discussion of this kind without reminding you that when one half of the world is at war and the arteries of our trade are being broken, and when there is at the head of our Government a true heart and a steady hand, it would be exceedingly unwise to remove that steady hand that has kept us out of war to place our future in the hands of the schoolboy candidates that are offering themselves for consideration in the opposition party.

When President Grant was being urged for a third term he said, "I would not accept a nomination even if it were tendered, unless it should come under circumstances as to make it an imperative duty." The imperative duty calls Franklin Delano Roosevelt to face the American people, put before them the facts as only he is able, enlighten them as only his voice can enlighten, and to assume anew the leadership of our Government to the end that the gains we have made may not be lost and to save us from the ravages of a war into which we will be inevitably drawn should unwise hands be placed to guide the ship of state.

My sincere plea to the common man of America is that we shall create an imperative demand to force Mr. Franklin Delano Roosevelt to remain at the helm of the affairs of our Government.

## Justice and Righteousness of the Hull Trade-Treaty Program

EXTENSION OF REMARKS  
OF  
HON. WADE H. KITCHENS  
OF ARKANSAS  
IN THE HOUSE OF REPRESENTATIVES  
Wednesday, February 21, 1940

### STATEMENT BY THE NATIONAL COTTON COUNCIL OF AMERICA

Mr. KITCHENS. Mr. Speaker, the farmers of America pay a bonus to certain tariff-protected interests on many things they have to buy. Likewise, all other consumers. For example, in 1909, the Waltham Watch Co. sold in Europe in competition with Europeans a large number of their watches for a price one-third less than the company would sell same watches in this country. A man by the name of Keene of New York City followed up the Waltham watch salesmen in Europe. He purchased from the European merchants those Waltham watches and brought them back duty free to the United States. In New York City, he sold those watches at retail for considerably less than any American could purchase such watches at wholesale in this country. Having investigated the matter I bought one of Keene's European-sold Waltham watches, and saved one-third of the American price.

Again, Mr. Speaker, in 1909 the Singer Sewing Machine Co. shipped to the Philippines, a distance of 10,000 miles, some of their sewing machines, paid the freight, and sold them for 60 percent of the price at which sold in the United States. An American in the Philippines, Prof. T. D. Anglemeyer, having resigned as teacher, and being ready to return to the United States, investigated and found it cheaper to purchase a Singer sewing machine in the Philippines, pack it, and pay the freight again across the Pacific Ocean than to purchase a similar machine in the United States. That is what he did. Therefore, Mr. Speaker, the American farmer is vitally interested in our foreign trade, tariffs, and the program of Hon. Cordell Hull. He is forced to pay a heavy bonus to certain protected industries to enable foreigners to buy certain of our products cheap and compete, at our expense, with foreigners. The wheat, corn, and cotton farmers, as well as all consumers, under the Smoot-Hawley Tariff Act have been required to pay the largest bonus in our history so as to enable foreigners to get some of our factory products much cheaper than we can buy them. The bonus has been too high. We cannot wonder, then, at the American Farm Bureau, the General Federation of Women's Clubs, railway and shipping organizations, and other labor organizations, as well as the people in general, complaining of the destruction of our foreign trade at their expense for the benefit of only a few.

In this connection, Mr. Speaker, I ask unanimous consent to include as a part of my remarks a statement of the National Cotton Council of America.

#### WHAT THE RECIPROCAL TRADE AGREEMENTS PROGRAM MEANS TO THE COTTON BELT AND TO THE NATION

The National Cotton Council, in requesting support for House Joint Resolution 407 which provides for the continuance of the reciprocal trade agreements program, submits the following in support of its position:

##### 1. POPULATION AND AREA OF COTTON BELT

Approximately one-third of the farm population of the United States—two and one-half million farm families aggregating more than ten million persons—are engaged in the production of cotton and cottonseed. More than 20,000,000 people of the Cotton Belt are directly dependent upon the cotton industry for a livelihood.

The Cotton Belt embraces more than one-third of the total area of the continental United States, extending from Virginia on the east to California on the west, and from southern Illinois and southern Kansas on the north to the Gulf of Mexico and the Rio Grande on the south.

##### 2. LARGE PERCENTAGE OF AMERICAN COTTON MUST BE EXPORTED

Normally 40,000,000 acres were planted to cotton. Loss of export markets for cotton resulted in the accumulation of a tremendous cotton surplus which depressed the price of the commodity to a level that threatened the economy of the Cotton Belt and seriously affected the economy of the entire Nation. In an effort to remedy this situation, the 40,000,000 acres normally planted to cotton have been reduced to approximately 24,000,000 acres—a reduction of 16,000,000 acres. This curtailment of acreage and production has seriously adversely affected the economy of this section and could not have been achieved without the expenditure of hundreds of millions of dollars supplied from the Treasury of the United States and made as "soil conservation" payments, "cotton price adjustment" payments and cotton loans.

Notwithstanding this drastic curtailment in acreage, our annual production is still much in excess of domestic consumption. The figures for the past 3 years speak for themselves:

	Production	Domestic consumption
<i>Crop year:</i>		
1937-38	18,252,075	5,747,978
1938-39	11,623,221	6,858,426
1939-40	11,500,000	8,000,000

<sup>1</sup> Estimated.

<sup>2</sup> Estimated—a high level rarely reached in the history of the industry.

At the beginning of the current crop year—namely, August 1, 1939—the carry-over in America amounted to 13,032,513 bales. If export markets are not recovered and maintained for from six to eight million bales of cotton annually, there will of necessity have to be a further curtailment of acreage with consequent economic disturbance, labor displacement, and serious geographical shifts in the production of agricultural commodities.

##### 3. WHAT RECIPROCAL-TRADE AGREEMENTS MEAN TO COTTON

The continuance of the reciprocal trade-agreements program is our greatest immediate hope for solving cotton's all-important foreign-trade problem. We believe that, through the instrumentality of reciprocal trade agreements, it is possible to develop and maintain export markets for our surplus cotton and cottonseed products without serious domestic economic disturbance.

##### 4. WHAT RECIPROCAL-TRADE AGREEMENTS MEAN TO THE UNITED STATES

Normally the United States can and does produce more of a great number of farm and nonfarm products than the American public can use. Surpluses of such production must (1) be sold in other countries, (2) pile up in unmarketable carry-overs in this country, or (3) be sold by producers at ruinously low prices. Unless exported, such surpluses force down prices, employment, and income of American producers. Sound expansion of United States trade with foreign countries accomplishes the following:

(a) Directly benefits American producers whose goods are exported.

(b) Improves domestic markets. Any American producer, farmer or nonfarmer, whose goods find a foreign market becomes a better customer for the goods of other American producers.

(c) Increases the supplies available to American consumers at reasonable prices, of goods produced to better advantage in other countries or not produced at all in the United States.

Foreign trade must of necessity mean two-way trade. This country cannot have the benefit of foreign trade without, in return, importing. There is no sound and enduring way for maintaining export markets for our surplus commodities except by buying in foreign markets those commodities, the purchase of which will not seriously disturb our domestic economy.

To increase foreign markets for products of the United States is the primary purpose of the trade-agreements program. This purpose is sought through the reciprocal adjustment of excessive trade barriers.

##### 5. WHAT RECIPROCAL-TRADE AGREEMENTS MEAN TO GENERAL WORLD TRADE

The abandonment of the reciprocal trade-agreements program would, in our judgment, be the equivalent of saying to the nations of the world that the United States is unwilling to negotiate with them further for the restoration of normal international trade. Such an act on our part will, justifiably, we think, be construed by the other nations of the world as a declaration of purpose by the United States to develop to the highest possible degree nationalism, to become self-contained, and to withdraw behind our excessively high tariff wall from the commerce of the world. Such action on our part would, in our judgment, constitute an open invitation to all the other nations of the world to do likewise. The effect would be a further disastrous decrease and paralysis of all trade between nations.

##### 6. WHAT RECIPROCAL-TRADE AGREEMENTS MEAN TO WORLD PEACE

We believe that there must come an end to the wars which now affect both Europe and Asia. Following these wars and in connection with their termination, there will be discussions between the

belligerent nations looking to the restoration of peace and of commerce. These negotiations and conversations will involve the economic and social structure of every nation in the world. Results obtained from these negotiations will determine the future security or insecurity, industrially, socially, and economically, of the peoples of every nation in the civilized world.

It is essential that our Government have a part in these negotiations and discussions in order that our governmental structure and our domestic and national economy may be safeguarded. Regardless of the outcome of the war in Europe, there is serious danger that international trade, as it has heretofore been conducted by democracies, will be greatly imperiled, and that probably its only salvation will depend upon the attitude and influence of the United States in connection with the negotiation of peace. Our sphere of influence, as well as our possible opportunity of protecting and preserving the principles of true democracy, will be seriously jeopardized if we abandon our reciprocal trade-agreements program and thus, in effect, serve notice on the rest of the world that the United States is withdrawing from international commerce. To pursue such a policy would be to renounce our interest in, and right to, participate in the negotiations which are to come for an economically sound and lasting world peace.

### The Brotherhood of America

#### EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

Mr. BENDER. Mr. Speaker, no weeks in the American calendar offer the people of our Nation a greater opportunity to emphasize the universal brotherhood of our land than the month of February. This is a month of heroes, when the youth of the United States turns its eyes back upon the history of our country to glory in its traditions. No nation on the face of the earth can boast of men more devoted to the needs of their people than America's Abraham Lincoln and George Washington. Their very names conjure up pictures of loyalty to and love for the principles of liberty which were the cornerstone of their lives.

It is fitting indeed that we should dedicate this month to the brotherhood of man. Consider the two men whose birthdays we remember with undying affection this month. The differences in their own lives, the disparity in their background, their training, their experience, are far less significant than the similarities in their goals. They provide in themselves a demonstration of brotherhood. Lincoln, born in poverty, self-educated, raised himself to the ranks of immortal greatness by the burning zeal of his cause—the preservation of the Union and the freedom of its people. Washington, reared in comfort, thoroughly educated, the gentleman in action, rose to the unchallenged claim of national fatherhood by the courage of his convictions—the absolute certainty that independence was a requisite of self-respect.

Both men were Americans of the highest order. They gave their lives to the establishment and preservation of the principles in which they believed. To the citizens of our Nation they brought the faith that comes with a belief in liberty, equality, justice, and brotherhood.

We live today in an hour when vicious power seeks once more to dominate world affairs. It is an age when millions of men and women have determined to sacrifice the ideals of humanity in favor of a glorification of brutality. Nazi Germany and Fascist Japan have deified the bomb and communicated the Book. Communist Russia has forsaken theory and adopted terror. In tiny Finland and helpless Ethiopia, wars, publicized and unpublicized, are raging on six fronts.

War is not even regarded as requiring apology. It is accepted and championed by arrogant forces for the first time in generations as an "ennobling" institution. The spectacle horrifies men who believe in the future of humanity. Men who look upon truth, kindness, justice, goodness as the aims

of civilization must band together today as never before in contemporary life.

Nothing is more necessary in these troubled days than a restatement of American fundamentals. We in these United States pledge ourselves to the brotherhood of man. We believe in democracy because we regard all men and women, white and black, brown and yellow, whatever may be their place of origin, as the common children of one great Father. We cherish the ideals of equality of opportunity, equality of rights, because we reject the false doctrines of "racism," the "superman," the "pure strain." For us the individual men and women who make up the whole of human life enjoy each a personal claim to membership in the great family of mankind which defies every effort to brand some as "inferior" or to hail others as "superior."

George Washington and Abraham Lincoln understood these concepts. Lincoln loved to quote the great words of the Great Teacher:

Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and thy neighbor as thyself.

This was brotherhood. This was true democracy.

The people of the United States refuse to succumb to those who would teach group hatreds. We shall not fall before those who would set church against church, class against class, if we remember the ideals of Lincoln and Washington.

In our Nation, we need no rigid pattern of human conduct, directing men's footsteps into one narrowing channel. We need no Fuehrer-Prinzip, no oath of allegiance to the Communist revolution. Our differences are not liabilities. They are assets to be guarded tenderly, so that from the divergences in our outlook may come sympathy and understanding.

Freedom of speech, freedom of assembly, freedom of worship, freedom of press are ours because we respect the views of our neighbors, because we find our own experiences richer through the common interchange of our ideas with those of our fellows.

Washington and Lincoln would be appalled at the condition of our world today. We must labor to safe-guard American principles, so that in the Nation to which they gave their last full measure of their devotion, their lives will not be forgotten.

The President of the United States has declared:

With gratitude to God for the liberties we enjoy and with a full measure of mutual respect for each other's faith, let us gather together in our churches, synagogues, schools, public halls, and homes during the week of February 18 to celebrate our brotherhood under God as citizens of our beloved land. Let us here resolve that in a time of world division and pain this Nation shall be rededicated to the proposition that all men are brothers; that religious prejudice and group intolerance may not here destroy that unity in freedom which is the strength of our national character.

From every American must come the response, "Amen."

### Treaties and Agreements Not the Same

#### EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. ROBERTSON. Mr. Speaker, the following quotation from the case of *Holmes v. Jennison* (14 Pet. 540, at p. 571), in which the opinion was delivered by the famous Justice Taney in 1840, should settle the question that treaties and agreements are different, and the latter are not to be ratified by the Senate:

In the very next clause of the Constitution the States are forbidden to enter into any "agreement" or "compact" with a foreign nation; and as these words could not have been idly or superfluously used by the framers of the Constitution, they cannot be construed to mean the same thing with the word "treaty." \* \* \*

A few extracts from an eminent writer on the laws of nations, showing the matter in which these different words have been used, and the different meanings sometimes attached to them, will, perhaps, contribute to explain the reason for using them all in the Constitution, and will prove that the most comprehensive terms were employed in prohibiting to the States all intercourse with foreign nations. Vattel, page 192, No. 152, says: "A treaty, in Latin *foedus*, is a compact made with a view to the public welfare, by the superior power, either for perpetuity or for a considerable time." No. 153: "The compacts which have temporary matters for their object are called agreements, conventions, and pactions. They are accomplished by one single act, and not by repeated acts. These compacts are perfected in their execution once for all; treaties receive a successive execution, whose duration equals that of the treaty."

## The President's Budget Message

### EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

#### STATEMENT BY THE NATIONAL CITY BANK OF NEW YORK

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the National City Bank of New York:

#### THE PRESIDENT'S BUDGET MESSAGE

The President's Budget message to Congress, delivered January 4, falls naturally into two parts: First, the figures themselves, and, second, the President's discussion of them. The message relates to the current fiscal year, ending June 30 next, and also the following year, ending June 30, 1941. Inasmuch as the current year was half gone when the message was delivered, the original estimates for this year are revised to that date as a guide to deficiency appropriations, if necessary, and to actions on the estimates for the year beginning July 1 next. The President's discussion includes comments on revenues and expenditures, recommendations regarding taxation, and expressions of opinion and philosophy supporting the policies embodied in the Budget.

#### THE BUDGET TOTALS

Turning first to the over-all figures, for the current fiscal year the revised estimates place expenditures (excluding sinking fund) at \$9,099,000,000, an increase of \$392,000,000 over last year. With net receipts estimated at \$5,166,000,000, or about the same as last year, the net deficit apparently will rise by nearly \$400,000,000, to almost \$4,000,000,000. This is the largest total "in the red" for any year since the Great War, excepting only 1936, the year of the soldiers' bonus.

For 1941 a somewhat more hopeful picture is presented. Thus, expenditures (excluding sinking fund) budgeted at \$8,424,000,000 are expected to be \$675,000,000 less than in the current year, while "net receipts" estimated at \$5,548,000,000 are expected to be \$382,000,000 higher, an aggregate gain (if realized) of \$1,057,000,000. The President then refers to the several "credit corporations" in which the Treasury has made investments for the purpose of effectuating its policies, and says that "with lessening need for loans in some cases and growing surpluses in other cases, it appears that some of those corporations will have excess capital funds," and he estimates that \$700,000,000 may be returned to the Treasury. The three items aggregate \$1,757,000,000, and this sum deducted from the deficit figures for 1940 would leave \$2,176,000,000, which is his estimate for next year's deficit. However, he recommends that additional taxes be imposed to cover the emergency national defense expenditures in the fiscal years 1940-41, estimated at \$460,000,000. Deducting this sum from the \$2,176,000,000 leaves \$1,716,000,000, which he accepts as the final deficit if the new taxes are imposed.

#### PRINCIPAL INCREASES AND DECREASES IN 1941

Examining the Budget for 1941 in further detail, it will be seen that the President expects to effect savings in 1941 mainly in the following particulars:

Work relief.....	-\$562,000,000
Aids to agriculture.....	-413,000,000
Aids to youth.....	-72,000,000
General public works.....	-46,000,000
Civil departments and agencies.....	-41,000,000

Total..... -1,134,000,000

Against these savings, however, are the following important added costs:

National defense.....	+\$320,000,000
Interest on public debt.....	+50,000,000
Social security.....	+58,000,000

Total..... +428,000,000

Balancing the foregoing figures, and allowing for other smaller increases and decreases, gives the net reduction of \$675,000,000 in over-all cost mentioned above.

With the anticipated increase in national-defense outlays, total expenditures under this heading are expected to reach \$1,840,000,000 in 1941—more than doubling in 4 years and more than trebling since the post-war low in 1934. Anticipated expenditures for work relief, despite the budgeted reduction, still foot up to the formidable sum of \$1,300,000,000, notwithstanding the expected improvement in business indicated by the revenue estimate. Counting also "aids to agriculture" and "aids to youth," it is interesting to note that proposed expenditures in these three "aid" groups exceed \$2,400,000,000. Moreover, these figures do not include expenditures under the general public-works program, or the pension, retirement, and related assistance programs financed with Federal funds, which in 1941 amount to \$1,200,000,000.

To avoid carrying the Federal direct debt above the statutory limit of \$45,000,000,000, the President proposes to supplement borrowing by a reduction of \$1,150,000,000 in the Treasury's working cash balances during 1940 (of which \$560,000,000 was made through January 25) and by \$460,000,000 of new taxes in 1941. On this basis, if the Government keeps within the budgeted expenditures, if revenues hold up to expectations, and if Congress enacts the new taxes, the direct Federal debt on June 30, 1941, will fall short of the statutory debt limit by the slender margin of about \$60,000,000. This, however, does not include the contingent debt on fully guaranteed obligations issued by Government agencies, amounting to \$5,737,000,000 on November 30, 1939.

#### WHAT DO THE FIGURES MEAN?

So much for the bare figures. What do they mean in terms of progress toward a balanced Budget and a sound fiscal position for the country?

In the first place, it should be stated that the indicated reduction in the deficit for 1941 is to be welcomed, even though it signifies little reduction in total expenditures and plainly is influenced by the debt limit.

In considering the indicated reduction in total expenditures next year it is important to note that a material change was made in the form of Budget presentation this year by deducting social-security taxes from total revenue receipts and deducting social-security investments in the reserve account from total expenditures. If these items are included so as to make the figures comparable with those of prior years and to show the over-all totals, expenditures in each of the 3 fiscal years, 1939, 1940, 1941, will be found to be in excess of \$9,000,000,000 and higher than in any other peacetime year, not excepting the bonus year 1936.

It is important to note also that the two proposals toward financing the deficit—drawing down the cash balance by \$1,150,000,000 and withdrawing \$700,000,000 from the capital of Government agencies—are both nonrecurring sources of funds and do not represent income but rather an expenditure of assets on hand. Moreover, when the Budget for the 1941 fiscal year was presented, it was pointed out that certain of the major items, including relief, were only tentative, and that additional appropriations might be necessary during the period. In a number of recent years the experience has been that the final total of expenditures has exceeded the original or revised budgets by as much as \$1,000,000,000 or even more.

Eliminating the nonrecurring sources of funds just mentioned, it will be seen that on the basis of estimated expenditures for 1940 and 1941 the debt increase for the 2 years alone would amount to approximately \$6,800,000,000, exceeding the present statutory limit by \$2,200,000,000. How long can this continue? In his Budget message the President has called for \$460,000,000 of new taxes in 1941, but as analysis of the figures has shown even this will fail to produce any lasting equilibrium if the current rate of spending goes on unchecked.

#### THE RISING COST OF GOVERNMENT

It is to be considered that never in the history of the country—not even in the biggest booms or under the influence of wartime excess-profits tax—have the revenues of the Government come within \$2,000,000,000 of the more than \$9,000,000,000 of estimated average expenditures for 1939, 1940, 1941. The budgeted tax receipts for 1941, including social-security taxes, amounting to \$6,151,000,000, are the largest ever collected in this country except in 1920 and 1938. Total receipts from all sources in 1941, including \$700,000,000 return of capital from Government corporations, are estimated to reach a new high total for all time, as indicated by the preceding summary.

#### Condensed summary of United States Government finances, 1914-41 [In millions of dollars]

Year ended June 30--	Total Government receipts	Total Government expenditures <sup>1</sup>	Surplus or deficit <sup>1</sup>	Gross debt <sup>2</sup> June 30
1914.....	735	735	—	1,188
1915.....	698	761	-63	1,191
1916.....	783	734	+48	1,225
1917.....	1,124	1,978	-853	2,976
1918.....	3,665	12,697	-9,032	12,244
1919.....	5,152	18,515	-13,363	25,482
1920.....	6,695	6,403	+292	24,298
1921.....	5,625	5,116	+509	23,976

<sup>1</sup> Excludes expenditures for debt retirement through sinking fund.

<sup>2</sup> Direct debt only; does not include guaranteed debt of Government agencies.

## Condensed summary of United States Government finances, 1914-41—Continued

Year ended June 30—	Total Government receipts	Total Government expenditures	Surplus or deficit	Gross debt June 30
1922	4,109	3,373	+736	22,964
1923	4,007	3,295	+712	22,350
1924	4,012	3,049	+963	21,251
1925	3,780	3,063	+717	20,516
1926	3,963	3,098	+865	19,643
1927	4,129	2,974	+1,155	18,510
1928	4,042	3,103	+939	17,604
1929	4,033	3,299	+734	16,931
1930	4,178	3,440	+738	16,185
1931	3,190	3,671	-481	16,801
1932	2,006	4,535	-2,529	19,457
1933	2,080	3,864	-1,784	22,539
1934	3,116	6,011	-2,895	27,053
1935	3,800	7,010	-3,210	28,701
1936	4,116	8,066	-3,950	33,778
1937	5,294	8,442	-3,148	36,425
1938	6,242	7,626	-1,384	37,165
1939	5,663	9,210	-3,542	40,440
1940	5,704	9,636	-3,932	43,222
1941 <sup>1</sup>	6,851	9,027	-2,176	44,939

<sup>1</sup> Budget estimate; includes social security tax receipts and appropriations for old-age reserve.

<sup>2</sup> Includes return of surplus funds from Government corporations.

Source: Compiled from President's Budget messages and annual reports of the Secretary of the Treasury.

Moreover, the sum total of State, county, municipal, and other local taxes has increased greatly during recent years and now amounts to approximately \$8,000,000,000. Thus the total tax burden now exceeds \$14,000,000,000, which is 22 percent of the entire estimated national income. Total taxes in 1938 represented \$105 annually per capita of population, or \$420 for the average family of four, and were practically as high as in Great Britain, notwithstanding the huge British war debt. And still the balancing of the Federal Budget is not in sight, and new burdens upon the taxpayer are being proposed not only by the Federal Government but also by many of the States and smaller subdivisions.

To many not familiar with the figures, it may come as a surprise that \$9,000,000,000 of Federal expenditures annually is higher than the entire annual net income for these years of all corporations in the United States. Treasury statistics for 1937, which are the latest available and cover a relatively good year, show that the 477,838 active corporations in this country had a combined net income, before payment of Federal income and excess-profits taxes, and not including intercorporate dividends (which do not represent real income for the corporate system as a whole) of but \$5,148,000,000.

Similarly, a comparison of individual income statistics and Budget expenditures reveals that if all individual incomes in the United States over \$5,000 were taken in their entirety, the grand total would still fall considerably short of meeting the Federal expenditures alone. Official figures for 1937 show that incomes of over \$5,000 were reported by 705,033 persons or family groups, having a combined net income of \$8,816,000,000 before Federal income taxes, of which the portion over \$5,000 would be \$5,291,000,000.

Efforts to devise additional taxes only expose in clearer light the multitude of revenue sources that have been tapped and drained heavily since 1914 and their potentialities for additional revenue substantially reduced. It is a matter of grave doubt whether taxes on corporations can be further increased without reducing production and employment. As to individual incomes, it is well known that taxes on large incomes have already reached confiscatory levels and are diverting capital from investment in industry to tax-exempt municipal bonds. People in the middle-income brackets, where new taxes seem most likely to fall, view with dismay the constant encroachments of the tax collector, which instead of resulting in the hoped-for progress toward a balanced Budget and an end to the ominously mounting public debt seem merely to encourage new and more ambitious schemes for spending.

No more striking illustration can be had of the growth and expansion of governmental costs than a comparison of the present Budget with the following simple table of Federal expenditures in 1914:

Legislative, judicial, and civil	\$226,000,000
National defense	313,000,000
Veterans' pensions and benefits	173,000,000
Interest on public debt	23,000,000
Total	735,000,000

At that time the sum total of governmental costs, amounting to but \$735,000,000, was confined to the civil, legislative, and judicial departments, national defense, and to war pensions and public-debt interest. Not only have the expenditures in these four categories more than trebled, but they now represent only a third of the whole Budget, which has multiplied twelvefold.

## OBSTACLES TO ECONOMY

That the trend exhibited by the foregoing figures cannot be continued indefinitely is generally conceded. In spite of this there are two principal reasons why the accomplishment of genuine

economy in government remains in doubt. One of these reasons is the continued reliance by the administration upon the policy of spending to promote recovery.

In his Budget message the President reiterates his faith in "the deliberate use of Government funds and of Government credit to energize private enterprise—to put purchasing power in the hands of those who urgently need it and to create a demand for the products of factory and farm." It was this policy, he contends, that brought about the rise in the national income from 1933 to 1937, and was responsible in 1938 for halting the downturn then in progress so that "in place of the \$42,000,000,000 decline in national income that occurred from 1929 to 1932, the decline from 1937 to 1938 scarcely exceeded \$8,000,000,000," and was followed by quick recovery.

These, however, are highly controversial claims, the merits and demerits of which have been discussed repeatedly in these columns. Suffice it to say at this point that certain facts stand out as indisputable, to wit:

First, there is nothing in the longer history of the country to prove, and much to disprove, the theory that Government spending is necessary to recovery; and

Second, despite all the billions of Federal money spent since 1933 to "prime the pump," there remain 8,000,000 unemployed, national income is still much below the level of 1929, while direct public debt has been increased to a point \$25,000,000,000 higher than in that year, and is still rising. It is indeed discouraging to learn from the President's message that not even yet, after so much spending and increase of debt, is the level of employment and national income regarded as sufficiently secure to warrant suspension of deficit financing.

In view of the failure of the spending policy to date, the continued acceptance by the Government of the spending philosophy must seriously affect the probability that any material reduction in governmental costs is yet in sight.

The second reason why economy in Government remains in doubt lies in the constant demands upon the Treasury from different pressure groups for subsidies, pensions, and other forms of hand-outs. Unless these demands are met by an enlightened and aggressive public opposition, it will be difficult for Congress to resist them. We cannot expect Government costs to come down and at the same time look to the Government to provide all sorts of new benefits and services that cost money. In other words, economy in Government is not just a responsibility of the elected representatives of the people in Washington and in the various State and local capitals; it is also a responsibility of the people themselves. Only as they are willing to exercise forbearance and to give their support to those who have the courage to cut costs can any substantial progress be made.

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

ADDRESS BY HON. THEODORE FRANCIS GREEN, OF RHODE ISLAND

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the junior Senator from Rhode Island [Mr. GREEN] at the annual banquet of the New England Manufacturing Jewelers and Silversmiths' Association at Providence, R. I., on February 17, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is indeed a pleasure to be the guest again of the New England Manufacturing Jewelers and Silversmiths' Association, in which, as you must know from my previous visits, I am deeply interested. New England, more than any other part of the United States, has a vital interest not only in a sound and prosperous economic situation in all parts of our own country, but also in a sound, vigorous, and general international commerce between the United States and other countries.

Your industry has a threefold interest in a large and steady exchange of goods both with groups within the United States and also with other nations. Like most other New England industries, yours depends largely on bringing raw or semimanufactured goods here, converting them into finished products, and selling the products elsewhere. So it follows that for the prosperity of your industry and of New England, so far as possible, in the first place the channels through which these materials come must be kept free from obstruction; in the second place, the trade routes over which the finished products leave must be free of trade barriers; and in

the third place, the possible customers wherever the finished products go must have sufficient buying power to take your products and pay for them.

I have an illustration right at hand, because some branches of your industry are at present under a handicap I am trying in Washington to overcome. The war in Europe is interfering with the shipment here of certain goods needed in your manufacture. War, of course, represents an extreme restriction of trade; but trade may be restricted almost as much by excessive tariffs, drastic import quotas, exchange controls, and other trade restrictions such as we had from 8 to 10 years ago. Either war or these trade restrictions bring home to New England manufacturers the interdependence of their industry and other groups in the United States and abroad.

To stimulate and support the exchange of our products with foreign products, and to promote the prosperity of all groups in the United States, the Congress adopted in 1934 the Trade Agreement Act as an amendment to the Tariff Act of 1930, and upon it is based the present reciprocal trade-agreements program.

I have not the time, and if I had I do not believe there is any necessity for me to describe in detail the act or the program or its results. I have only time to say in summary that within this framework laid down by Congress reciprocal trade agreements have been negotiated with 21 foreign countries, which accounts for about three-fifths of the international trade of the United States. Furthermore, a large proportion of the world's commerce is now being carried on under this plan, well described by Eliot Wadsworth, formerly president of the Boston Chamber of Commerce, as "the American plan, which leaves individuals free to act for themselves in transacting business outside the country."

Of course, none of us would claim that these agreements have been the only factor—or in all cases even the dominant factor—influencing our foreign commerce, but the program has exerted a steady, significant pressure toward maintaining commerce and industry at levels higher than they otherwise would have been both in this country and abroad. The year the act was passed, the United States international trade amounted to only three and three-fourths billion dollars. In 1938 it had arisen to more than \$5,000,000,000. In the first 11 months of 1939 it amounted to almost \$300,000,000 more than in the corresponding period of 1938. It is not a mere coincidence that accompanying this rise in foreign trade our national income has increased from less than \$51,000,000,000 to nearly sixty-four billion 4 years later.

The welfare of New England manufacturers, especially the welfare of the members of your association, is, I believe, inevitably bound up with the welfare of all other economic groups in our country, and this general welfare has been largely promoted by the reciprocal trade-agreements program, which you have every good reason to support. We cannot afford to isolate Rhode Island from the other States in the Union, and we cannot afford to isolate the United States from the other countries in the world.

### Ex-Soldier Washington, and Others

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 22, 1940

Mr. ALEXANDER. Mr. Speaker, the public is frequently shocked and disturbed by articles appearing in our newspapers, but I venture to say nothing has been more distasteful in recent days to good, liberty-loving, patriotic Americans than the Bell Syndicate article which I have inserted below.

The article is entitled "Uncommon Sense." It certainly is, on the part of the publishers, as it shows little common sense to have published such a heresy, a dastardly lie, and a libel on the men who have made, preserved, and perpetuated America. Where would we be today if it were not for our soldiers?

The article was called to my attention by E. C. Butler, third district commander of the Veterans of Foreign Wars, and his statement is as follows:

FEBRUARY 19, 1940.

This morning an editorial appeared in the Minneapolis Tribune which we of the V. F. W. are very much opposed to. We can see no reason why such articles are allowed to be printed and republished by any paper. I believe there should be some kind of a law to prohibit this, as you can readily see it is no more than slander. If there is anything you can do, John, to stop this kind of write-ups, or can at least attempt to, let me have your suggestion and I will take it up at our next district meeting.

I am sure you feel the way we do, as a veteran yourself. I am sending the clipping to you enclosed in this letter. I remain,

Yours truly,

E. C. BUTLER,

Third District Commander, Veterans of Foreign Wars.

And this is the scintillating gem of wisdom produced by John Blake, of the Bell Syndicate. It might be well to ascertain who Mr. Blake is—at least, he boasts he is not an ex-soldier—and who is back of the Bell Syndicate:

#### UNCOMMON SENSE

(By John Blake)

##### WAR HERO

"When he was in China during the Boxer Rebellion, we ran into a lot of bad food—poisoned stuff. The sergeant had a neat scheme he used, though. He'd get a Chink to sample everything before he ate it. He'd watch him, and, if the Chink didn't blink his eyes, the sergeant would finish the meal himself.

"When I was in the Argonne, I found a Heinie's food kit one day. I could always go for them German sausages and delicatessen stuff and I was hungry that day. But the captain had warned us against eating food we didn't know nothing about. Still I couldn't pass up that swell-looking stuff. So I took the food kit and hunted me up a French officer. 'Vous manger, mooseer?' I asked him, smiling pleasant and holding out a chunk of baloney. He acted very grateful and took the stuff. I watched him for awhile, and, when I saw he didn't blink his eyes, I finished off that Heinie's kit."

The veteran finished the yarn, amid general laughter and applause. If a few of us shuddered, perhaps it was because we weren't ex-soldiers and hadn't acquired the impersonal wartime point of view. After all, soldiers are trained to kill people and many of them get to thinking a life isn't very important.

The man who told the story had been extravagantly praised for his dexterity with a bayonet. He had been given medals, and an increase in pay for his proficiency in knocking off Germans. He started out as a simple fellow and it was natural that he got to thinking that his murderous occupation was a worthy one. His picture was spread around as the picture of a war hero. He was given testimonial dinners and retired with the rank of colonel.

Many of the most efficient soldiers are like that. As mechanics they are not to be trusted with a monkey wrench, as family men they are about as dependable as a tom cat; as members of society they lean toward felony. But when men are needed to defend the fatherland, they turn out to fit all the specifications. Give them a gun and they know how to use it in a way to delight the soul of a general. So long as a nation is at war they are at a premium.

In times of peace such fellows seldom amount to much. It takes special conditions to develop their destructive talents. Their genius for destroying human life flowers only in the proper environment. You can't murder without a license, and without practice their special talents don't get the proper exercise.

Under peaceful conditions they never develop that utter brutality so valuable in capturing an objective or defending a position against attack. The ability to collect war medals is not useful to peaceful men.

Now, let us pick apart some of the poison slander in the above article. "He started out as a simple fellow and retired with the rank of colonel," insinuating that not only are high officers "simple," but naturally if they are, then all soldiers below the rank of colonel must be, too, we assume we are wanted to conclude, including Nathan Hale; Joyce Kilmer, who wrote Trees, Joel McCrea, and the Message to Garcia; Abraham Lincoln; and countless other sung and unsung heroes. It has been charged in times ago that all the smart boys evade service, but an inclusive draft of 25,000,000 in western Europe and in America, as in 1917, hardly missed taking the flower of the youth of that year. And besides, the bravest and best were always the first to enlist; is it not a fact?

Another belittling remark:

But when men are needed to defend the fatherland, they turn out to fit all the specifications.

How long since it was considered unfitting a real man "to defend the fatherland"? When the people do not want the fatherland defended, and with guns if necessary, I venture to guess it will be in a day when the idealism of representative constitutional government has been irrevocably lost and when there is nothing worth while in the way of ideals or idealism to defend.

Against the heresies of writers such as this and when military dictatorships and totalitarian states have destroyed all morals, religion, and hope for a better world, then and only then, if I am not mistaken, will the people not want the fatherland and its priceless heritage defended.

"In times of peace such fellows seldom amount to much," says Mr. Blake. How about George Washington? There has been no greater character, yet he was "first in war." Yes; in the very travail of soldiering in a war and a revolution, America brought forth a man to the days of peace to be

ranked with the greatest and the noblest of any age in all the world.

When we think of Washington, we think of him not only as a military leader or diplomat but as an executive, as the man who by sheer force of great character not only held a divided and disorganized country together until victory was achieved but who, after peace was won, still held his disunited countrymen by their love and respect and admiration for him as "first in peace" until a nation was welded into enduring strength and unity, which influence still lives unto this day.

But how about Gen. U. S. Grant, Generals Taylor, Jackson, Wood, and Pershing, and many another soldier who has served his country in peace as in war, all as living monuments to contradict and to dispute the truth of such a foul statement as "in times of peace such fellows seldom amount to much." "The ability to collect war medals is not useful to peaceful men." No; but from men who have, and from their devotion, self-sacrifice, and service, has come—has been made possible—our American Government, its preservation and perpetuation. And every day these same ex-soldiers whom Mr. Blake reviles are giving continued service to God and country because they have some stake in such ideals.

It has been my observation that the experience of a soldier ennobles and purifies and makes the individual more considerate and more thoughtful of his fellowman. We know of many instances where a man has laid down his life to save that of his comrades. And to recite one or two isolated instances, such as found in the introductory remarks of this syndicated article, is like saying that all businessmen or all manufacturing firms are brutal and conscienceless and immoral because in some cases they are found to have been inconsiderate to their employees. Because one firm runs a sweatshop and wrings unjust profits out of the lives and blood of its employees hardly justifies one in concluding that therefore they all do likewise. I am sorry any paper could see fit to carry such a base article, built as it is on a false assumption and made up of lies, false theories, and insinuations. Soldiers are always cross sections of their nation. Such an article is an insult not only to our soldiers and ex-soldiers, but to their fathers and mothers who bore them, as well as to the entire Nation, and resolutions of censure should immediately be sent to the publishers by all patriotic organizations.

### Promotion of Good Will, Trade, and Travel Between the Americas

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

#### STATEMENT BY THE INTER-AMERICAN TRADE AND TRAVEL ASSOCIATION

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by the Inter-American Trade and Travel Association, which has adopted the short title of "Itata," pertaining to the promotion of peace through trade in the Western Hemisphere and the enhancement of good will and economic development between the Americas.

There being no objection, the statement of the organization was ordered to be printed in the RECORD, as follows:

I. T. A. T. A. believes that its program merits serious consideration as a meritorious undertaking devoted to the promotion of good will, trade, and travel between the Americas. This effort seems most commendable at this time and particularly to develop unity of the Western Hemisphere and greater reciprocity of trade.

The association enjoys the friendship and good wishes of officials of the Pan American Union, various other Federal and private organizations, the United States Travel Bureau, the Order of Adventurers, the University Travel Association, and a number of

diplomatic and commercial representatives of the nations to the south, as well as our own North America.

I. T. A. T. A. proposes what it believes to be a balanced program to improve our commercial, industrial, and cultural relationship with all the republics of the Western Hemisphere. In brief, the organization plans:

1. A voyage to all the American republics, carrying an exhibit of American manufactures, to show our good neighbors the things we have to offer in which they might be interested.

2. To carry aboard ship many responsible executives of North American industry so that they may see what our neighbors may have that would interest us.

3. To carry aboard ship some 150 students from American colleges and universities who could see at first hand the peoples and culture of the inter-American republics so that they could, when entering business for themselves, promote and expand our western understanding.

4. To utilize a presently idle United States steamship and employ some 200 or more American officers and seamen who are denied gainful employment because of the European war and to train in actual sea duty some 25 cadets from the training school of the Maritime Commission.

We believe this enterprise is in thorough accord with the policies of the several political parties in the United States, business, commerce and finance, the Congress, and the administration. As an attest to this belief, Itata submits a proclamation of the President of the United States, dated January 13, 1940, proclaiming Travel America Year:

"Whereas the exigencies of international conflict may be expected to deter travel by American citizens to the areas involved; and

"Whereas no such deterrent to travel exists among the friendly nations of the Western Hemisphere; and

"Whereas it is important that we in the Americas further consolidate our unity by a better knowledge of our own and each others' countries through the instrumentality of travel; and

"Whereas the facilities of the Government of the United States may well be devoted to the encouragement of so laudable a program.

"Now, therefore, I, Franklin D. Roosevelt, President of the United States of America, do proclaim 1940 as Travel America Year, and do invite our own citizens, and friends from other lands, to join in a great travel movement, so that our peoples may be drawn even more closely together in sympathy and understanding.

"In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

"FRANKLIN D. ROOSEVELT."

The Inter-American Trade and Travel Association is a nonprofit society organized under the laws of the District of Columbia, which has been actively making arrangements for a voyage of this sort for several months. It is now ready to complete its program.

It is proposed that the trade exhibits will, in effect, make of the voyage a floating fair. It will leave the United States about October 15, 1940, and spend 100 days in Pan American waters, stopping at each of the major ports of call of the 21 American republics.

The tentative itinerary calls for departure from New York with stops as follows:

Port au Prince, Ciudad Trujillo, La Guaira, Belem, Recife, Rio de Janeiro, Santos, Montevideo, Buenos Aires, and Punta Arenas.

Through the Straits of Magellan to Valparaiso, Antofagasta, Arica, Callao, Guayaquil, Acajutla, Corinto, Panama, Colon, Cartagena, Puerto Limon, Puerto Cortes, Puerto Barrios, Vera Cruz, Habana, and New York.

There will be effective promotion of understanding by our inter-American friends of the United States, its people, and its industries. I. T. A. T. A. will present special programs in the various ports, including:

An official governmental day, to which representatives of the Government would be invited as guests aboard ship.

A businessman's day for the respective leaders of trade and industry in each country.

A children's day, on which pupils of the schools in the various ports of call would be guests aboard ship so that the students in all the Americas can obtain first-hand knowledge of the United States.

Bear in mind that while the association is welcoming these youngsters, dozens of our own young men and women will be obtaining a direct study of the American republics. The University Travel Association, which so successfully operated for many years the so-called floating universities, has offered to put aboard ship 150 students. These young men and women, on their return to their homes, can talk and sell "trade and travel America" in many communities.

In general, the following program will be carried out for the students at each port visited:

Faculty and pupils will go ashore to visit the places of interest and carry on field work in connection with their courses. For example, the class in foreign trade will visit warehouses, governmental offices, and business firms. Art students will visit museums; botany students will visit the gardens and parks and other points of interest. At many ports receptions by local universities and cultural organizations are contemplated for our students.

The association in its preliminary research has been assured of the cooperation of the American republics to make the trip particularly interesting to our students, and to promote the direct good fellowship and acquaintance by the students that will so foster inter-American understanding.

The association is preparing a travel brochure cooperatively with the advice and suggestions of the United States Travel Bureau, which will set forth the natural beauties of North America so that our friends to the south may be advised of what they will see if they

visit the United States. Some 500,000 copies of this brochure will be distributed throughout the American republics and fill a need not now met by any publication.

It is important to us to know that the United States annually shows an adverse trade balance in our travel figures and the travel industry, from the standpoint of our economics, is almost as vital and almost as valuable in terms of dollars as any of our major export industries, including automobiles, cotton, oil, steel, and manufactured goods.

In 1939 travelers from the American republics spent approximately \$350,000,000 going places and seeing things. They did not spend it coming to the United States. Most of them went to Europe. The best statistics of the Department of Commerce indicate only about \$50,000,000 or \$60,000,000 was spent to visit the United States.

Our Government has been sadly remiss in this regard when we stop to think that some 53 foreign powers maintain in the United States travel bureaus dedicated to take our people to other lands.

Mrs. Ruth Bryan Owen Rohde, former Minister to Denmark, and once a Member of the House of Representatives, advises the United States, "I had an opportunity, during my years of residence in other lands, to discover how little is known abroad about the manifold attractions which the United States can offer to travelers.

"Our country has a wealth of natural beauties available to all," said Mrs. Rohde. "A vision of the wonderlands represented in our national parks alone should bring a steady stream of visitors to us. We will benefit not only economically but culturally as well. Unrestricted travel between the nations contributes to international understanding and aids the cause of peace."

The United States Travel Bureau is a part of the Department of Interior. Secretary Ickes has this to say of the importance of promoting travel between the Americas, and illustrates the complete lack of a publication conveying to those who might want to come to see us, a picture of what they will find if they come:

"Many nations have a cabinet officer to direct tourist and trade promotion. France and Canada are just a couple that do that. They spend thousands of dollars yearly and get back millions. Yet, if you go into any consular office of the United States in any foreign land and ask for something to show what the United States is like, the consul will only shrug his shoulders and say, 'Sorry, our Government doesn't get out anything like that.' Here is a letter from the American consul general at Santiago, Chile: 'If a way could be found for some literature and descriptive matter to be furnished to Government offices in foreign countries for free distribution, I am sure that the effort would be rewarded by better and more enthusiastic understanding between Chile and our country. The United States Government does not issue material descriptive of our Nation. Chileans are apt to look at us round-eyed when they come to our office and request a map of the United States, a picture of the Statue of Liberty, a pamphlet regarding our scenic beauties, our great men, and we tell them we do not have such material for distribution.

"Surprised and disappointed, unbelieving some times, our Chilean inquirer tells us: 'But I have been to the consular offices of other countries in Santiago and was given a great many beautiful pamphlets. Are you sure you haven't just one left somewhere?'"

In substance the Chileans think our consular officers are telling falsehoods when they say they do not have descriptive material to give away. The brochure that I. T. A. T. A. will prepare in collaboration with the United States Travel Bureau will go far toward filling this need as the association and the Honorable W. Bruce Macnamee, director of the Travel Bureau, have been working closely together in planning the activities of the organization.

Europe's Alps cannot compare with our Yellowstone, or the Rockies, or the Andes. There is no spa in the old country that we cannot better. It is amusing as well as amazing that we have not told the world what we have, even though the United States is supposed to be the native hearth of the ballyhoo artist and the advertising man. We may have been great horn blowers on a lot of subjects, but it appears that we have muted our trumpets in this respect.

To indicate the extent of the activities of the association and its unselfish desire to promote western solidarity, exhibit space will be donated to the United States Travel Bureau for a governmental exhibit. In this space the Travel Bureau can present the glories of North America for the edification of inter-America.

To effectuate the promotion of rapprochement between the Americas and objectives of the association, an advisory council of Members of Congress, governmental officers, inter-American diplomats and leaders in trade and industry is now being formed. I. T. A. T. A. is of the opinion that the Congress and the Government, as well as business, want to increase our commerce with the American republics in terms of buying from them and selling to them, and to increase travel between the Americas.

The European war, by curtailing much of the trade between Europe and South America, offers an exceptional opportunity to the Americas to increase their trade with each other. The statistics of the Bureau of Foreign and Domestic Commerce as of January 1940 show a decided increase already in trade during the last quarter of 1939. Here again the war provides opportunity for the promotion of trade and travel. One of the largest United States travel companies classified 20,000 travel inquiries received from September 1 through December 31, 1939, as follows:

	Percent
Inquiries concerning South America.....	8½
West Indies and Central America.....	9½
Mexico.....	11

or a total of 29 percent, as contrasted to a total of 10 percent for all other foreign countries including the Far East, the Mediterranean, and Bermuda.

I. T. A. T. A. quotes from an interview published in the New York Times obtained from Mr. E. P. Thomas, president of the National Foreign Trade Council:

"WE MUST ARRANGE FINANCING AND BUY MORE IF WE WOULD BOOST LATIN TRADE, SAYS THOMAS

"In looking to our immediate needs for increasing trade with Latin America to compensate for the loss in peacetime exports to Europe, American exporters must give first attention to our ability to buy more from the southern republics and to devising an economically sound plan whereby this country can help through loans and credits in developing new industries there," E. P. Thomas, president of the National Foreign Trade Council, said here yesterday.

"With the war jeopardizing much of our trade with Europe and probably eliminating sales of \$107,000,000 worth of goods to Germany, and an additional \$25,000,000 to Poland and Danzig, it is natural that Americans look to Latin American markets," he said; continuing:

"It must be remembered, however, that the buying power of these republics depends entirely on their ability to find markets for surplus primary products which are largely competitive with our own. They face the possible loss of \$240,000,000 in annual exports to Europe.

"Eight Latin American countries—Argentina, Brazil, Chile, Mexico, Colombia, Venezuela, Uruguay, and Peru—accounted for 90 percent of Germany's exports to that continent last year, he said. Their purchases amounted to \$200,000,000.

"An analysis of imports by Latin American countries from Germany in 1938 shows such items as coal, cotton, textiles, paper and paper wares, earthenware and porcelain manufactures, pharmaceuticals, steel and copper products, machine tools, steam locomotives, power machinery, motor vehicles and aircraft, wool and cotton manufactures. These are some of the principal products which this country is in a position to supply.

"In the case of Argentina, for example, these imports from Germany in 1938 were valued at approximately \$59,000,000 and for Brazil about \$65,000,000. The other countries made up the total of \$225,000,000 against which Germany took Latin American raw materials of an equivalent value.

"To supplement our reciprocal-trade agreement and good-neighbor program for promotion of inter-American solidarity, long-term credits, in which our governmental agencies will participate, may become essential."

So as further to emphasize the importance of the objectives of Itata, the New York Times Magazine of December 10, 1939, in an article by John W. White from Buenos Aires says:

"South America believes in the good-neighbor policy, but if that policy is to be carried beyond the status of a pleasant political phrase, the United States is expected to do something concrete in the way of implementing it.

"South America thinks the good-neighbor policy has been made the basis for uniting the Americas into a single political, economic, and social unit, which could live completely independent of the rest of the world. They say so every day all over the continent. The only question seems to be how far the United States is prepared to go in helping them become self-supporting, industrial states with large consumer populations and a high standard of living instead of merely suppliers of raw materials for the rest of the world, with their present sparse populations. \* \* \*

"The practical uniting of the Americas involves two lines of endeavor—the political and the economic. The final polish will require other endeavor along subsidiary lines, such as cultural and social. Political cooperation already has been achieved in large measure. Only the serious problem of economic cooperation remains to be solved."

We believe these few lines of themselves justify the importance of an activity and a voyage such as that projected by the Inter-American Trade and Travel Association.

The republics to the south have problems of their own to settle as well as do we of North America. Mr. Thomas E. Calder, president of the American & Foreign Power Co., points out in an article in the New York Herald Tribune that the 20 countries in South and Central America depend largely on the extraction industries—i. e., agriculture, minerals, and timber—for their prosperity or lack of it, and therefore are extremely sensitive to the world price levels of raw materials.

"They present in general the same problems which faced the United States 25 or 50 years ago," Mr. Calder said. "Unless new or additional markets can be found and additional capital invested in South and Central America, purchasing power in the southern republics will be reduced.

"If the United States is to develop greater markets for products of the United States, the United States should either buy more products from the southern republics or invest more capital in the southern republics, or do both."

Another outstanding American business executive, Mr. Daniel A. Del Rio, assistant vice president of the Central Hanover Bank & Trust Co., in an article also in the New York Herald Tribune, considers "Latin America the frontier for United States trade." Mr. Del Rio explains the European war and the partial, if not total, loss of our markets in the Old World, and domination of the Far East by Japan apparently dooming free trade in the Orient, and our permanent loss of that market means that the United States must find new markets.

"It is possible that the only logical markets that may have been left to us after this war is over will be the countries to the south of us," he said. "There lies a large virgin territory where industrial development is in its infancy, with enormous untouched mineral resources and the largest area of arable land in the world. There it is, Latin America as a new frontier waiting to be developed by the pioneering spirit and enterprise of the youth of America."

At the suggestion of one of the outstanding industrialists of Cuba, the organization will take on the voyage an exhibition of American paintings, as it is generally felt throughout the inter-American nations that the United States is somewhat lacking in cultural enterprise—in other words, we are somewhat barbaric—to acquaint them with the works of men like Whistler and Sargent.

It is axiomatic that the best way to know a person is to see him and talk with him. It is equally true that the best way to know a country, the best way to understand its people, is to do the same thing. It is advisable to see what they have to offer in terms of trade and show them what we have to offer that they might need. These are matters of major moment to us; subjects that will become increasingly important as the years go by; we had better recognize now the fact that over the next century it probably will be necessary for the Americas to stand together as a unit.

Perhaps the pages of history will provide adequate proof of this necessity. The Pan American Union will be 50 years old April 14. A half century of the promotion of good will has laid the foundation for our further efforts to make the Americas an entity of their own.

In view of these developments, it appears to us that it is most timely that a voyage of this sort be made, and we believe that Itata is an excellent and experienced organization to conduct such an enterprise. Among those in the association are men thoroughly familiar with the needs that will be met, experts in their fields, each a part in a well-formed organization that proposes to do this job in the way in which it should be done.

So that the exhibits of the world's fairs in New York and San Francisco may be available, the association proposes to sail from New York October 15 for 100 days in inter-American waters. Business executives of United States companies will go along, potential buyers of inter-American products, messengers of good will and mutual understanding.

In passing it should be observed that Itata's program represents a project which is a thing apart from the ordinary and established maritime enterprises, for it is designed to fill a need not now being met. It will give the Americas a first-hand knowledge of each other.

For purposes of illustration, let us assume that one of the North American business leaders aboard is surveying the possibilities of establishing a new plant location, while at the same time he is eager to find new sources of raw material. He would thus have the advantage of determining at first hand these and other facts in which he is interested. Coincidentally he meets personally the men and agencies with whom he will trade and obtain from them an understanding of their problems.

President Roosevelt, over and above the proclamation of 1940 as Travel America Year, some time ago wrote Mr. Thomas D. Green, president of the American Hotel Association:

"The time is here for a great new travel America movement, to which the Federal Government will give every impetus. I feel certain that Secretary Ickes is fully aware of the importance of the opportunity, not only in its economic sense but also in its stimulation of even closer relationships between all the Americas."

Itata has set the stage for a concerted effort for peace through trade and good will throughout the Western Hemisphere. Itata believes a voyage of the character projected will do much toward exterminating the inroads of fascism, Nazi-ism, and communism throughout the nations to the south and will nourish the roots of democracy by more closely knitting the common bond of understanding. We want to persuade our neighbors to come to see, and we want to go to see them. We want the day to arrive quickly when to us in the north many more people of Central and South America will deliver the friendly greeting "que tal" to us in person and when the colloquial expression "hi there" echoes throughout the republics to the south—the promotion of peace through trade.

### American Interests

#### EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

ARTICLE BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting article under the heading American Interests, written by the Senator from Florida [Mr. PEPPER] and published in the October issue of the magazine New World.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New World for October 1939]

#### AMERICAN INTERESTS

(By Hon. CLAUDE PEPPER, United States Senator, Florida)

The eyes of the world are upon America again.

At least for the last 25 years, we have been in the process of making the tremendous decision of what our place in world affairs was to be. We have known that we were a great world power, and we have been proud of our position. In spite of our efforts to suppress it, deep down in our hearts we have also known that we could not escape the responsibilities of such a position among the nations of the world. We have also declared and constantly cried aloud that our national policy was one of detachment and isolation from the remainder of the world in interest, yet we have seen very clearly, as much as we dislike to admit it, that in the very nature of things we were inextricably interwoven in the fabric of world affairs, and all that we did and all that we were inevitably reflected the character of the world pattern.

We have persistently resolved that we would insist upon our rights, our privileges, and prerogatives whenever they offered opportunity for gain throughout the world. Yet we have professed to believe, although we knew in our sober thought it was not so, that we could continually enjoy those advantages without ever meeting squarely the necessity for bearing the burden of those good things. We have constantly announced that we had no intimacy with any particular nation or group of nations in the world of such a character that we were bound to them and they to us, yet we knew when we were candid with ourselves that traditionally, philosophically, culturally, spiritually, even commercially, there was an affinity between us and certain other peoples of the world which bound us to them by those informal and invisible but nonetheless binding ties which sometimes hold closer and stronger than any others.

Our policy therefore has shifted from extreme to extreme. In 1916, it might be said that there was a sort of referendum upon our staying out of the World War in favor of peace, while in 1917 we went wholeheartedly into vigorous participation in that war. While there are those who either want to cloud the issue a bit or see it with such little perspective that it can be only clouded to them who say that we went into that war because of some injury to our commerce, some wrong to our citizens, some offense to our national security, integrity or prestige; yet we who try to see the situation as clearly as possible, know in our hearts that while these things were the match which maybe lighted the fire, were the Sarajevo, as it were, of the war, yet that it was a much deeper and stronger cause which really led this Nation to its colossal exertions in that terrible conflict.

In short, we feel that the faith that was in the heart of the American people when we entered that war, the throbbing impulse which actuated the men and women who both offered and gave their lives in that conflict, even the slogans, those great dynamic phrases which were the symbols of our attitude in that ordeal, were genuine—every word of them.

We feel that there was neither sham nor false pretense nor insincerity in our assertions that we entered that war to save things which from the beginning of our Nation, almost of our race, we had considered worth fighting for. Neither was there sham nor false pretense in our belief that not only our ideals but our national security were directly to be affected by the outcome of that war. And we are not going to allow the cynics to take the heroism out of the deaths of those American boys or weaken one jot or tittle the faith that lingers yet in the hearts of the Gold Star Mothers of this Nation, that their sons gave their lives for something better than the cold calculations of the greedy and the avaricious.

Neither are we going to forget the colossal heights to which the dreams and the aspirations of men reached, that there might be something like an ordered and lawful world—something like a worldwide recognition of at least the minimum of civilization and decency.

Neither shall we ever forget that upon the wings of that idealism and that determination which burst out of the sad heart of the world there came the nearest approach the human race has ever seen to a civilized world.

The Christian church, even in 2,000 years, in spite of the sacrifices of all the martyrs and the prayers of all the saints, has neither perfected man nor destroyed the devil. Because even a world war, therefore, did not temper the passions of nationalism to a reasonable restraint and purify the hearts of men and women of overreaching ambition and make over, at one fell swoop, either the injustices or maladjustments of tragic centuries it does not follow that those who died in that war gave their lives in vain.

This Nation is trying to fight its way through the maze of confusion toward the certain light of a true course—a right course. We know that tomorrow and the next day and the days thereafter are but the lengthened shadows of this day. We know that the turn we take in the road, though now but a perceptible deviation from another, will in the tomorrow of our journey make all the difference. Every day we get closer somewhere. It is tremendously important that we know where we want to go, at least. If we can just get to the top of the hill and see enough to plot our path clearly, at least part of the way, we will be fairly satisfied if we are sure that we are going in the right direction.

Unmistakably, there are certain things in other parts of the world in which we are definitely not concerned. By the same token there

are other things which concern vitally everything that we do and everything we believe in, everything we think worth saving out of the wreckage of the past. While, of course, America is primarily concerned with its own welfare, yet America knows that just as the welfare of no home stops at its doorstep, so does the welfare of no country end only with its boundary.

America is interested in the prosperity, the comfort, the education, the employment of every one of its citizens; yet America is also interested beyond measure in the spiritual and mental, as well as the physical inheritance of its posterity. America is not brash, falsely brave, but America is not afraid when every impulse of its mind and heart demands courage.

America is staggering under colossal burdens but she cannot solve them by indifferent concern for the chaos of the world.

Whether we know it or not, whether we intend it or not, we are determining our course—we are taking our place. This very Congress will, in my opinion, make the most far-reaching decision we have made about our international policy since the resolution of 1917 by which we entered the World War. We, at least, need to discuss the matter fully and candidly. We should, at least, know where we are going and determine what we are willing to do. It leads to nothing but confusion in what we do to be confused in what we think. Therefore, we should search our minds and hearts, we should search our traditions, we should examine our interests, we should weigh and balance the advantages and the disadvantages, we should contemplate the awful responsibility either of action or inaction, and in the councils of a free government arrive at a decision which befits a free and honorable people.

### The Peril to Our Government From Foes Within Our Borders

#### EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

ADDRESS BY HON. RUFUS C. HOLMAN, OF OREGON

Mr. HOLMAN. Mr. President, 10 days ago, when throughout the length and breadth of our land many Senators were invited to address meetings of patriotic Americans on subjects appropriate to a study of the life and work of Abraham Lincoln, I delivered an address in Philadelphia which I believe was pertinent to the subject. In compliance with the suggestions of some who heard it, I request unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, next Monday is the one hundred and thirty-first anniversary of the birth of Abraham Lincoln. On that day all over our broad land patriotic American citizens will be celebrating the event. So familiar are the American people with almost every detail of the homely life of this great and good man that for me now to recount biographical facts concerning him would be only repetition before any intelligent and well-informed assemblage of American citizens. One who contemplates a discussion of the career of Abraham Lincoln and its importance to the welfare of the American people and the lessons to be drawn from it for our present guidance, is forced under these circumstances to select one of his many expressed great thoughts and confine his discourse to a discussion of it.

Lincoln successfully sustained the shock of a slowly developed armed and open attack upon American constitutional government from enemies within his own country. We, too, to save our country now, must withstand attacks upon our Constitution from enemies within our own borders, with this difference—instead of from open and armed attacks, we must resist and suppress the insidious assaults upon our constitutional government of those who bore from within and from those whose loyalty to America is only a pretended loyalty—whose real sympathies are with elements foreign to America, American institutions, and the welfare of the American people. Lincoln's experience with his problem in his day is our best guide now to a solution of our own.

Recently, I ran across a speech which Lincoln delivered before the Young Men's Lyceum, of Springfield, Ill., when he was only 28 years old, on The Perpetuation of Our Political Institutions. In this speech he truly observed that the United States need fear no danger from foreign foes. In the enthusiasm of youth, he declared:

"All the armies of Europe, Asia, and Africa combined with a Bonaparte for a commander could not by force take a drink from

the Ohio or make a track on the Blue Ridge in a trial of 1,000 years. \* \* \* If danger were ever to threaten the United States it would come from within. \* \* \* As a nation of free men we must live through all time or die by suicide."

He goes on to speak of something that omened ill and says, "I mean the increasing disregard for law which pervades the country."

My friends, that is my text for tonight—the increasing disregard for law which pervades the country and the peril to our Government from foes within our borders—those seekers of special privileges and advantages to themselves and their foreign and domestic connections, regardless of what the consequences may be to the American Government or to the American people.

In 1857 and 1858, Lord Macaulay, the English statesman, historian, and essayist, wrote two very remarkable letters to an American correspondent, H. S. Randall, from which I shall quote a few sentences, reminding you that our Government, under the American Constitution, is still an experiment. Macaulay said in part:

"I have long been convinced that institutions purely democratic must, sooner or later, destroy liberty or civilization, or both.

"In Europe, where the population is dense, the effect of such institutions would be almost instantaneous. \* \* \* Either the poor would plunder the rich and civilization would perish, or order and prosperity would be saved by a strong military government, and liberty would perish. \* \* \* Your fate, I believe, to be settled, though it is deferred by a physical cause. As long as you have boundless extent of fertile and unoccupied land, your laboring population will be far more at ease than the laboring population of the Old World. \* \* \* But the time will come when new England will be as thickly populated as old England. You will have your Manchesters and Birminghams, and in those Manchesters and Birminghams hundreds of thousands of artisans will assuredly be sometimes out of work. Then your institutions will be fairly brought to the test. \* \* \* On one side is a statesman teaching patience, respect for vested rights, strict observance of public faith. On the other is a demagogue ranting about the tyranny of capitalists and usurers, and asking why anybody should be permitted to ride in a carriage while thousands of honest folks are in want of necessities. \* \* \* Which of the two candidates is likely to be preferred? \* \* \* I seriously apprehend that you will in some season of adversity, as I have described, do things which will prevent prosperity from returning. \* \* \* There will be, I fear, spoliation. The spoliation will increase the distress. The distress will produce fresh spoliation. \* \* \* Either some Caesar or Napoleon will seize the reins of government with a strong hand, or your Republic will be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth, with this difference, that the Huns and the vandals came from without, and that your Huns and vandals will have been engendered within your own country. \* \* \*"

So much for Lord Macaulay's sinister prediction of 80 years ago relative to the future of our country.

Sir James Bryce, one-time British Ambassador to the United States, observed, in part, in the 1910 edition of his great work entitled, "The American Commonwealth," as follows:

"So America, in her swift onward progress, sees, looming on the horizon and now no longer distant, a time of mists and shadows wherein dangers may lie concealed whose form and magnitude she can scarcely yet conjecture. As she fills up her western regions with inhabitants, she sees the time approach when all the best land, even that which the extension of irrigation has made available, will have been occupied, and when the land now under cultivation will have been so far exhausted as to yield scantier crops, even to more expensive culture. Although transportation may also have become cheaper, the price of food will rise; farms will be less easily obtained, and will need more capital to work them with profit; the struggle for existence will become more severe. And while the outlet which the West now provides for the overflow of the great cities will have become less available, the cities will have grown immensely more populous; pauperism now confined to six or seven of the greatest, may be more widely spread; and even if wages do not sink, work may be less abundant. In fact the chronic ills and problems of old societies and crowded countries, such as we see them today in Europe, will have reappeared on the new soil, while the demand of the multitude to have a larger share of the Nation's collective wealth may well have grown insistent. High economic authorities pronounce that the beginnings of this time of pressure lie not more than 20 years ahead (1930). \* \* \* It may be a time of trial for democratic institutions."

I do not subscribe, without drastic modification, to the direful predictions of the future of our country which these two great and impartial critics of our form of government held; and, yet, forewarned is forearmed. Instead of blindly rushing headlong into a situation in our country, which was predicted over 80 years ago, and again 50 years ago, and to which predictions some semblances may be discovered in present conditions, let us now take steps, before it is too late, to avert the calamities which may befall us if we continue to follow the present leadership of political thought in our Nation—the very kind of leadership to which Macaulay referred; a leadership which has made extravagance, incompetence, disloyalty, and the capitalization of public place for private gain, officially respectable in America. Let us return to the philosophy and Americanism of Abraham Lincoln, and again follow in his

footsteps; and along the safe and prudent ways of Franklin, Washington, Jefferson, Marshall, Madison, Jackson, and more recently, Cleveland, McKinley, and their kind. Let us again adopt the only methods for individual or national progress which have ever succeeded in the history of the world—the old safe road of industry, thrift, self-reliance, cooperation, honesty, truthfulness, loyalty, and patriotism. There is no short cut to ease and luxury. Eternal vigilance is still the price of liberty.

There still remain vast areas of our country to be cultivated; vast treasures in the earth to be mined; vast wealth in the fisheries of the seas and tidal rivers; vast forests to be harvested and vast opportunities for employment in transporting these crude and raw materials to factories and there, by refined manufacture, converting them into an infinite number and kind of useful, essential, and delightful objects for the enjoyment of the people of the world. Our problem is how best and most equitably to promote harmony and cooperation throughout our entire population. Then our problem will be one of underconsumption, and not overproduction.

If one doubts the capacity of the American people to consume unlimited quantities of the products of our mills and factories and farms, how do you account for the number of automobiles which congest the streets and parking lots of every city, town, and hamlet in the Nation and crowd the roads, highways, and lanes of every State in the Union?

But this possible hive of contented industry cannot be brought about by discord and by arraying class against class. Concord and the adoption of the golden rule by all, however, will do it. The philosophy of "Do unto others as you would have others do unto you," and "Love your neighbor as yourself," is a very practical thing, but few practice it. Therein lies our trouble.

You will note that with Lincoln, the British statesmen whom I have quoted agree that the supreme peril to our form of government will arise from amongst ourselves and not from foreign foes. This peril will be coincident with the exhaustion of cheap and fertile public lands and the congestion of population in the large and ever larger cities, therefore, it seems to me a first step to take to save our country is to stop further immigration into it; at least until we have solved the serious problem of 10,000,000 Americans out of work; the apportionment of our remaining available, arable lands; and what to do with those aliens amongst us who stir up trouble and are affiliated with those closely organized minority groups of alien-minded people resident in America who continually press for group advantage and involvement of us in foreign entanglements which are counter to the welfare of America and American citizens.

The effect of un-American pressure groups is patently observable in the acts of those politicians in government whose constituencies contain large blocs of such racial, religious, and alien-minded voters. It is high time for Americans who love their country and desire to preserve it to unite for the common purpose of maintaining the Federal Constitution, the protection of American interests, and the safeguarding of liberty and freedom.

Lincoln said, "A house divided against itself cannot stand." Already we have large groups within our country who do not assimilate themselves with us, but hold themselves apart from us, each group divided from us in its political philosophies and racial objectives. No longer does our immigrant population assimilate and become one with us in having only American aims and American ambitions. The melting pot no longer melts.

I found when I proposed to stop all immigration into this country for an experimental period of 5 years I was accused by some persons of being anti-Semitic because among those who are seeking admission to this country are some Jews. When I voted against the confirmation of Governor Murphy as Attorney General of the United States because I most thoroughly disapprove of his temporizing with the trespass and violence of lawless mobs in his State while he was Governor, I was accused of being anti-Catholic. When I opposed the repeal of the Neutrality Act, because I believed by its repeal America took the first step toward our involvement in another European war, I was accused of being pro-German—and so it goes. Each alien-minded or racial group judges American public men from the standpoint of advantage to its particular sect, race, or affiliate rather than from consideration of what is the wisest policy to pursue to safeguard America and to promote the welfare of all the American people.

Just to keep the record straight, I want to state that I am not anti- or pro-Semitic, anti- or pro-Catholic, anti- or pro-German, anti- or pro-English, anti- or pro-anything. I am just, apparently, a rather lonesome American in America, devoted solely to the welfare of America and the prosperity and well-being of all patriotic American citizens, regardless of race or creed.

The preservation of our constitutional Government now is confronted, in my opinion, with another great menace—the determination of many people to avoid real work; to grasp the fruits of industry without earning them; people who believe work is a curse and not a blessing; people who do not distinguish between mine and thine; people who know nothing of the joy of achievement through overcoming difficulties. To let another feed you may nourish the body but certainly will destroy the soul.

Lincoln earned his bread by the sweat of his brow. He depended upon himself and upon his own efforts. He did the work before him. He was self-reliant. He could suffer want and not lean upon another, nor attempt to wrest from another his lawful property. He never claimed to be underprivileged. He never sought to eat

bread earned by the sweat of other men's brows. He was typical of the pioneers of his day and generation—the hardy American stock that founded our Nation, subdued the wilderness, developed the country, lived within its income, paid its debts, and preferred to help rather than to be helped. He and his kind were lifters—not leaners. They realized that their liberties ceased where the liberties of others began. They did not trespass upon the property or rights of others, nor did they brook the trespass of others upon themselves. They were a hardy, God-fearing, law-abiding people, each believing his house was his castle.

Must I use the past tense in describing the predominant American characteristics typical of Lincoln and his generation, of his forebears, and until recently, of his successors? Are the hardy virtues of the early American stock no longer the predominant characteristics of the American people? Is the majority of those we call Americans today, to be found amongst those who take the law into their own hands; who brush aside the American Constitution, when the observance of it and the laws under it bar the way to their immediate objectives; who for themselves claim all the privileges and safeguards by which our Constitution protects the rights of the American citizens, but who violate those Constitutional safeguards as they apply to the persons and property of others; who follow a leadership which has referred to the honorable judges of our Supreme Court contemptuously as "nine old men," and to the Congress of the United States as a thing outmoded? Are those who swarm into this country, and congregate in the congested areas of our largest cities, and thereby necessitate slum clearance projects; who demand employment on their own terms and conditions; who, though able-bodied, would rather be on relief than to take a job at wages which many prospective employers could pay; who plan to be supported in idleness by money derived from public taxes—do these people constitute the majority of our citizenship?

If so, the predictions of Macaulay and Bryce, and the fears of Lincoln are already upon us.

But let us not despair. The preservation of the American Constitution and of representative government under it, are worth fighting for. Brave and patriotic men gave their lives to establish it in 1776, and brave and patriotic men gave their lives to perpetuate it in 1861. Let brave and patriotic men be prepared to give their lives, if necessary, to save the American Constitution and our representative government, and the welfare of the American citizens, in 1940, and ever after.

Let us again have a government "dedicated to the proposition that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, and for the people shall not perish from the earth." Let patriotic Americans be as ready to suppress lawlessness as the racketeers of honest labor and ambitious, designing politicians are, to foment it. Let us restore the administration of our country to the friends of the American Constitution, regardless of present political party affiliations. To this purpose, let all good Americans subscribe to the oath taken by the patriots who signed the American Declaration of Independence—"To this we pledge our lives, our fortunes, and our sacred honor." Our country needs today, more than anything else, in my opinion, another Abraham Lincoln, the Republican. May God grant that we find him.

## Government Projects in the Pacific Northwest

### EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

EXCERPT FROM ANNUAL REPORT OF THE SEATTLE-FIRST NATIONAL BANK, SEATTLE, WASH.

Mr. SCHWELLENBACH. Mr. President, the Seattle-First National Bank, the main office of which is in Seattle, and which has branch offices in various sections of the State of Washington, is the largest financial institution in the State. I was proud to find in the annual report presented to the stockholders of that national institution, on January 9, 1940, a recognition by the officers of the institution of the importance in the progress of the Pacific Northwest of the projects which have been carried on by the Federal Government under this administration, and I ask unanimous consent to have printed in the Appendix of the RECORD that portion of the report which deals with those governmental projects.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

## GOVERNMENT PROJECTS

As in 1938, Government activity during the past year in Washington provided substantial employment and was responsible for the expenditure of considerable Federal funds. The most important projects constructed or under construction include the following:

## GRAND COULEE

During the year \$25,000,000 was expended on this project that is located in eastern Washington, about 92 miles west of Spokane. Present estimated cost of the completed high dam and power plant is \$186,000,000. By the close of 1939 approximately \$93,800,000 will have been disbursed and engineers estimate that continued appropriations of around \$30,000,000 a year will be necessary to carry forward the entire development in a reasonably speedy, sound, and orderly manner to completion.

In an important election held on December 9, 1939, landowners, in the localities to be included in the reclamation undertaking, overwhelmingly voted in favor of the formation of districts. This represented the initial (vital) step in the reclaiming of some 1,200,000 acres of land, a large portion of which at the present time is arid or semiarid.

## BONNEVILLE

While little progress was made in the marketing of available power during a major part of 1939 (there were several changes in management), the closing months of the year realized the signing of several sizable contracts. Private utilities in Portland have contracted for a substantial amount of energy which will result in reduced rates in that territory. In addition the lure of cheap rates has encouraged the Aluminum Co. of America to announce its intention of constructing, in the near future, a \$3,000,000 plant at Vancouver, Wash. This announcement came after signing a 20-year contract with Bonneville authorities.

## LAKE WASHINGTON BRIDGE

Much progress is in evidence toward completion of this structure. The pontoon bridge (longest of its type in the world), which will shorten the distance to North Bend and points east by some 14 miles and provide a new artery of traffic into Seattle, will be completed, it is said, by June 30, 1940. Total cost will be \$8,854,400, of which \$3,794,400 represents a Federal grant.

## TACOMA NARROWS BRIDGE

Work was continued throughout the year on this \$6,400,000 project. While it will not be completed until the fall of 1940, there is plentiful evidence of sustained progress.

## BREMERTON NAVY YARD

With the completion of the graving dock, on which a contract of \$1,957,000 was recently awarded, the Puget Sound Navy Yard will have the two largest drydocks in the country. This will place the local yard, with its five units, in an outstanding position among the navy yards of the United States with respect to facilities for work on all ships of the Navy.

## MUD MOUNTAIN DAM

Work was inaugurated during the year on the \$5,235,000 Mud Mountain Dam, which is expected to reach completion by November 1942. This dam is to be used entirely for flood-control purposes. It is located on the White River, approximately 47 miles southeast of Seattle, and will protect Puyallup Valley and the Tacoma industrial area against costly floods.

## HOUSING AUTHORITY OF THE CITY OF SEATTLE

This organization has undertaken a program of slum clearance that assumes major proportions. A sum of \$3,000,000 is to be borrowed, nine-tenths from the United States Housing Authority and one-tenth locally. This is to be used in clearing Yesler Hill and constructing 700 dwelling units which will afford accommodations for approximately 3,000 persons. Appraisal work is in progress at the present time and demolition and construction contracts will be let in 1940.

## SPOKANE AND THE INLAND EMPIRE

The improvements noted in 1938 continued during the past year at increased velocity. Construction again led the way with the largest number (4,000) of building permits ever issued in the city's history. A total of nearly 650 permits for single-family dwellings, at a value of almost \$2,250,000, surpassed any year since 1926, while real-estate activity was approximately 10 percent above 1938. In addition such business barometers as post-office receipts, telephones in use (new high record in 1939), sale of manufactured gas, department store sales, family dwelling vacancies, sales of new automobiles and trucks, and local railroad car loadings, all indicated an improvement over 1938.

The lumber industry in this district enjoyed one of its best years since 1930, reports to the Western Pine Association indicate. An unusually open fall permitted operations to continue far beyond their normal termination, with orders holding up well throughout the year.

The substantial increase in dividend payments by six companies augurs well for the mining industry in that section. Payments during 1939 totaled \$6,989,000 as against \$3,370,000 in the year previous. Contributing factors were increases in the price of silver, lead, and zinc, the latter two from a greatly stimulated demand.

## Census Snooping

## EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

RADIO ADDRESS BY HON. CHARLES W. TOBEY, OF NEW HAMPSHIRE

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address recently delivered by me on the subject Census Snooping.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am speaking particularly tonight to the masses of our citizens, to those great groups who have moderate salaries and incomes, and who are typical of the home life of America.

During April an army of 130,000 politically appointed census enumerators, armed with bundles of questionnaires, will invade every home in this country and demand that you answer, under peril of imprisonment, each of the many questions drawn up by the bureaucrats in Washington; questions which, in my judgment, invade your inherent rights of privacy and your constitutional liberty.

This army of locally appointed enumerators, one-half as large as the standing Army of the United States, is being appointed not primarily on the basis of merit or trustworthiness but, under the spoils system of political patronage, to reward party politicians for the work they have done in past campaigns or are expected to perform this year.

The enumerator that comes to your door will be a neighbor of yours, for the Census Bureau has announced that the enumerators will be appointed locally.

Whether you want to or not, you will be required to tell him how much income you have made during the past year, and what the sources of the income were; whether you have been divorced in the past; how old you were at the time of your first marriage; the number of children born under present or past wives; whether you have been married more than once; whether you have had the advantages of an education or had to leave school at an early age; how many grades of schooling you completed; whether you own your own home; whether it is mortgaged, and if so, for how much; and how regularly you are meeting your debt payments; whether you have a flush toilet and whether you use it exclusively or share it with others; whether you use your bathtub alone or share it with others; and whether you have an out-door privy; and so forth.

These are only a few of the 81 questions that he will demand answers to. This ordeal alone is sufficient to give the normal housewife at least a slight suggestion of a headache.

You will be required to answer these questions whether your neighbor, who happens to be the enumerator, is a creditor or an enemy of yours, or whether you have good reason to feel that your private affairs may be quietly revealed to others in your neighborhood.

Never before in the history of this country have the people been forced to reveal to locally appointed census enumerators, under the population schedule, the amount of their incomes, and this is admitted by the statement of the Census Bureau itself.

On February 1, I read on the Senate floor a letter which I had sent to Secretary of Commerce Harry Hopkins, urging that the questions relating to the private income of the individual be stricken out.

Secretary Hopkins refused to strike out these personal questions and called my request absurd.

In an attempt to allay my fears as to the dangers of this private information being divulged, Secretary Hopkins pointed out that the law prescribes penalties of fine or imprisonment for any census taker who reveals any personal information. This does not satisfy me, however, for I remember that it was this same Mr. Hopkins who was the head of the W. P. A., and I have read the Senate report of the investigation of W. P. A. scandals. In Kentucky, lists of W. P. A. workers were copied from official records, on forms with a column left for remarks, on official W. P. A. stationery; copies were handed to every W. P. A. foreman, requiring the filling out of the political affiliation of the relief worker, and whether or not the person so checked was favorable to the candidacy of the Democratic incumbent for the Senate and, in many instances, it was found that men not in favor of this candidate were discharged and denied relief. Therefore, with this shameful record before us of what has occurred, I point out that while there is a penalty upon any census enumerator, who divulges the information he secures, yet there was a similar penalty for any W. P. A. official who divulged information; but that did not pre-

vent its being divulged, and being used in political efforts to elect one candidate, and kill off another, under the W. P. A. administration, of which Harry Hopkins was the head.

Therefore, in view of the W. P. A. scandals which I have just cited, there are just grounds for being apprehensive lest these politically appointed census takers reveal this information to their political bosses, and lest the political bosses take political advantage of the financial plight of the individual citizen.

It was this same Mr. Hopkins who, when he was Administrator of W. P. A. was reported as making the following statement, "The people are just too damn dumb to understand what is going on." Well, Mr. Hopkins, the people writing to me have convinced me that they are not too dumb to understand what is going on in this matter of census snooping.

So, upon receiving Mr. Hopkins' refusal to strike out these questions, I introduced Senate Resolution 231, which if adopted by the Senate will require the Census Bureau to strike out questions 32 and 33, which ask you to reveal your income. If you will write me I will be very glad to send you a copy of this Tobey resolution.

This resolution has been referred to the Senate Committee on Commerce, and I am endeavoring to get a hearing before the committee.

If you feel, with me, that these income questions invade your right of privacy, you can help to get them out of the questionnaire by writing to your Senator, urging support of the Tobey resolution on the census. If you and your friends help in this way, I am confident that we can get the resolution passed, and the income questions stricken from the questionnaire, so that you will not have to reveal to your neighbor, who will be the census taker, this private information, which may easily become common gossip in your local community. Only recently the housewives of Olean, N. Y., held a protest meeting, and publicly resolved that they will not stand for this snooping into their private affairs.

Notwithstanding these questions about income are not sanctioned by law, and are entirely new questions, Mr. Hopkins attempts to justify them by the statement that these census questions represent the wishes of the American people.

I challenge that statement as I also challenge the statement of an official in the Census Bureau who said, "The American people have asked us to answer these questions for them."

I suppose the American people are just clamoring to know whether or not John Smith has a \$1,200 mortgage on his house, and whether or not he made his last payment when due, and we, the American people, can hardly wait to find out how much income Mary Brown has received.

No; the American people never asked for this information. A few large business concerns may have done so, and some research bureaus, but the values, if any, gained from such information, are entirely disproportionate to the invading of the private rights of the people.

Every individual in this country has an innate love of freedom. Every individual is entitled to a certain amount of self-respect. Why should you be compelled to divulge the amount of your income to political appointees who may reside in your neighborhood, or be your enemy? A free American citizen is justifiably loath to furnishing such information to any Tom, Dick, or Harry who has been given by a political boss the privilege of intruding.

To illustrate, I now read a letter from a woman in New York who writes, "On a recent news broadcast I heard of your opposition to certain census questions. This comes to me with much force because of an experience I have had. During a recent farm census I was obliged to tell a neighbor, who had been made census taker, if I had a mortgage, and how much. This is a small town, and this information was a sweet morsel to the census taker, who lost no time in letting it be known. For such as I am, whose honest endeavor is to live a square and decent life, and mind my own business, these things hurt cruelly and seem most unjust."

Were I told that such a method of compulsion was used to obtain private information in Soviet Russia or in Germany, prior to, and to facilitate the inauguration of dictators in those countries, I would not be at all surprised.

Such a departure from precedent under the guise of social planning reminds one of Professor Tugwell's words: "We shall roll up our sleeves and make America over. We begin with small, unnoticed changes, and end by not being able to resist vast and spectacular ones."

I hold, and my opinion is supported by foremost authorities, that these income questions are a direct violation of article IV of the Bill of Rights, which reads: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated."

I have in my hand a letter from William Starr Myers, head of the department of politics at Princeton University, which reads as follows:

"DEAR SENATOR TOBEY: I am very glad indeed to see that you have taken up and exposed the character of questions to be asked of the individual citizens by the census enumerators. If the reports of the questions are correct, as stated in the newspapers, they are a direct violation of the Bill of Rights in the United States Constitution, and totally unwarranted as an infringement of private rights and individual liberties. I think you are doing a great public service, in thus taking a stand in defense of American institutions, and heartily thank you for it."

To the many of you who have written me that you will refuse to answer these questions as to income, let me assure you that, on eminent legal authority, these questions are not only unconstitutional but, in addition, there is no legislative authorization for them. So far as pertinent to this subject, the Congress restricted the census to questions on population and unemployment. Nowhere in the act are income questions authorized. The Bureau officials, acting without authority, inserted these questions on income, on the ground that they are population and unemployment questions. This is an attempt to stretch the word "population" beyond all reason.

I am not a prophet nor the son of a prophet, but as I review the growing scope and number of the questions asked at each census, and this stretching of the meaning of the word "population," it is not an overstatement to say that I shall not be surprised if, in 1950, with an increasing thirst for knowledge, they will inquire into the most private marital relations between husband and wife, attempting to justify this on the basis of population trends, eugenics, or biology.

To sum up, these census questions demanding you to divulge your income manifestly violate your constitutional rights. They constitute an unwarranted prying into your personal affairs, they open up personal information to people in your own community, who have been politically appointed as enumerators, and they are an invasion of the natural right of privacy of every citizen.

Wake up, America, before it is too late. Eternal vigilance is still the price of liberty. Stand up and fight.

## Rural Electrification

### EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

ARTICLE BY LUDWELL DENNY

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by the distinguished writer on economic and political subjects, Mr. Ludwell Denny, which was published in the New York World-Telegram, in which the writer discusses the activities of the Rural Electrification Administration and shows that within a period of a few years it has increased the use of electricity upon farms from less than 11 percent to more than 25 percent.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York World-Telegram]

R. E. A. REPORT DEFIES RUGGED INDIVIDUALISM

(By Ludwell Denny)

WASHINGTON, February 17.—The biggest club used by Republican campaign orators to beat the New Deal is "free enterprise." Too much government in business, boondoggling, plowing under of little pigs, and billions of dollars running out in taxpayers' money and debt for wasteful projects.

If the Government, instead of importing pink ideas from Europe, had simply let alone that rugged individualist, the American citizen, the country would have recovered from depression long ago—as it speedily will recover when the incoming Republican administration permits free enterprise. That is the G. O. P. argument.

But today one New Deal agency issued an annual report which the candidates of smear oratory may find too hot to handle. This agency is one of the worst offenders against rugged individualism. It competes with private capital. It regiments hundreds of thousands of free Americans. And yet Republican campaigners are not likely to use it as a horrible example to prove their point.

The name of this agency—and it is only a name to some city folks, many of them having never even heard of it—is the Rural Electrification Administration. Its report today indicates that about 25 percent of American farms now have electricity.

That, of course, is a pretty bad showing in the eyes of the average city chap. Considering that the country has had electricity for more than half a century, there has certainly been plenty of time to electrify not 25 percent but practically all of the farms of the richest and most progressive nation on earth.

But the surprising statistics in the R. E. A. report indicate that New Deal interference and regimentation are not to blame. Even before the Government began messing in this, business conditions were not perfect.

In fact, after 50 years of free enterprise and private initiative on the part of the great power industry of the country less than 11 percent of the farms were electrified.

Then the "blundering brain trusters," the impractical "long-haired boys," got busy. That was in 1935. And in 4½ years they have boosted the figure from 11 to 25 percent—and are on the way to 30 percent. In this brief period the New Deal did more in extending this branch of the electrical industry than private business had done in half a century.

And it is not going to sink the poor taxpayers, either. With few exceptions these rural power projects are paying their own way. Many of them are so successful as business propositions that private industry is trying unsuccessfully to buy them out.

It is not quite accurate, however, to say that the Government is doing all this. It is doing something much worse, from the standpoint of rugged individualism, than running these projects itself. It encourages the formation of, and lends money to, cooperatives. Nearly 9 out of 10 of the R. E. A. borrowers are cooperatives.

Apparently the individualistic farmers like this regimentation into cooperatives, or, at least, do not regard the sacrifice of their right to act separately in drudgery as too great a price to pay for lights, radios, electric irons, washing machines, refrigerators, and motors for farm work. The number of farm families being pampered and made soft by such luxuries is now 1,700,000 compared with 744,000 before R. E. A.

Among the new dealers who dreamed this dream, which has turned out to be so real and practicable, were Mr. Roosevelt, Senator Norris, Morris Cooke, John Carmody, and Harry Slattery, the present outstandingly able R. E. A. administrator. But, of course, it is the farmers who are doing the job—of self-help through cooperation and with Government encouragement.

### Looking at Records

#### EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

EDITORIAL FROM MONTGOMERY (ALA.) ADVERTISER

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Montgomery (Ala.) Advertiser of February 16, 1940, entitled "Looking at Records."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Montgomery (Ala.) Advertiser of February 16, 1940]

#### LOOKING AT RECORDS

When writers of opinions blandly say something about looking at records to prove a particular thesis it is time for the ordinary man to get out all his available intellectual salt and begin using it. Records of a purportedly statistical nature are the trickiest things known. There are many honest statisticians, but for every honest statistician there are hundreds of dishonest interpreters of statistics.

The old adage concerning the impartial truth-telling quality of figures is worthless when applied to certain complex situations. Isolated statistical facts are as dangerous as quotations apart from context. The misuse of statistical material is by no means confined to one group, but of late antiadministration propagandists have been egregious offenders. Frank R. Kent, nominal Democrat but violent anti new dealer, has recently asked his readers to look at the record in the popular fashion. He complains in the Louisville Courier-Journal that the swelling of the Government pay roll under Mr. Roosevelt "is as pregnant of national risk as the \$23,000,000,000 increase in national debt \* \* \*." The record, as Mr. Kent introduces it, is as follows:

"The record is almost fantastic. When Mr. Roosevelt took office there were 563,161 permanent employees of the Government. Today there are 932,654. Every month the total mounts. Within the next few months the new Wage and Hour Administration plans to add thousands of new inspectors, and there is hardly an agency of the Government, including the White House, where six additional secretaries were added recently, whose personnel is not expanding. None is being reduced. In 7 years Mr. Roosevelt has added 469,493 persons to the pay roll. It is not disputed that another 11 months, at the present rate, will see an additional 40,000 employees on the rolls. By then the size of the Government, like its cost, will have been doubled in 7 years."

It is more than likely that every figure quoted is as near true as human ingenuity and a couple of adding machines can make them. Mr. Kent is a careful reporter. He is a persuasive reporter. But there is part of the record obscured by the rush of Mr. Kent's prose. Hand it back here, Mr. Kent, and let us look a little more.

Prior to Mr. Roosevelt's swelling the Federal pay roll to this alarming extent there was a President in office who made this immortal

statement: "I am opposed to any direct or indirect Government dole." At the same time this President was pressing for a form of corporate dole called the Reconstruction Finance Corporation. It did not take a large administrative body to handle requests for loans by corporations even though there were many requests. There were not nearly as many requests from corporations for loans as there were people starving.

Prior to Mr. Roosevelt's swelling the Government pay roll to this alarming extent, the bank resources of this country had dropped from seventy billions to fifty-seven billions, and the bank deposits had declined about \$12,000,000,000 during the period June 30, 1931, to June 30, 1932. Widespread failure was imminent.

Prior to Mr. Roosevelt's iniquitous hiring of clerks to administer the myriad agencies created under his government, an army of unemployed marched on the Capitol of these United States. That army was dispersed with the command to "fire" going unobeyed by policemen who thought human lives more of an asset to the country than liquid corporations.

There is a lot to that record. So much to it that no one man's mind could possibly comprehend every detail and make a positive interpretation. Today's affairs, their records and figures, are quite often the product of yesterday's affairs. Sometimes they are the product of tomorrow's affairs and must be judged in that light. Every shade and subtlety of the record of human events has important bearing on the number of Federal employees right at this moment. There might be too many Federal employees. There might just as well be too few. It is certain that the Wage-Hour Administration needs more help—either it gets that help or business will be hopelessly entangled in the meshes of a law unadministered but effective in the eyes of a court.

Let's look at the record, as much of it as we can comfortably view during a lifetime, and then interpret the single facts without relation to the whole.

### Governor James of Pennsylvania and the W. P. A.

#### EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

EDITORIAL FROM THE PHILADELPHIA RECORD

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix an editorial published in the Philadelphia Record of February 22, 1940, entitled "W. P. A. Calls the Governor's Bluff," and dealing with Governor James, of Pennsylvania, and the W. P. A.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Record of February 22, 1940]

#### W. P. A. CALLS THE GOVERNOR'S BLUFF

Hell, it appears, hath no fury like an anti-New Deal Governor trying to cover up his failure to save money by blaming it on W. P. A.

We point to the sad case of Arthur H. James. He was elected on a pledge of reducing relief taxes. He has not reduced them and now faces the prospect of still larger relief appropriations. Governor James charges that Pennsylvania's W. P. A. quota of Federal funds is too small. In this he is right.

But the Pennsylvania quota is too small because all the State quotas are too small. They were cut by Governor James' own party when it joined with conservative Democrats and cut W. P. A. appropriations in Congress.

In spite of all his fury Governor James cannot justify his contention that there is political discrimination against Pennsylvania on the quotas.

Governor James complains that W. P. A. does not even fill its quota in this State. And on this point, too, he is right. But the reason again is not politics in Washington, but the stubborn refusal of the city of Philadelphia to sponsor W. P. A. projects.

The Governor was invited to Washington for a conference with W. P. A. officials on his charges. Characteristically, the Governor preferred to make a speech to Republican Members of the House rather than talk it over with W. P. A. officials.

Meanwhile, the W. P. A. officials pointed out for the 'teenth time that 22,550 available W. P. A. jobs in Pennsylvania are still unfilled.

This was not a "concession" on the part of W. P. A. The jobs have been available all along. They will materialize now if James can induce his fellow Republican leaders, such as Jay Cooke, to stop obstructing W. P. A. jobs.

Philadelphia, for instance, has one-third of the unemployed of the State. The city pays not a nickel for direct relief—and last year put up only \$1,000,000 as its share of W. P. A. projects.

For years there have never been more than 5,000 W. P. A. employees at any one time working on projects sponsored by the city of Philadelphia. As long as that situation continues, the Federal W. P. A. is almost helpless in Philadelphia. It can and does operate several projects sponsored by the board of education and agencies other than the municipal government.

But the backbone of any adequate W. P. A. program must be the local government itself.

Philadelphia's refusal to cooperate, plus the W. P. A. cuts made by James' own party, puts James in a hole. He can't bite the hand that elected him by blaming it on Jay Cooke, so he tries to blame the New Deal at Washington.

Isn't it odd how the Republicans in city council here refuse W. P. A. on the ground that they don't want "Democratic money" coming into the city, and yet Governor James charges that the Democrats are withholding W. P. A. jobs for political reasons?

They can't both be right. But there's a very good chance that both can be wrong.

The W. P. A. administration has called James' bluff. It says there are 22,550 jobs waiting for sponsors in Pennsylvania. Let's see James get the sponsors as every other Governor in the United States has done.

## The National Transportation Bill

### EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

RADIO ADDRESS BY FRED BRECKMAN

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by Fred Breckman, Washington representative of the National Grange, from Washington, D. C., on the grange hour, on February 17, 1940, on the subject, the National Transportation Bill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It will be recalled that about a year and a half ago President Roosevelt appointed a Committee of Six to survey the situation confronting the railroads of the country and to prescribe remedies for their ills. One-half of the members of this committee was composed of railway executives; the other half represented railroad workers. Other forms of transportation had no representation on the committee—nor was the general public represented.

In due time bills embodying the recommendations of the committee were drafted and introduced in both Houses of Congress. After somewhat lengthy hearings before the House and Senate Committees on Interstate and Foreign Commerce, these bills were favorably reported. The Senate passed a bill representing an attempt to codify the entire Interstate Commerce Act. When this measure reached the House everything but the enacting clause was stricken out and a new bill was substituted, which was passed after heated debate.

Action on this legislation came so late during the last regular session that there was not sufficient time remaining before adjournment to reconcile in conference the differences between the two bills. However, a conference committee is now engaged in the arduous and difficult task of attempting to compose the many differences between these two bills and to pave the way for final passage.

#### LEGISLATION THAT SUITS NOBODY

A curious situation has arisen with reference to the matter: First of all, the President's Committee of Six, which sponsored this legislation, has issued a pamphlet of 43 pages suggesting 36 "necessary changes" in the Senate bill. Another pamphlet of 91 pages issued by the Committee of Six recommends 27 changes in the House bill. The Interstate Commerce Commission has made a special report dealing with this subject which covers 84 printed pages.

As this report sets forth, the Senate bill, from the standpoint of codification, was produced under great difficulties and is regarded by the Interstate Commerce Commission as "a forced and hurried job." The Commission is of the opinion that any attempt to codify the Interstate Commerce Act should be worked out with great deliberation and that a preliminary report should be issued, setting forth a tentative draft, giving the reasons for all the changes that are proposed. After that, in the opinion of the Commission, all concerned should have an opportunity to submit briefs on this tentative draft—after which a final report should be issued for the consideration of Congress.

It will be seen from this that the legislation in question is far from satisfactory to the Committee of Six, which inspired it. In its present form it is considered imperfect and unworkable by the

Interstate Commerce Commission. It meets with the disapproval of a large percentage of railroad workers; it is likewise opposed by those who are interested in water and motor transportation. There never was any public demand for this legislation, and there is justification for saying that its enactment would be contrary to the public interest.

#### GRANGE OPPOSES UNNECESSARY REGULATION

The Grange and many other farm groups are opposed to the proposal contained in both House and Senate bills that the carriers on our inland waterways should be subjected to regulation by the Interstate Commerce Commission. The Grange likewise opposes this legislation because it goes further than the Motor Carrier Act of 1935 toward placing private motortrucks, including the 1,000,000 trucks on our farms, under the regulation and control of the Interstate Commerce Commission.

We maintain that there are only two legitimate grounds upon which the Government could justify itself in attempting to regulate transportation on our inland waterways. One of these grounds would be in the interest of public safety and the other to protect the public against monopolistic practices. So far as safety is concerned, the Bureau of Marine Inspection and Navigation, coming under the Department of Commerce, looks after that; and when it comes to protecting the public against monopoly, the truth is that no monopoly whatsoever exists among the carriers on our inland waterways, nor in the coastwise trade. The rivers, the lakes, and the seas are open to all. These are highways that were created by Nature herself. So far from breaking up any monopoly among the water carriers, which in reality is nonexistent, the pending legislation takes a long step toward creating a monopoly.

The carriers that are now operating would be permitted to continue, subject to rules and regulations laid down by the Interstate Commerce Commission; but before it would be possible to establish a new service it would be necessary to secure from the Commission a certificate of public convenience and necessity.

If this bill should be enacted, there would be no new carriers, for the simple reason that the restrictions of the legislation virtually instruct the Interstate Commerce Commission to deny any person or concern a certificate of convenience and necessity if the Commission comes to the conclusion that present transportation facilities are adequate to take care of existing commerce.

This raises the question, Who owns the rivers of the United States? It is the people of the country who own them. That being true, why should not the people be allowed to use their own rivers under proper conditions without let or hindrance on the part of the railroads, the Interstate Commerce Commission, or any other agency.

Most of us remember having heard that when Abraham Lincoln was a young man he made a trip on a flatboat carrying some farm produce down the Mississippi River to New Orleans. What a pity it would have been if it had been necessary for him and those associated with him to make application for a certificate of public convenience and necessity before starting on this trip.

#### THE MILLER-WADSWORTH AMENDMENT

If the pending transportation bill should be enacted, it is of supreme importance to those who are interested in the development of the transportation facilities of our inland waterways and to the public as well that the amendment sponsored by Senator MILLER, of Arkansas, and by Congressman WADSWORTH, of New York, should be retained. Briefly stated, this amendment provides that in order that the public at large may enjoy the benefit and economy afforded by each type of transportation, the Interstate Commerce Commission shall permit each type of carrier or carriers to reduce rates, so long as such rates maintain a compensatory return, after taking into consideration the overhead and other elements entering into the cost of the service rendered. This amendment is so fair and reasonable that it would be nothing short of preposterous if the bill should be enacted without it.

There is justification for saying that those who inspired and drafted the legislation under consideration have lost sight of the fundamental purpose for which Government regulation was established, and that was to protect the public interest. We have drifted so far away from this original and legitimate purpose that the effort of our lawmakers now appears to be to equalize competition as between different modes of transportation. The truth is that an attempt is being made under the guise of regulation to raise the rates of water and motor carriers to the point where they will be comparable with rail rates. This is not only unsound economically, but it is prejudicial to the welfare of the entire country.

#### FARMER WOULD BE PENALIZED

Agriculture, in particular, would be hard hit if the proposed legislation should be enacted. Transportation constitutes the heaviest service charge that the farmer has to pay. The farmer pays the freight both coming and going. Last year the farmer received only 39 cents out of every dollar paid by the consumer for food. At the depth of the depression the farmer's share of the consumer's dollar dropped to 33 cents. While transportation and distribution must be regarded as legitimate and indispensable functions in the affairs of our civilization, the fact remains that when those who merely transport and distribute the products of our farms receive vastly more than the share that goes to the producer, it amounts to the same thing as an economic crime.

Several months ago I filed a brief with the Interstate Commerce Commission on behalf of the Grange, protesting against the proposal that private motortrucks, including farm trucks, engaged in interstate commerce should be subjected to Federal regulation in

the interest of safety. While we are, of course, in favor of proper restrictions and regulations to promote safety on the highways, we take the position that this is a matter that is already being looked after by the several States. In addition to this, a survey discloses the fact that not one private truck in ten ever crosses a State line.

#### OVERCENTRALIZATION OF GOVERNMENT

Under the circumstances, it is proper to ask why Federal control and regulation should be superimposed upon State control and regulation. With the deficits of the Federal Government aggregating billions of dollars a year, why should this expense be duplicated? Can there be any reasonable doubt that if Washington undertakes to control and regulate the private motor carriers of the country, in due time this will result in a tremendous increase in the number of Federal employees? During the past 7 years the number of civil employees on the pay roll of the Federal Government has risen from 563,000 to 933,000, an increase of nearly 70 percent. During the same period the national debt was increased by more than \$21,000,000,000.

As these facts and figures convincingly prove, the Government has already assumed greater obligations and responsibilities than it is capable of carrying without increasing taxation to the point of confiscation.

The wise rule laid down by Thomas Jefferson, that government should restrain men from injuring one another and leave them otherwise free to follow their own pursuits, should apply in this case.

### Aviation Needs of the Coast Guard

#### EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

STATEMENT BY JOHN J. CRIM

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement, together with certain tables, relative to the aviation needs of the Coast Guard.

There being no objection, the statement and accompanying tables were ordered to be printed in the RECORD, as follows:

The Bureau of the Budget approved the sum of \$2,199,000 for the purchase of aircraft for the Coast Guard. These funds were to be used for the procurement of eight long-range, twin-motored seaplanes and seven intermediate-range, twin-motored amphibians.

On July 1 the Coast Guard will be operating 10 air stations. The minimum number of airplanes required for each station are 3 long-range seaplanes and 3 intermediate-range amphibians. The total number required for the service on this basis is 30 long-range seaplanes and 30 intermediate-range amphibians. On July 1 we will actually have in commission 16 long-range seaplanes and 16 intermediate-range amphibians. With this number of airplanes, we will be able to furnish only 5 of the 10 stations with the required number of airplanes. There will be 5 stations without airplanes of these two types. You can readily see that even with the full number of airplanes authorized by the Budget we will not have sufficient airplanes to adequately equip all of the 10 air stations. Of the 16 long-range seaplanes which we will have on July 1, 3 of them should be surveyed, as they have been in commission since 1932 and are now over 7 years old.

The normal duty performed by Coast Guard aviation requires that each air station have the number of airplanes stated above and these requirements are in no way connected with the present emergency. The present emergency has, of course, greatly increased the operation of Coast Guard aircraft and makes it even more necessary to have at least the minimum number of airplanes stated above. With this additional burden caused by the present emergency, the complement of each air station should be more than the six airplanes mentioned as being necessary to fill the minimum requirements.

The attached pages show our requirements in detail.

Summary showing comparison of airplanes now in service or under contract for construction and airplanes required.

	Required	In service, 1941	Deficiency
Long-range seaplanes.....	39	16	-23
Intermediate range.....	38	16	-22
Total.....	77	32	-45

16 airplanes are in restricted service due to their age and condition. They are not included in this total.

#### Airplanes required to properly equip air stations and air-patrol detachments

Units	Long-range seaplanes	Inter- mediate range	Total
1. Salem.....	3	3	6
2. New York (field).....	3	3	6
3. Elizabeth City (field).....	3	3	6
4. Charleston (field).....	3	3	6
5. Miami.....	3	3	6
6. St. Petersburg (field).....	3	3	6
7. Biloxi.....	3	3	6
8. San Diego (field).....	3	3	6
9. San Francisco (field).....	3	3	6
10. Port Angeles (field).....	3	3	6
11. Alaska.....	3	3	6
12. Great Lakes.....	3	3	6
13. Cape May.....	3	3	6
14. Honolulu.....		1	1
Total.....	39	38	77

An air station for Alaska and 1 for the Great Lakes have been authorized, but no funds have been appropriated for their construction.

#### Assignment of Coast Guard aircraft to air stations, after delivery of all planes now building or authorized

Assigned to—	Long-range twin- engined seaplanes	Inter- mediate-range twin- engined planes
Air station, Salem, Mass.....	3	3
Air station, New York, N. Y.....	3	3
Air station, Elizabeth City, N. C.....	3	3
Air station, Charleston, S. C.....	None	2
Air station, Miami, Fla.....	3	None
Air station, St. Petersburg, Fla.....	None	3
Air station, Biloxi, Miss.....	3	None
Air station, San Diego, Calif.....	None	1
Air station, Port Angeles, Wash.....	None	1
Air station, San Francisco, Calif.....	None	None
Air patrol detachment, Cape May, N. J.....	1	None
Honolulu, T. H.....	None	None
Total.....	16	16

#### Assignment of Coast Guard aircraft to air stations after delivery of all planes now building or authorized and if 8 long-range seaplanes and 7 intermediate airplanes requested in this appropriation are authorized

Assigned to—	Long-range twin- engined seaplanes	Inter- mediate-range twin- engined planes
Air station, Salem, Mass.....	3	3
Air station, New York, N. Y.....	3	3
Air station, Elizabeth City, N. C.....	3	3
Air station, Charleston, S. C.....	3	3
Air station, Miami, Fla.....	2	None
Air station, St. Petersburg, Fla.....	None	3
Air station, Biloxi, Miss.....	3	None
Air station, San Diego, Calif.....	None	3
Air station, Port Angeles, Wash.....	3	None
Air station, San Francisco, Calif.....	3	3
Air patrol detachment, Cape May, N. J.....	1	1
Honolulu, T. H.....	None	1
Total.....	24	23

### The Defense Program

#### EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

ADDRESS BY HON. LOUIS JOHNSON

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting and timely address delivered by Hon. Louis Johnson, the Assistant Secretary of War, before the Engineering Society of Western Pennsylvania at Pittsburgh, Pa., on February 19, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### NATIONAL DEFENSE

Engineers of Pittsburgh and western Pennsylvania, just 6 months have elapsed since my last appearance before an audience in Pittsburgh. What changes have taken place in the world in the intervening period.

Here is America they all have been for the better. Here in the "City of Miracles," for instance, the index of business activity which was down to 84 in August passed 130 in January. Industrial production increased. Trade improved. Employment rose. A nation united on fundamentals succeeded in making life safer, property more secure, and happiness more widespread.

In Europe and Asia the changes since August have all been for the worse. Ordinary business activities have ceased. Production has turned almost wholly to munitions. Trade is at a standstill. All human energy is devoted to more efficient killing of men, more proficient destruction of goods, and more diabolic dispersion of misery. May these internecine struggles never spread to our American shores. And they will not so long as we adhere to a policy of adequate national defense.

When I was here in August I advised you that America was arming because of necessity. I pointed out that in the world of today a nation which cannot resist aggression may face subjection. I called your attention to the nonpartisan national defense program which the President, supported by Congress, had launched. I tried to convince you that our peace—and I shall have more to say about peace—and our prosperity could be assured only if that program were fully enacted.

Today I am happy to report that our modest defense program is well on the way. Thanks to the hearty cooperation both of management and of labor, we are breaking one bottle neck after another in the production of munitions. We are proceeding in an orderly manner toward the manufacture and delivery of fighting equipment. We are selling implements of war abroad in accordance with our neutrality laws but are safeguarding our secrets and insisting upon the priority of our own orders.

Thanks to the happy camaraderie that exists between the members of the military and naval forces, each of us is making splendid progress along the munitions front without interfering with the projects of the other. Within the Army itself a splendid esprit de corps prevails. The ill feeling that once seemed to pit the men in the air against those on the ground has disappeared. Cooperative peace hovers over the War Department, and the American people are reaping the benefits in a far-sighted, well-balanced national-defense program.

In any national-defense program Pittsburgh must play a vital role. In the World War of yesterday, in the defense program of today, and in the industrial mobilization that may come at some tomorrow, steel, as always, will be the basic element in munitions; and where in the world could the Government or the munitions industry find a better market in which to get this essential supply?

During the World War perhaps 80 percent of all munitions steel came from the mills of this district. Heavy machinery, electrical apparatus, piping and pipe equipment, tool steel, and refractories were some of the significant items that the War Department obtained from this area. To illustrate the magnitude of munitions production in western Pennsylvania I need but say that in 1917-18 the shipments of ordnance material from Pittsburgh and vicinity ran to 100 carloads a day. Not only for the Army, but for the Navy and for the emergency fleet, the Pittsburgh district performed an admirable job in quantity and quality production.

In the armament program of today steel again is the basic element, and once more the Army and the Navy look to this district for their supply. Although steel predominates, we are also getting from local sources today bombs, gun tubes, and armor plates for tanks.

In a grave emergency the War Department will depend on the Pittsburgh district for a wide variety of munitions. In addition to those items already mentioned, our armed forces will look to western Pennsylvania for plate glass, optical and testing instruments, machine tools, gas-defense equipment, and troop barges.

The munitions that I have mentioned so far are but a few of those included in the vast catalog of war supplies needed for a modern army. The service of supply has assumed a role in the warfare of today at least coequal with that of the combatant forces. Nations have learned that in general it takes twice as long to manufacture, assemble, distribute, and issue to the soldier his equipment as it does to make him a well-trained and proficient fighting man. General staffs, therefore, find it just as necessary to evolve supply policies to carry out the national-defense program as to develop principles for the organization, the training, and the tactical and strategic employment of troops.

In the light of our own national-defense policy, let us therefore consider our specific supply needs.

First on our program should be the complete and modern equipment of our Regular Army and National Guard. This is our initial protective force. It must be ready to face any emergency at a moment's notice. Today these minutemen of ours are not adequately equipped. With the funds placed at the disposal of the War Department by the last Congress, and with what we hope to get this year, it is believed that by June 1941 they will be. I need hardly add that June 1941 is almost 18 months away.

Unfortunately, there is very little that can be done to accelerate the completion of this program. It takes time to manufacture

tanks, artillery, gas masks, and other munitions for which no counterpart can be found in ordinary civilian production. It is therefore imperative that our Regular Army and National Guard forces be completely equipped with modern implements of war; and once so equipped, that they be kept that way at all times.

Second on our list should be the maintenance of adequate war-reserve stocks. A war-reserve stock is a supply of munitions physically available to which men, when mobilized, can immediately turn. If a million men are to spring to arms overnight, the arms must be on hand for them to spring to. Because munitions are quickly expended when the guns begin to shoot, it is necessary that there be enough on hand to tide over the early months of battle. In a democracy it takes industry engaged ordinarily in peaceful pursuits many months to mobilize for war. It is therefore necessary that adequate reserve supplies be available until wartime production equals wartime consumption. In simple terms, an adequate war-reserve stock for our country should include enough munitions to maintain a force of 1,000,000 men for a period of at least 6 months. Today we have not got it. We have reported our shortages to Congress and sincerely hope that this situation will be ameliorated.

Third on our program should be the preparation of civilian industry for its wartime tasks. We have no Krupp, no Schneider, no Vickers in America; no munitions industry comparable to those abroad engaged almost wholly in times of peace in the production of implements of war. We must, therefore, rely on the conversion of our civilian plants into munitions factories. To effect such a change with a minimum of delay and confusion, we must help industry in time of peace to prepare for its allotted task in case of war. Our armament program, coupled with educational orders and production studies, are decided contributions toward this end.

Fourth on our program should be Government facilities for the development, manufacture, and maintenance of munitions. An example of such facilities exists in the form of our military arsenals. They are primarily laboratories. They cannot handle mass production. In the early stages of war, however, they will, in some fields, be the only source of munitions. It therefore behooves us to equip, modernize, and fully staff our governmental facilities so that they will be able to perform to their full capacity. Toward that objective we are at present striving.

A fifth plank in our supply platform should include the acquisition, the storage, and the maintenance of strategic and critical raw materials ordinarily procured from foreign sources. Among them are such items as tin, tungsten, chromium, and manganese, which either are not available at all in this country or, if available, are limited in quantity or deficient in quality. If the sea lanes become filled with raiders and fighting ships, we may lose access to the foreign shores where these materials are available. It is necessary, therefore, that we accumulate stock piles of such strategic reserves in this country and keep them up at all times. We have made a start in this direction. Congress authorized the expenditure of \$100,000,000 for this purpose. So far, however, only \$10,000,000 have been appropriated. I sincerely hope that Congress in its wisdom will set aside sufficient funds during this session to assure us an adequate supply of these critical items so vital to our wartime needs.

Another problem which deserves special consideration is that of practical assistance to the other nations of the Western Hemisphere in their procurement of munitions. Although principally a State Department matter, it is something that the armed forces, too, must consider. Now that we definitely have asserted our policy of hemisphere defense, we should be prepared to carry it into effect. It contemplates not a defense of the Western Hemisphere by the United States but by the united efforts of all of the American republics. Since we propose to depend upon each other for our mutual protection, we have a common interest, each and every one of us, in supply preparedness on a hemisphere front.

Finally our supply policy should include adequate plans for the prompt and effective mobilization of industry upon the declaration of war to meet full wartime requirements. Toward that end we have worked out an industrial mobilization program in the spirit of our American democratic traditions. It is not a perfect plan. No human plan can be perfect, but it is an honest and conscientious effort to avoid the errors of the World War on the industrial front.

In this supply program that I have outlined briefly the engineer is playing an important role. In research, development, design, and production of munitions his services are indispensable. Let me merely point out a few of the most recent achievements of the Corps of Engineers in this field. With the cooperation of the Air Corps it has revolutionized map making. With five-lens cameras and with multiplex aerial mapping equipment it has reduced to hours work that ordinarily would take weeks and months. It has used this new equipment in flood-control surveys at a great saving of time and money. Two engineer topographical battalions have been issued multiplex equipment to facilitate rapid mapping in the field with the aid of aerial photographs.

Another striking contribution of the Corps of Engineers in the field of supply has been the development of a metal mirror for use in our searchlights. In the past only glass was used. It was inherently fragile. Given a direct hit by a single bullet it would crash. The engineers now have developed a metal searchlight mirror which serves the same purpose and removes these difficulties.

As for the peacetime work of the Army engineers, there is little that need be told a Pittsburgh audience. Much of the activity of the Corps of Engineers relating to waterway improvements for the benefit of navigation, the control of floods and the abatement of pollution, has been centered here in western Pennsylvania. A far-reaching and progressive program of canalization has transformed the

Monongahela and Allegheny River systems into great inland waterways. Today, after 100 years of navigation improvements, a completed slack-water system, comprising 13 dams on the Monongahela, makes it possible for boats to navigate the river for a distance of 128 miles above Pittsburgh. Likewise, 8 completed dams on the Allegheny provide a 9-foot slack-water channel for a distance of 71 miles above the mouth. The craft using these channels can navigate directly to the Gulf of Mexico via the canalized Ohio and the improved Mississippi River, a voyage of approximately 2,000 miles. Due in large measure to these improvements this area has been rapidly transformed into one of the leading industrial sections of the world.

Flood-control dams are nearing completion on Tionesta Creek near the town of Tionesta and on Crooked Creek in Armstrong County. Similar work is rapidly progressing on Mahoning Creek, also in Armstrong County, and Loyalhanna Creek in Westmoreland County. Certain items of work on portions of Conemaugh and Little Conemaugh Rivers and Stony Creek to improve local flood conditions at Johnstown have been completed and other parts are actively under way. An important project in the western Pennsylvania area, which the Department expects to place under way in the near future, is the Youghiogheny Reservoir, involving an earth-fill dam on the Youghiogheny River above and near Confluence, Pa. This dam will provide storage for flood control and water conservation for improvement of Youghiogheny River navigation facilities and for pollution abatement. All of the above-mentioned projects form units of a coordinated reservoir system for the protection of Pittsburgh and the reduction of floods in the Ohio River Valley.

All along the national defense front, western Pennsylvania is lending a helping, patriotic hand. Your National Guard organizations, your Officers' Reserve Corps, your Reserve Officers' Training Corps at Duquesne University, at the University of Pittsburgh, and at the Carnegie Institute of Technology are all invaluable assets.

Last August, when I was in Pittsburgh, I briefly mentioned your splendid vocational schools and the excellent work they are doing in building up skilled labor in this country. I have been informed that 95 percent of the graduates from these schools last year are now employed in private industry. This fine job-placement record, in view of the great unemployment of youth in other parts of the country, speaks eloquently of the true value of your vocational-school system.

Also, I want to express to the industrial leaders, both of management and of labor, in western Pennsylvania my appreciation for the hearty cooperation you have given the War Department in our industrial preparedness program. I am especially grateful to you for the cordial reception which you are giving annually to the students of the Army Industrial College who visit you in the spring for a close-up view of your production methods. Out of these meetings has come a mutual understanding between industry and the War Department which bespeaks harmony in peace and efficiency in war.

And finally, in pleading for adherence to this sound policy of adequate national defense, may I put in the record that I plead for preparedness as the most certain road toward peace—preparedness not only in men and munitions but in thoughts, attitudes, and aspirations, for we have learned by bitter experience that peace comes not from mechanics or even from a staggering preponderance of power; it comes from the spiritual desire of peoples. We know that there must be a very great ability to use force, if necessary, for defense. We also know that that alone does not assure a peaceful ordering of affairs. There has to be a combination of the power of self-defense with a policy of peaceful arrangement of affairs, and only thus can peace be attained.

When we speak of national defense in the United States, those of us who have to follow the great play and interplay of forces think of the maintenance of a civilization here in which every boy does not have to spend, necessarily, 2 or 3 years of his life in an army camp; in which a mother can bring children into the world with reasonable likelihood that her children will not be sacrificed to the ambition of a group of nationalist statesmen, in victories which prove sterile or in defeats which prove disastrous. We think, rather, of a military establishment which can maintain and perpetuate the ideal of civil government, rather than that of military organization. We think of defense as a means and not an end. We seek to keep the new world not only free from the scourge of war which affects the old but as an abiding place for civilization which otherwise might well be buried among the ruins of Europe.

### Limits of Decision in Fur Seal Arbitration

#### EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. DIMOND. Mr. Speaker, early in the present Congress I introduced a bill—H. R. 3661—to protect and preserve the salmon fishery of Alaska as against the fishing operations of nationals of foreign countries in the seas adjoining the coast of Alaska to the limits of the continental shelf.

All of the Alaska salmon are spawned and hatched in the inland rivers and lakes of Alaska, and thereafter, while still young, proceed to sea. They remain in the ocean, dependent upon species, from 2 to 5 years and then return to the inland streams and lakes in which they were spawned and hatched.

If unrestricted fishing for salmon is permitted either in the lakes and streams or close to the shore or even a number of miles from the shore in the shallow waters overlying the continental shelf, the salmon fishery is sure to be soon exhausted; and therefore we have gone to great lengths to preserve and protect the salmon fishery from depletion by restrictive measures which limit fishing for salmon in territorial waters.

However, no legislation has ever been enacted which is specifically designed to protect and preserve the salmon by limiting fishing in the marginal waters overlying the continental shelf, and it has been mistakenly asserted that no government has the right to enact legislation attempting to exercise control in any respect over marginal waters more than 3 miles from shore. On this point, Mr. Speaker, may I refer to my remarks on the subject of jurisdiction in the marginal seas, which appear in the Appendix of the CONGRESSIONAL RECORD of the Seventy-sixth Congress, volume 84, at page 4075.

It has been said, again erroneously, that legislation such as is suggested in H. R. 3661 may not be validly enacted by reason of the adjudication in the fur-seal arbitration case, a decision made in 1893, involving the right to protect and preserve the seal which annually come to the Pribilof Islands, Alaska. That decision is not conclusive with respect to H. R. 3661 or similar legislation for the following reasons:

First. The adjudication in the fur-seal case was made in 1893, more than 44 years ago. During the period which has since elapsed, striking mechanical developments have taken place in all lines of industry, fishing as well as others. The boats and gear used in fishing at the present day are much more efficient than those which were used in 1893, and prior thereto; so that at the present time comparatively few ships with modern gear, if unrestricted in operation, may exhaust the salmon fishery of the entire world within a short time. In order to prevent the absolute extinction of some of the valuable sources of food supply which may be obtained from the sea, particularly the salmon, it is necessary to extend in other directions, and to make new applications, of the settled principles of international law which now permit, and have always permitted, of the proper protection of a nation's industries, as well as of its citizens, and of the defense of the realm. In this as in other cases involving rules governing the conduct of men, the law must be adjusted to meet, not only the mechanical developments of civilized society, but also the modified or changed economic requirements of that society.

Second. In the fur-seal case the tribunal had to do with an article of luxury alone. Fur seals have never been used extensively for food by the natives of Alaska or by any other people who had access to them. If the entire fur-seal herd were exterminated, the world would lose little except the use of an article, namely, the fur-seal pelt, which is truly an article of luxury and not necessary to be used by anyone. The livelihood of a people at the time of the fur-seal arbitration did not depend upon the continued existence of the fur seals.

With respect to salmon, the case is entirely different. From time immemorial many of the natives of Alaska have used salmon as a principal article of diet. In former days, if the supply of salmon had been cut off, the natives living along the coast and the salmon rivers of Alaska would almost inevitably have perished of starvation. While not so many native Indians and Eskimos of Alaska are now dependent upon salmon for food, there are still some hundreds who cannot continue to exist, unless by the bounty of the Government, if the salmon should be destroyed as may be done by unrestricted offshore fishing. At the present moment, many hundreds of Alaska natives, who live along the coast and in the valleys of the rivers opening into Bristol Bay and near the Yukon and Kuskokwim and other Alaska

rivers, make use of the salmon as their chief article of food, and without grants from the Government they cannot obtain any sufficient substitutes.

Third. With respect to the fur-seal herds, it was proved beyond any dispute that the pelagic sealing of foreign nationals, which the United States tried to terminate by seizures made in 1886 of foreign vessels engaged in that type of sealing, had been carried on for many years prior thereto. In fact, it was shown beyond question that foreign nationals had largely engaged in pelagic sealing prior to the cession of Alaska to the United States and had likewise engaged therein continuously from 1867, the date of cession, until the Fur Seal Tribunal met in 1893. The attempt made by the United States to prevent pelagic sealing in Bering Sea amounted to a reversion of historic practice. During most of the prior time the foreign nations which carried on pelagic sealing in Bering Sea did so with the full knowledge, first, of Russia, and later of the United States, and without any protest from those governments. The following excerpt from the case of Great Britain, Fur Seal Arbitration, volume 4, page 86, was never successfully disputed:

It is found that from 1867 down to and including 1885, vessels continued to visit and hunt in Bering Sea without interference when outside of the ordinary territorial jurisdiction.

As hereinafter noted, it had been agreed between the United States and Great Britain that the "ordinary territorial jurisdiction" extended only 3 miles from shore.

In Alaska we are not now confronted with any such condition. The salmon-packing industry of Alaska from its earliest inception until the present moment has been exclusively an American industry. The recent invasion of the Japanese was made in a clandestine and surreptitious manner and at a time when the Japanese Government continuously denied that any such salmon-packing operations in the waters adjacent to the coast of Alaska were being carried on by the nationals of that country. By historic practice the salmon fishery is ours alone.

Fortunately, we have publicly asserted the claim of our superior and exclusive right to the Alaska salmon by the conversations which were held during or about the year 1931, in which the Japanese announced their intention of fishing for and packing crabs in Bering Sea. The question at once arose about the salmon, and the Japanese operators assured our authorities that the salmon would not be molested. We were solicitous and zealous for the protection of the salmon, and at that time the individual Japanese who took part in the discussions thoroughly understood that we claimed the exclusive right to protect our salmon in all the seas adjacent to Alaska.

Fourth. In the fur-seal-arbitration case we agreed with Great Britain that 3 miles constituted the limits of ordinary territorial waters. The admission was a fatal one. We did not even stipulate that ordinary territorial waters should be construed to mean the minimum distance over which a nation may exercise sovereignty for all purposes in its marginal seas. The admission was contrary to the fact, for at that time a majority of the civilized nations of the world rejected, as they now reject, the rigid 3-mile-limit rule. The unhappy consequences of our agreement are shown by the fact that at the conclusion of the arguments and while the case was under consideration Mr. Gregers Gram, a member of the tribunal, expressed the desire that it should be understood that the tribunal had not undertaken to decide what were, according to principles of international law, the ordinary limits of territorial waters. The arbitrators concurred in Mr. Gram's opinion because those limits had been assumed by article 6 of the treaty to be 3 miles from the coast. Fur Seal Arbitration, volume 1, page 57.

With respect to the salmon, it is not necessary to lose our case in advance by admitting or agreeing that 3 miles constitutes the limits of ordinary territorial waters. The passage of H. R. 3661, or a similar measure, will effectually assert a wider claim of sovereignty or of jurisdiction, one more in harmony with the views of the majority of the civilized nations of the earth, and one, therefore, more in harmony with the law of nature and of nations.

Fifth. In 1889, several years before the fur-seal arbitration, Congress had expressly declined to assert the right of our Government to protect the fur seals in Bering Sea more than 3 miles from our shores. The circumstances surrounding the action of Congress are deserving of extended comment. In 1868 Congress enacted a law, one provision of which afterward became section 1956 of the Revised Statutes (1878), reading as follows:

No person shall kill any otter, mink, marten, sable, or fur seal, or other fur-bearing animal within the limits of Alaska Territory, or in the waters thereof; and every person guilty thereof shall, for each offense, be fined not less than \$200 nor more than \$1,000, or imprisoned not more than 6 months, or both; and all vessels, their tackle, apparel, furniture, and cargo, found engaged in violation of this section, shall be forfeited; but the Secretary of the Treasury shall have power to authorize the killing of any such mink, marten, sable, or other fur-bearing animal, except fur seals, under such regulation as he may prescribe; and it shall be the duty of the Secretary to prevent the killing of any fur seal, and to provide for the execution of the provisions of this section until it is otherwise provided by law; nor shall he grant any special privileges under this section.

It will be noted that the law governed the area "within the limits of Alaska Territory, or in the waters thereof." As hereinbefore indicated, the United States agreed before the Fur Seal Tribunal that the ordinary territorial waters extended only 3 miles from shore. Accordingly, when the tribunal construed the phrase, "or in the waters thereof," it necessarily reached the conclusion that the United States asserted no claim, under the provisions of the law above quoted, more than 3 miles from shore.

So the law stood in 1889 when Congress again considered the subject. During the Fiftieth Congress the Committee on Merchant Marine and Fisheries of the House of Representatives was directed—

To fully investigate and report upon the nature and extent of the rights and interests of the United States in the fur seals and other fisheries in the Bering Sea in Alaska, whether and to what extent the same had been violated, and by whom; and what, if any, legislation is necessary for the better protection and preservation of the same.

Later the committee reported, upholding the claim of the United States to jurisdiction over all waters and lands included in the geographical limits described in the treaty of cession and therein assigned to the United States. With the report the Committee submitted a bill which contained the following section:

Section 2. That section 1956 of the Revised Statutes of the United States was intended to include and apply, and is hereby declared to include and apply, to all the waters of Behring Sea in Alaska embraced within the boundary lines mentioned and described in the treaty with Russia, dated the 30th March A. D. 1867, by which the Territory of Alaska was ceded to the United States; and it shall be the duty of the President, at a timely season in each year, to issue his proclamation, and cause the same to be published for 1 month in at least one newspaper published at each United States port of entry on the Pacific coast, warning all persons against entering said Territory and waters for the purpose of violating the provisions of said section; and he shall also cause one or more vessels of the United States to diligently cruise said waters and arrest all persons, and seize all vessels found to be, or to have been, engaged in any violation of the laws of the United States therein.

But the bill so reported by the House Committee on Merchant Marine and Fisheries was not enacted. The Senate passed a bill for the protection of the salmon fishery of Alaska, having no reference to fur seals. Upon its passage by the Senate, the bill was sent to the House of Representatives, which amended the Senate bill by incorporating therein the body of section 2 of the House bill above quoted. Had the Senate accepted the House amendment, our position before the Fur Seal Tribunal would have been much improved, but the Senate refused to concur in the House amendment and the bill was sent to conference. In conference the following provision was adopted as section 3 of the bill, in place of the provisions of section 2 of the House bill above quoted. Section 3 of the bill as agreed to by the conferees is as follows:

Section 3. That section 1956 of the Revised Statutes of the United States is hereby declared to include and apply to all the dominion of the United States in the waters of Behring Sea, and it shall be the duty of the President, at a timely season in each year, to issue his proclamation and cause the same to be published for 1 month in at least one newspaper if any such there be published at each

United States port of entry on the Pacific coast, warning all persons against entering said waters for the purpose of violating the provisions of said section; and he shall also cause one or more vessels of the United States to diligently cruise said waters and arrest all persons, and seize all vessels found to be, or to have been, engaged in any violation of the laws of the United States therein.

It will be observed that the conferees abandoned the language of the House amendment which reads, "all the waters of Bering Sea in Alaska embraced within the boundary lines mentioned and described in the treaty with Russia," and adopted instead the following language, "all the dominion of the United States in the waters of Bering Sea." Again it may be observed that "all the dominion of the United States in the waters of Bering Sea" was necessarily construed by the tribunal to mean the ordinary territorial waters, and we had obligingly agreed that the ordinary territorial waters extended only 3 miles from shore.

The conference report was agreed to by both Houses and the bill became a law. Act of March 2, 1889; 25 Stat. 1009.

So it is clear that by formal action the Congress of the United States, after full consideration, refused even to assert any right or claim of the United States to exercise sovereignty or limited jurisdiction over the waters of Bering Sea more than 3 miles from shore for the protection and preservation of the fur seals, or for any other purpose. Since Congress refused to make such a claim, it would have been remarkable indeed had the Fur Seal Tribunal established the precise thing which Congress had deliberately refused to assert. This action of Congress taken in connection with the agreement of the United States before the tribunal that the ordinary territorial waters extended only 3 miles from shore was alone sufficient to prevent any possibility of a decision in favor of the United States.

Counsel for Great Britain before the tribunal made the most of the failure of Congress to act. The illustrious Sir Charles Russell, when he referred to this feature of the case and recited to the tribunal the facts surrounding the really effective amendment which was put in the bill by the House, the rejection of the same by the Senate, and the final agreement upon language which meant precisely nothing, ironically inquired:

Now I really have to ask, What was the reason for the change? Was it intended that the change should mean anything, or was it intended that it should mean nothing? (Fur Seal Arbitration, vol. 13, p. 88.)

With respect to salmon we have presented to us an inviting opportunity to avoid the mistake made by the action of Congress in the fur-seal case; we have here and now an excellent occasion to assert in strong terms our unquestioned right to protect the Alaska salmon through the exercise of a qualified and limited jurisdiction over the waters lying on the continental shelf in Alaska, not only in the Bering Sea, but elsewhere along the coast of the Territory. If we reject, as we should, the rigid 3-mile-limit rule, and if we assert, as we should, our right to protect the salmon fishery, we shall have gone far in making our claim impregnable.

Sixth. In the fur-seal case we asserted before the tribunal a property right in the fur seals and our counsel argued that it was lawful for us to claim our property right and protect the property involved anywhere in the waters of Bering Sea, relying on international law. It was then pointed out by the representatives of Great Britain that international law was powerless to create property rights and that the very concept of rights in property arose under municipal law and was sustained by that law.

It is a fundamental maxim of international law that any claim of right, in order to be recognized, must be asserted, or to use Senator Root's language, "prescribed for." It is true that the assertion of a claim of right may be made in various ways, but no other assertion can be quite as effective as an act of Congress, particularly if the same is approved by the President, who has charge, under the Constitution, of our international relations.

A part of our claim here is that we have a special property right in the salmon which are spawned and hatched in the waters of Alaska. One provision of the bill, H. R.

3661, declares them to be the property of the United States. The property right so claimed is, of course, subject to an implied trust, but the trust does not invalidate or weaken the right. It is equally fundamental that property rights are created, or declared, or maintained, not by international law, but by municipal law. Without adequate, relevant municipal law, property rights, in practice, disappear. Hence, the necessity of municipal law to establish and maintain our property right in the salmon of Alaska is clearly evident.

What now remains to make our rights and claims effectual is to assert by act of Congress our exclusive property in the salmon of Alaska, and the right to exercise jurisdiction over the waters of Bering Sea adjacent to the coast of Alaska up to the edge of the continental shelf for the purpose of protecting and preserving the salmon fishery. That is what is proposed by H. R. 3661.

Seventh. In the fur-seal case our claim was so broad that Lord Salisbury taunted us by saying we were seeking to defend not only our own traditional and long-established rights, "but also the rights of good morals and good government the world over." Fur Seal Arbitration, volume 12, page 54. It is plain from the proceedings before the tribunal that there was justification for the caustic comment of Lord Salisbury. We relied entirely upon the broad principles of international law, and upon those principles we might as well have claimed the right to seize the vessels of foreign nationals taking fur seals in the Atlantic, or the Antarctic, or in the Indian Oceans. Chief Justice Marshall in the case of *Church v. Hubbard* (2 Cr. 187) has indicated that all such claims of jurisdiction over the marginal seas must be founded upon municipal law and must be "reasonable." Our contentions before the Fur Seal Tribunal were so broad as to violate the test of reasonableness and lacked any sustaining base in municipal law.

As to the Alaska salmon, our rights as may be claimed under H. R. 3661 are strictly limited, not only to the waters adjacent to the coast of Alaska but to those waters which overlie the continental shelf, waters in which the salmon, under the influence of fresh water from the upland, gather together in large bodies, or "school," preparatory to ascent of our rivers to spawn, and the claim is in every respect reasonable.

Eighth. Substantial proof was offered to the Fur Seal Tribunal tending to show that the seal herds of the Pribilof Islands, under the dominion of the United States, intermingled with the seals that resorted to the Russian islands, the Commander group, and, therefore, the question was raised as to whether the fur seals born on the Pribilof Islands always returned to those islands, and also whether some of the seals born on the Commander Islands returned to the Pribilofs to mate and give birth to their young.

As regards the salmon, no such question has arisen or can possibly arise. Scientific investigations of the life of the salmon have proceeded far enough to be certain that the salmon hatched in the waters of Alaska invariably and without exception, and those salmon only, return to their place of hatching in Alaska, to the identical stream or lake in which they were hatched, there to spawn and then to die.

In all of the foregoing discussion treating of the distinctions to be made between the facts presented to the Fur Seal Arbitral Tribunal, and the facts with respect to the Alaska salmon fishery, it has been assumed that Congress will pass and the President will approve legislation such as is embodied in H. R. 3661. Without such legislation our position is perilous. With it, under wise administration, we are safe. The decision to be made now is not a question of foreordained law; it is a question of desirable future policy.

The differences in the two cases, assuming the enactment of H. R. 3661 or similar legislation, may be presented in more condensed form, in which the following paragraphs preceded by the word "then" refer to the fur-seal arbitration, and the paragraphs preceded by the word "now" refer to the Alaska salmon fishery.

First. Then: Primitive methods of fishing.

Now: Highly mechanized and efficient methods of fishing; therefore, change, if necessary, should be made to meet

changed economic conditions or changes and developments in the mechanical arts.

Second. Then: We were concerned with an article of luxury upon which neither the food supply nor the livelihood of the inhabitants of Alaska were dependent.

Now: We deal with an article of food, the cutting off of which will deprive hundreds of the native inhabitants of Alaska of their necessary supply of food.

Third. Then: We were confronted with a condition wherein the rights of other nationals were established by continuous practice extending without protest on our part or on the part of our predecessors in interest over a period of many years.

Now: The Alaska salmon industry, from its inception to the present day, has been and is exclusively an American industry and no other nationals have ever secured a foothold therein. The right of ourselves alone to engage in this industry has at all times been asserted—it has been "prescribed for."

Fourth. Then: We agreed to the 3-mile limit as comprising "ordinary territorial waters," objectively untrue, but nevertheless admitted.

Now: We may with entire right assert broader jurisdiction, particularly—as witness the Anti-Smuggling Act—through the enactment of H. R. 3661 or similar legislation.

Fifth. Then: Congress had expressly declined to enact municipal law asserting sovereignty or jurisdiction over the surrounding seas for the protection of the fur seals, although invited to do so.

Now: We have a singularly favorable opportunity by act of Congress to assert such sovereignty with respect to the Alaska salmon, and such jurisdiction over the adjacent seas as may be necessary for the protection of the salmon fishery.

Sixth. Then: We relied on international law to sustain a right in property—an impossible thing to maintain.

Now it is sought by municipal law to assert a property right as only such a right may be successfully claimed and maintained.

Seventh. Then: We claimed the right, indefinite in its nature, which was construed by our opponents as "also the rights of good morals and good government the world over."

Now: By the proposed legislation we seek to establish a claim limited in its scope and in all respects "reasonable."

Eighth. Then: Proof was offered of the intermingling of the herds of the fur seal of the Pribilof Islands—American—and those of the Commander Islands—Russian.

Now: It is proven beyond doubt that the salmon hatched in the waters of Alaska, and those only, invariably return to those waters to spawn.

### Modern Miracle Men—X-Ray Specialists

#### EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

ARTICLE BY REX BEACH

Mr. ANDREWS. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Rex Beach entitled "Modern Miracle Men," having to do with the activities of X-ray specialists.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MODERN MIRACLE MEN

(By Rex Beach)

"The child's tonsils will have to come out," said the doctor. "I've done my best for them, but it's no use."

Mr. Ingalls, the worried father, asked, "Isn't there some way to avoid it?"

"None that I know of. Tonsillectomy isn't a serious operation; the risks are almost negligible. If she were my child—"

"But we've had two unfortunate experiences in our family. I can't bear to run any risks whatever. There's the fright and the shock to think about, too. Isn't there any other way?"

"Roentgen-ray specialists make some extraordinary claims," said the physician. "I know very little about what they're actually doing, for no doctor can keep up with everything new. I'll give you the names of several and you can satisfy yourself."

Mr. Ingalls acted upon this suggestion; he consulted the leading radiologists in Philadelphia, Washington, and Baltimore. They ventured the opinion that an operation was unnecessary and referred him back to one of the leading X-ray specialists, right in New York, where he lived.

The father told me later, "I took my little girl to that man. She underwent a few painless treatments and was completely cured. She has been well for more than a year now; her tonsils are perfectly healthy. She suffered no shock; I suffered no hospital bills."

"Those X-ray fellows are achieving marvelous results, and I don't mean merely in the treatment of malignant diseases. They are curing goiters and tonsils and sinuses and adenoids. But a great many doctors are no better informed than that one of ours, and it's all news to the general public. Take head colds, for instance. There's a big story in that alone."

The speaker scored a bull's-eye with that random shot, for I have averaged two colds a year, and a good one often lasts me as long as a wrist watch. I've fought them with medicines, vaccines, diet, sprays, exercise, and plain Scotch. I still have my first draw to win. Sometimes a new infection moves in before its predecessor moves out. I've had a couple of old sit-downers evicted by a vigorous young epizootic who wanted the place to himself.

Doctors have blamed my tonsils for these colds; and although no doctor pronounced them utterly hopeless, more than one nose-and-throat has pulled out a foot of my tongue, flashed his lantern in my front entrance, and scribbled a hospital address with his free hand. If he persisted in arranging a rendezvous with a surgeon, I changed doctors.

From Mr. Ingalls and others I learned that there are a thousand or more radiologists in this country. Out of that number there are perhaps a hundred who have specialized in applying Roentgen rays to the treatment of other diseases than malignant tumors, and not more than 20 who have had really extensive experience in the treatment of goiter, tonsils, sinuses, and the like. These latter, however, have had extraordinary success, and even those less skillful and experienced show results equal to the average—credited to surgery. And this, of course, without surgery's disadvantages.

Dr. J. Thompson Stevens, 595 Madison Avenue, New York, is one of the pioneers in Roentgen and radium therapy. He specializes in the study and treatment of neoplastic diseases—that is, diseases having to do with morbid growths. That means he does much surgical work, mainly in cancer cases, but for more than 20 years he has labored, along with others, to adapt these invisible curative rays to their wider uses.

He is a member of an impressive list of medical societies and is the author of an informative book, *The Control of Goiter*. He has written numerous papers for medical journals both here and abroad and has addressed many scientific meetings. One such was the Fifth International Congress of Radiology, held in Chicago in 1937. Dr. Stevens' greatest ambition is to found free clinics throughout the United States for treatment with Roentgen rays and radium. He plans ultimately to devote much of his private fortune to establishing and training competent young radiologists, who will be placed in charge of the clinics.

He is as modern and efficient as his office and its equipment. He has a warm personality and a burning enthusiasm for his work, every detail of which is available in the form of carefully kept records, both documentary and photographic. He is painstaking, precise, and systematic in thought, speech, and action; he has an orderly mind, packed with facts and figures bearing upon his chosen specialty, and it appears to function with the same minute accuracy as does his electrical apparatus.

One of Dr. Stevens' case records, typical of others, is that of a young Salvation Army girl suffering from toxic goiter. The disease had progressed to such a point that she was prepared for a surgical operation but collapsed during the early stages of the anesthetic, whereupon the operation could not be performed.

It was decided to try Roentgen rays, and after seven treatments the patient was discharged as perfectly well. Her weight increased from 89½ pounds to 110; her pulse rate dropped from 126 to 70 beats a minute. The goiter disappeared and her basal metabolic rate became normal. Examination 1 year later revealed that she was still perfectly normal and no symptoms had returned.

Following this demonstration the surgeon in charge wrote to Dr. Stevens, saying, in effect, "The age of miracles has recurred. I shall never again operate on a toxic goiter."

"Common colds are a curse," Dr. Stevens told me when I went to see him. "They probably cause the average person more loss of time and cost him more money than any other ordinary ailment. Radiology won't prevent their occurrence (and neither will anything else) but it is a prophylaxis, a preventive. Many colds result from nose, throat, and sinus conditions. When those areas have been normalized with X-rays, susceptibility to infection is lessened; in other words, fewer colds are caught. Furthermore, when one does grab you, it will not be so severe, and you can shake it off more quickly."

"However, there are other more serious diseases for which radiology is a real specific. In the treatment of focal infections of the throat and the sinuses, for instance, it is not only safe and permanent in effect but also, as with the little Ingalls girl, it removes the infection more thoroughly and completely than any other method yet devised. It gets a better and more permanent result and gets it without risk, without fatalities, without loss of the patient's time, and at no expense for hospitalization. It involves neither pain nor inconvenience; it can be used where patients are too ill from other causes to stand an operation."

"What do you mean by saying that inflamed nose and throat areas can be 'normalized'?" I asked.

"In cases of infection the mucous membranes are highly congested. The structures become red and angry looking. Islands of infected lymph tissue stand out and the parts are bathed in a mucoid discharge. Under Roentgen treatment the inflammation lessens, the redness disappears, the little swollen islands of lymph tissue slough off, leaving the mucous membranes clean and normal."

"How is it possible to destroy diseased tissue by Roentgen rays without injuring healthy tissue?" I inquired.

"Lymphatic and embryonic structures are more radiosensitive—hence more easily destroyed by the rays than other living tissues. A tonsil or an adenoid is composed mainly of lymph tissue, and the amount of irradiation necessary to cause absorption in no wise damages the healthy structures."

"In other words, the Roentgen rays kill off the diseased tissue only?"

"That's one way of putting it. Actually, shrinkage of the tonsils and the lymphatic structures of the wall of the throat by this treatment produces drainage and thereby removes deformities throughout the entire mucous membrane. Obviously, that is impossible by any operative treatment we know anything about today."

"Tonsils weren't put in our throats as ornaments. They are our first line of defense against disease, and as such they have a definite function to perform—hence removal may result in other troubles; and here's something else to consider: Around the base of the tongue are other glands which are in effect accessory tonsils and subject to infection. When tonsils are diseased they, too, are affected. They are surgically inaccessible, but Roentgen-ray treatments normalize that entire 'tonsillar ring,' so-called, as thoroughly as they normalize the tonsils themselves."

"The removal of a child's adenoids isn't exactly pleasant. Those growths are hard to get at, and it isn't always possible to make a perfect job of scraping them out. Some part of the tissue may remain. But they yield readily to our treatment, and there's nothing about it to hurt or to frighten the youngster."

"Aren't Roentgen rays dangerous to fool with?"

"Not in experienced hands. With modern equipment we know precisely what we're doing. We follow a positive and well-proved technique: The rays are filtered through copper and aluminum so that only those of highest therapeutic value are retained; at no time do we use enough current to do damage. The technique is entirely different from that used in X-ray photography. That's why I prefer the term 'Roentgen ray,' rather than 'X-ray.'"

"What are the complications from treatment?"

"There aren't any. When tonsils are removed surgically, septic particles of matter are sometimes thrown into the circulation with disastrous consequences. That cannot result from Roentgen-ray treatments, if they are properly given."

"We often obtain wonderful results in chronic sinusitis, with postnasal dropping and catarrh, where other methods of treatment have accomplished nothing. Deafness, particularly when due to catarrh, has been helped. Many sufferers from rheumatism, arthritis, and neuritis caused by focal infections of the throat have been relieved. In such cases our treatment gets at the cause of the weakness, whereas others do not."

"Are the treatments expensive?"

"By no means. Fees are fixed to meet the requirements of the individual. They average about \$10 a sitting."

"I've mentioned several diseases," continued the doctor, "but I haven't discussed the one in the treatment of which radiology works its most conspicuous miracles."

"Before we go into that," I interposed. "I have a confession to make. I possess a pair of wayward tonsils."

Dr. Stevens' eyes brightened; he regarded me with a livelier interest. "Splendid. Let's have a look."

As he led me into his examination room I explained, "Mind you, there may be nothing wrong. I haven't a thing against them, understand. But—they have caused a lot of gossip."

He looked into me and said, "No wonder you have colds. They're a mess. I had a pair even worse than yours and they were treated by Roentgen rays with perfect results. That was 15 years ago. Since that time I've been bothered very little with colds, and when I do get one it doesn't last long."

"The results obtained in my own case led me to treat every member of my family. Next I treated several physicians, some of whom were nose-and-throat specialists, and all in all I've treated hundreds of patients. Many of them, before coming to me, had undergone from one to several nose and throat operations, with little or no relief. With the Roentgen rays I obtained almost uniformly perfect results. This method is particularly valuable for opera singers, actors, and the like, because it involves no reconstruction of the throat, no healing process, and it doesn't interfere with their work."

Dr. Stevens allowed me to examine some of his case records, which were extremely interesting even to a layman. The first one

happened to be that of a doctor who had suffered for 20 years with sinusitis, necessitating the use of argyrol packs all during the winter season, when his trouble was worst. After seven Roentgen-irradiation treatments it was completely relieved and it has not recurred. There were numerous other records of sinus, tonsil, and adenoid cases.

The doctor then showed for my benefit illuminated slides—"before and after" photographs—of goiter patients, together with much statistical data. It was material he had presented before medical bodies. When he had finished, he said:

"Now is your chance to prove the truth of what I've been telling you. I can cure your tonsils."

That day I began a series of treatments and also a course of reading on radiotherapy. The treatments consisted of dozing comfortably on a table, lulled by the buzz of some complicated electrical apparatus. The reading was hard work. But I'm glad I did both.

I took 12 treatments, the only apparent effect of which was to dry my throat, lessen my sense of taste, and interfere with my enjoyment of a good smoke. This gradually wore off. Six months later I took a few more treatments just to please the doctor, and for more than a year now my tonsils have behaved like a couple of kittens and I can show them without shame to anybody who is interested in tonsil peeking.

People ask what these rays actually do; whether it is the electricity or the heat that cures. It is, of course, neither.

Any burning, glowing, or electrically charged substance gives off rays or waves of energy. Some are visible and others invisible. Sunlight, one of the most important curative agents in medicine, consists of rays or waves of energy electromagnetic in character. Beyond the red end of the solar spectrum are invisible rays which carry a high charge of heat, and beyond the violet end are others. Both the infrared and the ultraviolet rays are widely used in medicine.

Some radio waves have a length of a quarter of a mile; ultraviolet rays, the shortest in the solar spectrum, are about one ten-thousandth of an inch long. Roentgen rays are infinitely shorter and of higher frequency than either.

The sun's rays are not very penetrating, and only about one-hundredth part of their short, ultraviolet vibrations reach even as deep as the capillaries under the skin. It seems that the shorter the wave, the deeper it goes; hence the Roentgen ray can penetrate practically anything and may be considered a form of super-sunshine.

This explanation is anything but scientific. I have no fear that it will be copied in textbooks, but it gives a rough idea.

As for the actual application of these rays in the modern treatment of nose, throat, and sinuses they are confined to two or three areas at each sitting, one over each side of the neck and, if sinusitis is present, one directly over the sinuses from the front of the face. Only the patient doesn't sit; he lies prone with his head turned to one side and the massive tube holder is lowered until it is 30 centimeters away from him. In this position the beam of rays is directed from behind the angle of the lower jaw downward through the tonsil and on into the sinuses.

The apparatus is allowed to run until 200 Roentgen units have been given, which takes from 8 to 10 minutes. Upon completion of the treatment over each area, the patient is said to have received one series of treatments. These are repeated at intervals of 2 weeks until the desired results are obtained. The number of "sittings" required varies from 10 to 20. The average is about 15 and relief is usually felt after the fourth or fifth.

That's all there is to it. There is no light, no heat, no shock, and no sensation.

Goiter has long been a scourge of humanity. At least 5,000,000 people have it. According to Dr. Stevens, 76 percent of goiter cases are of the toxic type, which is always serious. Here radiology has probably scored its most notable triumph.

This poisonous type of goiter, commonly termed hyperthyroidism, occurs because the thyroid gland secretes too much thyroxine, a substance intended by nature to aid the body in fighting infection and disease.

Of all the ductless glands in the body, the thyroid is the most important, because it is the master member in that chain of glands which govern our well-being. A child born with an inferior thyroid becomes an idiot and often is misshapen. If the gland deteriorates through disease or is surgically removed, a similar condition often manifests itself. If, on the other hand, the gland becomes overactive, toxic goiter, or hyperthyroidism, occurs, and if the disease is allowed to go far enough, the body may tear itself to pieces through excessive heart action.

The thyroid gland is the driving balance wheel of body and mind. Its proper functioning, therefore, is of supreme importance. The quantity of thyroxine carried in the blood at any one time is not more than one-thousandth of an ounce. Nevertheless, it may mean the difference between life and death.

When abnormal activity of the thyroid occurs—that is, toxic goiter—surgery has performed a service to humanity in demonstrating the possibility of slowing it down and restoring a balance by skillful use of the knife. Operations are made on simple or nontoxic goiter to relieve pressure or to improve the patient's appearance, and they involve no greater risks than ordinary incisions. An operation for toxic goiter is something quite different. Here the knife is used to slow down a balance wheel which has run wild. If too much of the gland is removed, evil consequences may occur.

Removal is a delicate undertaking, further complicated by the fact that patients frequently become so weak and wasted before consenting to an operation that the shock is fatal.

"With radiotherapy there is no guesswork," Dr. Stevens explains. "Neither is there any shock to the patient. More than 20 years have been spent in perfecting both the equipment and the technique of its use. We now have reliable records of more than 10,500 cases of toxic goiter treated by scores of radiologists and they reveal as high a percentage of cures as surgery, with no fatalities and with a saving in time, suffering, and expense. It has proved effective in cases where the best surgery has failed. Recurrences of the disease have been found in less than 3 percent of the cases treated. Those records, of course, are available to any investigator."

This statement prompted a query as to why, in view of what he said, anybody would undergo surgical treatment for toxic goiter.

"Medicine divides itself into so many exclusive specialties nowadays," the doctor answered, "and each one is making such rapid progress that much of the latest knowledge remains locked up for quite a while inside those groups. There is such a bewildering outpouring of this new knowledge coming from so many different directions that the general practitioner can't keep pace with it."

Treatment by radiation consists of directing the rays upon the affected gland for about 15 minutes at a time. The number of exposures required varies with the severity of the case. Ordinarily from 7 to 14 sittings are sufficient.

Having heard the fear expressed that the use of Roentgen rays may excite serious troubles in the body, I queried Dr. Stevens, who promptly reiterated his statement that under modern technique (itself the result of a quarter of a century of intensive study) in the hands of properly qualified, skilled operators, no such danger exists.

Sets of radiological equipment, some more modern than others, are pretty well distributed over the country.

The specialists operating them have demonstrated the value of this new and painless therapy not only in the treatment of the ailments mentioned above but in alleviating other ills. It has been used with conspicuous success in certain tubercular conditions, for chronic laryngitis and pharyngitis, and for the eradication of those dangerous hemolytic streptococcus and staphylococcus infections of the throat.

Sufferers from hay fever and "rose colds" have either been cured by it or greatly relieved.

Truly these men are helping enormously to widen the horizon of human knowledge.

## Recent Opinions by Mr. Justice Black

### EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

### EDITORIAL COMMENT

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a number of editorials on recent opinions by Mr. Justice Black, of the Supreme Court of the United States.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Birmingham (Ala.) News of February 14, 1940]

#### A SUPERB DELIVERANCE

The United States Supreme Court stood forth in one of its greatest roles in the decision handed down Monday in the Florida case involving four Negroes convicted of murder and sentenced to death. It stood forth as the protector of human liberty and human life against improper and extra-legal treatment. It stood forth as the defender of the simple legal rights of the poor and lowly.

In a great and ringing decision the Supreme Court upheld the civil rights of four Negroes whom the State of Florida found guilty of murder on the strength of "confessions" wrung from them in extremely dubious circumstances.

And in this memorable decision, unanimously handed down, the Court spoke through the voice of Hugo Black, of Alabama. Mr. Justice Black wrote this superb deliverance, which is surely destined to stand with other great opinions of the Supreme Court in behalf of human liberties.

The four Florida Negroes were arrested after an aged white man had been found murdered. A large number of "suspects" were arrested in dragnet fashion. They were questioned at length. A few of them finally were held for more prolonged questioning. The four who were finally convicted were questioned for nearly a week all day long every day and all night long the final day. After stoutly denying their guilt for nearly a week, they finally "broke."

Meanwhile, as Mr. Justice Black points out in his opinion, the Negroes were in surroundings such as would naturally frighten and

upset them. As the justice says, "the haunting fear of mob violence was around them."

The Negroes had no opportunity to consult friends or relatives or to engage counsel. Their civil rights were not accorded to them.

Against this sort of secret inquisitorial police methods Mr. Justice Black speaks out vehemently. There are many admirable and stirring passages in his opinion, such as the following:

"Today, as in ages past, we are not without tragic proof that the exalted power of some governments to punish manufactured crime dictatorially is the handmaid of tyranny."

"Under our constitutional system courts stand against any winds that blow as havens of refuge for those who might otherwise suffer because they are helpless, weak, outnumbered, or because they are nonconforming victims of prejudice and public excitement. \* \* \*

"The testimony of centuries, in governments of varying kinds over populations of different races and beliefs, stood as proof that physical and mental torture and coercion had brought about the tragically unjust sacrifices of some who were the noblest and most useful of their generations."

"The rack, the thumbscrew, the wheel, solitary confinement, protracted questioning and cross-questioning, and other ingenious forms of entrapment of the helpless or unpopular had left their wake of mutilated bodies and shattered minds along the way of the cross, the guillotine, the stake, and the hangman's noose."

This is one of the great Supreme Court opinions of our time, and it stamps Hugo Black as a liberal Justice of the highest status. Alabama is proud of him.

[From the Montgomery (Ala.) Advertiser of February 13, 1940]

#### BLACK'S INCREASING STATURE

The two opinions written by Mr. Justice Hugo LaFayette Black, adopted and announced by the Supreme Court of the United States yesterday, will advance him several degrees higher in public esteem. All of his previous opinions have consistently enhanced his prestige, as witness the increasing number of friendly comments by able critics upon his quiet performances. The most recent ones are even more challenging than any before them.

Some of the questions assigned to Mr. Justice Black by Chief Justice Hughes—Mr. Hughes is the managing editor of the Court—were none too inviting, some indeed aroused the suspicion that New York's most eminent Baptist layman was slyly hazing Hugo who, in the first stormy days of his career on the bench, was the whipping boy of all who thought that they saw in his appointment an opportunity finally to eviscerate Mr. Roosevelt. Many others, whose good will for the President could not be gainsaid, were sincerely disturbed. But this is water over the dam.

Black's critics insisted upon appraising him upon the basis of his conduct as a young, unknown politician in Alabama whose ambition to get on first base led him into a casual, but temporary, affiliation with the Ku Klux Klan. His membership in the Klan, to be sure, saw him safely through his first trial by ordeal before Alabama Democrats in 1926. It put him in the United States Senate. But this misadventure had no ill effect upon his philosophy and character as a Senator. He quickly rose in the respect and esteem of his colleagues. He won wide attention as a debater. He became even more famous as an investigator. In the latter days of his career in the upper Chamber he was commonly recognized as a first-string Senator. It had dawned upon his public that Black was a passionate libertarian, and an advanced thinker, whose life and personality had been deeply affected by a self-attained scholarship. His competent workmanship appealed to observers. It is midnight oil, pride, ambition, driving power, and compassion that have carried this fellow to his present enviable station.

Knowing what was in Hugo Black—the American public couldn't have known it so well—the Advertiser voluntarily took its stand by his side in 1937 when the thunder and lightning came thickly following his appointment to the Supreme Court. It was a new experience for the Advertiser to be for Black, for up until then Mr. Black and the Advertiser had served the Lord by working in rival vineyards. Outside of Alabama Mr. Black had few friends to plead his cause when a Pittsburgh reporter "exposed" Hugo's old membership in the Klan—a membership long known to the Advertiser and to most, if not all, Alabamians. From 1926 to 1937, we thought, was a long time for an enterprising Pittsburgh newspaper to work at the task of turning ancient history into news. Naturally we lifted an eyebrow when in 1938 a Pittsburgh reporter received a Pulitzer prize for repeating, substantially, what the editor of the Advertiser had done 10 years before, for which this editor likewise received a Pulitzer prize. We thought it a waste of good prize money. The Pittsburgh paper, although a daily, did no better job than the Yale (quarterly) Review might have done.

And so it was easy for the Advertiser to take the side of Hugo when his crisis came. It did so because it was convinced, and it so predicted in a series of editorials, that a country which did not then understand Black would yet come to recognize him as a great jurist. We have been assured since from many sources that these editorials in support of Black did much to reconcile many Americans to his appointment after the savage, hysterical attacks that were made upon him.

Now the Advertiser believes that its judgment has been vindicated by the department of Mr. Black on the Bench. He has performed precisely as the Advertiser had anticipated that he would.

Yesterday Mr. Black, speaking for the Supreme Court, denounced and reversed decisions by Florida courts involving confessions of high crimes by means of torture. The principals were four Negroes. Said Black:

"To permit human lives to be forfeited upon confessions thus obtained would make of the constitutional requirement of due process of law a meaningless symbol."

These men were subjected to "interrogations for 5 days." "The very circumstances," said Black, "surrounding their confinement and their questioning without any formal charges having been brought were such as to fill petitioners with terror and frightful misgivings."

The Negroes contended that their confessions were obtained by "violence and torture" covering nearly a week and that this violated their constitutional rights.

Black's opinion, sustained by his colleagues of the Nation's Highest Bench, completely reversed the Supreme Court of Florida.

But the opinion, while interesting because of its peculiar newsworthiness in the circumstances, is of far-reaching import from another point of view. It should go far to civilize the procedure of peace officers and minor courts, especially in the South. Confessions by torture are common practice in all American jurisdictions, but especially in southern jurisdictions, most especially where Negroes are concerned. It is an abuse of human rights, a practice of man's inhumanity to man that all of us who know anything about our neighbors know to be common, so common indeed that we customarily take it for granted.

It is a brutal, nasty, stinking practice, but we have tolerated it to our shame. Now the Supreme Court of the United States speaking through Hugo LaFayette Black of Alabama, has condemned it and it is up to citizens (and officials) everywhere to do something about it.

In another opinion, adopted by the Court, apparently without dissent, Mr. Black held that workers could not be discharged or otherwise penalized for changing their affiliation from the A. F. of L. to the C. I. O. There is not much about the C. I. O. that the Advertiser likes, but it likes Black's opinion that men who labor for a living have a right to affiliate with any type of union of their choice. The reasonable American must grant that this is true and just.

We stick to our original thesis—we were lonely when we advanced it—that Hugo Black will yet come to be recognized as one of the dominant personalities of the United States Supreme Court.

[From the Birmingham (Ala.) Age-Herald of February 14, 1940]

#### BLACK'S GREAT UTTERANCE

Every once in a while—at almost providential intervals, it would seem—a mighty utterance is sounded in Washington and the deepest and highest spirit of the Nation speaks once more. A whole people vibrates in response. It is as if the soul of America has found voice. An utterance of the final Court of the land, it is, of course, a supreme legal pronouncement. But it is even more than that. It bespeaks the basic spirit of our law, of our way of life, of our aspiration to justice and nobility and brotherhood. As such, it brings a renewal of the wells and springs of our national being. It gives new strength to the great spiritual entity that ultimately, far more than the mere land itself, is our country. It quickens our faith, our devotion, our patriotic love.

Another such utterance came on Monday of this week from the Supreme Court of the United States.

Here in Alabama the response is particularly proud and intense because the spokesman of the Court was Hugo Black. It was Hugo Black, of Alabama, who voiced a unanimous Court's new proclamation of the rights of man, of the right of every man, however humble, of whatever color, to the full protection of fair processes of the law.

In Florida a white man was murdered under particularly revolting and enraging circumstances. A number of Negroes were rounded up in connection with the case. Four of the Negroes were convicted and sentenced to death. Confessions obtained after extended questioning were used against the Negroes. The Supreme Court of Florida upheld the conviction. Appeal was taken to the Supreme Court of the United States.

The State of Florida maintained that the issues of fact relating to the claim of the defendants that due process of law had been denied them had been finally determined by a jury. The jurisdiction of the Supreme Court to inquire into the judgments was challenged. But, tersely, Justice Black dismissed this contention, holding that use of an improperly obtained confession might constitute denial of a defendant's right. The question was whether the confessions had been illegally obtained. Justice Black asserted the jurisdiction and duty of the Court to look into the record for the answer.

The answer he found was that "due process of law, preserved for all by our Constitution, commands that no such practice as that disclosed by this record shall send any accused to his death."

The record, the decision set forth, shows a sharp conflict upon the issue of physical violence. But it is clear, the Court held, that drag-net methods of arrest on suspicion without warrant were employed; that the arrested men, "ignorant young colored tenant farmers," were subjected to protracted questioning in a secluded jail room, where they were without benefit of friends or advisers and under "circumstances calculated to break the strongest nerves and the stoutest resistance."

Admitted practices were such, Justice Black wrote, "as to justify the statement that 'the undisputed facts showed that compulsion was applied.'"

So, bluntly, sharply, the Supreme Court declared that "the Supreme Court of Florida was in error and its judgment is reversed."

Men shall not die in America on evidence so obtained. Such methods of procedure must not be. Whoever the man, whatever the crime, justice shall not be based on that kind of police and prosecution tactics. Says the Court:

"To permit human lives to be forfeited upon confessions thus obtained would make of the constitutional requirement of due process of law a meaningless symbol."

And the Age-Herald is especially moved by and grateful for this declaration:

"We are not impressed by the argument that law-enforcement methods such as those under review are necessary to uphold our laws. The Constitution proscribes such lawless means, irrespective of the end. And this argument flouts the basic principle that all people must stand on an equality before the bar of justice in every American court."

Here again we have a timely and a powerful condemnation of that vicious doctrine that a good end justifies evil means. The world today is having a tragic, infinitely costly lesson in the fallacy of that doctrine. But if the lesson is thoroughly learned, as seems possible, a new world, a better world than men ever before have known, will result.

This opinion by Hugo Black is not the only pronouncement of the kind by the Supreme Court. There have been others and this opinion itself refers to a recent similar decision in a Mississippi case. Nevertheless, the circumstances of this case are such, the force, the clarity, and the humanitarian stature of this Black opinion are such that it will take its place among the great pronouncements of the court.

It often is difficult for men to subordinate the considerations that appear to have governed police, prosecution, and court in this case until the court of last resort was reached. But Americans in overwhelming majority—even many of those impressed by the considerations the Supreme Court rejected—must know a profound and thrilling reassurance and pride as they read this lofty document.

In a Supreme Court article in the current Life it is said: "Only a handful of the 80 justices who have served on it—Marshall, Story, Taney, Holmes, among the dead—could be called great men. But nearly all of them have risen in some measure to the challenge of their great responsibility. A current case in point is Justice Hugo Black, President Roosevelt's first and widely damned as his worst appointee, who is slowly winning informed respect for his earnestness and intense awareness of the impact of changing social-economic conditions on the law. He may take his place with the great justices of history."

There is a staggering answer in the fact that this great Black opinion came from a man who has known so much unfair abuse, who himself has faced accusations of intolerance and bias.

Whatever mistakes there have been in Hugo Black's past—and we have always been confident that they have been superficial mistakes of the head, not the heart—here in this opinion surely speaks the real man, the essential Hugo Black.

This newspaper is deeply gratified to see Hugo Black fulfilling its high hopes of him; to see this Alabamian meeting and extending the loftiest traditions of the great Court he is serving so well.

[From the Philadelphia (Pa.) Record of February 14, 1940]

#### THE FOURTEENTH AMENDMENT COMES BACK TO THE PEOPLE

The unanimous decision of the United States Supreme Court in the Florida third-degree case is not the first time the fourteenth amendment was used for the purpose intended by its framers. But this decision is far and away the most direct, sweeping, and brilliantly written application of the amendment to human rights that has come from our highest Court.

When the fourteenth amendment was written, most of the Congressmen and State legislators who voted for it had in mind just such cases as that before the Supreme Court in the Florida affair. It was part of the reconstruction measures adopted after the Civil War, and if an American of that time had been asked to explain why the amendment was needed he might have said:

"Race prejudice in the South is still bitter, will be for many years. Suppose a crime is committed and Negroes are suspected. They will be rounded up without warrant, tried without proper counsel or other legal safeguards of the innocent, and State courts will uphold this procedure."

The amendment was also designed to nullify State laws which discriminated against Negroes.

In many respects the fourteenth amendment has been a dead letter. We know that Negroes have been discriminated against by both law and procedure in some States, and that the Federal courts have not until recently effectively intervened to protect the rights of the helpless individual against certain States.

Meanwhile, the Supreme Court interpreted the fourteenth amendment so as to make it one of the most important guarantees in the Constitution.

Almost from the first, there was an attempt to use it as a shield for corporations against regulatory State power. This trend crystallized in 1886 in the case of Santa Clara County against the Southern Pacific Railroad.

The interpretation was extended, until by the close of the last century the fourteenth amendment was judicially accepted as the refuge of utility companies from State rate regulation and the sanctuary of corporations generally.

In the 1920's a beginning was finally made to apply the fourteenth amendment to its original purpose—the protection of the individual rights of political minorities. In the Nebraska school case, the Gitlow case, several newspaper censorship cases, the Scottsboro case, the Dirk De Jonge case, the Angelo Herndon case, and the recent civil-rights cases the Court has created a liberal line of decisions returning the fourteenth amendment to the people.

This progress is crowned by the Florida third-degree case. Here we had the familiar example of Negroes arrested by dragnet during a period of mob hysteria in a Southern community. We have an admitted detention, without specific charge and without counsel being permitted to the accused. We have the prolonged questioning under which "confessions" were finally extorted.

Whether or not the prisoners were actually beaten the procedure seems to be the exact reverse of what we who share the Anglo-Saxon legal tradition mean by "due process of law." The Supreme Court of Florida upheld this procedure and the convictions obtained under it. But for the fourteenth amendment and the United States Supreme Court these four Negroes would have been executed—legally lynched.

Too much significance cannot be attached to the fact that the United States Supreme Court's opinion was written by Justice Hugo L. Black. The fourteenth amendment was a partisan amendment. It was adopted with not a single Democrat in Congress voting for it. In all the State legislatures that ratified it only one lone Democrat voted for it.

Yet Justice Black, a Democrat, appointed by a Democratic President, wrote the strongest opinion on record upholding the real intent of the amendment. It is no longer a partisan issue.

The fourteenth amendment was originally a sectional measure. Yet Justice Black, a native of the deep South, is its champion. It is no longer a sectional matter.

A great hue and cry was raised over the fact that Hugo Black had once been a Klansman. The Record joined in that denunciation of him.

We have since regretted it. No man in whom race prejudice remained could have written the ringing opinion that Black did, upholding equality before the law.

Three-quarters of a century after the Civil War the Nation is beginning to unite on some of the fundamental principles for which it was fought. With this decision, the Supreme Court observes, in the finest possible way, the birthday of Abraham Lincoln.

## Comparison of Pre-War and War Period Exports

### EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. BROWN of Ohio. Mr. Speaker, there has been much discussion as to whether or not any trade benefit has been derived by this country as a result of the war now going on in Europe. Therefore I believe that a comparison of our exports for the 5-month war period, from September 1, 1939, to January 31, 1940, with the same 5 months of last year will prove of interest.

I therefore offer the following table of figures taken from the official reports of the United States Department of Commerce:

*Cotton, tobacco, and foodstuffs in our export war trade; United States exports 5 months of war period, Sept. 1, 1939, to Jan. 31, 1940, compared with corresponding 5 months of pre-war period*

Domestic exports	5 months ending Jan. 31—		Effect of war
	1939 (pre-war)	1940 (war period)	
Total exports, all products...	\$1,244,116,000	\$1,609,562,000	+\$365,446,000
Agricultural products:			
Cotton, raw.....	102,077,000	214,272,000	+112,195,000
Tobacco, bright flue-cured.....	87,938,000	26,378,000	-61,560,000
Foodstuffs (total).....	153,341,000	140,873,000	-12,468,000
Wheat and wheat flour.....	25,280,000	15,127,000	-10,153,000
Corn.....	16,905,000	12,184,000	-4,721,000
Fruits, dried and canned.....	28,095,000	26,003,000	-2,092,000
Vegetables, canned.....	1,616,000	2,875,000	+1,259,000
Meats and lard.....	20,493,000	23,446,000	+2,953,000

It will be noted that there has been an increase of approximately 30 percent in the exports from this country during the 5-month war period over the same period of last year. However, less than one-third of this increase is in agricultural products. Practically all of the increase in exports of agricultural products is accounted for by the war demand for raw cotton. Excluding small increases in the exports of canned vegetables, meat, and lard, our foreign trade in agricultural and food products has shown a heavy decrease, especially in tobacco.

It is apparent that thus far the so-called war boom has not been of any benefit to the average American farmer. With the belligerent powers being placed on a cash-and-carry basis, under our neutrality law, it seems evident from the above figures that such powers are conserving their cash for the purchase of needed war materials and are buying their foodstuffs and agricultural products in other markets on an exchange or credit basis, to the detriment of American agriculture.

## An Appreciation of the Late Dr. William E. Dodd

### EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

### ARTICLE FROM THE HOUR

Mr. COFFEE of Washington. Mr. Speaker, America sustained a tragic loss in the death of Dr. William E. Dodd, former Ambassador to Germany.

I had the good fortune to know Dr. Dodd well, and to be intimately acquainted with his family. I have enjoyed the charm and hospitality of his lovely estate, Stoneleigh, at Round Hill, Va. Dr. Dodd represented an intellectual viewpoint cherished by many men of erudition and sincerity in America. His tragic passing in this critical hour of our country's history is a telling blow to the cause of progressive legislation. In a recent article appearing in *The Hour*, there is an appreciation of Dr. Dodd which rather comprehensively discusses his life and career and the significance of his contributions to contemporary history. As an appreciation to Dr. Dodd, and because I know of the widespread interest in him and the profound admiration entertained for him by intellectuals throughout the length and breadth of our land, I am including herewith such article, as a part of my remarks.

[From *The Hour* of February 17, 1940]

DEATH OF WILLIAM E. DODD—CHAIRMAN OF AMERICAN COUNCIL AGAINST NAZI PROPAGANDA WAS VALIANT AND CONSISTENT FOE OF REACTION IN ALL ITS MANIFESTATIONS

Dr. William E. Dodd, head of the group responsible for the issuance of *The Hour*, died at 3:10 in the afternoon of Friday, February 9, at his country home in Round Hill, Va. In failing health for more than a year, he was stricken with pneumonia on February 7, and already the next day his condition appeared to be hopeless. He was 70 years old. Widely known as professor of American history at the University of Chicago, he was in the summer of 1933 appointed by President Roosevelt to the post of United States Ambassador to Germany, in which capacity he served until December 1937. Both in Germany and upon his return to this country he was an outstanding critic of the Nazi regime. In January 1939 he headed the newly formed American Council Against Nazi Propaganda, and he held the chairmanship until the day of his death. The office of the council sent the following telegram to Mrs. Martha Dodd Stern and Mr. William E. Dodd, Jr., daughter and son of Dr. Dodd:

"It is with a sense of real grief that we of the council staff have learned of your father's death. We feel this not only because of the affection and respect we had for him as a man but also because of our knowledge of the greatness of his contribution to the cause of democracy."

### HIS WORK AS SOCIAL HISTORIAN

William Edward Dodd, son of John Dodd and Evelyn Creech Dodd, was born at Clayton, N. C., on October 21, 1869. At the age

of 27, in 1895, he received his degree of bachelor of science from Virginia Polytechnic Institute, whereupon he remained in the school as a member of the faculty, teaching history. He was also a graduate student, and, in 1897, receiving from the institute his degree of master of science, he decided to go abroad to continue his graduate study toward the ultimate degree of doctor of philosophy. Forty and fifty years ago Germany was considered by American students and professors as the best place to learn scientific methods of historical research, and so it was for Germany that young Dodd sailed. He remained at the University of Leipzig until 1900, in which year he received his degree of doctor of philosophy, offering to that school his dissertation Jefferson's Rueckkehr zur Politik, dealing with Thomas Jefferson's return to active political life in 1796 and his struggle against the reactionary Federalists (forerunners of present-day Republicans).

A convinced Democrat of the Jeffersonian school, young Dodd quickly won recognition upon his return to America in 1900 as a thoughtful historian who sought in the past, particularly that of the American South, social and economic roots and principles accounting for the ills and triumphs of the present day. His early influence in America's academic circles was exerted through his teaching at Randolph-Macon College from 1900 to 1908; it was also in this period that he published *Life of Nathaniel Macon* (1903) and *Life of Jefferson Davis* (1907).

In 1908 he was called to the University of Chicago, where for the next 25 years he was to make his greatest contribution to historical research and writing. Hundreds of graduate students passed through his seminars, which were mainly on the evolution and collapse of the Old South as part of America's struggles for democracy. Many of them, dispersing to teach in the colleges and universities throughout the country, spread his interpretation of American history with great enthusiasm. Men and women of "the Dodd school" were becoming an influence in themselves. Dr. Dodd's published works of this phase include *Statesmen of the Old South* (1911), *Expansion and Conflict* (1915), *The Cotton Kingdom* (1919), *Woodrow Wilson and His Work* (1920), *Lincoln or Lee* (1928), and *The Old South* (1937). Only the first volume of the last-named has appeared, further work on the series being interrupted by Dr. Dodd's last illness.

#### AMBASSADOR OF DEMOCRACY TO THE LAND OF FASCISM

The nomination of Dr. Dodd to the post of Ambassador to Germany in the summer of 1933 came as a surprise not only to the public, accustomed to see career diplomats or rich industrialists at such posts, but also to Dr. Dodd and his family. In her book, *Through Embassy Eyes*, Martha Dodd recalls that at the time they wondered as to President Roosevelt's motives:

"Could it have been, we asked ourselves privately, that President Roosevelt wanted to register his belief in the democratic system by sending a representative as unconnected with fascism as any human could be—a man who had been loyal and unwavering in his support of democratic ideals, modest, scholarly, incorruptible politically and financially, a student of the old Germany where freedom was still not an empty slogan?"

From the very beginning of his sojourn in Berlin, Dr. Dodd astonished the Nazis and their collaborators from among the old-line high-caste Germans by his refusal to surround himself with pomp, by his insistence on carrying out his duties in a genuinely democratic way. Of yet greater discomfort to them proved the openness with which he repeatedly proclaimed his repugnance at the cruelty and repression marking the Nazi dictatorship. Not only did he lodge formal diplomatic protests against the various infringements upon the rights of Americans in Germany, but in public addresses he voiced his attitude toward nazism as historian and philosopher, an attitude which was always one of strong condemnation. In 1933, a few months after arrival in Berlin, Dr. Dodd delivered a speech in which he drew unflattering parallels between the regime of Hitler and the brutal dictatorships of the ancient Caesars. In 1934, speaking in Bremen, the ambassador declared that "only neighborly love can save the world now"—once more he warned the Germans of the perils of the dictatorship ruling them, and called for a return to Christian ideals. In July 1935, in a speech delivered in Berlin, he branded mischievous propaganda as "one of the errors of our time." Goebbels took it as a criticism aimed directly at him, and other Nazi leaders, too, were not far behind in their hatred of the outspoken representative of democracy.

The Nazis made a point of avoiding diplomatic receptions in the American Embassy. "In return," Martha Dodd recalls, "we declined many official affairs given by these same Nazis, though we observed as strictly as possible the rules of courtesy and accepted diplomatic etiquette." The State Department backed Dr. Dodd's policy and actions until September 1937, when the Secretary of State, Cordell Hull, against the advice of the Ambassador, decided to send *Chargé d'Affaires* Prentiss Gilbert as Hitler's guest at the Nazi party congress in Nuremberg. Dr. Dodd protested this step as tending to lend dignity to the barrage of antidemocratic and antisemitic speeches usual at the Nazi party congresses. But the British Premier, Neville Chamberlain, bent on appeasing Hitler, allowed his ambassador to go to Nuremberg; the French followed suit, and the United States State Department behaved similarly.

#### AGAINST REACTION AT HOME

American reactionaries were raising their heads, and Dr. Dodd responded to their machinations with keen indignation. In May 1937 he wrote a letter to several Senators on the question of the reactionaries' opposition to President Roosevelt's proposed reform of the Supreme Court. In a careful historical analysis and sum-

mary he showed the unprincipled selfish designs of those who hampered reforms and progress under the mask of allegiance to the Constitution. The concluding paragraph revealed the plans of a certain American near-billionaire to finance and control an American dictator. When the letter was made public, the press seized upon the paragraph, making much of Dr. Dodd's refusal to name the man.

In other ways, too, Dr. Dodd continued to express his concern with the growing boldness of domestic and foreign malefactors of wealth. Returning to the United States on a leave of absence in the summer of 1937, he lectured at the University of Chicago and to the public at large, everywhere attracting large audiences, and on all occasions reiterating his staunch belief in democracy.

Despite his renown he remained modest. Typical of him was a chance meeting on the campus with a graduate student to whom the Ambassador extended his hand with the unassuming introduction: "Dodd is my name." He would not take it for granted that practically everyone knew who he was.

#### RESIGNATION AND LAST 2 YEARS

Dr. Dodd returned to Berlin late in 1937, but it was plain that the relations between him and the Nazis were reaching a breaking point. Thus, his resignation in December 1937 came as no surprise. At first the Nazis treated his resignation and departure with stony silence but later their press went to unbelievable extremes in heaping abuse upon him.

The health of both Dr. and Mrs. Dodd suffered as the result of their trying but courageous life and work in Nazi Germany. In the spring of 1938 Mrs. Dodd died of heart failure and her death was a further blow to Dr. Dodd. Nevertheless, valiantly and at great sacrifice he continued his work of opposition to the dark forces both here and abroad. His chairmanship of the American Council Against Nazi Propaganda was a source of constant inspiration to his associates in the field.

In these days of 1940 when the reactionaries of the South and other American regions, both in Congress and outside, carry on a most vicious campaign against foreign-born, Negroes, and other minorities, it is fitting to recall Dr. Dodd's words pronounced in the course of a lecture delivered 7 years ago at the College of William and Mary, Williamsburg, Va. In the lecture, entitled "Federal Constitution and Its Application," he thus characterized the Federalists' attempts of 1796 to violate the Bill of Rights: "The young United States of America enacted alien and sedition laws in harmony with English reactionary policy and contrary to the spirit of both Federal and State constitutions." He concluded with this truly inspiring message-prophecy on the nature of the American world of tomorrow:

"It must be a new world, a new attitude toward constitutions and a recognition that privileged groups always work their own ruin, if not regulated by government; and working their own ruin they work that of their fellows in vast numbers. \* \* \* The principle of democracy is as vital today as in 1776."

### Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. MILTON A. ROMJUE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. ROMJUE. Mr. Speaker and Members of the House, there is probably no more important subject to come before this body during this session of Congress than the one now pending before it, and that is the question of whether or not we continue the policy, for an additional period, of entering into trade agreements between this Government and other nations as heretofore authorized. It is unfortunate that so many times when matters of legislation are taken up that any questions or proposals are opposed by some, regardless of how meritorious they are, purely upon the ground that the proposal is advocated by the President of the party in power. I think one of the many great achievements of President Roosevelt's administration is the benefits that have been accomplished by the trade agreements which Secretary Hull, on behalf of the United States Government, has entered into with the various countries. Now, of course, it is not expected that in every detail every individual throughout the country can be satisfied by such agreements. The minds of some people do not reach far back and sometimes there are those who soon forget. If there is one thing that can be pointed to that did more to destroy and injure the agricultural interests of this country and finally brought about a general collapse of

banks and business interests of the country generally, it was the high protective tariff law that was passed under the administration of the Honorable Herbert Hoover while President of the United States. That tariff law was enacted under Mr. Hoover's administration and it raised the tariff walls so high against practically every nation on earth that the United States Government suffered greatly from the loss of trade and the result was almost a complete collapse of the farm industry. Farm products went down and it became the forerunner of the breaking of banks throughout the country and many a home was foreclosed under mortgage as a result of this debacle that had been brought about by the legislation referred to.

Certainly the people of the United States will not be unwise enough to now want to turn back and wipe out what advantages we have gained and go back to the old logrolling system and reestablish a policy that has, within the last few years, so seriously injured our country. There is one thing we must remember—we cannot sell everything we produce to other people without doing some buying ourselves. One who is so short-sighted and so selfish as to believe he can have his cake and eat it too is penny-wise and pound-foolish. It would be one of the most unwise moves this country could make if we should now wipe out and destroy the power to extend or renew these and other trade agreements in the manner in which they are now being made. The Honorable Cordell Hull, Secretary of State, has performed a magnificent service. The manner in which he has handled the trade-agreement program, and his outstanding work and achievement in this particular will stand out forever as a memorial to his great service along with his wonderful achievement in the handling of our Government's international problems in this trying hour when the world is so much in disastrous conflict.

There is only one of two choices that can be made in regard to the handling of trade relations between this Government and the other nations of the world—one is through the process that is now being employed under Mr. Roosevelt's Administration and the other is to go back to that rule employed for so many years and which proved so disastrous under the administrations of President Taft and President Hoover. Unfortunately for our country, a great portion of its area in 1934 and in 1936 suffered very severe droughts. Many sections of our country, in those years, were almost completely burned. Necessarily some importations were required to come in at that time to meet our own immediate needs. One only has to go back to 1932, which happened to be the last year of Mr. Hoover's Administration, and you will remember that you could buy corn almost all over this country for 15 cents per bushel and in some States like the great State of Iowa it was sold on the public market at less than that. The prices of other farm commodities were in proportion and even wheat was selling for 25 cents per bushel. It is well known that unless there is a stable basis upon which the agricultural interests of our country can operate, there cannot be any permanent prosperity. The farming interests of the country understand that there must be and shall be more or less teamwork between agricultural interests and industry, each having and obtaining a fair share of the profits resulting from their toil, but the farming interests also well know that they cannot afford to be taken back to the old policy of logrolling, when it comes to making up a trade policy by the creating of high tariffs, so high as will cause, as it has caused heretofore, a collapse of the roof of the house of our country's general business structure. I commend the wise policy that has been pursued and followed by the Honorable Cordell Hull as Secretary of State in the handling of these trade agreements. I would not claim perfection for all, of course, but a careful study of any impartial mind that is well informed on the trade trends and trade situation existing between this country and other countries is bound to lead to the conclusion that the trade-agreement policy should be continued as most advantageous to the people in general of these United States.

## This Thing of Worrying About Europe

### EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

EDITORIAL FROM THE AMERICAN GUARDIAN, OKLAHOMA CITY, OKLA.

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herewith an editorial which appeared in a recent number of the American Guardian, a liberal weekly paper published at Oklahoma City, Okla. The article is by that well-known protagonist of liberalism and writer of provocative, challenging observations, Oscar Ameringer. It calls attention to the imperative need for the concentration by statesmen upon rehabilitation of our economic order in the United States; it deplores the emphasis upon the problems of Europe and the Orient; it deprecates the stress being laid upon the indigence of Europe while overlooking and neglecting the impoverishment of American citizens. The editorial points graphically at the all-too-prevalent vogue in our country of tearing our hair in frantic emotional excitement because far away there is trouble and despair, while close at home our eyes seem to be glazed with a myopic film and we are blind to our neglect of our own people here.

Liberals everywhere are insistent that this Congress should legislate effectively for the rehabilitation of the millions of underfed and underprivileged sharecroppers and tenant farmers; that we give to the Negro some measure of decent treatment and justice and provide him with an opportunity to enjoy sanitary and respectable living conditions; that we actually eliminate child labor and with it all of its dread sequels; that we provide for a practical extension of a public-health program so that medical and surgical care will not be the exclusive prerogative of the comfortably fixed and well to do; that we supply to the youth of America something more than threats, admonitions, red-baiting sneers, patronizing pats on the back, and "holier than thou" advice. Youth, facing the future of a dark outlook, will not be hoodwinked or deluded by minatory phrases or gestures. Recently they came to Washington asking for bread, and we gave them not only a stone but many stones. We overlooked their program and suggestions for legislation of reconstruction; we replied "communism" to their pleas for help and aid. But youth will not be swerved by such attitudes or policies, right or wrong. Youth cannot eat advice.

What are we doing to redistribute purchasing power; to bring about harmony in the labor movement; to extend the program of public ownership; to reform our banking and money system; to disintegrate monopolies; to expose gigantic combines of capital; to provide work and opportunity for youth; to give social justice and security to the elderly? We are derelict, and this Congress is refusing to face its responsibilities to their heritage and our antecedents. We cannot exorcise the devil of restlessness out of a distressed people. We cannot proclaim patriotism to them while they are losing faith in our institutions. We must give them security, opportunity, and the fullness of life. Will we meet the challenge of present-day conditions? I wonder.

There are many strongly phrased sentences in the article attached which should cause any intelligent person to think very seriously.

[From the American Guardian, Oklahoma City, Okla., February 2, 1940]

THIS THING OF WORRYING ABOUT EUROPE  
(By Oscar Ameringer)

Mr. Farmer, are you worrying about the mortgage on your farm, about overdue notes and taxes unpaid?

Mr. Wage Earner, are you broke and out of work, or if neither, are you losing sleep on account of fear of losing your job?

Mr. Professional Man, are you worrying about your clients or patients falling off? Are you having trouble collecting bills or paying your own?

Mr. Businessman, are you worrying about increasing competition in the face of decreasing sales, the low state of your bank balance and bills falling due on stock on your shelves?

Mr. Father, are you worrying about seeing your children through high school and college, enabling them to fight the battles of life better equipped than were you?

Mr. Banker, are you worrying about the value of the securities in your portmanteau or the ever-swelling deposits in your safe?

Mr. Manufacturer, are you worrying about mounting pay rolls, taxes, and inventories?

If so, each and all of you chuck your worries by joining the great all-American in- and out-door sport of worrying about European troubles.

In doing so you will not only forget your own, but in addition find yourself in the company of America's most illustrious statesmen, journalists, commentators, and broadcasters.

According to this distinguished company, you really have nothing to worry about. Your troubles, if any, belong strictly in the category of remote control and long-distance affinity. As my old college chum, Bill Shakespeare, has so aptly remarked, "The world is out of joint and all the king's horses and all the king's men can't glue the blamed thing together again." The wailing wall of Jerusalem is a wreck. A guy by the name of Joshua has tooted down the walls of Jericho. Abdul El Ashcan of Afghanistan is waging an undeclared war against the Bey of Bayrum. The firm of Pope, Roosevelt & Mannerheim has declared a holy crusade for the restoration of democracy in Georgia, U. S. S. R. Herbert Hoover and Governor Bricker, of Ohio, have joined in a campaign to feed indigent Laplanders with Buckeye Bacon and Georgia (U. S. A.) Crackers.

The preoccupation of America's master minds with long-distance affairs is easily explained by the fact that while some of us have trouble of our own, the Nation as a whole has none.

Outside of 10,000,000 unemployed, everybody is at work. Excepting one-half of our farmers being landless and all of them rattling the tincup for relief, agriculture is doing well. Forgetting that every profession is overcrowded, higher education is a lucrative investment. Leaving out of sight that we own two-thirds of the gold of the world and that our banks are bursting with \$20,000,000,000 crying for borrowers, the capital market is in first-class shape. Ignoring some 6,000,000 youngsters who left school, high school, and college during the past 10 years and are still looking for jobs, youth is still the hope of the future. Brushing aside the daily swelling army, 8,000,000 strong, of men made senile above 45, who are no longer wanted in industry nor capable of supporting themselves, old age is secure.

Shutting our eyes to the fact that the rich no longer know what to do with their money; that the poor have none; that one-third of us are ill-housed, ill-fed, and ill-clothed, while nine-tenths of the building-trades workers haven't struck steady work in 10 years, and there is a shocking oversupply of cotton, wool, textiles, clothing, and eats, and there are no statistics about how many of our fellow citizens are homeless or are starving and freezing to death—let's forget the United States of America and settle the troubles of Europe.

But before settling the troubles of Europe let's find out, first, what these troubles are and, second, how to settle them.

The main trouble is there is no such country as Europe. The territory covered by the noise "Europe" is composed of 20 separate and distinct states. In addition to being separate and distinct states, their people are separated by different languages, customs, religions, culture, and what not. So that about the only thing the states of Europe have in common is their fear and dislike of each other. How these fears and dislikes originated is too long to relate here. All I will say is that they started about the time when the saber-toothed tiger and the woolly rhinoceros decided they were no match for the two-legged critters that poured north from Asia at the retreat of the second ice age. As far as we know, these critters were a rude, ill-mannered species, as testified by the cracked skulls and bone-embedded arrows frequently found in their last remains. However, due to the primitive killing devices commanded by them, they were never able to exterminate each other completely, as testified by the fact that in spite of thousands of wars their descendants are still littering up the countries called Europe.

In the course of these wars they became so intermingled by way of invasion, migration, intermarriage, rape, and illicit love making that by now if they kept their mouths shut it would be difficult to tell the people of one from another. In other words, the people inhabiting the 20 countries called Europe are members of the same family and that family composed of bastards, each claiming descent from heaven and therefore entitled to send the others to hell.

To complicate matters still worse, each branch of this lovely family is ruled, and always has been ruled, by its particular set of gangsters selling protection, salvation, peace, and glory to their particular set of victims. The outstanding characteristics of all these gangs was and is an overpowering desire to live without working and raise their standards of living by enlarging their domains and number of victims. Their motto was and is, "You work, I eat, and to hell with the guy who says no." Thus the bellies of the ruling gangsters became the common good, while the belly interest of the commoners became high treason to country, flag, and God.

The full fruit of organized and sanctified gangsters is nationalism, and nationalism was invented to permit ruling gangsters to do to all concerned that for which they jail, hang, and burn their own nationals—such as murder, arson, and rape, for instance. The divine injunction, "Thou shalt not covet thy neighbor's ox, ass, wife, or maidservant," is only applicable to the retail trade. When committed by wholesale, in the name of nationalism, they are transferred into such virtues as loyalty and patriotism.

What the 20 countries of Europe must have before their people can live in peace is a United States of Europe. But this in turn cannot be achieved until the 20 gangster gangs that rule the 20 countries of Europe are eliminated. For just like the 130 official families that alone prevent the unification of the American labor movement, so the gangster gangs that rule the 20 countries of Europe will move heaven and hell to stave off the unification of Europe.

If President Roosevelt, the Pope, or Graf Mannerheim are prepared to remove the chief obstacles to a united Europe, they have our blessing. If not, let Europe stew in its own juices. What's more, a country that hasn't either brain or heart enough to supply one-third of its own people with stew out of a superabundance of ingredients is in a darned poor position to prescribe a comfort diet to countries which at the best of times never had enough to go around.

## Work, Wages, and Education

### EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 22, 1940

ADDRESS BY HON. AUBREY WILLIAMS

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Hon. Aubrey Williams, Administrator of the National Youth Administration, at the Harvard University Graduate School of Education, Cambridge, Mass., on Thursday, February 15, 1940, on the subject Work, Wages, and Education.

There being no objection, the address was ordered to be printed in the Record, as follows:

For educators, as well as for the rest of us who are concerned primarily with young people, the most significant observation that could be made about youth in these times is the fact that around 4,000,000 young people between the ages of 15 and 24 are out of school, looking for work, and unable to find a job of any kind. This is important to educators because it leads them to question whether the present educational process is effective in fitting young people to cope with this kind of situation. It is important to the economist because it indicates that our economy as now constituted is not prepared to absorb the new generation that is knocking at its door for admittance to the adult world in productive work. It is important to the political scientist and to all of us as citizens because it leads us to wonder how democratic institutions can best be adapted to solve the problem represented in these figures. But most of all it is important to the young people themselves because it means that the normal channels of growing up are closed to them. They find themselves ready and eager to do their part of the world's work and to achieve in return the economic independence which is the key to every other sort of independence. But instead they are frozen in a kind of suspended animation—condemned to a prolonged and therefore unhappy adolescence.

However, today I am going to digress from the subject of youth unemployment, which is the primary concern of the National Youth Administration, in order to discuss certain ideas regarding the problems of the educational world in meeting the needs of young people which have come to me in connection with my work. If in suggesting new directions for education I appear to be critical of its present policies, I would not want you to conclude that I believe in any way that education is responsible for the present major problem of young people. There is an unhappy tendency on the part of some people when confronted with the uncomfortable facts of unemployment to look around for the villain. What social agency is chosen for the role depends, of course, on the personal prejudice of the individual; sometimes it is the Government, or big business, or monopoly, or labor, and sometimes even the school system is chosen for the role. It is assumed by some process of magic that if the schools turned out better people, models of all the ancient virtues and fully trained in a trade besides, they would quickly find a place for themselves in the working world and the national economy would right itself.

The weakness of this type of reasoning seems to me obvious, for the schools are not the mainspring of the economic system. The schools cannot themselves create the purchasing power which would expand industrial production to the point of absorbing all their graduates. But educators must necessarily be concerned with the fact that every year, of the million and a quarter new workers entering the labor market, approximately 500,000 young people leave behind them the schoolroom only to find themselves in the limbo of unemployment. Educators must necessarily wonder whether these young people were thrust out from the school too soon, improperly prepared to take their place in the world, or whether the working world itself is in need of some kind of adjustment in order to make a place for them.

I think there is a growing realization on the part of educators that these two worlds, the world of the schoolroom and the world of the workshop are no longer separated by an unbridgeable gulf. They no longer are willing to hand a young man or a young woman a diploma and say, "Now my responsibility is ended—you will have to look to the businessman for your place in the world." They are beginning to realize that the functions of youth, the processes of transition from childhood to adulthood, are not separate and distinct phenomena separated into watertight compartments of education, a job, and personal adjustment. They are beginning to realize that this is one organic process in which each part has an integral relationship to the other part. They are beginning to accept the existence of an ideal, of a goal to be worked toward, in which the period of schooling will lead in a normal continuous way to the work experience and personal adjustments of adult life without the present breaks and interruptions that do such grave injury to the bewildered, frustrated, and unhappy unemployed young people of today.

Naturally, therefore, the educational world is faced with a questioning that turns both back upon itself and out upon the national economy and political scene. It turns back upon itself in order to examine its own methods, its own objectives, and its own adaptability to a changing world. The Regents' Inquiry of the State of New York is an excellent example of the way in which education has turned upon itself the searching rays of objective analysis and emerged with a freshness of vision and an understanding of its own problems which speak well for its vitality and ability to adapt itself to the needs of the times.

Moreover, educators are looking more and more to the working world beyond the classroom walls in order to see what happens to young people after they pass beyond the period of formal education. Educators are beginning to think of their function as only one step in the development of the qualities of personality, knowledge, and skill that make for well-adjusted adults. Educators are concerned primarily with that period of life when young people are traditionally encouraged to be nonproductive members of society in order to devote their full energy to the development of their own capacities and store of knowledge. This is one of the achievements of civilization, that the young may be carried by the productive effort of their elders longer than nature itself requires in order that they may in their turn function more effectively as adults. But the educative process by no means comes to an end when the situation is reversed and young people turn their energy and talent outward in order to contribute to the economy and society in which they live. On the contrary, this is the very climax of the educational process, for it is at this point that all the years of training that have gone before are subjected to the hard test of actual practice.

I am not talking now of vocational training. In fact I think there has been an overemphasis in the past on a strict division between vocational and academic education. There has been a tendency here again to think in terms of separate compartments of life as if the worker and the man were separate and distinct beings requiring a wholly distinct and isolated training. Certain studies like English literature and history and art were thought to feed the soul and the personality, while other studies were directed to training the worker in a particular skill. There were some in fact who not only saw these two fields of study as separate and distinct but even went so far as to consider them competitive. Therefore, a boy or girl in high school was faced with the difficult task of choosing whether he would undertake to train himself in a trade through a commercial or industrial course or whether he would undertake to develop his cultural capacities through an academic course.

Fundamentally, I think the problem grows out of a false and archaic concept of work which still persists in our modern world. The idea persists, sometimes unrecognized, but nonetheless powerful, that work is a means to an end, a necessary evil whereby man keeps himself alive, rather than a positive function of the human personality. Perhaps this idea goes back to the time when man's genius had not gone far enough in mastering the processes of nature to lighten the struggle for existence. And yet I suspect that this idea of work as a necessary evil is a comparatively sophisticated one. It is hard to imagine primitive man pausing in the constant struggle of wresting his livelihood from the wilds of nature without benefit of tools and in bitter competition with the rest of the animal kingdom in order to bemoan the hardship of his lot. It would not occur to him that there was an alternative method of survival any more than it would occur to us today that we could survive without eating.

I am inclined to think that our attitude toward work goes back not to its extremely onerous character in mankind's early history, but rather to the time when society began to develop two new concepts: First, the theory of a division of labor between individuals; and, second, the theory that certain groups of people,

originally as warriors and later as property owners, were exempt from the necessity of labor and might survive by reason of the labor of others rather than their own. Under a division of labor there developed the idea that certain kinds of work enhanced the social prestige of the person performing it and through the emergence of a leisure class exempt from labor there developed the idea that work of any kind, with the exception of governing and fighting, marked a person as belonging to an inferior class.

These ideas are hardly original; they have been expounded with great wit and penetration by Veblen in his Theory of the Leisure Class, but I am constantly impressed by the deep and persistent inroads they have made in our educational theory and practice. And I am even more impressed by my experience in the National Youth Administration with the fact that our educational system ought to be working to lessen rather than aggravate these outmoded attitudes toward work. For it is surely the very essence of a democracy that the intrinsic value of the human personality should be recognized and that the value and dignity of all forms of labor as an expression and function of that personality should be accepted as a part of our national philosophy.

I think there are a number of historical factors that have led us into false directions and lost us the trail of true democratic progress in the field of education. Our ancestors who founded this Nation had the pioneers' true respect for education as the very keystone of equality of opportunity for all, and their respect for higher education has fortunately persisted among us to this day. But they brought with them from the Old World the concept of higher education as the hallmark and prerogative of the gentleman and therefore as the stepping stone to gentlemanly occupations. Gentlemanly occupations they conceived as the professions, business, and the arts; in fact, all the unmanly occupations with the possible exception, in the period of agrarian dominance, of gentleman farming. This attitude is bad enough at the college level, in my opinion, for reasons which I will explain later, but it has been disastrous at the secondary school level where a high-school graduate tends now to look upon the white-collar occupations alone as worthy of his training and personal worth.

For a while it was possible for us as a nation to avoid facing squarely the absurdity of our growing tendency to expand educational opportunity at the high-school and college level as a means of lifting our children into the socially more acceptable strata of nonmanual occupations. This was made possible by the great waves of immigration from the Old World, by the tremendous influx of workers from the poverty-stricken countries of Europe who were desperately eager for work of any kind and happy enough to get the jobs as ditch diggers, railroad builders, domestics, common laborers of every kind that the second- or third-generation Americans scorned. But then in turn their children struggled to lift themselves above their parents' level into the white-collar jobs where they would be accepted on equal terms by the older inhabitants—and when immigration ceased, our factories became filled with frustrated young people who wanted to work in an office.

It is obvious that without new immigration it is the children of all of us who are going to have to do the work of the future in this country. And the bulk of that work, by the very nature of our modern economy, is going to be manual work, not in the sense of back-breaking labor, but in the sense of machine tenders, on the farms, in the factories, or in the service and distributive occupations. This is surely a fundamental and axiomatic consideration for educators.

There are those who react to the acceptance of this fact by the assertion that we should reduce the extent of education at the college level to the number that may properly be absorbed in the gentlemanly pursuits. This is what has been happening in certain totalitarian countries where the function of higher education is conceived of in terms of the needs of the state rather than the development of the individual. The same line of reasoning leads to the conclusion that education at the secondary level should either be reduced or that its curriculum should be so modified as to fit young people for the social and occupational class they will occupy as adults.

These theories, to my way of thinking, represent the ultimate in reactionary educational theory and are contrary to the very tradition of democracy that has made our educational system the powerful instrument it now is. It assumes a wholly utilitarian function in education, that education is intended to turn out as from a machine the number and kind of workers required by our economy rather than to develop the best potentialities of every individual born into a democracy. It runs counter to the potentialities of our modern technical and scientific development which has freed mankind from the drudgery of never-ceasing labor and permitted him to devote a greater part of his span of years to the development of those qualities of the intellect and spirit which distinguish man from the lower animals.

Modern productive techniques have brought with them not only new leisure but also a new complexity of problems to be solved. This has given education a double problem: First, to develop in young people those personal qualities which will enable them to make constructive use of the leisure which is the ultimate object of all labor-saving devices, and, second, to develop the necessary knowledge, objectivity, and social attitudes which would enable them to participate intelligently in the democratic solution of the complicated problems growing out of modern science, techniques, and industrial organization.

Both of these are difficult tasks requiring a considerable period of time devoted to the educative process. Neither of them relate

directly to the development of specific working skills. They are in many respects more important to the young person whose actual occupation is not stimulating than to the person whose work enhances the broad development of personal qualities. It is therefore my conclusion that the extent of education should depend on the needs of the individual rather than on the needs of the economy for workers trained in one field or another. Moreover, I feel that while modern conditions of production require on the whole fewer persons with a long period of training specifically directed to developing vocational or professional skills, the complexity of the problems facing citizens in a modern democracy and the potential opportunity for fruitful use of leisure time require that if anything a greater proportion of the total span of man's hours, days, and years should be devoted to the acquisition of knowledge and the development of personal qualities.

I do not believe that our democracy can afford to provide less educational opportunity for any of our people. On the contrary, I think it should provide more adequately so that children in all parts of the country, from all races and all economic groups, may have the best we know how to give them. It is the timing and the content of our education rather than its extent that needs to be considered critically in terms of its objectives.

In connection with the timing of education, I would like to repeat what I said earlier regarding the tendency to separate education off from the other processes of personal development. Young children—perhaps up to the ages of 15 and 16—must necessarily devote the greater part of their time to personal development. First of all, the physical requirements of growth are such that arduous work on the part of children is considered harmful to the individual and hence to the race. It is therefore considered the responsibility of a civilized state to provide adequately for its children through the period of their physical growth. But in addition the complexities of modern life are such that young people are not considered sufficiently mature in judgment or knowledge to cope with the world entirely unaided by adult support even by the time of their physical maturity. Parents who are financially able to do so almost invariably wish to continue to support their children through the period of college and even graduate studies in the belief that this prolonged period of dependency fits them better to cope with the world as adults.

This is a logical development in an age where the machine has freed man from the necessity of using his full years of physical maturity for productive work. But it has two serious drawbacks: First, it postpones in all but the exceptional case the time when a young person begins to receive the benefits of actual work experience; and, second, it tends to limit the opportunity for complete educational development to those young people whose families are in that small minority of the economically well-to-do that can afford the heavy expense of higher education.

I think these are perfectly sound solutions to both these problems and that herein lies the chief value of our N. Y. A. experience to educators.

First, in discussing this problem of work experience, it is probably necessary to define just what I mean by "work." I know that to students the whole process of studying seems the hardest work in the world. That is because they think of work in terms of effort. But the thing that distinguishes work in the sense that I am using the term is the fact that it is effort directed toward some objective benefit. A student expends effort in order to develop his mind and acquire knowledge for his own present and future use. A worker expends effort in order to contribute to the world's wealth, knowledge, or well-being. In this way a worker creates a new value for which he is entitled to receive compensation. The expenditure of effort on the part of a student has its reward in the enrichment of his own personal capacities.

Sometimes these distinctions are hard to draw clearly, but I believe that in general the difference is a valid one. The confusion arises from the byproducts of the effort of student or worker rather than from its objectives. For instance, a student might very well write a brilliant thesis as a part of his studies which would cast new light on some problem and so add to the sum total of human knowledge. And certainly the research worker whose objective is to expand the world's knowledge adds constantly to his own.

It is, in fact, the byproducts of work experience that I had in mind when I referred earlier to the fact that it was a mistake to think of the processes of education as taking place solely in the classroom. I imagine many older people, in looking back, feel that they learned more in their first week at a job than they did in a year in the schoolroom. Certainly no one would feel that his personal development ceased when he secured his diploma.

The question seems to me to reduce itself in considerable measure to timing. How long is it desirable to deprive young people of the benefits of "work" in the sense that I have used the term? Are parents entirely right in their belief that they are doing their children a service in making it unnecessary for them to work until they are somewhere between 20 and 25 years of age? Above all is this idea, that there is a time of life to be devoted entirely to self-improvement in the form of education and a time of life for productive work, a sound and necessary one? These are the questions that come to mind.

It is obvious that work, unless unusually hazardous, arduous, and protracted, is not physically detrimental to young people after the age of 16. Certainly to anyone raised on a farm even this would seem unduly conservative. For with our strong agrarian tradition we like to think that our most vigorous stock has come from the farms where boys and girls alike are expected to do their share of the regular chores and of the unusual work of the

planting and harvest seasons. Even in small-town and city life in an earlier period there were plenty of chores in the average household to give most boys and girls a thorough taste of work during their adolescence. There were big houses and yards to be kept in order, water to be drawn, wood to be chopped, kitchen gardens to be tended, baking, preserving, and dressmaking for the girls, animals to be tended, and all kinds of handyman work normally to be performed around the place.

As our way of life has changed so that less work is performed in the home and all work is more highly mechanized and therefore more highly organized, it has become less possible for young people in their teens to participate in the work of the home or the community while continuing their education. Nowadays, if a young person wants to help, for example, with the canning, he has necessarily to give up school in order to go to the cannery for a full day's work when the whistle blows. You could hardly expect the cannery operator to adjust his production and the use of his machinery so that high-school boys or girls could drop in to work for an hour or two in the afternoon after school is over. It is not particularly economical—although it may have other values—for girls to make their own clothes at home when large-scale factory production can turn out attractive ones more inexpensively. Carpentry work in the home may be good recreation but furniture factories, equipped with all the latest power machinery, can probably fill the average family's needs more satisfactorily than their 16-year-old son at work in the basement.

The shift from a handicraft economy to large-scale mechanical production has made it very difficult, if not impossible, for young people to get much of any work experience before they leave school. I think the young people have lost some things in this process which we ought to be able to regain in other ways.

First, they have lost the necessity of acquiring certain basic skills which, while they may never be required in a vocational sense, add immeasurably to the ease of getting along in the world. I have been astonished by the number of boys between 18 and 25 years old who come to the National Youth Administration with no knowledge of how to drive a nail—and the number of girls who don't know the simplest principles of cooking or sewing. I am personally of the opinion that the world would be a more comfortable and pleasant place to live if everyone—male and female—knew how to wield a hammer, a paint brush, a skillet, a needle, a hoe, and a broom, at the very least.

It was interesting to me to learn that the early charters granted for education in the American colonies specifically provided that training in the manual arts was the responsibility of parents rather than the schools. Today if the home no longer provides the opportunity to teach these arts, it is time to revise our thinking and work out a way for them to be learned and practiced elsewhere.

But there is a more serious side to this long delay in opportunity for productive work and that is the effect on the attitude of mind of the young people themselves. For the greatest value of work to the individual is the sense of justifying his existence in sharing in the productive enterprise of the world. There is a dignity, a sense of achievement, a self-confidence, and a feeling of belonging and comradeship that are hard to describe without apparent sentimentality. It is this phenomenon I have seen so often in my experience with the administration of relief when a man long unemployed, with confidence, initiative, and dignity all but destroyed, is transformed in a day by going back to work. But in the case of young people it has a special significance. It is the first recognition that the period of childhood is passed, that the time has come when one is accepted into the adult world on equal terms as a producer.

It is one of those interesting contradictions of the human spirit that complete personal development seems to come only when the individual ceases to be solely on the receiving end and begins to contribute from his own store of talent, energy, and knowledge to the wealth of the world. This may be a byproduct of the work itself, but it is such an essential one in the educative process that it should be recognized as such. It should drive out of our thinking the whole ancient idea of work as an evil and make us seek it out as one of those opportunities which should be denied to no part of the human race.

If we are going to continue the process of educating young people through 20 or 25 years, I think it is essential that we find a way to extend to them the opportunity to work during the period of their schooling. After all, as I have tried to point out, the traditional division of time of life between study and work is an arbitrary one, based primarily on changes in our economy which make full-time participation in production the more efficient and therefore the more profitable method of work in most processes. There are a few exceptions—newspapers are still largely delivered by schoolboys, but there are not enough of these to make a dent in the problem.

Frankly, I doubt very much if private employment will ever offer a solution to this particular problem. There have been some interesting experiments—the one at Antioch College is probably best known—but the difficulties of finding suitable jobs are almost prohibitive. In connection with vocational training at certain high schools, arrangements have been made with employers to give the students work on a half-day basis as a part of their high-school work. But this is obviously not an efficient arrangement for most employers and presents some very difficult problems in labor standards. Questions have recently been raised, for example, as to the applicability of the Fair Labor Standards Act to this group, and it can readily be seen that without very careful safeguards exploitation and unfair competition could very easily occur. Vacation employment is also a possibility but here again it is

difficult to find suitable jobs of short duration. I am wholly sympathetic with all of these schemes but I am afraid that their inherent difficulties are such that they can only reach a comparatively small number.

There are still three possibilities: Work at home, work at school, and work for the benefit of the general public. Work at home, even where it still exists, is certainly desirable, but it has three great limitations. First, it is necessarily limited in variety and quantity, and is usually of the handicraft, individualistic, and, therefore, inefficient type. Second, most young people think of their families as an extension of themselves; it does not have the same value in terms of a sense of contribution to the larger economic whole. And third, in most families it does not mean work for a wage. I am going to speak later about the significance of a wage but it is of fundamental importance to young workers as a recognition of the value of the work which has been done and an evidence that the period of independent self-support has begun.

The National Youth Administration has had experience with providing work both in the schools and for the general public. On the whole I think it has proved its value in bringing the benefits of work experience to young people both in school and out of school. But it has necessarily been limited to an economically needy group and has not been available to all young people on the basis of subjective need.

Nevertheless the extension of work opportunity to those in need has given definite public recognition to the second problem growing out of the extension of the period of education; that is, the problem of cost. It used to be assumed that if the State provided free public schools equality of educational opportunity was assured. I think that this was probably more true in the days when more of us lived on farms where it was easier to carry along the younger members of the family and when there were more odd jobs available for students. But today it would be ostrich-like blindness not to recognize that the children of the poorer sections of our population cannot finish high school, let alone college, without some form of assistance.

It seems to me that with the realization that a substantial part of our young population is going to have to go into unskilled or semiskilled occupations, it becomes doubly important that the selection of young people for the more highly skilled fields of work should be based on their own aptitude rather than on the financial ability of their parents to carry them through the necessary period of training. I can imagine no worse menace to our democratic tradition than the development of a hereditary caste system whereby only the children of the well-to-do might enter the professions, and the children of the now less-honored occupations should remain permanently bound to follow in their parents' footsteps. But it follows inevitably that if there is to be opportunity for children of unskilled manual workers to move into the skilled and intellectual pursuits there must be an acceptance of the fact that there is no tragedy when the child of a professional person becomes a factory worker.

There are two vital factors in creating a situation where young people will go into the work for which they are best suited on the basis of open, democratic competition. First, all kinds of work must be made more attractive. There must be less disparity of financial return from different occupations so that all workers may share in the standard of living which our modern genius makes possible. There must be shorter working hours for the routine mechanized occupations so that persons whose jobs offer little outlet for imagination or creative activity may be able to develop avocational outlets for their talents. There must be neither social stigma nor unusual prestige attached to any form of work, except, perhaps, that of the creative genius. All work should be honored, and the coal miner as welcome in the drawing room as the lawyer or stockbroker. Above all, education should be extended to all young people who can benefit by it regardless of their occupational objective so that our democracy will function with informed citizens and cultivated men in every walk of life.

This means a revolutionary change in many of our attitudes, for certain prejudices are deep-rooted and, much as we hate to admit it, there are many vestiges of the class alignments of the Old World in our national psychology. But in the field of education our tradition of opportunity for all is strong, and there is a real historical basis on which to build. I think the very existence of the N. Y. A. student work program, and its wide popularity among educators, civic leaders, and political representatives is good evidence of the firmly rooted belief that young people of promise should be given financial assistance in completing their education. And I think it is also evidence of the persistent American tradition that financial assistance should be given to people who are able to work only in the form of wages for work performed.

I believe that young people should be given work and I feel strongly that they should receive a wage consistent with the value their work has created. I think that when needy young people are old enough to work they should have a chance to earn some money so that they will not be penalized by the poverty of their parents in completing their education. But, in addition, I think that all young people should have a chance to work and to receive a fair wage for their work, even before their education is completed, in order that they may learn the true values, both subjective and objective, of their labor. For what is money but a measure of value, and what is work but the process of creating a value? To me the principle that a laborer is worthy of his hire is basic to the whole

concept of work. Work without its just wage is as meaningless as salt without its savor.

If private enterprise cannot provide young people with paid part-time employment during the period when they are still devoting a part of their time to the educative process, the only alternative way it may be done is through some tax-supported public agency. It is conceivable that local communities might undertake to do this through the schools and I am told that a few have done so. I think such an arrangement might work out very well, but it has one serious drawback. The schools are necessarily fighting, year by year, to expand the amount of public money available to them for educational purposes. They are scarcely in the position at this time to advocate successfully the cause of paid employment for young people from local treasuries.

In any case, whatever the reason, it has remained for the Federal Government, through the National Youth Administration, to put into actual practice the dream that progressive-minded school people have long cherished. The National Youth Administration has provided through its student work program part-time paid employment in the schools to young people who need financial assistance in order to remain in school. We have purposely left the actual direction of the program in the hands of the school people themselves in order to achieve several objectives. First, it has made it possible, by the contribution of their labor as supervisors and administrators, to put all the Federal funds available for this program into actual wages to the young people themselves; second, it has eliminated any possibility of an effort, or even the appearance of effort, on the part of a Federal agency to interfere with the sacred area of educational policy traditionally reserved to State and local authorities; but most important of all is the third reason—the fact that in the student work program we have placed in the hands of the educators of America a new educational medium and tool. The fact that in virtually every high school and college of this country the Federal Government has put into the hands of the principal, president, or dean a certain number of paid part-time jobs has a revolutionary significance in the educational world with which most of the theoretical pedagogues have not yet fully caught up. But school people generally are beginning more and more to explore, develop, and realize the educational benefits of this program in a way that should influence profoundly the future direction of education.

In some respects I believe that the other part of the N. Y. A. program, the projects for young people who have left school, has almost as much educational significance as the student-aid program. For even though many of these young people on our projects have left school solely for financial reasons, there are many, many others who left because they felt the school system had nothing further to offer them. Especially as the student-aid program is extended and strengthened in order to keep in school those who need financial help to stay, we find on our out-of-school work projects those whose needs the school system as constituted somehow failed to meet.

Because the National Youth Administration is a new agency, and perhaps in part because we are not essentially an educational agency, I think it has been possible for us to experiment with certain techniques which may have value for educators. First of all we have proceeded on the assumption that youth is a time of experimentation, of groping for the right career, for the right direction, of self-searching. We have tried, therefore, to give young people on our projects a chance to try their hands at a variety of kinds of work in order to learn a little of what different jobs really mean and which ones might be better suited to the particular aptitudes of the individual. We have accompanied this by individual and group occupational counseling and by the development of simple but comprehensive occupational studies, analyzing the conditions, requirements, and opportunities of different types of work. Furthermore, we have organized a kind of instruction, both on and off the job, related to the work the young person is doing. We have worked, in short, to break down the arbitrary division between work and study in order to give a comprehensive understanding and sense of direction to young people in the difficult period of their transition from childhood to productive independence.

Even though we in the National Youth Administration think we have learned some interesting things about the educational needs of young people who leave school long before their educational potential is exhausted, we are not anxious to take over the work of the schools. In fact, we think there is no inherent reason to make an arbitrary dividing line between the program of N. Y. A. projects for young people in school and young people out of school. We would like to see many of the boys and girls on our out-of-school work projects who thought they had left the classroom behind them forever go back to school on a part-time basis, and we are working with the Office of Education and school authorities in several cities on an experimental basis to that very end.

The educators have been quick to recognize that if the schools are to reclaim for the classroom this group that has deliberately left school behind them once, it must be on a new and experimental basis specifically designed to meet their needs. Neither the traditional academic course designed to prepare students for the equally traditional classical college education nor vocational training directed toward the development of a single skill will fill the need of these young people. A new type of education, experimental and realistic in the best sense of those words, is needed to give these young people an understanding of the world which they have already entered. This is the world of work, in which man uses the techniques and machines made possible by science to adapt the wealth of nature to his needs. It is the world of economic organization

whereby the processes of production and distribution are made to work with a present degree of efficiency which is marvelous in terms of the overwhelming complexity of relationships but appalling in the discrepancy between potential abundance and actual poverty. It is the world of social organization whereby citizens living in a high degree of mutual interdependence solve their common problems and provide for their common welfare. It is the world of medical science bringing nearer the dream of health and vigor for all, the world of new media of communication making possible but somehow failing to produce the understanding of all peoples of the world of each other, the world of new media for the entertainment and expression of the genius and aspiration of a people. These are a few of the things which education should help young people growing up in a new kind of world to understand.

I can imagine that many of you are wondering whether in dreaming of a civilization in which all of our young people will be educated to be the cultivated, intelligent citizenry which can solve the problems with which we older people have grappled so long and so ineffectually, I have not forgotten the grim fact that at any one time in our current imperfect period of history there are approximately 4,000,000 young people for whom not even the minimum opportunity of the chance to earn a living exists.

I have not forgotten this army of jobless young people. They are my daily job and their tragedy is never out of my mind. But the problem of jobs for all is not going to be solved by the educators alone. The solution of this problem is the major task of the body politic, of us all. It involves fundamental readjustments in the relationship of capital, labor, and government so that the economy will function for the benefit of the entire population. There is general agreement as to objective, but there is a wide diversity of opinion as to method. This is perfectly right and proper in a democratic Nation, where we are free to disagree with each other and to express our disagreement in words and in action at the polls. But it slows up the process of adjustment; it is surer and probably less costly in the long run, but it takes time which is precious to the individual whose life is involved in this historical process. A writer in one of your Harvard publications, an undergraduate, I believe, once pointed out with considerable justice that through the emergency programs, especially through the W. P. A. program, the New Deal had purchased time with which to work out through the slow processes of democracy the fundamental readjustments in our national life which are necessary if democracy is to survive. Revolutions and dictatorships alike come about when the needs of the people are so pressing that rapid and ruthless change seems to them to offer the only hope for their fulfillment.

I have faith that we in this country will find a solution to our problems through the democratic process. But I think it is essential that those of us who are concerned with the development and future of young people should not become discouraged and lose our sense of direction during this difficult transitional period. I feel particularly strongly that educators should not resign themselves to cutting their educational pattern in terms of the cloth of present economic inadequacies. Let them develop young people who are not only equipped to make good use of the potentialities of the modern world but who are also wise enough to develop the machinery that will bring the benefits of our potential abundance to the whole population.

While young people are still immature we will begin to give them an understanding of the vast achievements of modern invention. We will show them in the lower schools how modern civilization has brought untold benefits to men through the use of machinery and through the harnessing of natural forces. I believe that it is possible to prepare the way for enthusiastic participation in industry in later life by giving children in the elementary schools some insights into the wonders of our mechanical civilization.

Similarly, I believe that it is possible to create an interest in agriculture even in the minds of young people who are never going to be farmers. The new crops which the Department of Agriculture has brought to this continent can be described. There is as much romance in the importation of these crops as in any story of the search for the Golden Fleece.

For the children in the lower schools descriptive accounts of mechanical and agricultural achievements can be made the means of cultivating respect for labor and also the means of stimulating out-of-school activities that will take the place in some measure of home activities that in earlier times introduced children to serious participation in the real production.

At as early a point in the school program as is feasible constructive activities should be introduced as a part of the regular school program. The upper grades of the elementary school furnish opportunities for a great deal of practical activity. Such activities would appeal to the slow learners because they have to do with concrete realities. They would appeal to the bright pupils because they stimulate inventiveness.

By the time that pupils pass into the secondary schools the descriptive phase of their study can begin to deal with the complex organization of industry, business and government. On the practical side a differentiation can begin. First, there will be exploratory exercises which will make it possible for each pupil to become acquainted with several different spheres of activity. Later activity will begin to take on the individualized form which is appropriate to the capacity and taste of each pupil.

There is nothing in the program which I am proposing which does violence to the most ambitious plan of intellectual education. I

am convinced from my contact with young people that there is nothing that stimulates intellectual effort more than the achievement of tangible, constructive results. Work that shows outcomes and intensive thinking can go on at the same time and supplement each other.

In due time a very young person, no matter what opportunities his parents may offer him, begins to feel the urge to show independence. It used to be possible for any boy who felt this way to drop out of school and find a job. It was less easy for a girl. The social system will have to step in in some way and furnish opportunities now that are different from those supplied in earlier times by private enterprise. The American Youth Commission has advocated provision by the Government of jobs for all young people 16 years of age who want them and are unable to find them in business, agriculture, or industry. The main point which I have to make is that the educational system should not at this stage of beginning independence drop its graduates to shift for themselves. I foresee for the schools a great social mission if they will keep in contact with all their pupils as they gradually emerge into adulthood. Some of these adolescents will continue to take full-time courses. For them a program of intensive intellectual training and constructive activity which will build up interest in work and respect for work can continue. Some adolescents will come to the end of all-day schooling, but it is to be hoped that their guidance by the school will continue and that part-time courses will be provided which will illuminate and supplement their labor.

I have no hesitation in advocating the inauguration of such a general program, because I have seen the elements of the program working themselves out during the experimentation that has been forced on this Nation during the past years. The Nation had to provide work for a host of young people as a pure economic necessity. Suddenly it was discovered that this work gave individuals courage, initiative, and insights that they had never had before. Many of the workers came back to educational activities which they had left and showed a new enthusiasm for learning that opened up to them new sources of personal satisfaction. What experimentation has shown to be possible for some can, I believe, be made the advantage of all. What is needed is a pooling of experience, a new view of the needs of young people, and a new understanding of the requirements of modern civilization.

The marvels of our modern world are rooted in knowledge. Knowledge made possible the inventions which are the very backbone of our modern civilization. Among these are the printing press, which made political democracy possible by transforming knowledge from the privilege of the few to the heritage of the many, and the harnessing of steam and later of electricity to do the work of man, which made possible our modern industrial organization with its potential union of physical abundance and leisure for the cultivation of personal values. Knowledge has brought us this far; knowledge, understanding, and the courage to experiment must carry us forward. It is my hope that education, facing this challenge, will assume not a defeatist view that its aims must be restricted to the grim realities of the present scene, but a new vitality which sees in the modern world the need to make an even wider place for the educational process so that a wiser, broader-visioned generation will come forward to carry on the solution of our common problems.

## Manganese, and Trade Act

### EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. KNUTSON. Mr. Speaker, under permission granted me, there is herewith submitted for the RECORD a copy of a letter written to Chairman DOUGHTON by J. Carson Adkerson, representing the American Manganese Producers' Association; also a letter written to Mr. Adkerson by former Assistant Secretary of War Hanford MacNider on October 3, 1927, on the subject of manganese:

AMERICAN MANGANESE PRODUCERS ASSOCIATION,  
Washington, D. C., February 6, 1940.

Re: Extension of Reciprocal Trade Agreements Act, H. J. Res. 407.  
HON. ROBERT L. DOUGHTON,

Chairman, Ways and Means Committee,  
House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Inasmuch as a representative of the State Department, in recent testimony before your committee, has given specific, misleading information on manganese, I feel it is my duty to make available to the committee information on the manganese situation under the Trade Agreements Act.

It is generally recognized that the State Department made a mistake in reducing the duty on manganese and we hope some way will be found to rectify it.

## MANGANESE

Manganese tops the list as the No. 1 strategic war mineral essential to our national defense. On account of its importance in our national defense program, manganese stands in a category all its own.

Embodied in the preface of the report of the War Industries Board following the end of the World War is a letter from Bernard M. Baruch, chairman of the board, to President Woodrow Wilson, under date of December 24, 1919, from which the following is quoted:

"Through a system of stimulation by a protective tariff, a bonus, an exemption from taxation for a limited period, licensing or any other effective means, every possible effort should be made to develop production of manganese, chrome, tungsten, dyestuff, by-products of coal, and all such raw materials usually imported but which can be produced in quantity in this country."

In letter of February 12, 1932, to the American Iron and Steel Institute, Hon. F. H. Payne, Assistant Secretary of War, stated as follows:

"In view of the dependence of the military requirements upon steel products and of the supreme importance of manganese in the making of sound steel, it is deemed essential to have available at the beginning of a major war a domestic or nearby operating source of manganese ore.

"To create such an operating source during peacetime the producers must have a market for their output."

In line with the above recommendations, Congress in 1922 provided a duty of 1 cent per pound on metallic manganese contained in ores running above 30 percent metallic manganese. Under the stimulation of this tariff, production of domestic ores containing 5 to 10 percent manganese increased from 62,670 tons in 1921 to 1,110,067 tons in 1929; ores containing 10 to 35 percent manganese increased from 8,439 tons in 1921 to 364,312 tons in 1926; ores containing 35 percent manganese or more increased from 13,531 tons in 1921 to 98,324 tons in 1925.

Lack of cooperation and market from certain major steel companies, together with constant threat of removal of the manganese duty, have for years hung like a sword of Damocles over the heads of domestic manganese producers and retarded developments.

Developments were further retarded through the importation, duty free, of increasing quantities of ores running slightly under 30 percent manganese.

In the Tariff Act of 1930 Congress, to protect the lower grade ores, extended the 1 cent duty to cover all ores containing 10 percent or more of metallic manganese.

Under the stimulation of this duty substantial strides have been made in the development of manganese deposits in the United States and in the development of processes for the recovery of high-grade manganese from our abundant low-grade ore reserves.

The situation in the manganese industry is well explained on page 43 of the published Army Extension Courses, 1931 edition, Industrial Mobilization Plans, prepared by the War Department, which summarizes the domestic manganese industry as follows:

"In spite of all handicaps, however, enough interest has been stimulated to result in the creation of a capacity much larger than indicated by annual domestic production and a readiness for expansion that is a decidedly important military asset."

Despite the statements of opponents to the effect that it was not feasible, today the highest grade manganese concentrates in the world are being produced from low-grade ores. Not only this, but commercial production of high-grade manganese from low-grade ores is now an assured fact, not only in the United States but in Cuba as well. Development of the deposits and processes for recovery were brought forward under the stimulation of the tariff.

All that the United States now needs to solve its problem of manganese for national defense is the installation and maintenance of additional beneficiation plants. This can and will be done by the industry if a fair market is made available to domestic producers. However, unless the industry is stabilized by adequate tariff protection, a temporary increase in price would not warrant additional major investments, and therefore additional plants with a substantial increase in production could not be expected.

## COOPERATION

Congress has repeatedly expressed its will and intent to encourage the further development of the manganese resources of the Nation, but it is to be regretted that full cooperation from the administrative arm of the Government has not yet been forthcoming.

The President, in his message to Congress on the 2d day of March 1934, asking for trade-agreement legislation, stated as follows:

"You and I know, too, that it is important that the country possess within its borders a necessary diversity and balance to maintain a rounded national life, that it must sustain activities vital to national defense and that such interests cannot be sacrificed for passing advantage."

In spite of this, on February 2, 1935, a 50-percent reduction in the duty on manganese was agreed to by the State Department.

For reasons not yet disclosed, domestic manganese producers were not given proper notice or hearing, as required by law, before reduction of the manganese duty in the trade agreement with Brazil.

It appears also that the War Department was not consulted by the State Department prior to negotiation of the agreement and officials of the War Department did not know of the reduction in the manganese duty until informed through manganese producers

themselves after the agreement had been concluded and sent to the printers and just prior to its signature by the Secretary of State.

In addition, it appears that information presented to the State Department by domestic manganese producers prior to the negotiation of the agreement did not reach the trade-agreement officials and was not considered by them prior to negotiation of the agreement.

Hon. Francis B. Sayre, Assistant Secretary of State, in testimony before the Finance Committee of the Senate, with reference to trade-agreement legislation, stated as follows:

"The whole purpose of the program of trade bargaining is this—to restrict the commodities covered in the agreement with any specific country to commodities of which that country furnishes the chief source of supply of importation into the United States."

The opposite to this was done. Manganese was traded away to Brazil, a minor producer. Russia, the major shipper of manganese to the United States, was then allowed entrance through the back door of the Brazilian agreement.

The trade agreement with Brazil was signed February 2, 1935, and became effective January 1, 1936.

During the year 1933, Brazil shipped no manganese at all to the United States, nor was manganese listed in the public announcement of items being imported from Brazil, although the complete list of such items handed out by the State Department, prior to the agreement, included items of minor importance, such as 50 tons of tankage with a value of \$1,573 and 8,000 feet of sawed cabinet woods with a value of \$386.

Comparative table showing tonnage of manganese ore imported into the United States from Brazil and Russia for the years 1932-39

[Figures from U. S. Bureau of Mines Publications]  
(Long tons)

Year	Brazil	Russia
1932.....	21,500	55,437
1933.....	None	83,780
1934.....	55,834	124,836
1935.....	29,528	153,200
1936.....	110,018	289,867
1937.....	77,988	383,949
1938.....	29,698	166,043
1939 (11 months) <sup>1</sup> .....	32,589	114,064

<sup>1</sup> Preliminary figures for 1939.

The following is from record of testimony of Hon. Henry F. Grady, Assistant Secretary of State, before your committee January 18, 1940:

"Mr. GRADY. We have escape clauses, such as the one relating to currency, which we discussed a few minutes ago, and the one relating to a third country obtaining the major benefit of a concession."

## COMPARATIVE TARIFFS

A comparison of the tariff and price of manganese as compared with other ores and metals is in order. Tariffs on the ores and prices of the metals under normal conditions are approximately as follows:

Ores	Ore tariff, metallic content (cents per pound)	Metal	Metal prices (cents per pound)
Lead.....	1.5	Pig lead.....	5
Zinc (after duty cut).....	1.2	Slab zinc.....	5
Copper.....	4.0	Ingot copper.....	11
Manganese (after duty cut).....	.5	Ferromanganese (80 percent Mn).....	5

## MANGANESE COMPARED WITH STEEL

Restoration of the manganese duty, cut under the trade agreement, means only 7 cents added to the cost of an average ton of steel.

According to figures presented by Hon. FRANCIS H. CASE on the floor of the House, June 15, 1938, the cost to the American public of the duties on crude and semifinished steel only (par. 304, Tariff Act, 1930) from the year 1922 to 1937, inclusive, amounted to a total of \$8,468,961,511. This tariff is in effect a subsidy. For the year 1937 the tariff protection on this one steel item alone is shown as \$731,733,430. In addition, when steel is sold to the Government, under the buy-American law, a differential of 25 percent or more is allowed over the low foreign bid. This likewise is a subsidy.

Figures from the Iron Age, embodied in the CONGRESSIONAL RECORD of June 15, 1938, show that the total assets of 21 steel companies, representing 92.2 percent of the ingot capacity of the United States, amount to \$4,430,885,614. In other words, the cost to the American public of the duties on this one steel tariff item alone, during a period of 15 years and 4 months, amounted to nearly twice the above-mentioned assets. This is a substantial subsidy to a well-established industry and a direct cost to the American public.

Even under the reciprocal-trade agreements the full tariff is still enjoyed on this major steel item. Steel enjoys a tariff sufficient to equalize the cost of production at home and abroad. There is no good reason why manganese should not be protected to the same extent. All that domestic manganese producers ask is treatment for manganese on a parity basis with steel products.

#### TARIFF RATES

On January 17, 1940, Hon. Henry F. Grady, Assistant Secretary of State, testified before your committee that "manganese ore had a 106-percent tariff in 1935." He failed to advise that this figure was based on sacrifice sales only and represented the foreign value of the ore.

On page 598 of "Summary of Tariff Information, 1929, Schedule 3," published by United States Tariff Commission, in review of the manganese industry, there will be found the following:

Prices of metallurgical ore containing 50 percent manganese, per long ton, duty paid, United States Atlantic ports, have been as follows:

	Yearly average
1924.....	\$31.45
1925.....	32.28
1926.....	32.80
1927.....	31.32
1928.....	30.03
Average.....	31.58

The average price for foreign manganese ore covering the 5-year period was \$31.58 per ton; the freight from Baltimore to Pittsburgh area was \$2.52, making the total delivered price, Pittsburgh area, \$34.10 per ton for the ore, which is equivalent to a price of 68.20 cents per unit for metallic manganese. This was a normal period.

The present price of the same grade of imported manganese ore, delivered at Atlantic ports, as shown by the current trade journals, is 60 cents per unit of metallic manganese, or \$30 per ton for the ore. The freight to the Pittsburgh area is now \$2.83 per ton, making the total delivered price, Pittsburgh area, \$32.83 per ton for the ore, or 65.66 cents per unit of metallic manganese. Included in this price is the present tariff of \$5.60 per ton for the ore, or 11.20 cents per unit of metallic manganese, which is 17 percent of the delivered price in the Pittsburgh area.

There is no need, however, to split hairs over rates. During the World War, when there was no duty at all on manganese, we paid more than 5 times the normal price for the ore and even then we did not get it. Sufficient quantities were not available at any price.

#### LOSS IN REVENUE

The actual loss in revenue to the United States Treasury through the reduction of the manganese ore duty in the trade agreement with Brazil amounts to \$18,422,320 as follows (based on figures from United States Bureau of Mines showing metallic manganese contained in ores imported subject to duty):

Year	Metallic manganese content (long tons) <sup>1</sup>	Loss through tariff reduction
1936.....	388,351	\$4,349,531.20
1937.....	408,330	4,573,296.00
1938.....	179,723	2,012,897.60
1939 (11 months) <sup>2</sup> .....	231,123	2,588,577.60
In bonded warehouses in the United States (Nov. 30, 1939).....	437,323	4,898,017.60
Total.....		18,422,320.00

<sup>1</sup> Tariff on manganese imported in the form of ferromanganese not included. Manganese from Philippine Islands and Cuba not included.

<sup>2</sup> Preliminary figures for 1939.

This money now goes as an additional subsidy to the steel industry.

#### STOCK PILES

In 1939, on recommendation from the administrative departments, Congress passed the Strategic Materials Act, authorizing the appropriation of \$100,000,000 over a 4-year period for the purchase of manganese, tungsten, tin, chrome, and other strategic materials. Manganese is listed as the item of major importance.

The purpose of the act was twofold. (1) Accumulation of stock piles; (2) development of American resources; \$10,000,000 was appropriated for immediate expenditure. To date no manganese ores of domestic origin have actually been purchased by the Government under the Strategic Materials Act and on account of this, together with the reduction in the manganese ore duty, uncertainty in the domestic manganese industry continues.

A stock pile of 1,000,000 tons of manganese has been recommended. Even such a stock pile still will not assure the country adequate security as no one can foretell how long an emergency will last. Domestic mines cannot in a short period of time, ordinarily allowed in an emergency, produce sufficient to meet the demands. It requires time to carry forward development work underground and install the necessary plants.

#### CONCLUSION

Through the reduction in the manganese ore duty in the trade agreement with Brazil, our country since 1936 has lost in revenue \$18,422,320, which was formerly enjoyed by the United States

Treasury. This loss will continue to increase. In addition, since 1936, we have sacrificed the continued development of our own manganese resources for national defense. To cover up this mistake, the strategic-materials bill was passed by Congress authorizing the appropriation and expenditure of \$100,000,000 over a 4-year period for the purchase and stock pile of strategic minerals of which manganese is the major item. Even the Strategic Materials Act will not solve the manganese problem. In an emergency, such as we may now be facing, domestic mines will still have to be put into operation. It is possible we have waited too long already. This is indicated by the results of the recent repeated Government calls for bids for manganese ore under the Strategic Materials Act. To date only one small order of 25,000 tons has actually been contracted for. The results of the bids indicate that a sufficient quantity of the grade of ore called for by the Government is not readily available from foreign or domestic sources. Stocks in bond, although substantial, are fast being depleted. Our country has the reserves of ore, the labor, and the capital. However, it cannot be expected that substantial investments in additional developments and milling plants will be made until assurances are given that the domestic production will be protected against future importations of manganese ores from Soviet Russia produced by Communist and forced labor where cost means nothing, or ores from India which are mined by labor paid the equivalent of 1½ cents per hour. Restoration of the tariff to a parity basis with steel is necessary to help stabilize the manganese industry on a basis similar to that enjoyed by steel.

#### RECOMMENDATIONS FOR NATIONAL DEFENSE

1. Restore the duty: Terminate or modify the trade agreement with Brazil so that the manganese-ore duty may be established on a parity basis with steel products. This will, prior to the date of restoration, encourage and permit importers to store within the United States, under the present reduced rate of duty, all manganese ores they can find available in the world's markets and thereby force the formation of a stock pile at no cost to the Government.

At the same time it will encourage and permit domestic producers to immediately make additional investments, carry forward development work, install additional plants, and increase production to help take care of the needs of the United States at no cost to the Government.

2. Stock pile: If a Government-owned stock pile is considered advisable, then let appropriations be made under the Strategic Materials Act for the Government to purchase and store manganese ores exclusively of domestic origin during such periods when prices are low and no other outlets for the ore are available, thus encouraging further developments and maintaining a healthy nucleus of a manganese industry within the United States ready for expanded production to meet the needs in an emergency.

These recommendations may be carried out and results obtained in accordance with the will of Congress and at no ultimate cost to the Government, provided that existing and future trade agreements are made subject to the approval of Congress or the Senate. Respectfully submitted.

J. CARSON ADKERSON, President.

WAR DEPARTMENT,  
OFFICE OF THE ASSISTANT SECRETARY,  
Washington, D. C., October 3, 1927.

Mr. J. CARSON ADKERSON,  
Hy-Grade Manganese Co., Inc., Woodstock, Va.

MY DEAR MR. ADKERSON: Your work in the development of an adequate supply of manganese ore to meet the industrial needs of the United States has been brought to my attention. Your activities along this line are rendering valuable service in the solution of the problems of industrial preparedness and I wish to express my appreciation of the work that you are doing.

It appears that manganese is essential to the production of steel and without steel national defense is obviously impossible. The safety of the country requires that we have a readily available source of manganese within the United States. Those who are working to meet this requirement have my best wishes for success.

Sincerely yours,

HANFORD MACNIDER,  
The Assistant Secretary of War.

#### American Standards Work and Assistance Act

#### EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. MARCANTONIO. Mr. Speaker, yesterday I introduced a bill known as the American Standards Work and Assistance Act. The bill provides, briefly, that 3,000,000 jobs be provided immediately for the unemployed of our country; that the wages be the prevailing hourly wages; that the hours be

not less than 120 nor more than 130 monthly, with a national average monthly wage of \$70; that the projects will be of such a nature as to provide useful work of a permanent nature, offering the opportunity of utilization and preservation of the skill, training, and morale of the workers; that the program be open to all unemployed without relief test; that jobs be given as long as faithful service is performed and as long as the unemployed are unable to secure employment in private industry. This automatically abolishes the cruel and inhuman 18-month provision in the present relief act.

My bill also provides that the employment program be supplemented by unemployment-assistance grants to the States based on a decent, self-respecting standard of relief.

This program can be contrasted with what is now proposed to Congress by the Budget. As we know, a recession is already here and increasing in intensity. Steel production is down from 94 percent to 67 percent, industrial-production index is off from 128 to 107. It is likely that within a month, unless it is checked, this recession may bring the industrial index down to 100. This will mean we will have lost the employment gains in the recent so-called war boom. No promise is made that the boom will be resumed. In the fact of this oncoming recession, of which the administration has been warned, the sensible course is to try to head it off. Increased purchasing power should be made available to limit the spread of the recession. Instead, between now and June, 800,000 W. P. A. workers will be dropped; P. W. A. will be further curtailed; housing will have exhausted the possibility of further employment. If the President's appropriation requested in the Budget is passed, another 350,000 will be dropped between July and September; C. C. C. and N. Y. A. will be sharply cut.

For this blunder we will have to pay dearly in the suffering of millions of unfortunates and in the possibility that this recession may develop into another 1937 and worse unless checked.

As a matter of fact, the only thing stopping a collapse today is purchases of war supplies from Europe. This means that we are being placed more and more at the mercy of these war purchases, and giving foreign nations actually a control over our own peace and our domestic policies.

It is maintained that any increase in expenditures beyond the President's request would raise the debt limit. This argument is a fake and a smoke screen raised by the economy bloc designed only to scare the people and prevent decent treatment of our underprivileged and needy groups. In a letter from Marriner S. Eccles, Chairman of the Federal Reserve Board, in response to a question by David Lasser, president of the Workers Alliance, Mr. Eccles shows that the Federal Government has available today the following funds that are unused:

In the gold-stabilization fund which can be terminated at any time.....	\$2,000,000,000
In profits in silver.....	1,500,000,000
Excess working balance in the Treasury over that normally needed.....	1,350,000,000
Total.....	4,850,000,000

In other words, there is available today nearly \$5,000,000,000, a great sum, a huge reservoir which is being unused while millions suffer.

My bill would particularly remedy several outstanding disgraceful things in the present W. P. A. First, it would eliminate the 18-month clause, which the W. P. A. itself has shown by records has meant unusual hardship to W. P. A. workers; second, it would rescind the monthly wage cuts of \$5 to \$8 made to laborers in the North, and particularly made to women with dependent children; third, it would restore the prevailing hourly wage taken away by Congress; fourth, it will provide assistance at decent standards to unemployed families deprived of work projects jobs.

I respectfully call the attention of my colleagues to this bill as a sincere effort to avoid another terrible economic calamity which is before us.

## Proposed Minimum Coal Rates

### EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

EDITORIAL FROM THE MOLINE (ILL.) DISPATCH OF FEBRUARY 16, 1940

Mr. JOHNSON of Illinois. Mr. Speaker, over 5,000 citizens of the cities of Rock Island, Moline, and East Moline, Ill., have signed a petition in protest of proposed minimum rates on coal for this area by the National Bituminous Coal Commission. If these proposed rates are applied it is going to raise the annual coal bill of these cities by about a half million dollars a year. These rates are unfair and unjust discrimination to not only the consumers of this area, but also to the nearby coal miners and operators.

This is just one more effort of unwanted regulation from Government in private industry that further harrasses industry and labor.

Hearings on these proposed minimum coal rates have been completed and I submit an editorial appearing in the Dispatch of Moline, Ill., under date of February 16, 1940, in further explanation of these proposed unfair rates to this district.

[From the Moline (Ill.) Dispatch of Feb. 16, 1940]

#### THE PEOPLE REST

Now that evidence has been presented, briefs submitted, and oral arguments made, Moline area interests have done about all that humanly is possible to enter a vigorous and honest protest to the proposal of the Bituminous Coal Commission for increased coal prices for this area.

The final step is up to the Department of the Interior of the United States Government which will decree whether the proposed price increases, the last word in discrimination and unfairness against this community, shall be made permanent. This decision is of utmost importance and reaches right down into the pocket-book of every family in Moline, East Moline, Rock Island, and Davenport.

If the Government chooses to adhere to its theorists of the Bituminous Coal Division rather than to the practical, honest, and sincere reasoning presented by quad-city interests, then up will go the coal bill. And swept aside will be weeks and weeks of untiring, united effort on the part of associations and chambers of commerce in this community to protect the interests of their fellow men.

It is estimated that if the proposed minimum mine prices for coal are made permanent, the price of coal for Moline area consumers will be raised \$1 a ton. This will result in a \$500,000 increase in the annual coal bill for quad-city consumers.

The trial examiners have been asked by residents of this community to try to explain why there should be discrimination in mine prices for varying kinds and sizes of coal. They want to know, if anyone can explain, why it would not be fair, equitable, and just to establish minimum mine prices, open to all consumers of coal, regardless of where they are situated and regardless of the form of transportation so that all consumers of a particular coal will be on an equal basis at the mine.

It isn't clear to them why the mine price of Fulton County coal, for example, to be delivered in Moline should be \$2.60 a ton while the price for the same coal at the same mine for delivery in Chicago would be \$2.05 and for Peoria consumption, \$1.95 a ton. This is but one example of the gross discriminatory features of the proposal.

Equally unjust is the Commissioner's proposal to place the quad-city area in marketing district 41 including La Salle, Freeport, Rockford, and Ottawa, instead of placing it in marketing district 38 along with Peoria, Pekin, Galesburg, and other cities whose industries are highly competitive with those in this community and that will enjoy cheaper minimum prices for coal.

The Bituminous Coal Commission would decide what Moline area consumers—both domestic and industrial—are to pay at the mine for coal, but the Attorney General has ruled the Government need not abide by this ruling. It can purchase coal on the open market.

The people of Moline, East Moline, Rock Island, and Davenport have presented their case as convincingly and honestly as possible. All that they can do now is wait and hope that the Federal Government can see its way clear to accord this area the kind of treatment to permit it to continue a healthy industrial growth as compared with other communities in Illinois and Iowa.

## The Government's Cotton-Control Plan Is Undermining Midwest Agriculture

### EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ARTICLE BY H. E. SPANGLER

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. H. E. Spangler, of Cedar Rapids, Iowa.

#### THE GOVERNMENT'S COTTON-CONTROL PLAN IS UNDERMINING MIDWEST AGRICULTURE

(By H. E. Spangler)

The economic condition of agriculture is still far from satisfactory. Prices are still far below parity. Much must be accomplished before we have good times and permanent prosperity on our farms. In considering this basic problem it should not be, as has been too often the case in the past, approached from a narrow, partisan standpoint. All sincere suggestions should be studied sympathetically and impartially no matter from what source they may come. We have found that the plan adopted under the old Farm Board, which was set up under a Republican administration, did not do the job. It is also apparent, when the facts are considered, that the acreage-control plan adopted by the New Deal does not live up to the glowing claims made by its sponsors.

It must also be remembered in our study of the farm question that many things have been done which have been helpful. We must not abandon anything that is good. On the other hand, when we find policies which do not work, or have been harmful, then such features should be abandoned and something beneficial adopted in their stead.

It is evident that there is much confusion as to the proper remedy. Many sincere men do not agree. The great American Farm Bureau Federation, under the leadership of Edward A. O'Neal, of Alabama, takes a position on certain features while the Farmers National Grange, under the leadership of Louis Taber, of Ohio, takes the opposite view. The Farm Union is often sincerely in disagreement with them both. We also find that Members of Congress of both political parties are in disagreement, and it further appears that there is much confusion in the Department of Agriculture. Many of these uncertainties and much of the confusion comes from the lack of real knowledge of the facts. As the truth is known, the differences disappear.

It is not the purpose to here discuss any phase of the farm problem other than acreage control, especially as to cotton. It is intended to be an analysis of facts now available from experience which indicates that some of the features of acreage control, especially as to cotton, which we have had in some form for about 6 years, are not helpful but a costly experiment for the Corn Belt. Surely it is proper to examine the facts and be guided by them.

Ever since 1933 we have had some form of acreage control. Under this plan it was intended to control the production of our farms by orders from far-off Washington. Those responsible for the plan told us that by this method they would do away with surpluses; that production would be kept down to the demand; that parity prices would be obtained and farm prosperity assured. Incidentally, those times of parity prices were during a period when farmers operated their farms without restriction.

The principal plan now in operation in the Middle West is what is known as the Corn Acreage Control Act. Under this law a "corn-control area" was set up. This area comprises all of Iowa and Illinois and parts of the surrounding or adjacent States. Within this area, which prior to "control" produced substantially 60 percent of the Nation's corn crop, they pay us not to plant more corn than the arbitrary Government allotments which they make for each farm. In the balance of the country, which before control produced substantially 40 percent of the Nation's corn, they are left free to raise all the corn they desire without being penalized. The truth as to the workings of the plan is no longer left to conjecture. The Government records tell the story.

#### IOWA AND ILLINOIS REDUCE CORN ACREAGE UNDER GOVERNMENT PLANNING

During the years of so-called corn-production control, the two great corn States, Iowa and Illinois—which are the only two States wholly within the control area—have reduced their acres planted to corn 14 percent. The average yearly acreage in these two States for the 5-year period prior to 1933 was 20,776,000 acres. In 1939 this acreage, under the Government's plan, was reduced to 17,884,000. Recently the Government has ordered a further drastic reduction of 12 percent for next year.

#### IOWA AND ILLINOIS HAVE REDUCED HOG PRODUCTION UNDER GOVERNMENT PLANNING

Hogs are generally raised and prepared for market where corn and other feed is available. When the Government put its corn-control

scheme into effect it was announced that they would prevent surplus hog production by controlling the production of corn and feeds which go into the making of hogs. The result has been to reduce the raising of hogs in Iowa and Illinois about 7 percent. The Government's estimate of 3,449,000 sows farrowing in these two States for the year ending December 31, 1939, is 246,000 less than the average yearly number farrowed during the 5-year period prior to 1933. This reduction in litters, using the Government records of approximately 6 pigs per litter, amounts to a reduction of 1,476,000 hogs in these 2 entirely restricted corn States.

From the acreage reduction above noted and reduction in hog production shown above it would seem that the Government plan to reduce surpluses was meeting with some degree of success. Unfortunately, however, the story is only partly told. Before the full effect of the plan can be determined it must be remembered that surpluses are national problems, and that Iowa and Illinois are only 2 of the 48 States. In order to get the full picture it is necessary to explore into what has been taking place in other sections of the country. When this is done the outlook for the Corn Belt is discouraging, to say the least.

#### THE PRODUCTION OF CORN AND OTHER LIVESTOCK FEEDS MOVES SOUTH

During the period in which, under Government planning, the Corn Belt has been reducing corn acreage and hog production, which are the very basis of our economic existence, the planners in Washington have also put into effect a cotton-control plan. Through this scheme they are attempting to control and reduce the production of cotton. The cotton planters have been paid hundreds of millions of dollars by the Government to reduce cotton acreage. According to the Government crop report issued July 1, 1939, they now are raising 15,600,000 acres less cotton than was raised in the Cotton States for the 5-year average prior to the advent of crop control. Is this enormous acreage allowed to remain idle? It is not. Does the Government permit and encourage the utilization of those acres for the production of crops which compete with those natural to the North and of which it has more than the market will absorb at decent prices? The Government does that very thing.

The facts are that this vast acreage taken out of cotton is being successfully used to produce grains and feeds for livestock in ever-increasing quantities. It is true that these cotton States formerly could not compete with the Middle West in this field, but they can do so now since they are virtually being paid to do so.

During these control years a real revolution in farming has been going on in the Southland. Confronted with 15,600,000 idle acres, they have had the problem of utilizing these acres for other crops. A campaign of educating the cotton farmers to do this has been going on with unabated energy. In this promotion work the United States Government, through its agents, has taken a prominent part. These agents have been sent out to every community in Dixie to preach and teach them how to raise substitute crops on the former cotton lands. Local agricultural societies, grain and livestock associations have sprung up where they were never heard of before. The doctrine is further spread through agriculture departments in southern high schools and colleges.

Through this educational campaign the southern farmer is being taught how to raise corn and other feed crops. With better methods, improved seeds, and cheap commercial fertilizer (the Government has distributed in the South thousands of tons of free fertilizer which is produced by the gigantic and costly experiments known as Muscle Shoals and Tennessee Valley Authority), they are increasing their yield per acre, and the success they are having is evidently just the beginning. The Government figures showing the increase in corn acreage, since the adoption of restricted acreage for cotton, is pronounced in the States shown in the following table:

TABLE I

State	Average acreage 1928-32	Average acreage under Gov- ernment plan 1938-39	Increased acreage under Gov- ernment plan
North Carolina.....	2,186,000	2,430,000	244,000
South Carolina.....	1,525,000	1,800,000	275,000
Georgia.....	3,676,000	4,577,000	901,000
Florida.....	685,000	813,000	128,000
Alabama.....	2,868,000	3,550,000	682,000
Mississippi.....	2,177,000	2,973,000	796,000
Arkansas.....	1,874,000	2,203,000	229,000
Louisiana.....	1,299,000	1,628,000	329,000
Total.....	16,380,000	19,974,000	3,594,000

<sup>1</sup> Total increase in acres.

While the Government has not published the figures showing how all the abandoned cotton lands are being utilized, the reports do show in addition to corn that 3,317,000 acres of it are now in tame hay, several million acres are in pasture and forage crops, about 1,000,000 acres are used to raise soybeans, and half a million acres are sown to oats. It is also known that they are now raising, especially in the Southwestern States, large amounts of kaffir corn and sorghum grains which make a very good substitute feed for corn. To the above additional southern corn production there has also been a very substantial increase from other States and parts of States not included in the Government-controlled area.

## THE HOG INDUSTRY MOVES SOUTH

Prior to the reduction of cotton acreage the livestock industry in the South was not being developed. With the increases in feeds, however, that great Midwest industry already has a southern rival of formidable proportions. The increases in corn alone in the States shown in table I is sufficient, with the use of cottonseed meal and other proteins of which the South has an abundance, to fatten more than 6,600,000 two-hundred-pound prime hogs. The increase of the hog industry in the South, following the increased production of feeds, is an artificial shifting of this industry, the effect of which on the economy of the Middle West is far-reaching and disastrous. The increase in hogs fed by feeds largely produced on former cotton land is shown in the following table:

TABLE II

State	Average sows farrowed 1928-32	Government estimate of sows farrowing year ending Dec. 1, 1939	Increase under Government planning
Maryland	35,000	56,000	21,000
Virginia	133,000	189,000	56,000
North Carolina	166,000	238,000	72,000
South Carolina	90,000	162,000	72,000
Georgia	247,000	398,000	151,000
Florida	106,000	136,000	30,000
Kentucky	194,000	287,000	93,000
Tennessee	187,000	289,000	102,000
Alabama	154,000	263,000	109,000
Mississippi	139,000	217,000	108,000
Arkansas	157,000	335,000	178,000
Louisiana	223,000	281,000	58,000
Oklahoma	219,000	290,000	71,000
Texas	334,000	475,000	141,000
Total increase in sows			1,262,000

At six pigs per litter, which is the approximate figures used by the Government, the total increase in hogs is 7,572,000.

The Government has not published the hog production as to counties but from other reliable sources it is learned that in the free counties in the corn-acreage-control States such as Wisconsin, Michigan, Ohio, and Indiana, the hog production has increased substantially. In these four States, according to the Government reports, they raised 1,704,000 more hogs in 1939 than before the Government restriction, and such increase is known to come largely from counties where they raise all the corn they like and still get Government checks.

The added surplus in hogs caused by the artificial shifting of the hog industry to States which are practically forced to raise corn and other feeds is the factor in the situation today which glut the market and causes pork prices to sink lower and lower. The average yearly number of hogs received on the Chicago market, the greatest in the world, is only 6,200,000. The new southern surplus is therefore more than enough to supply that great market for more than a year. Market authorities say that it is this new southern surplus which makes the present ruinously low prices for hogs.

## THE CATTLE INDUSTRY MOVES SOUTH

With the enormous increase in feeds raised on former cotton lands, southern farmers are also competing with the Middle West in raising cattle. Their additional southern pasture, forage crops, and tame hay acreages are leading to a rapid development of the cattle industry. In these southern States the cattle on the farms on January 1, 1938, were 3,074,000 head more than they were on January 1, 1932, before the Government's artificial interference. With increased feed has come better breeding stock and improved methods so that herds are also rapidly increasing in quality. This is an increase of approximately 20 percent, a substantial portion of which has been in dairy cows, so that Midwest and northern industry also has a new competitor for the dairy markets. The increase in cattle in these cotton States is shown in the following table:

TABLE III

States	Cattle on farms, Jan. 1, 1932	Cattle on farms, Jan. 1, 1938	Increase under Government planning
Maryland	277,000	310,000	33,000
Virginia	792,000	869,000	77,000
North Carolina	551,000	638,000	87,000
South Carolina	274,000	352,000	78,000
Georgia	811,000	942,000	131,000
Florida	468,000	748,000	280,000
Kentucky	1,040,000	1,172,000	132,000
Tennessee	1,032,000	1,125,000	93,000
Alabama	810,000	983,000	173,000
Mississippi	993,000	1,286,000	293,000
Arkansas	848,000	1,075,000	227,000
Louisiana	740,000	1,076,000	336,000
Oklahoma	2,131,000	2,139,000	8,000
Texas	6,127,000	7,245,000	1,118,000
Total	16,884,000	19,960,000	3,076,000

<sup>1</sup>Total increase in cattle.

## THE MEAT-PACKING INDUSTRY MOVES SOUTH

The Government's Biennial Census of Manufacturers, 1933, and the preliminary report of the Bureau of the Census on wholesale meat packing in 1937 show that the South, during that period, has found it necessary, in order to process its great increase in livestock, to establish 35 additional wholesale meat-packing establishments. Figures since then are not available. Incidentally, not a single cotton gin was established in the Corn Belt during that period.

## REMARKS FROM THE SOUTH

There is much comment in the southern press in reference to the shift of the Midwest industries of raising feeds and livestock. A few are quoted below:

The newspaper known as the Press Scimitar, published in Memphis, in its issue of October 9, 1939, stated:

"The new ruler of the Bama plains is the white-faced gentle Hereford. Hundreds of purebred Herefords, sires and their herds of grade cows, today roam the broad, lush pasture lands of south-west Alabama, where the little white cotton bolls once grew supreme. \* \* \* Although a majority of agricultural leaders believe the new industry is still in its infancy, most of them are enthusiastic in predicting the Black Belt will soon become the major cattle-producing area."

In the Commercial Appeal, a newspaper published in Mississippi County, Ark., under date of July 10, 1939, the following appeared:

"There were about 18,000 hogs in the county in 1933, and now estimates increase this number to 45,000. The primary cause of this is that farmers realized hogs could best use up the corn being planted on some of the land formerly used for cotton. Prior to the time the Government farm program was inaugurated, only about 15 percent of the county's cropland was in corn, while, under the A. A. programs, the amount planted is about 35 percent."

The publication known as the Southern Farmer, published at Montgomery, Ala., in its December 1939 issue stated:

"The once-famous cotton plantations of Arkansas are rapidly becoming known for their fine herds of cattle."

A newspaper editorial, A Bad Day for Iowa, appeared on July 7, 1938, in the newspaper published in Tuscaloosa, Ala., in which it was stated:

"The Government program, by taking so much acreage out of cotton cultivation, has done more than any other thing to bring about a larger acreage of corn. The only thing now bothering us is what the folks out in Iowa will say. When Alabama and Mississippi and Georgia and those other Southern States cut their importations from the Corn Belt to a fraction it's going to be another story—and we're not confining these importations to corn. We might throw in mules, meat, and a dozen other things which we can raise cheaply and effectively on Alabama soil."

A recent survey made by one of our northern magazines in reporting on economic conditions in the Southwest for the current year stated:

"A new farm industry will bolster income later this season. Heretofore southwestern calves and yearlings have gone north to Iowa and other Corn Belt States to be fattened. Now they're being fed at home on corn and sorghum grains raised on acreage withdrawn from cotton cultivation."

## CONCLUSION

By virtue of climate, soil fertility, and the habits of its people the Corn Belt has been the heart of the great food-producing area of the Nation. Its basic crop is corn, which, with other feeds, is largely processed into livestock. This is the source of our wealth and future prosperity.

For many years prior to the arrival of the so-called crop control the Southern States, or Cotton Belt, with a consuming population of approximately 25,000,000 people, afforded the Middle West a market for a material part of its grain and meat products. In turn, the Midwest has been a market for the cotton, sugar, peanuts, tobacco, and other products of the South. We still buy from them, but the freight trains going south run lighter and lighter. As the President boasted a few months ago in a speech in Alabama, the New Deal is making the South independent of the North. By this "planning" we have lost much of our market there and they may never be regained. The loss to the people of Iowa and the Corn Belt for the past, present, and future is incalculable. It amounts to more than all the many millions of payments which the Government has used to bring the artificial situation about.

The Middle West has no quarrel with the people living in the South. It is understood that they have suffered and are suffering from the planning of the Government theorists. For many years they ruled the cotton markets of the world. Under the New Deal years a great part of such markets have been lost to other countries. The Government's artificial handling of cotton production has been disastrous. It is hoped that the South, as well as the North, can throw off the yoke of the "planners" and that production by both areas of the normal, natural crops to which each is adapted can go forward without governmental interference, either directly or indirectly.

The Corn Belt does not object to the production by other States of those crops which are the basis of its existence provided they can do so without Government aid. It certainly does object and protest against governmental policies which enable other States to compete with it, not by reason of climate and soil, but by what amounts to a Government subsidy.

The economic problems of this country cannot be solved on a sectional basis. When the Federal Government goes to the aid of one section at the expense of another, disaster to all is the result.

As an emergency measure the cotton farmer should be compensated but not in such a way as to injure the Midwest. Corn control should apply nationally if surplus is to be avoided by that means.

The facts set out herein should be taken into account in any study and formation of future plans. They are presented for that purpose only. Every loyal son of Iowa wants the farmers of Iowa and America to have every financial assistance the Government can give. That is simply justice. The goal to strive for, however, is to attain that balance which is most often referred to as "parity" and under which the agricultural population will regain its place in the sun so that it can again become a free, independent, and truly prosperous part of America.

The figures used in the above are taken from Government publications:

1. The figures used as to the acreage of corn in the various States are found in United States Agricultural Statistics, 1938, page 44, and in Government report dated July 1, 1939, page 19.

2. The figures as to the production of hogs are found in Government publications entitled "Crops and Markets"; United States Department of Agriculture, December 1933 to December 1938, inclusive; Government publication entitled "Farm Production and Income from Meat Animals," issued by United States Department of Agriculture, Bureau of Agricultural Economics, September 1936, and Government report dated June 1, 1939, published by the United States Department of Agriculture, Bureau of Agricultural Economics.

3. The figures as to cotton acreage are taken from Government publication by the United States Department of Agriculture entitled, "Agricultural Marketing Service," issued July 1939, and Government publication entitled, "United States Department of Agriculture, Agricultural Statistics," published in 1938.

4. The figures as to cattle are taken from the Government publication entitled "United States Department of Agriculture, Agricultural Yearbook 1933," page 590, and Government publication entitled, "United States Department of Agriculture, Agricultural Statistics 1938," page 283.

## Labor and the Trade Treaties

### EXTENSION OF REMARKS

OF

### HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. MURRAY. Mr. Speaker, labor is beginning to recognize its relationship to foreign importations of products that American labor could produce.

I received a letter and resolution dated May 10, 1939, from Mr. Tony Martin, secretary of the Marathon Local, No. 319, International Brotherhood of Paper Makers, which were as follows:

ROTHSCHILD, Wis., May 10, 1939.

Hon. Mr. MURRAY,  
Washington, D. C.

YOUR HONOR: For the past several years the importation of foreign pulp and paper products into the United States has been steadily increasing, until it has become a very serious problem in the United States, and particularly in the Pacific Northwest.

The fact that foreign pulp and newsprint paper has been allowed to be imported into the United States duty-free ever since the year 1913 has had a tremendous effect on the pulp and newsprint mills in the United States, as none of them have worked at the capacity of which they are capable for the past 2 years.

Obviously, when we import products that we can produce at home, we are exporting jobs; and with so many people out of work at this time in this country, it doesn't take much of a student of economics to know that we are exporting the thing we need most.

This curtailment has affected some 100,000 people on the Pacific coast alone. This is taken on the basis that 13,000 people are directly employed in pulp mills on the coast, and the average family consists of 4, and those working in the woods would easily bring the figure to 100,000 people on the coast dependent upon the pulp and paper industry for a livelihood.

It is hard to understand why our Government allows duty-free pulp and paper products imported into the United States while mills in this country are forced to close down and place their employees on direct relief or W. P. A.; and, in turn, this causes a rising tax burden on both employer and employee to take care of the ever-increasing relief rolls.

Sincerely and fraternally yours,

MARATHON LOCAL, No. 319, I. B. P. M.,  
TONY MARTIN, Secretary.

Whereas the imports of foreign pulp and newsprint is in excess of the pulp and newsprint paper manufactured in the United States; and

Whereas the pulp and newsprint paper manufacturers, with millions of capital invested, have been idle or curtailed for the past 2 years, thereby suffering a great loss in the lapse of operating industry due to the importation of foreign pulp and newsprint paper; and

Whereas this country enacted the wage and hour law, which set a minimum wage at 25 cents per hour and a maximum workweek of 44 hours so as to protect the American laboring people, and when we allow paper products manufactured by low-paid foreign labor to be imported into this country duty free we are penalizing the American employer, who is forced by law to pay a decent wage or close down his plant; and

Whereas better than 25 percent of the pulp and approximately 78 percent of the newsprint paper used is imported into this country; and

Whereas our imports of pulp and paper products are in value the largest single imports into this country in the past year, exceeding the imports of such commodities as rubber, sugar, coffee, and silk; and

Whereas we can with exceedingly small exception produce all of the pulp and paper products necessary right in this country or in Alaska: Now, therefore, be it

Resolved, That our Congressmen and Senators be requested to use every means possible to obtain a quota of not less than 40 percent on the excessive importation of pulp and newsprint paper into the United States; and be it further

Resolved, That we request the International Brotherhood of Paper Makers Union and the International Brotherhood of Pulp Sulphite and Paper Mill Workers Union use all measures possible to see that this resolution is carried out.

Submitted by Marathon Local, No. 319, International Brotherhood of Paper Makers.

[SEAL]

TONY MARTIN, Secretary.

I also had extensive correspondence and personal contact with the International Brotherhood of Paper Makers, Local 116, Otic C. Moyer, secretary, Stevens Point, Wis.

The interests of these organizations as shown above are to provide jobs for American workmen. As long as newsprint and pulp are to be "frozen" on the free list, it would be of little value to offer a bill to restore a tariff on these forest products.

The labor of the paper mills now in operation must also contend with new paper mills which are furnished money from the Federal Treasury, as shown in the following news item:

PUBLISHERS DEDICATE PAPER MILL TO USE SOUTHERN PINE—50,000 TONS OF NEWSPRINT TO BE MADE ANNUALLY, STARTING ABOUT DECEMBER 1

LUFKIN, TEX., May 27.—East Texas saw today its pine forests cradle a new industry—one that brings fresh economic hope to the South and may revamp the newsprint industry of the world.

Southern newspaper publishers stood inside unfinished walls of a great paper mill and dedicated a plant that will convert native pine into newsprint.

Fifty thousands tons of newsprint annually will begin to roll from the \$6,000,000 mill about December 1. The publishers, who now buy most of their paper from Canadian and Swedish markets, months ago signed contracts for the first year's output.

The softwood of the great Coastal Plain, which extends from Georgia westward to mid-Texas, in the future may furnish the United States much of the 4,000,000 tons of newsprint used annually.

The plant of Southland Paper Mills, Inc., is being built with funds subscribed by southern publishers and a \$3,425,000 Reconstruction Finance Corporation loan.

E. L. Kurth, president, said east Texas alone grows enough yellow pine yearly to supply five or six mills the size of this one.

Publishers from six States said there was a strong possibility other mills would be built in Louisiana, Mississippi, Tennessee, Arkansas, Alabama, and Georgia.

However, the question arises as to the advisability, desirability, or fairness in having Federal funds used to start new paper plants in competition to the paper mills already in existence.

The labor unions in the established paper mills have every reason to be interested, first, in having jobs for American labor; and, second, to exercise concern as to what will happen to their own jobs if the Federal Treasury is going to be used for financing new paper mills in competition to the mills that are already employing them.

These are fundamental questions of governmental policy and are of deep concern to every laboring man, every farmer, and every businessman in America.

The following article, appearing in Time, February 12, 1940, indicates the operation of the paper mills of the South:

#### SOUTHLAND PAPER

Southern pine is a sticky, spindly tree that grows weedlike in every abandoned field, reproduces a stand of timber (unlike the

North's mighty, slow-growing spruce and fir) in 15 or 20 years. It has long been used for kraft (boxes and wrapping) paper.

Savannah's late, great chemist, Charles Holmes Herty, spent the last 8 years of his life trying to make commercial newsprint out of southern pines. In his laboratory he found a process that worked, but he died in 1938, before the South's lumbermen could build him a mill. What kept Dr. Herty at his labors (and excited many a southern businessman) was the prospect of another rich, new industry to help along the South's industrial revival.

Three weeks ago, in Lufkin, Tex., the Daily News went on the street printed throughout on southern-pine newsprint. It was the first newspaper ever to use a commercially made southern-pine paper. Last week the Dallas Morning News followed suit, ran off an edition on 35 tons of southern newsprint. By week's end seven carloads of the paper Dr. Herty labored to perfect had been delivered to the Morning News pressrooms.

The table shown below gives the imports of pulp and newsprint in the United States during the past 5 years. Both pulp and newsprint are on the free list:

[Tons of 2,000 pounds]

Year	Wood pulp		Newsprint paper	
	Quantity	Value	Quantity	Value
1935	1,933,249	\$70,734,847	2,383,315	\$82,265,267
1936	2,237,500	\$2,836,228	2,751,580	\$6,719,470
1937	2,394,695	\$8,268,913	3,317,024	\$12,529,421
1938	1,710,393	\$0,777,808	2,274,603	\$10,455,671
1939	2,026,209	\$5,875,739	2,705,128	\$15,715,522

Source: Compiled from statistics furnished by the U. S. Department of Commerce.

The following table shows the production of wood pulp and newsprint paper in the United States during the period 1930-39:

[Tons of 2,000 pounds]

Year	Wood pulp		Standard newsprint paper	
	Quantity	Value	Quantity	Value
1930	4,630,308	\$192,224,565	1,225,085	( <sup>1</sup> )
1931	4,409,344	\$156,174,967	1,203,263	\$63,654,376
1932	3,760,267	( <sup>1</sup> )	1,047,047	( <sup>1</sup> )
1933	4,276,204	\$124,072,000	928,332	\$32,205,982
1934	4,436,128	( <sup>1</sup> )	969,705	( <sup>1</sup> )
1935	4,925,669	\$149,981,900	947,717	\$33,353,967
1936	5,695,219	\$165,272,519	938,287	( <sup>1</sup> )
1937	6,572,918	\$225,573,125	975,854	\$37,086,644
1938	5,933,560	\$180,394,204	832,331	( <sup>1</sup> )
1939	5,798,833	( <sup>1</sup> )	939,442	( <sup>1</sup> )

#### THE NEWSPAPERS AND FREE TRADE

Due to the fact that such enormous quantities of pulp and newsprint paper are imported free of all duty, many people are of the opinion that this fact influences the big metropolitan papers to be in favor of the trade treaties.

The average country newspaper is more or less of a public-service necessity and should be entitled to every consideration. They distribute the facts of local, State, and Federal agencies, many times with no financial reward to themselves.

High-priced magazines bringing from 15 to 35 cents apiece should be able to carry their share of the load and not ask any group to be the victims of lowered tariff rates so that they can enjoy the benefits of free trade.

The average newspaper realizes that labor must be employed before subscriptions can be expected, or articles advertised can be purchased, and the average newspaper also knows that the farmer must get a "parity price" for his products if he is going to subscribe for a newspaper or before he can purchase the goods advertised by the merchants of the community.

The fact that we have 9,000,000 unemployed people in the United States presents a problem that must be met and the labor groups such as those quoted above are trying to offer their solution to this problem. In my opinion, their suggestions are deserving and worthy of every consideration.

#### The Third Termites

#### EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. MURRAY. Mr. Speaker, the following article, from one of Wisconsin's leading newspapers, gives evidence to the fact that each day more and more people are becoming aware of the political schemes of the New Deal:

[From the Wausau (Wis.) Record-Herald]

#### THE BOSSES TURN "THIRD-TERMITES"

Call the roll of the really important political machines in American politics and it will be seen that all the Democratic ones—so far as cursory observation goes—are on record for a third term for Roosevelt.

Strange! Boss Hague, Boss Kelly, Boss Maestri, Boss Crump—they never have had much reputation as reformers. They never were known to have a great urge to "make America over." They have always played the idea that American life was already plenty abundant to suit them. Why this sudden passion for reform, experiment, and the New Deal?

Maybe the example of Boss Pendergast has something to do with it. The Kansas City boss fell foul of the New Deal and he went to jail. His machine crumbled up at the recent election. Boss Pendergast is all washed up. And there have been Federal grand juries in towns here and there, such as New Orleans, where Maestri's dominion lies—but no indictments as yet. Maestri's organization is for a third term. Maybe there won't be any indictments after all.

Pinko new dealers have been extremely unkind in their criticism of Jersey City's reactionary boss, Mayor Hague, which makes it all the stranger that he should be so strong for continuation of the New Deal. And Boss Guffey is positively tearful about a third term, seeing as Pennsylvania has elections this year and he's up for reelection.

The explanation of this curious congeries of political bedfellows is, of course, plain enough. Roosevelt believes in spending, and spending public money is the specialty of the bosses. If Mr. Roosevelt doesn't run again, or at least if the New Deal isn't continued, the bosses won't have a Federal trough to feed at.

Third termites, almost to a man, are the lads who are on the pay roll, directly or indirectly. A third term for Roosevelt means 4 years more in the money. If it doesn't happen, the boys have a reasonable expectation of getting the ax.

What's a 150-year-old tradition founded by Washington and Jefferson, and respected ever since, between such friends as the bosses and the pay roll?

This same paper, located as it is, in one of the greatest agricultural counties in the country, has been very positive in its opposition to the reciprocal-trade treaties and has editorially answered Mr. Roger W. Babson in his weak advocacy of these treaties.

The Wausau Record-Herald is located in the heart of Wisconsin's cheese industry and has carefully noted the effects of these treaties on the farmers, labor, and businessmen of the district, who know that cheese averaged 14.7 cents per pound all during the last Republican administration, when there was a world-wide depression, and that it has averaged only 13.2 cents per pound the 7 years of "the more abundant life." They also know that every dairy farmer in their community should add 32 percent to every milk check he has received during the past 7 years if he wishes to vision a sum equal to the prices of cheese which prevailed during the seven pre-New Deal years.

In this midst are also located the Fromm Brothers, the world's greatest fox farmers. They are not only large breeders but also sell the "crop" to hundreds and hundreds of the small breeders of the country.

The tariff reduction of from 50 percent down to 35 percent is more than the fox industry should be forced to accept. The 100,000 quota is useless during normal times, when the importations have been as follows:

Imported from—	1929	1931	1933	1935	1936	1937	1938	January and February 1939
Canada	622	2,094	848	1,175	6,402	7,959	8,685	12,991
United Kingdom	23	—	688	24	7,844	11,656	3,396	687
Norway	—	—	—	—	1,000	6,188	4,015	6,252
All other countries	9	4	465	6	543	191	372	69
Total	654	2,098	2,001	1,205	15,789	25,994	16,468	19,999

With an average preresciprocal treaty import of about 2,000 pelts, the 100,000 may look good in print, but with a 250,000 domestic consumption, it really means that the New Deal has given away 40 percent of the domestic market for furs to the foreigners at the expense of the domestic producer.

The reciprocal-trade treaties were inaugurated to encourage foreign trade and every day it is more evident that they have encouraged foreign trade, but for the foreigners at the expense of American labor, American agriculture, and the American businessmen.

### Indiana's Stake in the Foreign Trade Agreements Program

#### EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. LARRABEE. Mr. Speaker, I approach the task of appraising the interests of my State, Indiana, in the trade-agreements program with a definite realization that this question is of most vital importance to every resident of my State and my district.

For the factual information I am about to present here, concerning the benefits that have accrued to my State in the past, through the operation of the trade agreements, I wish to express my sincere appreciation to the officials of the Department of Commerce, Bureau of the Census, the Bureau of Foreign and Domestic Commerce, and the State Department. Without the information that has been assembled and furnished by them it would be impossible to make an intelligent appraisal of the result and the prospective benefits derived and to be derived from extension of our trade abroad.

The growth, development, and prosperity of my State have long been most closely associated with its trade in a great variety of products, not only with a large number of sister States but with almost every foreign country. Indiana is outstanding for its wealth of manufactures as well as for its diversified agriculture. Foreign markets have opened to consume a large part of the products of Hoosier farms and factories.

Indiana, in fact, is essentially an exporting State. Her three and one-half million inhabitants cannot consume nearly all of either her agricultural or manufactured goods. Thus, any program which provides additional outlets for Indiana's products is a program in which the people of Indiana must be vitally concerned.

The fact that the people of Indiana are concerned is shown definitely in the large number of letters, telegrams, and other communications that have come to me from the representatives of agriculture, labor, commerce, and industry in my State, and even from the Indiana League of Women Voters, which seeks to concern itself with any program, event, or events that will bring desirable benefits to our people. That Hoosiers no longer feel that their interests are best protected by high tariff walls that restrain trade and stifle outlets for Hoosier products is evidenced by nearly every nonpartisan pronouncement that I have seen or heard.

It is my sincere belief that if all the people were fully informed on this subject, no legislator from my State would dare raise his hand or voice in protest against the continuation of the trade-agreements program that has been so ably administered by the State Department.

#### HOW STATE IS AIDED

Just how has the trade-agreements program affected Indiana? As it has affected Indiana, so it has, in comparative degree, affected the entire Nation.

Hoosier industries, in the year 1929, were employing 240,000 workmen, and over 40 percent of these were engaged in production of iron and steel products, electrical, industrial,

and agricultural machinery, automobiles, automotive products, meat products, canned vegetables, and fruits. These industries produced about four-fifths of Indiana's reported exports that year.

On the basis of reliable figures Indiana's total exports in 1929 were valued at \$73,740,000. In 1932, the State's exports had decreased to \$17,244,000, a decline of 77 percent. The Nation's total average decline between the same 2 years was only 69 percent.

The severe fall in Indiana's exports in those 2 years precipitated a severe decline in the State's economy. Thousands of factory workers lost their jobs, with resultant loss of wages to the workmen and profits to employers, but the activities of transportation companies, financial institutions, advertising concerns, brokerage and insurance agencies, and other service industries engaged in moving goods in foreign trade were severely curtailed.

It is noted also that since Indiana's industrial-plant capacity and employment is adjusted to an export trade of the proportions of 1925-29, the urban demand for the products of its farms fluctuates also with the trend in its exports of manufactured goods.

In addition to the loss directly connected with the shrinkage of its exports, Indiana suffered from the severe decline in the export trade of the country as a whole. Curtailed purchasing power in other sections of the country that normally buy much of Indiana's domestic export load immediately shrunk those domestic markets for Hoosier products.

#### BENEFITS ARE NATIONAL

Thus we can readily see that the interest of any one State in our foreign trade cannot be accurately measured, nor can the well-being of Indiana be considered apart from that of all other States of the Union. Trade agreements then that benefit the Nation as a whole, or any part of it, eventually benefit Indiana.

Therefore the trade-agreements program under which the Government is endeavoring to restore and expand foreign markets for American products is of vital importance to Indiana indirectly as well as directly.

The trade-agreements program was begun on June 12, 1934, by means of an amendment to the Tariff Act of 1930, having been made necessary by the drastic shrinkage of our foreign trade during the years of the Hoover panic. Between 1929 and 1933, the year before the Trade Agreements Act was passed, our national total exports declined from \$5,241,000,000 to only \$1,675,000,000. Even more serious than this, our trade had fallen off proportionately more than had the international trade of the world as a whole, indicating that for some reason or other this Nation was not sharing equally in the international commerce.

Agreements have been entered into with 17 countries, including Canada, our second largest customer; 7 European countries: Belgium, Czechoslovakia—no longer existing, Finland, France, the Netherlands, Sweden, and Switzerland; 2 South American countries: Brazil and Colombia; and 7 Central American and Caribbean countries: Costa Rica, Cuba, Guatemala, Haiti, Honduras, Nicaragua (agreement suspended temporarily) and El Salvador. These 17 countries accounted for 39.2 percent of our total foreign trade in 1937.

Negotiations for agreements with other nations, including the United Kingdom, normally our best customer and one of the best foreign markets for our agricultural products. When this agreement and others in the process of negotiation are concluded, the share of our total foreign trade conducted with countries with which agreements have been made will amount, on the basis of 1937 figures, to 58.9 percent.

The results already achieved demonstrate the effectiveness of the trade-agreements program as an instrument for restoring to the American farmers and manufacturers necessary outlets abroad for their surplus production. Furthermore, the agreements have contributed to an improvement in our relations with other nations, by tending to eliminate one of the prime causes of international and civil conflict, economic insecurity.

## FIRST RESULTS SEEN IN 1935

The immediate benefit of the enactment of the trade-agreements law was first noticed in 1935, when our exports exceeded those of 1934 by \$150,000,000. In 1936 they increased by \$173,000,000 over 1935 and during 1937 they increased by \$389,000,000 over 1936. As more and more agreements came into effect the benefits increased proportionately.

However, in all fairness, it should be pointed out that only a part of this increase may be credited to the trade agreements, and, with so many factors involved in the economic situation at home and abroad, it is impossible to say definitely how great the increase directly resulting from the trade agreements really is. An indication of the effect of the agreements may, however, be determined from a comparison of the manner in which trade has developed with countries with which agreements have been made and with the rest of the world. As an example, our exports to the 14 countries with which agreements were in force for all or part of 1936 were 14 percent greater during 1936 than during 1935. This increase compares with a corresponding increase of 4 percent in our exports to other countries. In 1937, with 16 agreements in effect during all or part of the year, exports to these countries were 60 percent greater than in 1935 as contrasted with an increase of 39 percent in exports to all other countries.

Examining further Indiana's benefits from the trade agreements we find the facts very encouraging.

Indiana is located in the section of the country which represents the most diversified agricultural-industrial economy of any part of the Nation. The State is important not only as a producer of manufactured foodstuffs, such as meat products, wheat flour, and canned fruits and vegetables, but also for its specialized industrial, electrical, and agricultural machinery. Almost every branch of the iron and steel industry and of the automotive industry is represented in Indiana. In 1929 approximately 35 percent of the gainfully employed persons in Indiana were engaged in producing manufactured goods, alone.

This does not encompass any of the thousands employed in transportation or service activities incident to the actual manufacturing processes.

## DIRECT AID TO FARM INCOME

Export trade data on the manufacturing in Indiana are not yet compiled for the past 2 years, but the farm income in 1937 was estimated at 80 percent of that for 1929 and 117 percent of that for 1932. Since there is always a very close relationship between farm income and factory pay rolls, a high degree of increase in the State's manufacturing industries in 1937 is clearly indicated. New industries have opened, many of them manufacturing in a large part especially for foreign export trade. Local indexes have shown continuous increases on each 6 months' report from the manufacturers association and similar reports, with a few seasonal exceptions. Unemployment figures continue to decline, with a few seasonal exceptions.

Taking a few of the industries at random in Indiana, the iron and steel industry first, it is seen that from the blast furnaces to the most advanced manufactories, 56,000 persons were employed in 1935. Only Pennsylvania and Ohio outranked Indiana in iron and steel output. In 1935 Indiana's production in this industry was valued at \$222,752,000 of a total of \$1,931,000,000 for the United States. The known exports of iron and steel products from Indiana amounted to \$6,866,000 in 1929 and to \$1,512,000 in 1932, a decrease of 78 percent.

While the actual State production and export figures of the iron and steel industry in Indiana are not available for the last few years, a fair appraisal of the increase can be ascertained from the national figures. In 1929 the total United States production of steel-mill manufactures aggregated over \$5,000,000,000, and total exports were \$288,000,000. In 1937, for numerous reasons, the United States export total increased to \$372,600,000, almost a hundred million dollars more than in 1929. Since we know that employment in the

iron and steel industries in Indiana has increased greatly during the past 2 years, and even during the past few months, it is certain that Indiana supplied a sizeable portion of these exports.

In twelve of the seventeen trade agreements, concessions opening foreign markets to greater exports to a greater variety of iron and steel products and advanced manufactures have been gained, aiding almost every branch of the industry.

Canada, which has long been an important market for our iron and steel, imported from the United States merchandise of these kinds amounting to nearly \$174,000,000 in 1937 compared to \$86,000,000 in 1935, the year preceeding the trade agreement, or an increase of 101 percent. Canadian imports of advanced steel manufactures from the United States increased from \$4,500,000 in 1935 to \$7,500,000 in 1937.

## AUTOMOTIVE EXPORTS ARE HIGH

Indiana's exports of automotive products totaled \$26,000,000 in 1929 and included passenger cars, trucks, busses, chassis, trailers, and parts. By 1932 these exports had fallen to \$4,300,000. Indiana ranks third among States producing these manufactures, its output in 1935 having been valued at \$74,800,000, or approximately 5 percent of that of the entire country. This is the third most important industry in the State, employing 14,000 wage earners in 1935, and the number has since greatly increased. The motor-vehicle industry of Indiana, exclusive of motorcycles and airplanes, manufacturing the completed product, is the sixth industry in importance, employing over 9,000 wage earners, with products valued at \$69,500,000 in 1935.

The United States exports of automotive products in 1937 valued at \$360,169,000 were the highest since 1929 and fourth highest in the history of the industry. Unofficial figures, today, show a greater increase in these exports. Although it is not possible to determine definitely what portion of the automotive industry exports came from Indiana plants, it is certain that the trade-agreements program has contributed very materially to the improvement in this industry in Indiana. In fourteen of the seventeen completed trade agreements, automotive manufactures have been specifically provided for.

Production of electrical machinery, apparatus, and supplies is now one of Indiana's most important industries and is growing constantly. In 1935 the Hoosier State contributed nearly 8 percent of the total production of this industry in the United States. Employment in the industry in 1935 averaged 17,000 wage earners, salaried officers, and employees, and the output was valued at \$73,400,000. While the actual figures for the past year are as yet unavailable, unofficial reports show a marked increase in both numbers of employees and total production.

In 1935 Indiana ranked as the fourth State in the manufacture of radios and phonographs. This industry alone employed 2,500 persons and its products were valued at almost \$10,000,000. Like the electrical industry in this State, the musical instruments—radios and phonographs—industry, has expanded considerably during the past 5 years.

## ELECTRICAL EXPORTS IMPORTANT

In 1929 the total exports of electrical machinery and apparatus was more than \$130,100,000. The items included are varied and range from generators, transforming and converting apparatus, and motors of high unit value to bells, buzzers, light cords, and insulating materials.

Between 1929 and 1932 Indiana's declared exports of electrical machinery and radio apparatus declined by 46 percent, from \$1,657,000 to \$900,000. In 1937 the value of exports in this field from the United States increased over 70 percent, and while the actual figures for our State are not available, unofficial figures indicate that the State's increase was slightly better than 70 percent enjoyed by the Nation as a whole.

In the manufacture of refrigerators and ice-making apparatus Indiana is second only to Michigan in the value of output. In 1935 Indiana's production, valued at \$36,511,000 was more than 16 percent of the Nation's total. More than half the United States production is accounted for by electrical household refrigerators of which Indiana is an important

producer. Exports of the United States of electrical refrigerators and parts have been increasing and in 1937 were valued at \$20,671,000 of which the household type accounted for \$12,771,000.

In eight of the trade agreements concessions have been obtained that assist in the exporting of electrical household refrigerators. Canada, for example, reduced its duty 25 percent. Indiana most certainly has gained by this and similar concessions.

#### MEAT EXPORTS ARE GAINING

The wholesale meat-packing industry in Indiana employed nearly 5,300 persons in 1935 when the value of its output was \$72,250,000. Over \$46,000,000 worth of these products were lard and other pork products, and about \$17,000,000 were beef and veal.

Indiana is one of the first five States in the country in the production of hogs, and about fourth in the production of corn. Its farm cash income from corn and hogs rose from \$44,584,000 in 1932 to \$105,272,000 in 1937, an increase of 136 percent. The State's farm cash income from cattle and calves increased by 121 percent, to \$32,661,000 during the same period.

While the bulk of Indiana's output of the meat-packing industry is for domestic consumption, substantial quantities have been exported in past years. In 1929 the reported exports of lard, hams, and shoulders and other meat products from Indiana were valued at \$10,100,000 but in 1932 at only \$2,800,000.

Exports of pork and lard from the United States decreased materially from 1923 to 1934, chiefly because of increased hog production in Europe and the restrictions placed on imports by several foreign countries. With the present increase in production in the United States, a large export surplus of hogs is becoming available.

Concessions have been gained in favor of these products in some of the trade agreements, most valuable of which is that in the agreement with Canada. Canada has granted duty reductions ranging from 10 to 65 percent on bacon, ham, and lard. Under this concession Canada has increased her imports from the United States from \$57,700 in 1935 to \$340,600 in 1937, according to official figures. Indications are that her present imports far exceed those of 1937.

Exports of meat and meat products from the United States have increased to sixteen of the seventeen countries that are participating in the agreements as the result of the definite concessions obtained in favor of these products.

#### IMPROVEMENTS SEEN THIS YEAR

A seasonal slackening of activity in industrial concerns in the State of Indiana during January 1940 is seen as indicating more favorable marketing conditions than might have been anticipated.

According to the survey of the Bureau of Business Research, Indiana University School of Business, the anticipated seasonal business decline failed by far to reach the decline recorded in January 1939.

Some of the indications found in the Indiana University School of Business report published under date of February 20, 1940, and which strongly indicate that Indiana's export business and business in general has enjoyed valuable benefits from the trade agreements follow:

The bureau's preliminary index of business conditions in Indiana for January declined nearly two points from the recovery high of December. The decline was not unexpected, since it was apparent early in January that business was receding somewhat faster than normal from the December peak. Yet the January decline was significant for two reasons: It was relatively small when compared with the average month-to-month change of about four points for last year, and it represented small, scattered declines among many businesses rather than a major slump in a single important industry. It should also be noted that at the level after the decline from the December high the index was still higher than at any time since 1929 with the single exception of last month.

On the whole, the trend of business in the State was mixed. New-car sales, coal production, and livestock sales were seasonally better than in December. Automobile production and electricity output were unchanged after making allowance for seasonal differences; while newspaper advertising, bank debits, department-store sales, building, pig-iron production, and stone output declined slightly. Although new-car sales were better than in December, they did not

keep pace with national automobile production. Coal output was stimulated by the cold weather and was higher than in any January since 1927.

During much of the last quarter of 1939 recovery was bolstered both by war orders and prospective war orders. The prospective war business has been pretty well discounted. From this point the upward swing will depend upon the strength of our domestic recovery and actual war business. With exceptions here and there, our present war business represents less than 10 percent of the total output of the durable-goods industries. What course actual war orders will run in the coming months no one can predict.

#### PAY ROLLS ARE UP 12 PERCENT

With the decline in the rate of industrial production the inventory question has been raised again. Apparently inventories are not yet excessive. But in any case inventories are relative to sales, and the inventory problem arises always after, and not before, a decline in business. At present we have reached a point in inventories which suggests increased sales or decreased production.

A slackening of activity in industrial concerns and a marked reduction in retail-trade employment, following the December expansion, contributed to a decline of 8 percent in total employment between December 15 and January 15. Total employment, however, was 12 percent above January 1939, according to the current report of the Indiana State employment service. Pay rolls decreased 9 percent during the month but were 19 percent larger than last year.

#### Employment in Indiana, January 1940

Industry	January 1940	December 1939	Percent change	January 1939	Percent change
Manufacturing.....	285,242	300,059	-4.9	244,722	+16.6

Wholesale trade.....	24,876	25,939	-4.1	24,288	+2.4
Coal mining.....	10,685	10,364	+3.1	9,827	+8.7
Quarrying and nonmetallic mining.....	1,271	1,636	-22.3	1,651	-23.0
Total, all groups.....	435,126	472,548	-7.9	388,276	+12.1

Manufacturing employment receded 5 percent from December, but was 17 percent above a year ago. The seasonal index for Indiana manufacturing employment, based on the experience from 1930 to 1935, inclusive, shows that a decline of 0.9 percent is considered seasonal for January. An advance of 2 percent in employment of the machinery group was the only gain reported in industrial employment during the month. All groups reported substantial increases over last year. Manufacturing pay rolls declined 8 percent, but were 26 percent above January 1939.

Nonmanufacturing establishments reduced employment and pay rolls 13 and 10 percent, respectively, during January.

#### Weekly pay rolls in Indiana, January 1940

Industry	January pay rolls	Average earnings	Percent change from—	
			Month ago	Year ago

## RETAIL COST OF FOODS

The retail cost of food in Indianapolis increased 0.4 percent between December 12 and January 16, according to the report of the Bureau of Labor Statistics. This was in line with the 0.3-percent rise for the country as a whole. Advances in the cost of cereals and bakery products, dairy products, and fruits and vegetables were responsible for the increase. The price of flour continued to move up, showing an average gain of over 4 percent above the previous month and about 15 percent over a year ago. The cost of butter advanced contraseasonally. Following the usual seasonal movement, egg prices were definitely lower. Percentage increases during the month in the different classifications were: Cereals and bakery products, 1.2; dairy products, 1.7; fruits and vegetables, 5. Percentage declines were: Meats, 1.9; eggs, 11.2; beverages, 0.1; fats and oils, 1.5; and sugar, 2.4. The cost of all food was 0.5 percent below January 1939.

## INDUSTRIAL PRODUCTION ENCOURAGING

The anticipated reaction of steel production from the boom pace of the past several months did not take place in the Indiana-Illinois district until late in January. During the first 4 weeks of the month, mills operated above 90 percent of capacity. But in the week ending February 3, output dropped from 91 to 73 percent of capacity. The present rate of production is being maintained by a heavy backlog of orders.

The most significant factor in the steel situation during January was the abrupt contraction of new business. Incoming orders generally were below 50 percent of production. Steel producers, however, have not considered the situation discouraging and have been inclined to attribute the lag in new orders to the widespread severe cold weather, to unusually heavy buying in the fourth quarter of last year, and to the fact that demand is seasonally quiet in January and February. It also appears that many steel buyers have drawn on inventories for part of their requirements.

Although substantial, consumer inventories are not considered excessive, which has led to the conclusion in some quarters that output will have to be stepped up in the near future to keep pace with the current rate of consumption. However, there are no immediate indications of a recurrence of a broad increase in demand such as occurred last September.

Continued weakness in scrap prices reflected the uncertainty of the outlook in the steel industry.

Returning again to the consideration of the benefits that have come to various industries and occupations in the State, under the operation of the trade agreements, it is definitely noted that the following manufactures, in addition to those discussed in detail, have made gains:

Wood and wood products, glass and glass products, textiles, including men and women's clothing and garments of all descriptions, cotton and silk hosiery, rayon garments and hosiery, wool apparel, and countless other products, including rubber goods, tires, tubes, and small rubber articles of all descriptions, boots and shoes, musical instruments, including pianos, pipe organs, harps, horns, drums, and band and orchestra instruments of every description, paper and paper products, and practically every type of article produced by the skill and imagination of man.

## NO INDUSTRY IS OMITTED

There is, as far as I have been able to learn, no industry in Indiana that does not benefit directly or indirectly from the concessions on American goods that have been obtained in the trade agreements.

Quoting directly from a report of the State Department, issued in August 1939, concerning the benefits of the trade agreements, I offer the following additional information relative to the benefits that have accrued to the State of Indiana, and that are expected to result in the future:

It has been estimated that almost one-fifth of the raw materials used in the United States comes from foreign sources. An important proportion of the products imported from foreign countries is used in American factories and makes much of their output possible. Ninety-nine percent in dollar value of materials in the rubber industry is imported. The leather manufacturing industry draws upon 22 countries for at least half of its materials. One-third of the raw materials used in the chemical industry comes from abroad. Our textile industries, notably those using silk and wool, rely heavily upon foreign materials. In the processing of nonferrous metals, 14 percent of the semi-finished materials must be imported. Fine machinery, precision instruments, and tools can be made only when certain special steels and alloys are imported. Aluminum, tin, nickel, silk, vegetable fibers, hides and skins, dyeing and tanning materials, cacao beans, paper base stocks, raw cotton, drugs, tobacco, oilseeds, as well as many semimanufactures, are needed by American industry.

## MANY PROCESSING IMPORTS

Data in the Census of Manufactures for 1935 indicate that more than 10,000 persons in Indiana have jobs in factories

working imported raw materials into finished forms. These are employed in industries engaged in the manufacture of such commodities as chocolate and cocoa products, flavoring extracts, spices, confectionery, rubber goods, aluminum products, tin cans and other tinware, paper and allied products, newspapers and periodicals, woollens and worsted goods, and jewelry. Another 10,000 factory jobs are dependent upon the secondary processing of some of the imported materials or upon the use of other imported raw materials and semimanufactures, such as in the printing and publishing industries, the railway repair shops, and in the manufacture of chemicals.

In Indiana there are thousands of employees and active proprietors engaged in wholesale and retail grocery establishments, in eating and drinking places, and in drug stores, whose daily business depends upon imported products used in the foods, beverages, drugs, and cosmetics which these businesses prepare and distribute.

Raw materials for industry and exotic foodstuffs are not, however, the only products which foreign countries are interested in exporting to us, and which it is to our advantage as consumers to take from them. Certain of the products of other countries are more or less competitive with goods produced in the United States. The concessions in trade agreements of benefit to Indiana could not, of course, have been obtained from the foreign countries concerned if concessions had not been granted in return by the United States on some of these more or less competitive products. The concessions which the United States has granted, however, have been made only after the most careful study of all available pertinent information, including the views of interested persons, in order that no hardships might be caused to any established American industry. Increased imports do not by any means imply a reduction in the sale of the domestic products against which they may compete. It is quite likely, in fact, for a variety of reasons which cannot be discussed here, that in most cases the opposite will result, and that sales of the domestic product will increase with increasing imports.

Furthermore, the ability of producers in foreign countries to sell their merchandise in the United States enables those countries to purchase products from Indiana and from other States of the Union.

## INDIANA BENEFITS AS NATION BENEFITS

It would be impossible to enumerate every duty reduction, quota increase, or duty binding that has been obtained to assist the producers and manufacturers of Indiana to find foreign markets for their surplus products, but, as shown above, exports of many of Indiana's products have been and are being aided by the trade agreements. Moreover, since Indiana's well-being is principally dependent upon the domestic demand for its goods, the State is benefiting by improved opportunities created for the export of the products of other States. As the workers in the other 47 States find increased employment in industries producing export commodities, and as the farmers in other regions find increased outlets in foreign countries for their surpluses, their ability to buy the products of Indiana's farms and factories is enhanced.

In fact, any concession from a foreign country that helps farmers or manufacturers anywhere in the United States to ship their surplus production to foreign markets creates a chain of economic transactions throughout this country the total effect of which is to increase purchasing power beyond the volume represented by the original transaction.

Through the trade-agreements program excessive restrictions on the sale of our products in foreign countries are being gradually resumed, and equality of treatment is being substituted for trade discriminations. In this way the program is aiding American producers and exporters to recover and expand their foreign markets and is contributing to the welfare of Indiana and of the whole United States.

## The Domestic Petroleum Industry and the Venezuelan Trade Agreement

## EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. RANKIN. Mr. Speaker, I listened with a great deal of interest to the debate on the amendment relative to crude oil, and the Venezuelan trade agreement. After examining the subject rather carefully I became thoroughly convinced that that amendment should be defeated by all means.

Crude petroleum and fuel oil derived from petroleum, including topped crude and gas oil, have been free of duty under the last three tariff acts—the Underwood Tariff Act of 1913, the Fordney-McCumber Tariff Act of 1922, and the Hawley-Smoot Tariff Act of 1930. By the Revenue Act of

1932 an import excise tax of one-half cent per gallon, equivalent to 21 cents per barrel, was levied on imports of these commodities, except for imports used for supplies of ships in foreign trade or entered in bond for refining and reexport.

The centers of crude petroleum production in the United States are located chiefly in the mid-continent, Gulf-coast areas, and the State of California. The average grade of domestic crude petroleum ranges between 30° and 35° in gravity. Imported crude petroleum, on the other hand, is generally below 20° in gravity.

Imports of crude petroleum from Venezuela, which is much heavier than the average domestic crude, yields chiefly heavy fuel oil and asphalt. Domestic crude petroleum yields relatively larger percentages of the more-valuable products—gasoline, kerosene, and lubricating oils. As a result, the use of imported crude petroleum for the manufacture of the heavier grades of fuel oil reserves the lighter domestic crude for the manufacture of the more valuable products.

The domestic petroleum industry has been on an export basis since its beginning, and in crude petroleum since 1933.

Exports of crude petroleum are substantially comparable in quality with the average grade of domestic production, but lighter than imports. The rising trend in exports of crude petroleum from the United States is due in part to two important factors: First, the increased demand in some foreign countries for military purposes, including storage, and second, the establishment in other countries of a domestic refining industry as a national policy. Japan increased its imports of crude petroleum from the United States from 2,500,000 barrels in 1929 to 16,086,000 in 1939. Exports of crude petroleum to Italy increased from none in 1929 to 5,000,000 barrels in 1939. During the same period exports of crude petroleum to France increased from 4,000 barrels to 16,700,000 barrels. Exports of crude petroleum to Canada, the most important foreign market, increased from 22,400,000 barrels to 28,100,000 barrels. Total United States exports of crude petroleum increased from 26,400,000 barrels in 1929 to 72,100,000 barrels in 1939.

#### CONCESSION TO VENEZUELA ON PETROLEUM

By the terms of the trade agreement concluded with Venezuela, effective December 16, 1939, the import excise tax on crude petroleum, topped crude, and fuel oil was reduced from one-half cent to one-fourth cent per gallon—equivalent to 10½ cents per barrel. In order to safeguard the domestic petroleum industry the quantity of crude petroleum, topped crude, and fuel oil which may enter the United States at the reduced rate may not exceed 5 percent of the total quantity of crude petroleum processed in refineries in the continental United States during the preceding calendar year, as ascertained by the Secretary of the Interior. This 5 percent annual quota established by the trade agreement is approximately equal to the ratio between imports and domestic production of these oils following the levying in 1932 of the one-half cent per gallon excise tax and the present time. All imports in excess of the established annual quota are subject to the full one-half cent per gallon excise tax.

The concession on petroleum granted to Venezuela constitutes the most important consideration granted to that country. United States imports from Venezuela consist chiefly of crude petroleum, topped crude, and fuel oil. On the other hand, Venezuela granted concessions benefiting American farm and factory products which made up 36 percent of our total exports to Venezuela in 1938.

Among the more important American products on which reductions in duty were obtained by the United States are cigarettes, lumber, furniture, and fresh and canned fruits.

Imports of crude petroleum, topped crude, and fuel oil are small in comparison with domestic production and exports. The total quantity of imports in 1938 of taxable crude and fuel oil amounted to 29,700,000 barrels compared with exports of 121,100,000 barrels and domestic production of 1,660,000,000 barrels. This does not include 22,500,000 barrels exempt from excise tax used for supplies of ships in foreign trade, and entered in bond for refining and reexport. In other words, United States imports of these oils constituted only 2 percent of total domestic production for 1938. On the

export side, shipments of these same oils to foreign countries during 1938 constituted 7 percent of domestic production and were more than 300 percent greater than imports.

#### IMPORTS SERVE A DESIRABLE ECONOMIC PURPOSE

Analysis of the imports of crude petroleum, topped crude, and fuel oil indicates that these imports, small in comparison with our domestic production and greatly exceeded by our exports, serve a desirable economic purpose of balancing the supply of certain petroleum products in our home markets.

Venezuela supplies nearly 90 percent of total United States imports of crude petroleum, and the Netherland West Indies supplies over 90 percent of our imports of fuel oil. Imported crude petroleum is not comparable in quality with the average domestic oil, in that it yields much less gasoline and practically no lubricating oil, the more valuable refined products. The chief products of Venezuelan crude petroleum are heavy fuel oil and asphalt.

The calculated gasoline yield from the refining of Venezuelan crude petroleum is about 12 percent; that is, every 100 barrels of Venezuelan crude petroleum yields approximately 12 barrels of gasoline and approximately 55 barrels of heavy fuel oil. Domestic crudes are lighter than the imported product and yield approximately 43 percent of the more valuable product, gasoline, which accounts for about 70 percent of the domestic petroleum industry's annual revenues, and a fuel-oil yield of 25 percent.

The 29,700,000 barrels of taxable crude, topped crude, and fuel oil imported in 1938, nearly all of which was imported from Venezuela directly or indirectly through the Netherland West Indies, entered almost entirely through the ports of New York, Philadelphia, and Baltimore to serve the thickly populated industrial areas of the northern Atlantic Coast States. (Does not include 22,500,000 barrels exempt from excise tax used for supplies of ships in foreign trade, and entered in bond for refining and reexport.)

These imports of crude petroleum produced a calculated supply of sixteen to seventeen million barrels of heavy residual fuel oil. This estimated sixteen to seventeen million barrels of heavy residual fuel oil derived from foreign crude petroleum constituted about one-fifth of a total consumption of ninety to ninety-five million barrels in that area. To attempt to supply the heavy fuel-oil consumption of the industries located in the New England and northern Atlantic Coast States would result in increasing the heavy inventories of gasoline stocks—from which the domestic petroleum industry derives approximately 70 percent of its annual revenue—and, through accumulation of large inventories, have a depressing effect upon the price.

The production of sixteen to seventeen million barrels of heavy fuel oil from Venezuelan crude petroleum, with a gasoline yield of approximately 12 percent and a heavy residual fuel-oil yield of about 55 percent, results in about 2,700,000 barrels of gasoline. The production of the same quantity of heavy fuel oil from domestic crude petroleum, with a gasoline yield of approximately 43 percent and a residual fuel-oil yield of 25 percent, would result in the production of nearly 28,000,000 barrels of gasoline. This addition to our gasoline production, which is more than one-half of 1 month's average domestic supply, would increase excessive gasoline inventories, which is a serious problem for the domestic petroleum industry.

The moderate imports of foreign crude, topped crude, and fuel oil serve a useful purpose by balancing the domestic supply of petroleum products more nearly to demand, due to the much lower gasoline yield and much higher heavy residual fuel-oil yield of the Venezuelan product and the domestic crude petroleum consumed in the thickly populated industrial areas of the northern Atlantic seaboard States.

#### PETROLEUM INDUSTRY BENEFITS FROM TRADE AGREEMENTS

It is significant to note that whereas a concession on petroleum has been granted in only one agreement—the moderate reduction in the excise tax which was granted to Venezuela—concessions expanding opportunities in foreign markets in which our domestic petroleum industry can sell its products have been obtained in 12 agreements. Five countries reduced the duties on petroleum products, four

countries bound the rate of duty against increase, two countries bound petroleum products on the free list, and one country bound the rate of duty and increased the quota. Examples of the various petroleum products affected by more favorable export opportunities obtained through trade agreements are: Gasoline, lubricating oil, petroleum residues for heating, benzine and benzol, lubricating greases, kerosene, and various petroleum oils and greases.

Switzerland granted a concession on petroleum residues for heating purposes, benzine and benzol for motors. Swiss imports of these products from the United States increased respectively between 1935—the preagreement year—and 1938 from \$35,000 to \$1,361,000; from \$1,039,000 to \$2,077,000. Sweden granted a concession on gasoline and that country increased its imports of gasoline between 1934—the preagreement year—and 1938 from \$3,051,000 to \$7,071,000. The Netherlands guaranteed not to change the duty-free status of lubricating oil. Its imports from the United States between the preagreement year 1935 and 1938 increased from \$840,000 to \$1,125,000. Canada, our most important foreign market for petroleum products reduced the duty on lubricating oils, engine distillates, and gasoline. Imports from the United States by Canada of these products increased respectively between the preagreement year 1935 and 1938 from \$2,605,000 to \$3,122,000; from \$7,000 to \$71,000; from \$1,501,000 to \$5,219,000.

The petroleum industry's most important and profitable market is, of course, the home market. There are certain benefits shared by the domestic petroleum industry derived from the trade-agreements program which, though less tangible are nevertheless real. Such benefits flow from an improved domestic market. Imports and exports mean more work for all the people—employed in transportation—railroads, busses, trucks, ships—and in merchandising—stores, markets, insurance companies—as well as more work for the people engaged in the manufacture of the great variety of commodities that are bought and sold. Such activity at home strengthens and increases purchasing power all along the line and creates expanded markets at home for petroleum products.

Prices that our domestic petroleum industry has received for its products have been highest during periods when foreign trade—imports and exports—has moved in large volume. In such periods domestic industrial activity has been brisk and, in addition to higher prices, the petroleum industry has experienced greater demands for its products.

*United States exports of domestic petroleum and petroleum products to trade-agreement<sup>1</sup> countries and to non-trade-agreement countries, 1937-38 compared with 1934-35*

## Benefits to Minnesota From the Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

LEAGUE OF WOMEN VOTERS ON TRADE AGREEMENTS

Mr. ALEXANDER. Mr. Speaker, without entering into a lengthy discussion of the pros and cons of the question of the extension of the reciprocal-trade agreements, I ask consent to extend my remarks by inserting in the RECORD the following pamphlet from the Minnesota League of Women Voters, a good cross-section organization of the women of our State, giving some helpful facts relating to the trade agreements in Minnesota.

MINNESOTA LEAGUE OF WOMEN VOTERS,  
Minneapolis, January 1940.

#### BENEFITS TO MINNESOTA FROM THE RECIPROCAL-TRADE AGREEMENTS

1. What is the significance of foreign trade to Minnesota? Minnesota is both directly and indirectly dependent upon foreign trade for continued economic development. It needs foreign markets for surplus products of its farms, forests, and factories. It shares in the improved domestic market created when, by selling their surplus commodities abroad, other sections of this country increase their purchasing power. Total exports reported in Minnesota fell from \$52,000,000 in 1929 to \$6,000,000 in 1932. The total accountable income of Minnesota fell from \$1,417,000,000 in 1929 to \$870,000,000 in 1932, and cash farm income declined from \$421,000,000 to \$163,000,000 for the same 2 years.

2. What have been the benefits to Minnesota from the trade agreements? Meat products, wheat and wheat flour, and agricultural machinery and implements, are mere examples of exported products of Minnesota for which expanded and more stable market outlets have been obtained.

3. What has been gained for the meat industry? In 18 agreements concessions have been obtained for Minnesota meat packers and livestock farmers. Reduction in tariff rates on lard has been obtained in 10 countries. Assurance against any increase in duties was obtained from 4 countries; and 1 country removed the duty. The United Kingdom increased the annual quota on hams; 12 countries reduced the rates of duty or granted tariff concession on American hams; bacon; fresh, frozen or cured pork, beef, and veal.

4. What concessions have helped Minnesota as a wheat-growing and flour-milling center? Minnesota is benefited by provisions in 11 agreements. The United Kingdom, largest wheat-importing market in the world, removed the duty on wheat, Canada reduced the duty, and two countries granted annual quotas. On wheat flour 7 countries either reduced the duty or gave assurances that existing duties would not be increased. The United Kingdom agreement removed the British margin preferences in 5 colonies.

5. What about agricultural machinery? In 9 agreements concessions have been obtained on agricultural machinery. Two countries reduced the rates of duty on cultivating implements and harvesting machinery. One country completely removed the duty on

these items. Two countries removed the duties on tractors and parts, 4 gave assurances against any increase, and 1 country bound tractors of wheel- and track-laying types on its free list. The United Kingdom agreement provides binding margin of preference in 12 British colonies on agricultural machinery, implements, and parts.

6. What have been the benefits to the dairy industry? Exports of dairy products in the United States in 1929 were valued at \$17,914,000 and at \$6,072,000 in 1932, while imports were valued at \$30,415,000 and at \$13,093,000 in 1932. Although United States exports of dairy products have never been large as compared with total domestic productions and consumptions, exports amounted to \$5,140,000 in 1937, compared with \$4,114,000 in 1936. Studies of nonfarm families show that consumption of milk and milk products rises rapidly as rising income makes possible larger per capita expenditures for food. Studies show that when average annual per capita for food is between \$30 and \$60 consumption of milk is about 125 pounds a year; when \$90 to \$120, it rises to 270 pounds; between \$120 and \$150, to 340 pounds.

Concessions granted by United States on dairy imports under the various trade agreements have been moderate, limited, and very carefully weighted in order to safeguard interests of American producers. Concessions on prepared milk, the principal export of dairy products, was given by six countries, in some cases as much as 68 percent.

7. What has been the result of the most-favored-nation clause? Lower tariff rates on some 600 items formerly extended by Canada to France, but not to the United States, now apply to American commodities. Among these Minnesota is particularly interested in reductions on fresh beef, veal, on wheat, wheat flour, and semolina, macaroni, and on pasteurizers for dairy use. Canada has also given more favorable treatment to American butter and certain types of cheese, and France has given improved treatment to condensed milk and infants' milk foods.

8. Has Minnesota labor benefited from the trade agreements? When foreign countries increase their demand for American products, industry must employ greater numbers of wage earners in order to produce these products. Increased employment in industries manufacturing export commodities increases domestic consumer purchasing power and creates greater employment opportunities for those engaged in supplying the domestic market.

9. Does Minnesota alone benefit as the United States benefits? If there is an increase in the number of cars manufactured in the United States for export, the manufacturing of those cars will increase the purchases of iron ore. Concessions obtained on American products not produced in Minnesota, such as plate glass, typewriters, chemicals, etc., benefit the citizen of Minnesota by creating domestic demand for Minnesota grains, meats, vegetables, and dairy products.

These figures have been taken from recently released State Department releases.

#### FARM BUREAU ON TRADE AGREEMENTS

I wish also to append hereto a telegram from the head of the American Farm Bureau Federation, which in my mind expresses a sane viewpoint regarding the trade agreements extension:

HON. JOHN G. ALEXANDER,

Washington, D. C.:

The last American Farm Bureau Federation convention, representing farmers in 39 States, endorsed without a dissenting vote continuance of reciprocal-trade agreements, all agreements to be approved by Secretaries of State, Commerce, and Agriculture. We respectfully urge your support of House Joint Resolution 407.

WASHINGTON, D. C.

EDW. A. O'NEAL,

President, American Farm Bureau Federation.

It is thus apparent that the trade agreements extension movement has considerable support from two rather divergent groups—the women and the farmers. Of course, there are farm women who are active members of the League of Women Voters, but I assume that the largest part of their membership in Minnesota is made up of women from the metropolitan centers. Consequently, I think they can be said to represent a cross section of the urban viewpoint. Thus we have above the organized views of two widely separated groups which have made a careful and detailed study of the subject of reciprocal-trade agreements and their effect and bearing on the welfare and daily lives of Mr. and Mrs. Average Q. Citizen as well as on the Nation's general prosperity and peace, and they favor extension.

How best we can preserve peace and promote prosperity is the great interest of all of us, and I am thus glad to present the viewpoint of these two great organizations.

## Swiss Cheese and Reciprocal-Trade Treaties

### EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. MURRAY. Mr. Speaker, the Swiss cheese industry of the United States is largely centered in southern Wisconsin. While some other States produce this splendid cheese about two-thirds of it is produced in the green valleys of Dane, Green, Lafayette, and Iowa Counties in Wisconsin. In Bulletin 200, United States Department of Agriculture, and Wisconsin Department of Agriculture, I find that during the last 4 Republican years, in the midst of a world depression, Swiss cheese averaged 22.9 cents per pound. It averaged 18.6 cents the first 6 years of the New Deal, or 23 percent less than the last 4 Republican years. The last 6 pre-New Deal years Swiss cheese averaged 24.4 cents per pound or 31 percent more than the 18.6 cents per pound for the first 6 New Deal years. All dairy products averaged nearly one-third more in the pre-New Deal period than in the days of the New Deal more abundant life.

The following table shows the domestic production and imports of Swiss cheese for the years 1933–39:

Calendar year	Swiss or Emmenthaler cheese	
	Production	Imports
1933.....	40,287,000	10,728,000
1934.....	39,449,000	6,819,000
1935.....	42,622,000	6,259,000
1936.....	40,078,000	6,237,000
1937.....	41,504,000	10,332,000
1938.....	43,084,000	9,904,000
1939.....	(1)	210,558,000

<sup>1</sup> Not available.

<sup>2</sup> Preliminary.

Source: Production Statistics 1931–37 from Agricultural Statistics, U. S. Department of Agriculture, 1939; 1938 data from reports of Bureau of Agricultural Economics, U. S. Department of Agriculture; import data from official statistics of U. S. Department of Commerce.

It will be noted from the above table that some years we imported up to 25 percent of the amount of our domestic production, and for the years 1933 to 1938 the imports have averaged over 20 percent of the domestic production. Of course, the new dealers tell us that just a few imports do no harm. Then they tell us we can hold farm prices up by the Federal Surplus Commodities route—when they spend \$66,000,000 in 1 year to buy up surpluses, and when we import \$868,000,000 worth of competitive agricultural products in 1 year, as we did in 1937. In fact, the \$868,000,000 worth of imports of competitive agricultural products in 1937 exceed the total of \$797,000,000 worth of our whole agricultural exports for the same year, and this was the first time in the history of the United States that this relationship of exports and imports of agricultural products has existed. The exports of agricultural products in 1939 were the smallest in the history of the country, when compared with imports. Our exports of agricultural products under the New Deal have dwindled down to 23 percent of our total exports—an all-time low.

Another interesting phase of these reciprocal-trade treaties is that they were inaugurated to stimulate trade. As far as agriculture is concerned it appears the stimulation is in favor of the foreigners as they have shipped us over 60 percent more agricultural products during the past 4 reciprocal trade treaty years than they have bought from the United States.

Following is a copy of radio address by Mr. Elliott Roosevelt appearing in the January 1940 issue of *The Protectionist*:

[From the *Protectionist* for January 1940]

AMERICA LOOKS AHEAD

(Radio address of Mr. Elliott Roosevelt, November 21, 1939)

Good evening, everyone!

The other night I had dinner in a restaurant and during the course of the meal a waiter came in with a great wheel of cheese.

It was good. It was so satisfying I couldn't believe it. It made me think of the easterner who went into the West and stood on the brink of the Grand Canyon for the first time. As his eyes swept across that infinity of space, he shook his head incredulously. "It's a lie," he said, "It's a lie!"

So I turned to the waiter, who by now was standing near me with the air of a great painter who knows he has just turned out a masterpiece. "Wonderful," I said. "This is wonderful. Where did it come from?"

"Switzerland," he replied.

I told him again how excellent it was. I said, "I'd like to buy one of those myself—a whole one—can you get it for me?"

For a moment he seemed startled. He seemed at a loss. He said, "Why, I'm sure it could be arranged, Mr. Roosevelt. I'll see. I'll speak to the manager myself."

In a moment he returned and said, "Look, Mr. Roosevelt. I'm going to tell you something about that cheese. You won't let it make any difference, will you? You won't stop eating it, will you?"

That was such a strange request that for a moment I couldn't answer. I said, "No."

"Well," he said, "I was fooling about this cheese. It didn't come from Switzerland. It came from Wisconsin—right here in the United States. It's the finest cheese in the world. But we have to tell some of our patrons it's imported or they won't want it. They think anything made at home is cheap."

Here in a sudden burst of confidence, this waiter was touching on one of the strange mental quirks in the people of this country—the mania that most of us have for something foreign—for something imported—something brought in under a high tariff and sold at exorbitant fees. We like to say, "Best wine in the world—straight from Tuscany." We like to say, "This new tweed is imported—just off the boat." We like to feast our eyes on the little label that says, "Made in England," "Made in Japan," or "Made in Germany."

But every time we do this we place a stigma on American ingenuity, on our own native resourcefulness and competence. If we have green pastures here, and cows grazing in them, why isn't our cheese just as good as the cheese from Switzerland? If we have vineyards here, and sunshine, why aren't the sunny fields of California just as health-giving and nurturing as the sunny hillsides of France?

To be guilty of the crime of pride in self or homeland leads to narrowness. To go around making the unqualified statement that American goods are inferior to those elsewhere is sheer ignorance and nothing else. The people who share this view are generally those who never had time to learn anything about the United States because they were always too busy reading about some other country. They know the names of Napoleon's generals but ask them the name of the lieutenant governor of their own State and they can't tell you.

Only the other day I was talking with a hotel man who had just come from a luncheon with another hotel man from Ithaca, N. Y. During the luncheon this visitor had been greatly impressed by the beauty of a certain kind of salad bowl which he saw at the hotel. "It's beautiful," he said, "where did you get it? I'd like to have some like it for our hotel."

"Well," said the other, "I hate to tell you this, because it might embarrass you. But this particular bowl came from Ithaca. There's a factory there that makes them. This factory, as I recall, is just a couple of blocks from your office."

That's the way it generally goes. For some reason, and it may be our imaginations playing tricks on us—most of us have a perverted sense of values. We aren't as bad about this as we used to be. We're waking up and realizing what a satisfying old country we live in after all. But all too often we still place emphasis on a label, "Made in Spain," "Made in Italy." Our own goods are similar to the prophet, who was not without honor, as you recall, save in his own country. And there was the easterner, as you also recall, who decided to make a grand tour of the Western States. In the desert he became fascinated with the Indians, who apparently were weaving beautiful Navajo blankets—before his very eyes. He bought several and took them home, and when he displayed them proudly to his friends, there was the little telltale label on each blanket, "Made in Paterson, N. J."

We say the Swiss know how to make fine cheese—and they do. But we have Swiss in this country—quite a good number. And we also have dairies—quite a good number. If a Swiss and a cow can make a cheese in Switzerland, why can't he make it just as good, just as fragrant, just as satisfying in America? And when I say cheese, I mean everything else, too—Paris styles and Hollywood styles, Montana T-bone steaks and Argentine T-bone steaks, Florida oranges and Spanish oranges.

LXXXVI—App—60

I'm not saying one shouldn't eat Spanish oranges. By all means, eat them—if you must. But don't go around making the assertion that Spanish oranges are superior to American oranges until you know what you are talking about.

There's no use denying it. Most of us are still a little in awe of what we call Old World glamor. The mere fact that a cheap pocket hankie comes from some shop on the Rue de la Paix seems to invest it with an irresistible charm.

Handkerchiefs and cheeses and finished products are one thing, raw materials are another. I don't mean that we shouldn't have free and open commerce between nations. That is essential. But the individual who spends his dollar for something that comes from a shop across the Atlantic when he could go down on Main Street and do just as well, is lessening the purchasing power of his country by just that amount. And when a sufficient number of people do this it begins to hurt.

But we are growing up. We are coming of age. And when the day finally comes that we can go to Switzerland and find the natives listening respectfully to the waiters, who whisper, "Sirs, here is a treat—a real treat. This cheese came all the way from America."

On that day, ladies and gentlemen, we shall have arrived.

I hope his philosophy is impressed upon his relatives, and on the new dealers who are giving the market of the American farmer to the cheap labor of other countries.

## The State of Kansas Does a Good Job of Conserving Her Oil and Gas Without Federal Control

### EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

STATEMENT BY HON. JOHN M. HOUSTON, OF KANSAS, BEFORE THE SUBCOMMITTEE OF THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE AT THE HEARING ON HOUSE RESOLUTION 290 AND H. R. 7372

Mr. HOUSTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the subcommittee of the Committee on Interstate and Foreign Commerce considering legislation on the conservation of petroleum:

Mr. Chairman, I am appearing before this subcommittee to give that which I sincerely believe to be the attitude of the oil industry of the State of Kansas toward the legislation under consideration, as expressed to me in conversations with and in letters from practical operators of my State.

It is my contention that Kansans neither need nor welcome Federal control of their oil industry. They are proud of their development and control of petroleum resources. The conservation laws of Kansas are sound in principle and practice and they are administered equitably.

A system of cooperation between the State authorities and the industry has been worked out which simplifies problems that might develop into menaces if they were handled by a distant, unsympathetic, and uninformed authority in Washington to whom Kansas would be only one item in a long list.

Production questions are determined by men who know the situation and who are part of the community. Kansans have confidence in these men because they know them, and if a mistake is made the case can be presented without long delays and expense involved in a trip to Washington.

When they are doing the work so satisfactorily at home, they can see no reason to call in an expensive outsider who could do the job no better and probably not so well as it is being done now.

Kansas cannot afford to have her oil industry injured by absentee administration. It is an important element in the industrial life of the State.

Mr. Joseph A. Kornfeld, of Wichita, Kans., very ably summed up the views of Kansas oilmen in an editorial in the *Wichita Beacon* of December 24, 1939, as follows:

"A most significant trend of the times is the movement toward administrative control, as contrasted with judicial control. By administrative control in government is meant the operation of functions from a central governmental body not strictly limited by the restrictions of the law of the land. This contrast is the opposition of public law with and over private law, in the sense that the public law places a higher value on the official and

his acts, whereas private law places no higher value on official acts and treats all as equal before it.

"Administrative control as opposed to judicial control resolves itself into the acts of governmental individuals in the sense that power centralized is at once both vague and far-sweeping. Psychologists say that it is impossible for a human being to exercise a power of determination completely impartial and objective; what he does do is the natural result of a combination of his personal environment, prejudices, and temperament. In a legal sense, what he wills has the force of law, and he is, to some extent, freed from the scope and sphere of the laws.

"This is a phenomenon operative under bureaucratic democracy, wherever it exists; in that absolute bureaus, boards, and government administrators may rule by discretion instead of by law. Technically freed from 'hampering' constitutional checks, they may impose their views of expediency in what they consider to be the public interest or the general welfare, until a congressional act either abolishes their department or after a time re-creates it.

"Under such a condition, rights are relegated to the background, the value of property is lessened, the true concept of liberty is diminished, and the private law made less operative.

"Bureaucratic control thus may go, and often does go, off on tangents far outside the legal circumference originally established by law. As the momentum of duties and scope of geographical influence expands at a tremendous pace, centrifugal force often carries regulation far beyond the legal confines of regulation. The policeman, instead of regulating the movement of traffic, for a time steps into the capacity of the driver of the car of industry.

"The need exists for a guaranty of two functions: (1) Guaranty against taking for public use without due compensation, and (2) guaranty of due process of law. These two guaranties must exist if individual rights of property are not to be destroyed. Thus unchecked discretion and undefined ideas of public policy are constant threats to property.

"The Cole oil bill presents the danger of bureaucratic control over the oil industry in that there is no recourse to the acts of the Federal Conservation Director provided for under the bill. The bill provides principally for the prevention of waste but makes no provision for ratable taking, limitation of production to demand, and for correlative rights. The conservation director is empowered with the right to step in in any oil field of the Nation and establish rules after a public hearing is held; the principal danger lies in his exerting those powers not specifically called for in the bill under the prestige of office of a Federal oil director. Opposition to the bill is gaining momentum from the oil-trade associations. \* \* \* States' rights are at stake, as well as the right of free enterprise and initiative."

Mr. Chairman, I would like to tell the subcommittee something about the oil industry in Kansas and what it means to my State.

Kansas oil wells are not great gushers such as have been found elsewhere. They are small wells. The average output per well per day is only seven and one-half barrels. There are few flowing wells in the State. All the oil which the 21,264 wells in Kansas produce must be pumped. That means employment of labor. Kansas, in spite of this high production cost, has been making a substantial contribution to the prosperity and general welfare of the Nation. It was giving employment to 9,470 persons at the oil wells alone in 1937, the latest figures available. The refineries in Kansas during 1937 numbered 3,335 wage earners, receiving a total annual wage of \$5,399,000.

Oil is a leading crop in Kansas. The estimated value of the oil production in the State in 1938 was \$72,100,000. This was one-third of the total value of the leading crops and stock in Kansas during that year, including wheat, cattle, milk, corn, and hogs.

In the 50 years that Kansas has been producing oil, up to January 1, 1939, our total production has amounted to 1,435,000,000 barrels produced at an average value of \$1.48 a barrel. Today, because of competition, largely based upon foreign imports, the value of a barrel of Kansas oil has dropped to \$1.19.

Kansas has not only been producing oil, it has been adding to our reserves by new discoveries promoted by the fairly good price which has been received for our petroleum. During 1938, 43 new fields were discovered in my State with an estimated potential recovery of 65,800,000 barrels, making a net increase in the reserves during 1938 of 6,213,000 barrels.

In Kansas there are 19 companies operating refineries with a crude capacity of 176,800 barrels per day, or 4 percent of the total refining capacity of the United States. The amount of oil which Kansas can refine is greater than the amount that Kansas produces, the ratio of refining capacity to crude production being 111.1.

This industry and the economic values which it represents and vital relationships which exist between it and other branches of the Nation's business has developed on a sound basis.

In addition to the active production element in the industry, others in Kansas have an important interest in the efficient local administration of her conservation laws. About 30 percent of the total farm population of Kansas lives on lands which either produce oil and gas or are under lease for that purpose. The owners of these lands, where productive, derive substantial income from the royalty, or share of the revenue, and where not productive they receive rentals. In addition, they are paid bonuses for signing leases, the amounts varying according to the proximity of the land to oil and gas production or to position on known geological structure considered favorable to the discovery of new fields.

Fortunately, the leasing activity and the development of western Kansas came at a time when the area was badly in need of money.

Independent producers started the "play" and their number increased as one county after another became productive. In the 10 years, 1928 to 1937, inclusive, it has been found by a careful check of the activity over this period that a total of \$40,500,000 came into western Kansas in the form of bonuses for leases and that \$56,500,000 was disbursed for rentals on acreage.

At the beginning of the year 1938 there were approximately 10,250,000 acres under lease in the western part of Kansas—west of range 1. Average rental being paid on that date was 75 cents per acre.

It was the area west of range 1 that was in greatest need of this help. Range 1 is the meridian which passes through Wichita. East of this is the older producing area of the State, whose development dates from 1889. Included in the area west of range 1 and counting those counties through which this meridian passes, there are 61 of the State's 105 counties. They have a total area of 34,009,609 acres; thus, on the first of 1938 approximately 30 percent of this area was under lease. Some of them were as high as 90 percent leased. Some, far from producing fields, were 2 and 5 percent leased; all, however, were sharing to some extent on the huge disbursement of rental money.

The leasing activity began a little back of 1928 in the western Kansas area. In 1927 there was a total of 870,000 acres purchased. This jumped to 1,550,000 acres in the following year. The next year, 1929, was the high point of lease acquisition, with 4,500,000 acres added. In 1937 there were 1,750,000 acres purchased—put under lease—and of this, as of the other figures given in this paragraph on leasing, it is estimated that 95 percent or more was west of range 1.

As one example of the disbursements in counties not yet producing oil, Ford County, with a total area of 692,480 acres, was 30 percent leased at the beginning of 1938. That would mean 207,744 acres and, at 75 cents per acre, the indicated income from rentals is \$155,408 per annum. The total tax on farm lands and improvements for 1937 in Ford County was \$239,821. Still more striking is Grant County. Its total area is 369,920 acres, and on January 1, 1938, it was 80 percent leased. At the 75-cent rental, that would indicate receipts of \$221,952. Its tax bill for 1937 was \$98,388 on farm lands and improvements.

For all the 61 counties west of range 1 and through which that line passes, the total taxes levied on farm lands and improvements for the period October 16, 1937, to October 15, 1938, was \$10,919,274 and the oil "crop"—income from rentals, bonuses, and royalties for the year 1937—was \$19,600,000.

In 1936, when the taxes on farm lands and improvements were \$10,018,367, the oil "crop" amounted to \$15,440,000.

These revenues, incidentally, compare quite favorably with the Federal payments on crops and livestock. In 1936 such payments for all Kansas totaled \$34,718,000 and total oil revenues from the three sources—rentals, bonuses, and royalties—for all of Kansas are estimated at \$18,542,563. In 1937, the oil "crop" went ahead of the Federal disbursements, the figures being \$18,512,000 from the Government and \$22,836,000 from oil. The chief difference is that the oil money did not swell the public debt and does not have to be repaid in any form by the recipients.

The big year for Kansas oil was 1937. Total production for the territory west of Range 1 and the counties through which that line passes was 43,361,350 barrels and the average price was \$1.25.

The several thousand wells that have been drilled left a portion of their total cost in the community in the form of wages paid to labor, mostly spent in turn in the community. Expenditures for food, lodging, clothing for the army of oil operators and their employees; the purchase of supplies of all kinds, including oil and gas, in the numerous towns where leasing and development have been carried on for years; the creation of taxable wealth, helping to bear the cost of government; the payment for shooting rights on acreage where seismograph parties were working—all make up an amount not susceptible of estimation, but undoubtedly quite large.

Kansas has developed these closely integrated phases of her petroleum industry under home rule and local self-government. The people of our State cannot seriously consider changing from a system which has proven so successful and in which they have a representative part to an untried program in which they could not share and the success of which is so highly problematical.

## The Fur Farmer and the Trade Treaties

### EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. MURRAY. Mr. Speaker, the critical problems of the fox farmers of this country are due to, first, the reduction of the tariff from 50 percent to 37½ percent, which went into effect on January 1, 1939, and later reduced to 35 percent, and, second, the war situation, which has caused demoralized foreign markets.

The weakened foreign market pointed the furs toward the American market, which had already been next to ruined by the lowering of the tariff on January 1, 1939. The State Department in late 1939 put a quota on silver fox of 100,000, but again reduced the tariff by 2½ percent.

Wisconsin produces about 54 percent of the foxes of this country. The Seventh Congressional District of Wisconsin is honeycombed with small fox breeders. These people, largely interested in dairying, are ideally equipped to be fox farmers as they have the husbandry and natural livestock experience to make them successful fox breeders.

Since more foxes were imported into this country in the first 2 months of 1939, than during the entire previous year of 1938, that alone is an indication of the damage resulting from the lowering of this tariff.

Reliable fox breeders estimate that the Canadian reciprocal-trade treaties cost them over \$3,000,000 in 1939 alone, or a loss of 30 percent.

The quota of 100,000 is of little value under normal conditions, as the yearly imports up to 1939 have been increased from 21,098 in 1931 to 25,994 in 1937.

If the normal United States consumption is computed at 250,000 furs this is giving away 40 percent of our market. If it is computed at 300,000, that would be giving away 33½ percent of our market.

The following table shows the imports for the period 1929-38:

Imported from—	1929	1931	1933	1935	1936	1937	1938	Total for 1939
Canada.....	622	2,094	848	1,175	6,402	7,959	8,685	-----
United Kingdom.....	23	-----	688	24	7,844	11,656	3,396	-----
Norway.....	-----	-----	-----	-----	1,000	6,188	4,015	-----
All other countries.....	9	4	465	6	543	191	372	-----
Total.....	654	2,098	2,001	1,205	15,789	25,994	16,468	133,251

<sup>1</sup> Of which \$5,000 were from Canada.

The above shows an increase of over 800 percent in imports of 1939 over 1938, enough to ruin any market in the world.

I have personally seen the many small fox farmers of my home district develop their activities from the initial pair of foxes to a business of proportions.

The reciprocal-trade treaties have done an untold injustice to these fox breeders by lowering the tariff so greatly. Not only do I receive communications from my own people, but many others write me about the fox-farm situation, an example of which is shown by the following letter:

GOLD STAR FUR RANCH, INC.,  
Owatonna, Minn., January 31, 1940.

HON. REID F. MURRAY,  
Washington, D. C.

DEAR SIR: By jove, who would have thought it? The Canadian and Norwegian fox ranchers are trying to undermine the quota to get their platina, white-faced, and ring-neck foxes in without duty and not on the quota. What a gyp! Our breeders did not even think of protecting themselves by naming all those color phases separately, because they were honest and knew they are nothing but silver fox in its variations. But the foreigners lay quiet until all was set and then come in with this foolish argument for Hull to fall for—the argument that they are a separate breed of their own, which everyone knows is not true. So, for heaven's sake protect us against that sort of thing, because that will lick us. What we want is as follows:

1. Put the trade treaties back in the hands of Congress.
2. Do not let platinum, ring-neck, or white-faced foxes in without duty; and count them in on the quota. Do not class them under anything but silver fox, because that is what they are.
3. Have the trade treaties cease when they expire in June.

The fact that they pulled this dirty stunt on us gives Congress a good point of argument in favor of a smaller quota and higher tariff, because they were not satisfied with things as they are, but want really to "hog" our markets, and do not care a rap whether or not the American rancher gets a dollar for his pelts or not. This stunt of their's makes us all angry and makes us want to shut them out entirely, which I hope you can do. So spread the news among all the Members, and fight, fight, fight, now, because now is the only time.

Yours truly,

GOLD STAR FUR RANCH,  
W. C. LIDDELL,  
President and Treasurer.

P. S.—January 9 they had a meeting with the Commissioner of Customs. Kindly get to him at once and stop this.

The reciprocal-trade treaties will go down in fox-farm history as one of the most unfair pieces of legislation that has jeopardized one of the infant industries of our country.

## Lincoln Day Address

### EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ADDRESS BY HON. BRUCE BARTON, OF NEW YORK

Mr. HARTER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. BRUCE BARTON, of New York, at the Lincoln Day dinner of the Buffalo Athletic Club of Buffalo, N. Y., February 12, 1940:

We are met here to honor the memory of an American who was ill-fed, ill-clothed, ill-housed—and did not know it.

He was born in a log cabin without heat, running water, or any modern convenience. According to a philosophy now widely current, this was a hopeless environment; it should have convinced him from the start that he was doomed to failure.

His clothes were of crude homespun, ill-fitting, and worn until the fabric would no longer hold a patch.

His diet of corn pone and bacon lacked essential vitamins. His schooling was limited to a few scattered weeks, under teachers whose own schooling had been meager.

In such circumstances he should have been told that there was no hope. But no one told him this. Instead, he was told that he was fortunate because he had been born in a country where any boy might properly aspire to even the highest success, even the Presidency of the United States.

He was told, also, that self-discipline and hard work were his only path to salvation, and that if he neglected them he would be poor and wretched all his life.

It was generally accepted in those days that the privilege of self-government involved the responsibility of self-support.

The rule of living was the rule of thrift. The first three commandments were: "Eat it up;" "Wear it out;" "Make it do."

He had every excuse for discouragement, self-pity, and revolt. He should have been good material for the Communist Party, an excellent professional delegate to congresses of American youth. As such he might even have been invited to luncheon at the White House.

But no one let him know that the cards were stacked against him. No one suggested that it was useless to try. No one said: "It is too bad you did not come over here in the *Mayflower* because then you would have had a chance. Now it is too late. You were born poor and you will die poor. All the real chances are gone."

Instead, they said: "Root hog, or die." And, though in later life he had his dark moods of spiritual depression, he never seems to have doubted that, given any sort of break, he could and would take care of himself.

The name is Abraham Lincoln. As our distance from him increases his stature looms higher and his shadow lengthens. More and more he comes to be regarded as the greatest American.

In opening my remarks on this note I would not have anyone assume that I am unsympathetic with social reforms. The obligations of government now are very different, and rightly so, than they were in 1812.

"New occasions teach new duties,  
Time makes ancient good uncouth;  
They must upward still and onward  
Who would keep abreast of truth."

Everything government can properly do to adjust the handicaps in the game of life has the cordial approval of all right-thinking men and women. You and I would have no child born in a log cabin, no American, old or young, ill-fed, ill-clothed, or deprived of opportunity for self-respecting employment and the chance to contribute, up to the limit of his talents, to the progress of the community.

But my text tonight is neither the material handicaps of Abraham Lincoln nor the public career of Abraham Lincoln. I propose to speak briefly of the faith of Abraham Lincoln. I seek to remind you of the ancient truth that the life is more than meat and the body than raiment. We need this reminder. All our talk for too long has been of our stomachs and our pocketbooks. We have chattered on and on about the standard of living, when it is only the standard of our inner living—ambition, hope, self-reliance, sacrifice, faith—that makes life worth living at all. We bow low before the golden calf of "purchasing power," and interpret the more abundant life in terms of the second payment on a second car. Our eyes are blurred with covetousness, jealousy, and avarice; and we have almost forgotten that where there is no vision the people perish as surely as where there is no food.

From all this worship of the unreal and unimportant we draw ourselves apart tonight, to restore our perspective and refresh our spirits in reverence for Abraham Lincoln.

Today is the one hundred and thirty-first anniversary of his birth. One hundred years ago he was still unmarried and living in Springfield. He was a member of the Illinois State Legislature and junior law partner of John T. Stuart. I have framed on my office wall the original of the following memorandum in his own handwriting:

"Received of Moses M. Martin as administrator of the estate of Isaac Martin, deceased, the sum of seven dollars & fifty cents, in full for services rendered said estate.

"STUART & LINCOLN.

"OCTOBER 15, 1938."

This was in the days when a dollar was a dollar, and not 59 cents, when a man's estate passed to his children and not to the tax collector, and when a lawyer's duties were quickly performed and cheaply paid because they did not involve interminable wrangling with his government.

As a young man Lincoln once floated down the Mississippi on a raft of logs to be sold in the lumber market of New Orleans. Those logs were cut by rugged men who swung their axes in the wilderness from sunrise to sunset. Most of them, having little ambition or imagination, were not more successful in those good old days, now regarded as teeming with opportunity, than they would be today. They were born poor, worked hard, spent more than they earned, or invested unwisely, and died poor. Only occasionally one of them, looking further ahead, was willing to forego the immediate expenditure of his wages and stake his surplus on a gamble on the future. Such a man bought cheap woodland, hired other men to chop, and by wise management accumulated capital, perhaps a fortune. The lumber built homes; it became ties for railroad tracks spanning the continent; it became ships that carried the flag of the young country across the seas.

The men whose courage and capital shaped the timbers and fashioned the houses and the ships and stretched the gleaming rails across the prairies were once hailed as "subduers of the wilderness," "developers of a continent," "conquerors of a new world," "creators of a civilization."

Of late we have been told that they were only "pillagers of our natural resources," they were "robber barons," they "stripped a continent of its riches," they took all and contributed nothing.

Some years ago, John A. McCall, builder of the New York Life Insurance Co., lay dying. It was soon after the Hughes investigation had shown some glaring inequities in the conduct of the insurance companies, and the New York World was running day after day at the head of its editorial column, "McCall must go. McCall must go."

Smarting under the abuse, broken-hearted by the awful fall from popular esteem to public hate, McCall turned his dying eyes to a friend and exclaimed, "My God, and did I never do anything good for the New York Life?"

Our fathers lived in the age when the men who made America were all good; now we have the age when all they did was bad. So the pendulum swings from right to left, from overpraise to overblame, from pride to cynicism.

Lincoln steered a middle course. He was not much impressed by position or wealth. He once remarked, "I have talked with great men, and I cannot see wherein they differ from others." He contended that God must love the plain people, or He would not have made so many of them. He never lost his sympathies with the poor and distressed. On the other hand, he knew that unless there were opportunity and reward for the self-reliant we should have no progress, for it is ever the strong who must pull and the weak who ride.

Said he (in 1860): "What is the true condition of the laborer? I take it that it is best for all to leave each man free to acquire property as fast as he can. I don't believe in a law to prevent a man from getting rich; it would do more harm than good."

And in the year preceding: "Men who are industrious and sober and honest in the pursuit of their own interests should after a while accumulate capital, and after that should be allowed to enjoy it in peace, and also, if they should choose, when they have accumulated it, to use it to save themselves from actual labor, and hire other people to labor for them. In doing so they do not wrong the man they employ, for they find men who have not their own land to work upon, or shops to work in, and who are benefited by working for others—hired laborers, receiving their capital for it. Thus a few men that own capital hire a few others, and these establish the relation of capital and labor rightfully—a relation of which I make no complaint."

Are these the words of a reactionary with no social conscience? They are the words of one whose tears ran down his cheeks as he reviewed the applications of condemned soldiers for pardon, and who put his hand to the document that set 3,000,000 human beings free.

We honor him as the high, calm, brooding, dauntless spirit that kept alive the courage of our ancestors through their severest crisis and left us a united Nation. We say of him: "He won the Civil War." But in another, though more limited sense, it might be said that Cyrus McCormick won the Civil War. The invention of the reaper came just in time to make it possible for the lesser strength of women and children to harvest the crops and so free the men from the wheat fields for the field of battle. Lack of food and transportation hampered the Confederacy even more than lack of men. Without the reaper the Union armies could not have

been so adequately fed, and the war conceivably might have had a different ending.

Nothing could illustrate more aptly the necessary interdependence of government and industry. Those men, either in government or in business, who minimize this interdependence do the country poor service. We know that without stable government business cannot prosper, whatever the ingenuity or initiative of its managers. We know this because it has been proved in our history. In the days immediately following the Revolutionary War our ancestors found themselves in possession of a country richer in resources than any in the world. Fish and fowl, timber and metals, fertile land and water power—every material asset was here for the creation of quick and widespread prosperity. Yet the letters written at that time reflect demoralization and hopelessness on the part of Americans in private as well as public life. A few years passed, just a very few years, and Thomas Jefferson was able to write to a friend abroad that the country was enjoying almost unbelievable prosperity, that of all lands under the sun ours was surely the most to be envied.

What had happened in that little interval? The same land was here, the same resources, the same people. What miracle had so suddenly banished fear and inspired an almost unlimited hope? Only one thing. In those brief months a stable government had been set up, and George Washington elected President of the United States. The Government had indicated its purpose to restore and defend the national credit, which is the foundation of all business confidence. This rich country, lying prostrate, was transformed into a rich country standing upright, forward looking, strong and self-reliant, because, and only because, of government. Without strong government there can be no business.

Equally it is true that prosperous, independent business is the indispensable support of liberty. Democracy breaks down first, not in its political machinery, but in the economic processes which nourish it. Bad business, unemployment, hopelessness on the part of employer and employee alike—these have been the beginning of the disaster in every country where democracy has been lost.

Abraham Lincoln saw this two-sided picture as clearly as any man who ever lived. There were some greedy, selfish businessmen and bankers in his day, as in every other. When a delegation came to him from Wall Street complaining about the burden of taxation and governmental interference with their business, he gave them short shrift. Unless the Government should succeed in saving the Union, he said, they would have no business. He could utter stern rebuke when private enterprise needed it, but he made no trips around the country denouncing businessmen, or threatening that "if business does not, Government will." He knew that, in the final analysis, the preservation of the Nation depended not on bureaucratic controls, but on the character and self-reliant effort of the people, expressed through their own freely managed activities, big and small.

Never in his long political career did he utter a demagogic appeal. Never did he promise that merely by turning one party of politicians out and installing its opponents in office the people could solve all their problems, or relieve themselves of the obligations of self-reliance and toil. He knew too well the tragic history of such promises. He may have remembered the night when Napoleon stood in his palace in Paris after the defeat at Waterloo, surrounded by a little remnant of what had been his glittering company of courtiers. It was a warm night, and the windows were open. Outside in the street a crowd of common people gathered and cheered Napoleon, and begged him to form them into another army and lead them once more against his foes. Amazed by the demonstration, Napoleon turned to his followers: "Why should they cheer me?" he exclaimed. "What have I ever done for them? I found them poor, I leave them poor."

This is the bitter epitaph of too many of the world's political great. They find the people poor; they promise them an easy abundance, and they leave them poorer, not only by added debt but by the loss of their illusions and their hope. The record of industry, on the whole, is better than the record of government. Business does not find the people poor and leave them poor. Business finds the common man chained to his doorstep with no horizon beyond the limits of his own small town. It leaves him in his automobile, freed from the shackles of time and distance with the whole continent for his playground. It finds the farmer bending over the hoe, or the farmer's wife over the washtub, as their ancestors had done before them wearing themselves into early graves; and it leaves the farmer riding on his tractor, the woman sitting beside an electric washing machine, each one doing more work in a day than used to be possible in a week, and coming to the end of the day untired.

The New York World's Fair, that stunning record of the past and thrilling promise for the future, was not Government's creation, but the child of industry. Henry Ford has had more influence on the breadth and scope of American life than almost any dozen sessions of Congress. There are industries in your own city that have added more to the health and happiness of the people of your State than any session of the legislature. The abundance of life that can be enjoyed on this rich and still young continent is unlimited if American Government and American industry work together in mutual understanding and respect. This truth Abraham Lincoln knew, and by it he profited.

Of late we have been misled and disheartened by the repetition of too many myths. The myth of the simple days, the days when everything was easy as contrasted with the present when problems are assumed to be hopelessly complex. But there never were any simple days. Listen:

"Whatever the cause of the panic the disaster was widespread; bank after bank went under, boom towns in the West collapsed; eastern mills shut down; working people in the industrial centers, starving from unemployment, begged for relief."

To what panic do those doleful words refer? To the panic of the complex days of 1929? No. The panic of the simple days of 1837.

We are incessantly assailed by the myth of the vanished frontier. It was in 1893 that Prof. Frederick Jackson Turner delivered his now famous address at the Chicago World's Fair, pointing out that the census of 1890 had, for the first time in our history, revealed a slackening in the western surge of population; the free land was gone. For more than a generation his address was neglected and almost forgotten, until suddenly it was resurrected to become the theme song of the despairers of today.

What are the true facts? There never was a frontier in the sense that any man or family, regardless of its ability or determination, could move West and find easy fortune. Tens of thousands were born in log cabins in the same year Lincoln was born, and many if not most, of them died in log cabins. The pioneer is a creature not of time but of spirit. The frontier, like the kingdom of heaven, is within us. If America's horizontal frontiers are closed, our vertical frontiers, the possibilities of lifting the whole standard of American life have hardly begun to be explored.

Depressing myths are no invention of the present; they have been always the escape and the alibi of the faint of heart. Abraham Lincoln had no time or patience with them. The Civil War which he and others had hoped would end in 90 days dragged its bloody course across 4 frightful years. All around him men lost their hope; great newspapers cried out against the awful slaughter and called for a truce. Many expressed open and even violent doubt as to whether the Union at such a price was really worth preserving. In their hearts they surrendered, but never he. He had learned from his earliest youth that what is most precious in life must be paid for in hardship, and staying power, and blood. These are his words to the soldiers of the One Hundred and Eighty-sixth Ohio in the fourth year of the war:

"I almost always feel inclined, when I happen to say anything to soldiers, to impress them, in a few brief remarks, the importance of success in this contest. It is not merely for today, but for all time to come, that we should perpetuate for our children's children that great and free government which we have enjoyed all our lives. I beg you to remember this, not merely for my sake but for yours. I happen temporarily to occupy this White House. I am a living witness that any one of your children may look to come here as my father's child has. It is in order that each one of you may have, through this free Government which we have enjoyed, an open field and a fair chance for your industry, enterprise, and intelligence; that you may all have equal privileges in the race of life, with all its desirable human aspirations. It is for this the struggle should be maintained, that we may not lose our birthright, not only for 1 but for 2 or 3 years. The Nation is worth fighting for, to secure such an inestimable jewel."

Those solemn and prophetic words should be a part of the ritual of every American home.

Often disappointed in subordinates, often let down by those in whom he had placed responsibility, he never lost his trust. His clear, firm eyes pierced deep into the souls of men and women and knew them for what they are—none wholly bad, none completely good. But, on the whole, more good than bad.

So he believed in the masses.

So, also, he believed in himself. That he might save the Union, he was willing to humble himself to an extent which made some of his associates burn with anger. When one night General McClellan delivered an unforgivable snub, Lincoln's aides hotly demanded that the contemptuous young general be forthwith removed. Lincoln brushed them serenely aside. "I will hold McClellan's horse," he said, "if only he will give us victories." The self-abnegation denoted no lack of self-respect. On the contrary, he knew himself to be so immensely superior that he could afford to be immensely tolerant. A powerful Senator came to him another night at the White House to demand that he reorganize his Cabinet. The Senator, a friendly supporter, pointed out what was only too clear to every Washington observer, that Secretaries Seward, Chase, and Stanton each believed himself better fitted for the Presidency than his chief. Lincoln refused to take the suggestion seriously. He knew the faults of his advisers, he said; he knew their private criticisms and connivings, but he had no fear. The Senator, recording the conversation in his diary, wrote in some amazement: "He (Lincoln) said with a good deal of emphasis that he was master."

A few months after Lincoln's death, young John Hay, who had been his secretary, was in Washington and paid a visit to this same Senator. Dissensions between the new President Andrew Johnson and the Congress were high, the problems of reconstruction seemed almost too great for solution; Washington was a distracted city. Wrote young John Hay in his diary: "He (the Senator) feels very gloomy. Thinks we are going to the devil. He is a brighter man and an older man than I, but I know we are not."

Lincoln never for one moment allowed his mind to entertain the poisonous idea that America or the American people were going to the devil. He carried the feelings and faith of youth into old age, and this is genius. Buoyed up by the inner consciousness of mastery, he cared little what the uninformed might say or do. Men disappointed him often, but he never let himself grow cynical. Presiding over a land torn by civil strife, he kept his eyes fixed firmly on the hour of reunion which he knew must come.

Inwardly warmed by spiritual fires, he was almost unconscious of being ill-fed or well-fed, ill-clothed or well-clothed, ill-housed or well-housed. He believed in the American people, in the integrity and strength of his own purposes, and in the final victory of the will of God. In this conquering faith he solved his seemingly impossible problems. Insofar as we are worthy to share that faith, we shall solve our lesser problems, also.

Let us then here rededicate ourselves to the service of our country that he, being dead, shall not have died in vain. Let us drink deep of his belief in America, and be ashamed of our doubts. In his own words:

"With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in \* \* \* to do all which may achieve and cherish a just and lasting peace among ourselves, and with all nations."

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. THOMAS F. FORD. Mr. Speaker, with the main purpose of the reciprocal-trade program the opening of markets for our export surpluses—both agricultural and industrial—no group takes issue. But some, following the exploded theory that a nation is enriched only through its exports and is impoverished by its imports, are honestly worried over imports. It is on agricultural imports that the opposition has centered.

Yet it can be shown and has been shown that there is no basis for such opposition. The fact is that our export trade with the 21 countries with which we now have trade agreements fell from \$3,000,000,000 in 1929 to one-third that in 1933, and has doubled since the trade agreements have been made. Moreover, our export trade with the agreement nations increased 61 percent between the years 1934-35 and 1937-38, while our import trade increased only 35 percent. With the nonagreement countries our imports and exports each increased about 37 percent—a slightly larger percent of imports than with the agreement countries, and a much smaller increase in exports.

#### FARMERS' CASH INCOME INCREASED

Perhaps the best test of the effect on agriculture is a comparison of our farmers' cash income at different periods. In the tragic boom year of 1929 our farmers' income exceeded \$11,000,000,000. At that time farm products in the United States supplied 90 percent of our home consumption of such products. While the farm income fell in 1933 to a little over \$5,000,000,000, the American farmer supplied 93 percent of the home market for such products.

The trade-agreement program has left the farmer in possession of 93 percent of the home market, while the farmers' income has risen to nearly \$8,000,000,000.

How any friend of the farmer can ponder these facts and still claim that the farmer is suffering from the program is beyond the comprehension of most of us.

#### AGRICULTURAL IMPORTS PRINCIPALLY NONCOMPETITIVE

Of course, everybody knows that we have a long and important list of agricultural commodities that we do not produce here and that we regularly import. And yet the opposition has the brazen effrontery to cite the \$795,000,000 of "agricultural" products that were imported in the first 9 months of 1939 without making any attempt at breaking these figures down to show what percentage of these imports are or are not competitive products. Common honesty demands that this be done, and when it is done, the facts disclosed are as follows: At least two-thirds of these products, amounting, roughly, to \$530,000,000, were products that the Smoot-Hawley Tariff Act placed on the free list because they are products that we do not produce at all and must import or go without. Among these necessary imports, entirely noncompetitive, are coffee, rubber, raw silk, bananas, cocoa beans,

tea, carpet wool, sisal. Even the most rabid proponent of a high protective tariff admits that such essential products should be admitted free of duty. Therefore the only possible controversy is confined to the remaining one-third of the agricultural imports.

These include products which we produce but not in sufficient quantities to supply our needs. Practically all are subject to a high duty. But that duty has not stimulated production sufficiently to meet the home demand. Imports are necessary. Then there are products which have different grades or qualities, not produced here in sufficient quantity, which must be imported. The high tariff does not keep them out, because we want and need them. The same is true of certain fruits and vegetables that are produced here only in restricted seasons. We import when a home supply is not available.

#### DAIRY AND CATTLE IMPORTS INSIGNIFICANT

The charge that the dairy and cattle industries are injured by the program has been proven untrue. Secretary of State Hull pointed out in a recent speech that the income of the dairy industry declined under tariff embargoes from over \$1,800,000,000 in 1929 to about half that in 1932, and rose under our trade program to nearly \$1,400,000,000 in 1938. There is no denying that. Nor is there any denying that in 1938 the imports were only one-half of 1 percent.

As to the cattle industry, it still has from 95 to 98 percent of the home market and the one and a half percent admitted under the trade agreements are subject to quota, grades, and other restrictions. Incidentally, those politically minded cattlemen who are attacking the trade program might take a look at their bank accounts, at the high market quotations, at the black ink which has replaced the red ink of the Smoot-Hawley period.

#### PROGRAM HAS STIMULATED EXPORTS

Turning now to the general effects of the reciprocal-trade program, we might ponder on the increase in exports of industrial plants. As I have stated, the exports to trade-agreement countries increased 61 percent; to other countries, only 38 percent. This is from 1934-35 to 1937-38. Turning to the statement of Isador Lubin, Commissioner of Labor Statistics, Department of Labor, I quote this paragraph:

This increase in exports provided a direct stimulus to employment. According to estimates made by the Department of Commerce the number of persons directly employed in the production of exported manufactures increased from 374,000 in 1933 to 673,000 in 1937, an increase of approximately 300,000. This figure takes no account of persons employed in the transportation of the exported commodities, such as railroad, truck, ocean shipping, and longshore workers, and, furthermore, it does not include persons employed in the production or transportation of the raw materials, fuel, and other products used in producing these exported commodities. Hence the increase of approximately 300,000 jobs represents only a part of the employment directly created by the increase in our export trade. Nevertheless, it is a substantial figure, showing that our export trade in manufactured goods has made a substantial contribution to business recovery since 1934.

#### IMPORTS NECESSARY TO OUR LIVING STANDARD

As I said, no one objects to exports. But it is essential to realize that, without imports, it is impossible to keep up a large export trade. Imports and services—shipping, banking, insurance—must in the long run balance exports and services. That is, our credits for exports and services we perform in the way of shipping, and so forth, must ultimately balance our debts for imports and services rendered us. The only alternative is for us to take foreign securities, foreign investments, or gold. We have been taking the gold and have thus accumulated such an enormous quantity that it has become a major problem. This gold, incidentally, came to us not because we pay \$35 an ounce for it, the fact being that the price of gold has been generally uniform in the United States, England, France, and other nations. The gold has been shipped here to establish credits either to pay for the greater value of our exports over our imports or to invest here because under the New Deal this has become the safest country in the world for investment.

I am told that one of our largest apartment houses in the city of Washington is owned by the queen of a friendly little

neutral nation and that many other large buildings here and in other cities are owned by well-known citizens of other nations. Those investments have been made possible through the shipment of gold here and not by larger imports.

#### TRADE AGREEMENTS HELP BOTH INDUSTRY AND AGRICULTURE

My own great State of California has greatly benefited from the reciprocal-trade agreements. They have opened markets for our surplus dried and canned fruits and vegetables and for other agricultural products. And by stimulating industrial production the agreements have opened thousands of jobs, at a time when jobs are the crucial need of our disturbed people. This has only just begun. It is my hope and my belief that with a development of this program, with a steady increase in production, transportation, and consumption, more and more employment will be created. This is essential to the very life of thousands of our citizens who survived the boom of the twenties only to find themselves bereft of their savings and unable to get a new foothold in a rapidly changing scene which left them impoverished in the midst of "surplus" products of all kinds.

To repeat, I wish to again state that the reciprocal-trade treaties have opened markets for millions of dollars' worth of our surplus commodities. By so doing they have given employment to hundreds of thousands of our citizens. They have helped the employer and the factory worker by opening the way for the sale abroad of surplus factory products, while lowering the tariff on essential raw materials. They have helped the farmer in two ways. First, by opening markets for a part of his surplus and thus also preventing a collapse of domestic prices; and they have helped him in an indirect and even more important way by increasing the employment, wages, and purchasing power of his city customers.

Lastly, the program has been of untold benefit to consumers by keeping prices at a reasonable level and thereby raising the standard of living.

### The Reciprocal Trade Agreements Program

#### EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. DITTER. Mr. Speaker, before the Congress today is a bill to extend the authority of the President to negotiate reciprocal-trade agreements for another 3 years. For 6 years we have been operating under this program, and yet no single piece of recent legislation is subject to more confusion, more misunderstanding, and more purposeful misrepresentation than is this program of tariff bargaining. Claims and counterclaims have been indiscriminately made by both proponents and opponents of this bill, many without any basis of fact, and few, if any, designed to clarify the issues posed by this program. Is it any wonder, then, that in a recent Gallup poll, only one out of ten voters in the country had any conception of the philosophy underlying the program?

What is the philosophy underlying the trade-agreements program? In the terms of the act itself it is simply—

For the purpose of expanding foreign markets for the products of the United States . . . by regulating the admission of foreign goods into the United States in accordance with the characteristics and needs of various branches of American production.

To achieve this purpose the President was authorized to seek concessions for our products in foreign markets and, in return, to grant concessions to foreign producers on products which we need. The concessions given and received are embodied in a reciprocal-trade agreement and go into effect at the discretion of the President. In a further effort to expand exports the principle of multilateral trade was to be encouraged. This is simply a guaranty of equal treatment in

the American market to goods of all countries which guarantee equal treatment to American goods in their markets. In simplified terms this is what is involved in the unconditional most-favored-nation policy.

Is the Republican Party opposed to the underlying philosophy of the trade-agreements program as expressed in the act? Certainly not. May I quote from a speech by a very prominent statesman to support this claim:

By sensible trade agreements which will not interrupt our own production, we should afford the outlets for our increasing surpluses. \* \* \* We must not repose in fancied security that we can forever sell everything and buy little or nothing. \* \* \* We should take from our customers such of their products as we can use without harm to our industries and labor. \* \* \* The period of exclusiveness has passed. The expansion of our trade and commerce is the pressing problem.

This statement was made by President William McKinley on September 3, 1901. The Republican Party was the originator of the doctrine of reciprocity and throughout the succeeding years has steadfastly held to this principle as the only profitable way for the United States to conduct its foreign trade. Efforts by the new dealers to fasten the tag "embargoists" on the Republican Party is sheer nonsense and only serves to divert the attention of the people from the real issues posed by this program.

Stripped of all misrepresentations and name calling, the issues are:

First. Is the Reciprocal Trade Agreements Act constitutional?

Second. Has the program expanded our export trade?

Third. Have foreign goods been admitted on the basis of need?

Fourth. Has the program been successful in promoting multilateral trade?

The question of the constitutionality of the act hinges on the methods provided for the accomplishment of the aims mentioned previously. These are, first, to authorize the President to enter into trade agreements with foreign governments; and second, to proclaim such modified duties as are required or appropriate to carry out any such foreign-trade agreement. In the first instance, Congress has delegated to the Executive a power which Congress itself does not possess. Is there any provision in the Constitution authorizing the Congress to negotiate agreements with foreign governments?

The Constitution does provide, however, that the President "shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur." Thus these agreements are based either on a power conferred, but not possessed, by Congress, and are therefore nullities, or they are treaties and must be concurred in by two-thirds of the Senators present. I am convinced that they are treaties and that unless concurred in by the Senate are unconstitutional.

The provisions of many of the agreements concluded thus far have only served to strengthen this conviction. In the first place, a majority of the countries require ratification by their own legislatures. Secondly, in the trade agreements with Cuba, Belgium, Honduras, and Colombia it is expressly provided that the provisions of these "agreements" supersede any inconsistent provisions contained in previous treaties concluded between the two governments. As that great statesman, Senator Borah, said at the time the agreement with Colombia was signed:

We have a treaty with Colombia, which is conceded to be a treaty made in the usual course of negotiating and ratifying treaties. We have a trade agreement with Colombia. Certainly nothing less than an agreement equal in force and effect to a treaty could abrogate the first treaty.

The Constitution expressly provides that—

The Congress shall have power to lay and collect taxes, duties, imposts, and excises. \* \* \*

Under the provisions of this act Congress has authorized the President to raise or lower our duties by 50 percent, but provides no definite standards to guide the Executive in his selection of duties which may or may not be reduced. The delegation of powers by Congress without adequate standards

has long been recognized as unconstitutional and has been so stated by the Supreme Court in numerous decisions.

Why, then, has not this act been tested by the courts? The answer can be found in the act itself, which denies to a manufacturer, producer, or wholesaler the remedy allowed by section 516 (b) of the Tariff Act of 1930. Under this section a manufacturer, who considered himself aggrieved by an assessment, could file an appeal with the Secretary of the Treasury, and if not satisfied could carry his case through the various customs courts and under certain circumstances to the Supreme Court itself. With this right denied, however, it is impossible to prove injury through a reduced duty which is not common with people generally. The only means available for removing this statute from the books or for making it conform to the Constitution is right here in the legislative branch of our Government. In the interests of constitutional government we must pursue one course or the other.

No one will deny that our exports have increased in recent years. In an effort to inflate the value of the program, the State Department points with pride to a 97-percent increase in our export trade from 1932 to 1939. This, they claim, is a result of the trade-agreements program. As is true with so many other statements made in connection with the program, this figure is subject to close scrutiny. When examined closely, we find that from 1932, the low point of the depression, to 1935, before the program went into operation, exports increased 42 percent. From 1935 to 1939, while the program was fully operative, exports increased but 39 percent. Was this due to the trade program or to general world recovery? The larger increase from 1932 to 1935 would certainly seem to indicate that our exports increased primarily as a result of world recovery and would have taken place irrespective of the trade-agreements program.

Agriculture's stake in any program designed to increase our export trade is obvious. No single branch of American production is more dependent on foreign markets for prosperity. In advancing the trade-agreements program proponents claimed that agricultural exports would increase and that "a better relationship between agriculture, mining, and manufacturing would be maintained." What has happened? In preliminary figures issued by the Department of Commerce, agricultural exports in 1939 were actually 1 percent below agricultural exports in 1932, the bottom year of the depression. Over this same period exports of all United States merchandise increased 98 percent. Of more direct bearing on the program itself, we find that agricultural exports in 1939 are 12 percent below agricultural exports in 1935, a year in which agricultural exports were sharply curtailed as a result of the drought in 1934, while total exports increased 39 percent over this period. Is there any evidence here that the farmer has benefited from the trade-agreements program or that a better relationship between agriculture, mining, and manufacturing has been maintained?

Let us look at a few specific commodities. The most pressing problem facing agriculture, and those of us who wish to help the farmer, is the disposal of the huge surpluses of many agricultural products. The four most important of these are cotton, tobacco, wheat, and pork products. Foreign markets are essential for the producers of these commodities. The State Department claims that under the trade-agreements program markets for these surpluses have been found. What are the facts?

Proponents of the agreements program have been unanimous in their praises of the concessions we received on wheat and wheat flour. They point with pride to the increase of over seven times in the quantity exported to all countries from 1935 to 1938. What they neglect to point out, however, is that exports to concession countries increased but four and one-half times, while, over the same period, exports to nonconcession countries increased nearly nine times, or almost twice as much, relatively, as exports to concession countries. Nor do they mention that in 1938 we subsidized the export of millions of bushels of wheat, either in the form of grain or flour, and that a large percentage of the subsidized exports went to countries which granted us concessions. Have the agreements helped the wheat farmer?

Another commodity which is dependent to a large degree on export markets is cured pork. Here it is seen that from 1935 to 1938 the quantity of hams, shoulders, and bacon exported to all countries increased 3 percent. Exports to countries which gave us concessions, however, actually declined 9.5 percent, over the same period, while exports to all other countries increased 4.6 percent. It might be interesting to note that the quantity of total exports of all meat products increased 2 percent from 1935 to 1938. To countries which granted us concessions, however, exports declined 14 percent, while to all other countries they increased 4 percent. Have the agreements helped the livestock producers?

The case of cotton offers further illumination on the agreements program. The trade agreements have had no direct effect on cotton, as it enters all the important world markets duty-free. Cotton does offer, however, an excellent test of the theory often advanced that trade in all commodities would increase whether the subject of concessions or not. If there was any validity to this theory, certainly exports of cotton, in which we hold a dominant world position, should be the first to feel the upsurge. From 1935 to 1938, however, the amount of American cotton entering foreign markets has declined 22 percent, while over the same period foreign mill consumption has increased 10 percent. Has the cotton grower benefited from the trade-agreements program?

And, finally, it is well to examine the figures on tobacco. Here we find that from 1935 to 1938 total exports increased 23.4 percent. Exports to concession countries increased 29.1 percent, while to all other countries the increase was but 22.7 percent. This would seem to indicate that the trade-agreements program had been successful in promoting our exports of tobacco. It is necessary, however, to look a little deeper. Of the six concessions we received, only two represented decreases in duty. One of these concessions was made by Cuba, one of the world's largest tobacco-exporting countries, and the other by Colombia, which annually takes about 100,000 pounds. Further, from 1932 to 1938 exports to all countries increased 19 percent. Exports to concession countries, however, actually declined by 33.8 percent, while to all other countries there was an increase of 33.8 percent. Can anyone say that the tobacco grower has benefited from the reciprocal-trade agreements?

Of even greater significance from the standpoint of surplus removal is the percentage of our domestic production which enters export markets. In 1929 we exported 44.9 percent of our cotton production, 35.3 percent of our production of unmanufactured tobacco, 17 percent of all the wheat produced in this country, and 5.7 percent of our total production of pork products. In 1938, however—the last year for which figures are available—we exported but 28.1 percent of our cotton production, 28.3 percent of our production of unmanufactured tobacco, 11.4 percent of the domestic wheat production, and but one-tenth of 1 percent of our total production of pork products. Is there any indication here that foreign markets for our agricultural surpluses have been improved?

These are but a few examples of commodities which have shown no material gains directly attributable to the trade-agreements program. Proponents of the program can undoubtedly point to examples which show just the opposite picture; but what other four commodities combined annually account for approximately 65 percent of our total agricultural exports? Is any further evidence necessary to show the complete failure of the program in its avowed object of increasing the value of foreign markets for the products of our farms?

The third issue at stake is the expressed purpose of reducing our own duties "in accordance with the characteristics and needs of various branches of American industry." Let us examine some of the reductions made in the agreements concluded thus far. First, cattle; do we need Canadian and Mexican cattle? Does cattle from foreign countries possess a "characteristic" not present in American cattle? Next, milk and cream; do we need milk and cream? Do we produce insufficient quantities of milk to satisfy our domestic demand? Quite the contrary, we all know of the desperate

measures taken by our own dairy farmers to rid the market of unsalable surpluses. Do we need hay, oats, cherries, apples, cauliflower, potatoes, eggs, and many other highly competitive farm products? The answer is obviously "No."

It is only necessary to examine the operations of the Federal Surplus Commodities Corporation in recent years to ascertain just how desperately we need many of the commodities on which our duties were reduced. During the fiscal years 1938 and 1939, the Surplus Commodities Corporation, note the word "surplus," spent \$30,479,112 for removal operations of 20 commodities which in the judgment of the State Department were in such need as to warrant reductions of as much as 50 percent in many cases. Over this same period imports of these commodities were valued at \$92,298,000. Can there be any reasonable doubt that in the administration of this act, the State Department has arrogated powers which were neither granted nor implied by the provisions of the Reciprocal Trade Agreements Act?

And finally, I would like to comment briefly on the fourth issue—have we been successful in promoting multilateral trade? The basis on which multilateral trade is built is the extension and adherence to the unconditional most-favored-nation policy. In order to insure equal treatment for our commerce in world markets, we stand ready to extend the reductions made in the various trade agreements to like products originating from every country in the world. Only by discriminating against our trade does a nation forfeit the privilege of equal treatment in our market.

During the recent hearings on this act numerous attempts were made by members of the minority to ascertain from the Secretary of State and other administration witnesses precisely to what extent we were receiving most-favored-nation treatment from the nations of the world. No direct answer was received, but it was admitted, at least, by Assistant Secretary of State Grady, that—

We have not \* \* \* obtained 100-percent nondiscriminatory treatment in our trade with the world.

Even as regards the nations with which we have trade treaties, we are not even receiving most-favored-nation treatment in fact, although, as Secretary Hull told the committee, they have adopted that policy "in principle." While this may be true, it is nevertheless a fact that on March 1, 1939, trade-agreement countries were parties to 33 clearing agreements, 49 clearing-payment agreements, and 26 payment agreements. Thus, a network of exclusive agreements has been built up around the very markets in which the United States was guaranteed equal treatment. As to non-treaty countries who are receiving the benefit of our concessions, the Secretary of State stated that they are making the most-favored-nation policy "their long-view objective."

Though conceding that discriminations against American commerce still exist, Secretary Hull stated that the State Department was pursuing "a policy of patience and friendly representation" toward nations which were discriminating against us "to move as fast as they can or are reasonably disposed to" toward the ultimate objective of most-favored-nation treatment. The Secretary of State stated that the removal of these discriminations could not be accomplished overnight. However, the fact is that the treaty program has now been in operation for nearly 6 years, and the discriminations are as bad or worse than they ever have been.

The following quotations from the Annual Report of the Bureau of Foreign and Domestic Commerce for 1939 bear out the statement that discriminations are on the increase:

Obstacles to foreign intercourse \* \* \* became perhaps even more numerous and more complex during the past year than in preceding years. \* \* \* Various forms of exchange restrictions imposed by foreign governments have created a problem of obtaining effective payments in dollars quite apart from the ordinary difficulties of securing and holding foreign markets for American products. Not only are restrictions placed upon the free conversion of foreign currencies into dollars, but it may be required also that exchange allotments must be obtained before goods are passed through customs or even before goods are ordered. Imports from the United States are frequently on a different footing from shipments originating in other countries, notably in instances in which clearing and compensation agreements are in effect or in which bilateral trade results in an excess of exports from this

country, and special regulations are sometimes applied to the importation of particular commodities. Transfers of dividends, profits, royalties, and other payments not directly related to trade in goods are often subject to rigid controls. Moreover, the operations of American-owned enterprises in certain foreign countries, involving investments of large proportions, have been placed under severe disabilities.

In the case of barriers to trade in goods, there has been increasing resort to measures beyond the familiar tariff duties. For example, quota systems which stipulate maximum quantities of specified commodities which may be imported from all countries, have become common. \* \* \* The situation has been rendered the more confusing during recent times by political dislocations in central Europe and Asia, and by the formation of trade areas and currency blocs to which access from outside areas is completely or partially closed by the use of extraordinary control devices.

It is apparent that the other nations of the world are not following our leadership in putting into effect the unconditional most-favored-nation policy as regards import restrictions. The President, however, has it within his power to compel nondiscriminatory treatment for American products. He can do this either by withholding the benefit of our treaty concessions from those nations which in fact discriminate against us or, by availing himself of the more drastic powers contained in sections 337 and 338 of the Tariff Act of 1930, providing for penalty duties on imports from nations pursuing unfair practices and discriminating against American commerce.

The efficacy of the first method has already been proven in the case of one nation—Australia—which formerly was found to discriminate against American commerce and was temporarily denied the benefits of our treaty concessions. That nation was not long in removing those discriminations.

I do not believe that anyone can interpret these criticisms as advocating a policy of tariff embargoes. I have made a conscientious effort to propound what I believe to be a fair and honest criticism of the trade-agreements program. To summarize: The act as it now stands is unconstitutional; the program has failed to increase the value of foreign markets for our surplus agricultural commodities; our own duties have been reduced, not according to need as set forth in the act, but according to the whims and beliefs of a few classical economists; and, lastly, the program has not succeeded in assuring equal treatment for our commerce in world markets. After a 6-year test, the trade program has proven its inability to handle the complex problems posed by world conditions. As the difficulties increase, is there any reasonable assurance that they will be met more easily through this program? I do not think so. The results have not been encouraging. The philosophy can be sound, but the methods pursued to put a philosophy into practice have destroyed what might otherwise have been real benefits. I must oppose the extension of the program as dangerous to the welfare of American agriculture and industry.

### Reciprocal-Trade Treaties

#### EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. WOLVERTON of New Jersey. Mr. Speaker, opposition to any further extension of the reciprocity trade agreement program is not based upon disbelief in the principle of reciprocity as a proper consideration in negotiating trade treaties between our Nation and other nations, but is based upon the fact that the administration of the act, under the Secretary of State, has shown an utter disregard of the necessity of protecting our farm and industrial workers from competing with commodities produced in foreign countries by the underpaid and overworked labor of those countries.

If the trade treaties already entered into had been confined to the importation of only those commodities which

we do not grow or manufacture in this country, then, there could be no plausible basis of opposition to any treaty arrangement that would take such in exchange for our own manufactured or grown products, and, for which other nations might have need. Such would be a fair exchange and would constitute true reciprocity.

But, unfortunately, the administration has used the powers delegated to the President without regard to the true principles that form the basis of real reciprocity. Such have been violently disregarded by entering into agreements that have made possible the importation of manufactured and farm-grown products from foreign countries as to which we already have a surplus. In some instances surplus being so great as to create a problem that has baffled solution.

#### RECIPROCAL TRADE TREATY PROGRAM DETRIMENTAL TO FARMERS

For instance, the administration has been at its wit's end to find a method to prevent surplus production of farm commodities. We have seen all sorts of panaceas tried, including crop curtailment, and, as a last resort purchase by the Government of such surplus and distribution to the needy. Up to the present time no substantial remedy has been found even though millions of dollars have been expended in the vain attempt to do so. And, yet, in the face of this condition the administration has negotiated treaties that have made possible the importation of the very commodities of which we already have a surplus. The result has brought additional distress to the farmers of the Nation.

Thus, we find that notwithstanding the fact that the Federal Surplus Commodities Corporation has been engaged in an endeavor to remove the surplus of no less than 20 different farm commodities, the State Department has negotiated reciprocity treaties with foreign nations that have reduced the tariff on the same commodities, thereby making it easier, and, in fact possible, for those foreign countries to send into this country the same commodities of which we already have a surplus. During the fiscal years 1938 and 1939 we spent \$30,749,112 on surplus removal operations and during the same period there were imported into the United States \$92,298,000 worth of these same commodities from abroad.

The damage that has been done to the American farmer as result of the administration's reciprocity treaty program was well and forcibly expressed in the resolution adopted by the National Grange at its annual meeting held at Peoria, Ill. The resolution was as follows:

The reciprocal trade agreements program has caused serious damage to American agriculture. It has depressed farm prices by encouraging imports of competitive products from countries where substandard labor conditions prevail. It is wrong in principle and violates the Constitution. It should not be renewed when it expires by its own limitations on June 12, 1940.

The American Farm Bureau Federation by resolution, in part, demanded:

That no agreement be consummated, the effect of which might be to force or hold domestic prices for any farm commodity below parity level. Any other course would justify the condemnation of and opposition to such agreement by all agricultural groups.

Thus these two great national farm organizations recognize the distress that can result to our farmers by agreements that do not take into consideration the prevailing conditions.

#### DETRIMENTAL TO LABOR

There is also a striking inconsistency between the trade treaties and the national labor policy recently adopted by Congress. In an endeavor to increase the wage level of labor and improve working conditions, we enacted a law providing for minimum wages and maximum hours in industry. The trade-treaty program, in permitting importation of competitive products from foreign countries, where the wages paid are but a fraction of those received by American workers, and where there is no such thing as a 40-hour week or an 8-hour day, has the effect of setting at naught in such cases the beneficial results sought to be attained for our workers by our National Wage and Hour Act.

Likewise, our immigration law and the Asiatic-exclusion law have been nullified to a large extent by the reciprocal trade treaty program. Under the latter, the products of

cheap foreign labor are allowed to be brought in here to displace the products of our own labor. The competition thus created is just as keen and disastrous as if the foreign-made goods had been manufactured in this country under the same adverse wage and working conditions that prevail abroad.

Thus the importation of these foreign-made goods, by reason of the preferential tariff rates provided in the reciprocal-trade treaties, has a tendency to break down our American standard of living. It is this threat that prompted representatives of groups of workers who have been adversely affected by the trade treaties to appear before the Ways and Means Committee of the House and protest against continuance of the reciprocity treaty program.

#### DETIMENTAL TO INDUSTRIAL RECOVERY

It is generally agreed that confidence is one of the most necessary elements of industrial recovery. It can be readily seen that confidence cannot be created where uncertainty exists as to what industry will next be brought into competition with foreign-made goods imported in this country under preferential tariff reductions granted by the reciprocity trade treaty program. The American producer is finding it increasingly difficult to face this severe competition even with full tariff protection, and without it the situation becomes almost hopeless. I hate to think what the result will be when the millions now under arms in foreign lands return to their workshops and start manufacturing goods that will be sent into this country under the reciprocal-trade treaties already in effect. I well remember the disaster that came to our industrial establishments after the last war as a result of an influx of foreign-made goods, and I do not want to see that happen again. Up to the present time the war raging in Europe has saved us from it, but what about the time when the war is over? To contemplate the adverse result on our economic structure is enough to create serious concern.

#### MOST-FAVORED-NATION CLAUSE

One of the most unusual and unexplainable provisions of our foreign-trade policy is that which gives the benefit of any and all provisions of every reciprocity trade treaty, not only to the nation that enters into the same with this country, but also to every other nation of the world (except Germany). In other words, every other nation gains all the benefits without giving up to us anything in return. Such an arrangement violates the most fundamental principle of reciprocity. Reciprocity means exchange. It contemplates giving up something for that which is received. But under our policy as now in effect we give up to one nation in return for what we receive from it, and all other nations immediately receive the same benefits as the contracting nation, and without giving any benefit to us in return. Such a one-sided arrangement fails to even approximate reciprocity and in my opinion is neither sound nor justified.

#### CONGRESSIONAL APPROVAL OF ALL TREATIES

Another fundamental defect in our reciprocity treaty policy is that which makes the treaties negotiated by the Secretary of State effective without the approval of either the Senate or the House. The Constitution seems clear and explicit in this respect. There would seem to be no doubt that all treaties should have at least the approval of the Senate before becoming binding upon our part. There is also much to be said in favor of the necessity of House approval of this particular type of treaty, but certainly there can be no plausible reason to deny the necessity of Senate approval before such treaties become binding on this Nation.

But aside from this constitutional question there is both reason and justice in the demand that all these trade treaties should have the approval of the elected representatives of the people in Congress before becoming effective. Under the procedure by which our reciprocity trade treaties are negotiated no one knows the name or identity of the person or persons by whom the treaties are finally negotiated. Nor is any information divulged to our American businessmen as to what commodities are to be the subject of the proposed treaty. The only information that is made public is the

name of the nation with whom the treaty is being negotiated. This necessitates every individual who has any business that might be affected by a treaty with such a nation to submit a brief explaining why his particular business should not be included in the treaty. And no one knows until the treaty is made public whether his business is included or even been under consideration. A closed-door policy such as this is neither right nor just nor is it conducive to the best interests of industry, agriculture, or labor. I do not believe that unknown and unnamed individuals in a bureau of government should be permitted to negotiate treaties affecting the life and death of American industry and agriculture. Congress, and no bureaucrat, should have the last say as to what is best for America.

In presenting these views I have not set forth all the matters that might properly be the subject of amendments to improve the reciprocity trade policy, but those which I have mentioned are, in my opinion, fundamental and without which I would feel justified in voting against adoption of the pending resolution.

### The Taxpayer Is To Blame

#### EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ADDRESS BY STACY B. D. BELDEN

Mr. EDWIN A. HALL. Mr. Speaker, I ask unanimous consent to extend my remarks and include therein a recent address of Mr. Stacy B. D. Belden, secretary of the Delaware County (N. Y.) Taxpayers Association and editor of the Dairyman Press, Franklin, N. Y.

The address is as follows:

If anybody is to blame for the tax structure as we have it today, it is ourselves; we complain to our friends about high taxes, but usually not more than two or three men are ever enough interested to attend even a town budget hearing.

When 2,800 C. I. O. members march four abreast up to the capitol they make an imposing group. Legislators are there to carry out the will of the people. When no one appears on the other side, the spending group naturally exert the pressure.

The entire Government tax budget system is built on a spending basis. Departments are asked not "how little can you get along with during this year of limited incomes," but "how much does your department want?"

Unreasonable extravagances are the result. A winter sports book outlining the best places to ski has just been published at Government expense. I did my skiing in the old pasture. We are gone mad on the subject of recreation.

Our tax structure is built on an agricultural basis of land values, which was fine 100 years ago, but which is now outgrown. State aid has been instituted to help equalize taxes where land values are low.

But with greater State aid has come a stronger centralized government. In the last 5 years 16,000 new State jobs have been created, largely in the fields of mental hygiene.

More than \$1,000,000 a day is being spent to run our Government, \$400,000,000 a year more than the gross income from all the farms in the State. Business firms are leaving the State, leaving the tax burden greater on those left behind.

Westchester County, in New York State, started an investigation. They found the budget called for \$3,000,000 for the park commission. The investigators found the cause worthy, but extravagant, and through their efforts the budget for that commission was reduced to \$170,000. Now there are more than 500 taxpayers' organizations in this State. I am convinced, however, that real money cannot be saved until we turn things upside down in Albany.

The purpose of these organizations is fourfold:

1. To cut taxes by eliminating waste, duplication of effort, and all unnecessary expense.
  2. To know where the dollar is to be spent before it is voted.
  3. To keep the people informed on all tax problems.
  4. To get value and service for each dollar of tax expenditures.
- Complaining about taxes is not enough. The taxpayer must have facts to back him up and a definite, constructive program to place before tax-hearing committees, before he will even be heard. The day of easy money is past.

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. CHARLES L. GERLACH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. GERLACH. Mr. Speaker, Members of the House of Representatives, in voicing my opposition to the reciprocal-trade agreements and to any extension of the Trade Agreements Act unless approved by both House and Senate, I want to make plain that I am doing so without thought of political partisanship. I am speaking solely for my constituents, who must earn a living without regard to politics and whose means of earning that living have been seriously impaired by the present trade agreements.

I want to say that in the short time I have represented my district I have supported many of the policies of the administration which I believed were of definite benefit to the people as a whole. I have always voted solely on what I believed to be the merits of the proposition under consideration, and my record will bear me out. And it is in that belief that I oppose the present trade agreements.

I am in favor of building up our foreign trade, but not at the expense of our domestic welfare. I am not in favor of sacrificing the farmers and laborers of the United States in order to promote foreign trade. We are making this sacrifice under the existing agreements, and I say to you that it is high time we put a stop to it.

It seems to me that our trade with foreign countries flourishes most in periods of domestic prosperity, for it is then that the American laborer and the American agricultural worker have adequate purchasing power—and that is multiplied at least seven times through its extension to national purchasing power—and it is then that we import the largest quantities of those things not grown nor manufactured at home; it is then that we spend most freely for foreign luxuries.

Therefore I say to you that the intelligent way to stimulate foreign trade—exports and imports alike—is to create first a sound domestic prosperity. Anything which improves the purchasing power of the American farmer and the American laborer will encourage foreign trade. But the present trade agreements do just the opposite, for they destroy and impair the purchasing power of a very large percentage of the American people.

Those who favor the trade agreements clamor that the reduced rates granted us by foreign countries make it possible for us to sell more goods to these countries and so increase our foreign market. I agree that this has a logical sound; but is it not just as true that when we reduce our tariffs the foreign countries who are benefited with the reduction expect to broaden their American market? When a Belgium agreement is made reducing the duty on cement shipped into the United States, the Belgians have a right to believe they will ship more cement into the United States. And they do ship more, to the extent that the domestic market is flooded with Belgian cement which can be sold at a lower price than the American product.

There is but one result to this procedure: Consumption of the domestic product drops; there is a decline in the industry; plants are shut down and men are thrown out of work; the loss of money that would have gone to make up pay rolls for these workers means a further reduction in the purchasing power of the American public. For this reason I am opposed to trying to build up foreign trade through destroying the purchasing power of the domestic consumer.

I know this to be fact, for my home district is one of the leading cement-producing districts in the Nation and I have seen the effect of the influx of foreign cement upon the work-

ers in the industry in my district. How could it be otherwise when, according to figures published by the Department of Commerce, Belgian cement under the trade agreements enters our country at a lower price per barrel than the cost of American manufacture?

The same thing is true of the farmer. My home district is one which contains one of the largest potato-producing counties in the country, and the farmers who have been raising potatoes as a livelihood have been seriously hampered by the trade agreements. When a Canadian agreement is made reducing the tariff on potatoes shipped into this country the same thing happens as in the case of Belgian cement. The Canadians certainly expect to sell their potato surplus in the United States and they do so. This takes away from the American potato grower enough of his domestic market to drive potato prices so low that the American grower's purchasing power is greatly impaired. And when this farmer's pocketbook is empty he cannot deal with the merchant, the tradesman, the doctor, and the dentist, and thus all business is down automatically.

My home district is also one of the Nation's foremost apple-producing sections, and here again the influx of the foreign-grown product under trade concessions has caused a tremendous loss to the local grower. So, as I see it, when we increase imports of these farm products into a domestic market already oversupplied, we are driving the domestic price further and further toward the bottom, and this while the Federal Government is spending billions of dollars trying to restore parity prices to the American farmer. To me this does not make sense.

I could offer countless instances of this type, but I have chosen those with which I am most familiar and which most affect the people whom I am here to serve. The same condition exists all over the United States just as it exists in my district. Where we are endangered with the oversupply of imported cement, potatoes, and apples, other districts face the same problems with beef cattle, oil, dairy products, sugar, and many, many other commodities.

I say to you that this is wrong. The best customer American industry ever has had, or ever can have, is well-employed and well-paid American labor, whether it be the industrial worker or the agricultural worker. Therefore we must keep the purchasing power of the American farmer and the American laborer at the highest possible point. The only way in which this can be done is to protect the products of the American agricultural and industrial worker by refusing to allow the foreign product to enter our shores at a price detrimental to the American producer. The American farmer and the American industrial producer are entitled to the American market, and I am firmly convinced that the trade agreements already negotiated have resulted in the decreasing of the American market for all American products. This has brought a lowering of both farm and factory income and of American purchasing power.

There are certain manufacturing interests who are seeking foreign markets for their products and who fail to realize that they are doing so at the expense of the domestic producers of raw materials. I fail to see why they should pursue the foreign market in preference to the domestic market, for in the long run they are paying a very high price for a little foreign trade, a price that is higher than the foreign trade is worth to the United States. I say to you that there is no reason for such procedure when it is a proven fact that the 130,000,000 American people consume an average of 90 percent of all that we raise and manufacture. We therefore should rid ourselves of the destructive reciprocal trade agreements program and make an honest effort to increase our foreign trade through policies that will increase the purchasing power of the American people.

There is one other aspect to these agreements which has a very drastic effect upon the American market, and that is the most-favored-nation clause as it is put into being by the good-neighbor policy of the administration. The fact is that the concessions granted under these treaties are given

not only to the 22 countries with whom the reciprocal treaties have been negotiated, but to 64 additional countries.

I cannot see that it is sensible for us to give concessions to Canada, and under the most-favored-nation clause, allow Mexico, with whom no reciprocal-trade treaty has been made, to claim the same benefits as does Canada. As I see it, the procedure is merely the throwing open of our domestic market to the whole wide world and allowing that market to become flooded over with the cheap foreign products.

It would be well for all of us to remember at this time the advice of President William McKinley, who said:

We should put a tax or duty upon products of foreign growth and manufacture which compete with like products of home growth and manufacture, so that, while we are raising all the revenues needed by the Government, we shall do it with a discriminating regard for our own people, their products, and their employment. Such a tariff stands as a defense to our own productions, as a discrimination in favor of our own and against the foreign, and as an encouragement to productive enterprises, as well as securing fair and reasonable prices to our own consumers.

I say to you that this is impossible under the reciprocal-trade agreements, and I say that they should be taken off our statute books, I do not believe that the power to negotiate such trade agreements should be given to one man, a man who is an appointed official, the people having no voice in his selection. I do not believe that this power should be given to one executive department. I repeat that I am in favor of extending our foreign trade, but not at the expense of 30,000,000 farmers and their dependents, and millions more of factory laborers. I say to you that any policy which affects so large a portion of our population should not be put into effect without the ratification of both Houses of Congress. I do not know of any other major nation with a democratic form of government which allows such trade agreements to become law without legislative approval. For the Congress of the United States to allow it is contrary to the very spirit of our Constitution. Therefore, in conclusion, I say to you that if we are to have any trade agreements at all, the power to ratify these treaties should be returned to the legislative branch of the Government, where it belongs.

### The Trade Treaties

#### EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

EDITORIAL FROM THE BOSTON POST OF FEBRUARY 20, 1940

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of February 20, 1940:

[From the Boston Post of February 20, 1940]

#### THE TRADE TREATIES

The question of extending Secretary Hull's authority to make reciprocal-trade agreements has been taken up by Congress and strong opposition is likely to develop from various parts of the country, including New England. In order to promote our essential foreign trade by these reciprocal agreements, Secretary Hull has to make it easier for the foreign buyers of our goods to sell their goods here. This means increased competition for some American producers, and naturally they protest.

The main question, however, is, or should be, does the country as a whole benefit by these agreements; that is, do they benefit a larger number than they injure? In the past 6 years we have concluded reciprocal agreements with 16 countries. The total purchases of these 16 countries from all other countries increased only \$90,000,000 from 1933 to 1938, the last year for which figures are available. But in this same period their purchases from the United States increased \$464,000,000. This means that their purchases from all other countries except the United States declined sharply, while their purchases from us increased 63 percent.

That would seem to be a very substantial argument in favor of Hull's policy. The other thing to consider is what did we

have to concede to encourage this increase in trade? We have reduced our tariff rates from an average of 52.6 percent in the period from 1931-34 to 39.3 percent in 1938. That might seem a very substantial concession, but it only brings the average rate of 39.3 percent back to about where it was in the most prosperous period, 1922-30, when the average rate was 38.5 percent.

This good showing for the country as a whole, however, does not mean that every proposal of Secretary Hull is necessarily equitable for all concerned. There are instances where protest is not only justifiable, but may be imperative to save certain industries. But in a broad way his work has brought good results.

### The Military Order of the Purple Heart

#### EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. FISH. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include the following resolution, in recognition of George Washington's Birthday observance, passed by the Military Order of the Purple Heart and read by the national adjutant at the ceremonies of that order held at George Washington's tomb at Mount Vernon yesterday:

#### RESOLUTION IN RECOGNITION OF GEORGE WASHINGTON'S BIRTHDAY OBSERVANCE

Whereas international relations in the Old World have again relapsed into turmoil and armed conflict, in which some Americans express favoritism and partisanship, which violate American traditions of tranquillity and peace; and

Whereas George Washington, first President of the United States and founder of the decoration of the Purple Heart, gave to us the great heritage of his convictions regarding the neutrality of America in all foreign entanglements: Be it

Resolved by the Ray Workman Chapter No. 50, Military Order of the Purple Heart, in regular meeting assembled on December 26, 1939, That we again avow our reliance upon the international policies of George Washington, in refraining from all political connections and military alliances with Old World nations. This policy is aptly revealed in the following letter to Patrick Henry, occasioned by the insistence of France for our reciprocal aid in her war against Great Britain, because of the aid to us by Lafayette in the Revolutionary War:

PHILADELPHIA, October 9, 1795.

MY DEAR SIR: I persuade myself, sir, that a crisis is approaching that must, if it cannot be arrested, soon decide whether order and good government shall be preserved or anarchy and confusion ensue. My ardent desire is to keep the United States free from political connections with every other country, to see us independent of all and under the influence of none. In a word, I want an American character, that the powers of Europe may be convinced that we act for ourselves and not for others. This in my judgment is the only way to be respected abroad and happy at home.

I am, my dear sir,

Your most obedient and affectionate servant,

G. WASHINGTON.

The Honorable Sir PATRICK HENRY.

And be it further

Resolved, That a copy of this resolution be sent to all schools, the press, veteran and patriotic civic organizations in Chicago, with our felicitations and solicitations for their concurrence and promotion by reading the above quotation as a part of their observance of George Washington's Birthday.

HERBERT J. OKE, Commander.  
LEONARD E. COLE, Adjutant.

Official. December 26, 1939.

Approved by the national executive committee of the Military Order of the Purple Heart in session February 10, 1940, and recommended to each chapter's consideration.

Official:

GEORGE F. BRADFIELD,  
National Adjutant.

Approved:

WENDELL A. LOCHERER,  
National Commander.

The first honor badge provided for the enlisted man in the ranks or the noncommissioned officer in the American Army was originated by Gen. George Washington during the Revolutionary War, at Newburgh, N. Y., which is in my

congressional district. This was known as the Purple Heart Decoration, and was announced in orders on August 7, 1782, at which time Washington said he wished to "cherish a virtuous ambition in his soldiers, as well as to foster and encourage every species of military merit." The first three and only awards were made by a board of three officers, including my great grandfather, Maj. Nicholas Fish.

The Purple Heart Decoration was forgotten after the Revolution, but was revived on the two-hundredth anniversary of the birth of George Washington in 1930. President Hoover ordered its reinstitution in 1932, to be awarded for meritorious service in time of war. Only those service men who were entitled to wear wound chevrons for wounds received in battle can qualify, except under special citations for meritorious service.

The general order by which General Washington established the decoration read as follows:

The general, ever desirous to cherish a virtuous ambition in his soldiers, as well as to foster and encourage every species of military merit, directs that whenever any singularly meritorious action is performed, the author of it shall be permitted to wear on his facings over the left breast, the figure of a heart in purple cloth or silk, edged with narrow lace or binding. Not only instances of unusual gallantry, but also of extraordinary fidelity and essential service in any way shall meet with a due reward. Before this favor can be conferred on any man, the particular fact, or facts, on which it is to be grounded must be set forth to the Commander in Chief accompanied with certificates from the commanding officers of the regiment and brigade to which the candidate for reward belonged, or other incontestable proofs and upon granting it, the name and regiment of the person with the action so certified are to be enrolled in the book of merit which will be kept at the orderly office. Men who have merited this last distinction to be suffered to pass all guards and sentinels which officers are permitted to do.

The road to glory is a patriot army, and a free country is thus open to all; this order is also to have retrospect to the earliest stages of the war, and to be considered as a permanent one.

The Military Order of the Purple Heart, composed entirely and exclusively of veterans who have been awarded the Purple Heart, held its annual dinner and redecoration ceremony last night at the Mayflower Hotel, in Washington, when the decorations approved by the War Department were presented to the members who had not been officially decorated by an accredited officer of the United States Army, by Col. C. A. Dravo, adjutant general of the District of Columbia National Guard.

It is appropriate that the Military Order of the Purple Heart should adhere to the avowed international policies of George Washington, in refraining from meddling in European affairs and that it go on record, as evidenced by the resolution above, as opposing violations of American traditional policies of nonintervention, no entangling alliances, and peace. Keeping America free of such war commitments and foreign wars was the theme used by Senator GUY M. GILLETTE, of Iowa, and Representative RALPH O. BREWSTER, of Maine, at its annual dinner last night.

## Objections to Reciprocal Trade Agreements Law

### EXTENSION OF REMARKS

OF

HON. CHARLES F. RISK

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. RISK. Mr. Speaker, this joint resolution seeks to continue for a period of 3 years more the power granted in 1934 to the Executive to negotiate reciprocal-trade treaties. Already we have entered into 21 of them, and much has been said on both sides of the question as to whether they have resulted in improved economic conditions.

However, let me direct your attention to two objections to the 1934 law that seem to be sound. The first is that in the opinion of many able lawyers the law is unconstitutional in

that it is an unwarranted surrender to the Executive of the obligation of the Senate to pass on treaties with other nations. The fact that these pacts are called agreements does not change their nature. The second is that this law is so drafted as to deny any injured party the opportunity to have its validity tested in court.

Up to 1934 it was accepted without question that the tariff-making power of the United States vested in the Congress. And in some decisions the language is such as to place that responsibility squarely on the Congress. Moreover, throughout the debates in the Constitutional Convention there is demonstrated the insistent desire that all treaties, including those affecting commerce, should be ratified by the Senate. Under our form of government the legislative branch cannot rightfully turn over to either of the others any duty imposed upon it by the Constitution.

These treaties bind the United States to certain tariff concessions for an indefinite period. It is true they may be abrogated at any time, but who will seriously contend that we shall take steps to cancel any one of them while the present administration is in power?

The existing law provides that—

Every foreign-trade agreement concluded pursuant to part 3 shall be subject to termination, upon due notice to the foreign government concerned, at the end of not more than 3 years from the date on which the agreement comes in force, and, if not then terminated, shall be subject to termination thereafter upon not more than 6 months' notice.

What does this language mean? It does not say definitely that the agreements, as they are called, shall terminate. "Subject to termination" is the term used, but at whose instance? It may fairly be assumed that termination will be effected only at the instance of the President. Under this language the treaty may stay in force indefinitely. And the American people are permitted no representation at hearings, in negotiations, or the final approval.

That this law was drafted in a spirit of avoidance of the Constitution and the fundamental rights of our citizens, no one will deny. It was never intended that a citizen damaged by the operation of this law should have his day in court to test its validity, because no citizen has any standing before the courts on this question. He just cannot get there. The Supreme Court in *Mississippi v. Johnson* (4 Wall. 475) decided years ago that the President cannot be restrained by injunction from carrying into effect an act of Congress alleged to be unconstitutional. So an injured party cannot get into court that way. Nor can he get in in the other manner, namely, by the commencement of a civil suit for damages, because he is unable to name a respondent. So the question of the validity of this law must remain undecided, despite the fact that it has resulted in irreparable damage to many citizens.

One might be justified in doubting the sincerity of this administration on this question. In 1932 the Democratic platform strongly condemned the Tariff Act of 1930 as being disastrous to our economic well-being. But, despite the overwhelming majority, no attempt has been made to repeal it.

Now, as to the wisdom of the law. Can anyone truthfully say that our American workman is getting a square deal by forcing him to compete with cheap foreign labor?

In the last session I introduced a bill designed to relieve our workers from competition with foreign wage scales. The bill simply provides that all imports must have been produced in compliance with the Fair Labor Standards Act of 1938, commonly called the wage-hour law, before admission to this country. My best information is that several of the members of the majority of the Committee on Labor favored this same provision when the wage-hour law was being considered in committee, but for some unknown reason it was not permitted to be inserted in the law.

Mr. Speaker, we should defeat this resolution at this time, but should go further and take steps to regain the legislative power that was surrendered at the time of its passage, to the end that the Congress may have an opportunity to pass upon all trade treaties now in effect.

### Migratory Indigents in California

#### EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. ANDERSON of California. Mr. Speaker, I take this opportunity to again call the attention of the House to an increasingly difficult situation which confronts the State of California. Distressed and impoverished migrants continue to enter my State in search of jobs that are not to be had. The United States Employment Service has for several years advised those looking for work that there are already far more workers in California than there are jobs available.

However, the present Federal migrant-camp program, plus relief grants far in excess of those paid in most other States, combine to act as a powerful magnet on distressed families from the great Southwest. The Farm Security Administration maintains these unfortunate people until they are eligible for State relief, when they become an additional load upon the already overburdened California taxpayers.

Under leave granted me to extend my remarks, I wish to insert here an editorial from the San Francisco Chronicle of February 2, this year:

#### MIGRATORY INDIGENTS HAVE RIGHT TO A CHANCE

The migratory indigents that have swamped California's relief problem come here as American citizens, just as the old-timers and settlers of California came. They have the same right to establish themselves if they can.

The old-timers came for gold. If they did not find it they got jobs if they could. If they could not get work they took to farming, and in a day before there was any talk of irrigation. Some of them made good. Some had a very tough time.

There was no relief agency waiting when the wagon trains pulled into California, or when the passengers and crews went over the side to strike out for land. But they were tough. Only the tough ones got here on the hard haul across the continent, around the Horn, or across the Isthmus of Panama. They came here to better their economic position in life and they used what they found. If they failed, they usually got good-hearted help to try again, or a collection was taken up to pay their fare home to where they came from.

Ninety years later the Americans who want to better themselves and come to California to try are entitled to a chance to adapt themselves to the community and become self-respecting, self-supporting citizens. They have claims upon conscience and humanity, and definite rights. These rights do not include the one of permanently attaching themselves to California's relief grants, which average \$29.76 per month, compared with the \$3.38 Oklahoma grant, or the Texas \$7.90 grant, the high mark for the Ozark Plateau, whence the migrants come.

The migrants have a right to come as American citizens, but they are, properly, wards of the United States, not of California. Washington has shirked its duty in this respect and makes no secret of its opinion that any duty ends once migrants—with Federal aid, meager, but more than they would get at home—have been here long enough to claim residence.

The migrants are entitled here to as good as they get at home. They are entitled to a chance to better themselves, and to an opportunity to acquire any suitable idle lands to make a genuine effort. What land may be available is, frankly, not the best. If they try and fail, it is both generous and economy to pay their fare back to the places they came from.

The point brought out in the above editorial with reference to making suitable land available to migrant families is worthy of serious consideration. The Farm Security Administration migratory camps are only a temporary expedient at best. They do not offer a permanent solution to a relief problem that is growing rapidly more oppressive and that is concentrated primarily in my State.

Why must these needy families travel a thousand or fifteen hundred miles to secure help which should be available to them in their home communities? California has a primary duty to perform in caring for its own citizens, many of whom are in need of public assistance, and simply cannot continue to assume the large proportion of an additional burden which is in reality a national problem.

Members of the California delegation in Congress have been seeking a solution for some time, and we are hopeful of presenting a comprehensive plan to the Congress in the not too distant future. I hope that other Members of the House will give us their wholehearted cooperation when the proper time comes.

### Lincoln Day Address at Knoxville, Tenn.

#### EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ADDRESS OF HON. KENNETH F. SIMPSON, MEMBER OF THE REPUBLICAN NATIONAL COMMITTEE

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks I wish to present a copy of the address of Hon. Kenneth F. Simpson, member of the Republican National Committee, New York State, delivered at the Lincoln Day dinner of the Knoxville Young Republican Club at Knoxville, Tenn., on Saturday, February 10, 1940.

It was just 80 years ago that a relatively unknown candidate—a dark horse—ran away with the Republican nomination for President. Some of the eastern newspapers knew so little about him that they had to send inquiries: Was his first name Abram or Ab-ra-ham? How could the new Republican Party put before the voters at such a critical time just a former one-term Congressman, utterly untried by any administrative or executive office?

Under more pressure, enduring more hardships than any President before him, this "typical prairie lawyer" brought the Union safely through the irrepressible conflict, and before his tragic death showed the Nation the path toward reconstruction and reconciliation, "with malice toward none, with charity for all."

We face this year no crisis as grave as that faced by Lincoln. But this critical election year will not soon be forgotten.

Let us look to the philosophy of Lincoln, so successful in his day, for guidance. And if we cannot find in Lincoln's works an economic or social program that will cure the ills of the twentieth century, we may at least find in him some guide toward the state of mind in which a solution of these ills may be approached; we may find some philosophy about human relations, some insight into the methods of national progress which may be as timely today, as when the first Republican President took office.

In his entire career Lincoln was never to be found in the camp of extremists. An eminently practical politician, he was always willing to compromise unless fundamental principles were involved. He was not afraid to stand for an unpopular issue, if necessary. "Stand with anybody that stands right," he once told his party. "Stand with him while he is right and part with him when he goes wrong."

Lincoln had a deeper faith in democracy than any other man in public life at the time. During the war there were many proposals that he should become a dictator, but he steadfastly refused to consider them. As he stated in his Gettysburg address, he regarded the war as a test of the power of popular government to endure such a crisis. He insisted upon giving democracy a fair test. He made it work.

This man, who rose from so low a station to such a high one by his own efforts, who belonged to the underprivileged one-third of a nation but didn't know it, believed in the necessity of private initiative and self-help. I can best illustrate this by citing a letter written by Lincoln to his stepbrother, John D. Johnston. Johnston was continually hard up. Lincoln often assisted him. Finally, when Johnston wrote to ask for \$80 more, Lincoln's patience was exhausted. He replied, in effect, as follows: "I know you are not a lazy man, John, but you are always idle because you think you won't get enough return from your work. So I will give you no more unconditional grants of money. But I will do this: If you go to work now I will give you a dollar for every one you earn by your own labor in the next 4 months. In that way you will soon be out of debt and you will form a habit that will keep you out of debt."

Lincoln was highly sensitive to the fundamental rights of labor. He could not have been otherwise, for the scars of labor were on his own hands. He once assured an audience of striking New England shoe workers that he was glad they lived under a system of labor in which workers had the right to strike. But with equal vigor he insisted that the rights of property deserved protection. He was against—as he put it—making "war upon capital." He was glad to welcome to his standard in 1860 the support of eastern capitalists.

He didn't call them economic royalists. He did not consider it wrong or antisocial to accumulate wealth. "Capital has its rights," said Lincoln, "which are as worthy of protection as any other rights." He did not believe in ranging class against class.

During Lincoln's Presidency there was hardly a man in the country who had ever read a book or held a musket who did not think he had a better way than Lincoln of running the Government or carrying on the war. The White House was under continual pressure from special interests to adopt this or that beneficial policy—often beneficial only to themselves. While willing to listen to everyone, he turned pressure groups away empty-handed.

Lincoln believed that the world moves forward. If he were here today, he would not advise that we repudiate the accumulated experience of the past 10 years and attempt to restore the pattern of 1928. We all should like to restore its prosperity but we must never try to restore its smugness and its social self-satisfaction. Nor can we afford to restore its indifference to social reform.

The past 10 years have given us an understanding of the need for certain social reforms but we have failed to acquire a clarity of direction. We have been in the position of a patient whose doctor each day changes his diagnosis and prescribes a new remedy. When we were diagnosed in 1932 we were told that we were sick from too much competition. The antitrust laws were suspended. The cure-all was N. R. A. N. R. A. fostered more monopoly in 2 years by governmental decree than natural economic processes could breed in a decade. The administration's own committee—the Darrow committee—set up to investigate the N. R. A., reported that N. R. A. had done incalculable harm to small business.

After N. R. A. was declared unconstitutional, we were re-diagnosed. It seems that the first diagnosis was wrong because the second diagnosis was that we suffered from lack of competition. Now an enlarged Antitrust Division of the Justice Department is prepared to launch upon a new wave of prosecutions. Not that some of these prosecutions may not be justified. That is not my criticism. What I wish to emphasize is the fact that upon such a fundamental matter of policy we have seasawed violently back and forth, from one direction to the other.

As a second instance, you will recall that this administration came into power decrying Mr. Hoover's extravagance. It now spends just twice as much money in 1 year as Mr. Lincoln needed to win the Civil War—in 4 years. Belatedly, on the eve of a new election, it has a few equivocal words to say in favor of economy.

As a third instance you will recall that in 1932 the administration started out on a program whose purpose it was to inflate prices. The price structure was too unstable. It had to be made rigid. The administration has now shifted its stand. Commodity prices are now, it claims, too high and the price structure to rigid.

Bad as is this practice of rushing from one extreme to the other, it is made even worse by the dogmatic fashion in which it is done. When a new policy is decided upon it is handed down as from Mount Sinai. It never seems to occur to anyone to say that if the new policy is so dead right, then the last policy, which was its direct opposite, must have been dead wrong. Lincoln used to have a little story to illustrate the frame of mind of people who simply would not let their pet ideas be questioned. A young man was parading his horse at a Kentucky horse sale to show off its fine points, when a man whispered to him, "Look here, ain't that horse got the splints?" and the young man answered: "Mister, I don't know what the splints is, but if it's good for him, he's got it, and if it ain't good for him, he ain't got it."

It is not merely in our economic policy, but in our political methods that we are adrift. We encourage rather than repress political pressure groups. We have seen the growth of a relief lobby, an A. F. of L. lobby, a C. I. O. lobby, a farm lobby, a sugar lobby, a utilities lobby, a munitions lobby, and so forth.

To quote the words of President Clarence A. Dykstra, of Wisconsin University, "At this very moment our democracy is being challenged by pressure groups who want large portions of political pie regardless of the welfare of the majority of us."

In 1936 hundreds of thousands of dollars were scooped out of labor-union treasuries without authorization by the rank and file. John L. Lewis has openly boasted that he contributed \$500,000 to the Democratic campaign fund in that year. Parenthetically, he now finds that it wasn't a good investment, and he now proposes to sell short the securities he bought. Of course, it is no evil for labor to participate in politics; labor has a legitimate interest there. But labor should participate through the direct and democratic action of the rank and file. It is no more right for the C. I. O. than it would be for the Liberty League or the National Association of Manufacturers to attempt to purchase political favor.

I do not share the belief that the present administration must be criticized only because it has spent large sums of money. But I do say that it has spent the money planlessly and recklessly, like an irresponsible housewife. I do not share the belief that it is wrong for a Federal administration to promote the economic welfare of the people. But I do say that it is wrong for any administration to encourage an attitude of mind that there is no way out of misery. It is wrong to rob our people of all desire for self-

help. It is wrong to take the opposite course from that which Lincoln took in his letter to John D. Johnston.

That does not mean that we must not spend at all. What we need is realistic economy in government, and the realism is as important as the economy. We must strive to get more, in terms of public welfare, for every public dollar spent. There is such a thing as false economy. In the current economy drive Congress beheaded three Federal agencies. They had performed a definitely useful service. Theirs was the job of gathering facts and organizing crucial information to assist in maintaining efficient governmental activity. It would be just as silly to economize by cutting out the index from an outline of history.

I said that the administration was spending recklessly and without a plan. I know of no better illustration of the lack of sound budgeting than the recent appropriation proposal for national defense. The first official administration estimate and proposal was for an immediate appropriation of \$1,300,000,000. The sponsors of this estimate said that it was for indispensable and immediate naval construction. Some Members of Congress had the temerity to question these figures. The request was sliced by half a billion dollars, and, with this slice, the greatest naval disaster in modern times took place—52 paper destroyers, along with a number of cruisers and submarines, were scuttled. The country was told that this tremendous reduction would in no way endanger its security. If the reduced naval budget is adequate to the needs of the Nation, why were these additional destroyers, cruisers, and submarines demanded? The Budget policy of the administration seems to be to ask for much and to settle for less. This reminds me of the story of the gentleman who rushed up to his friend and frantically requested a short-term loan of a million dollars. The friend was aghast and said that he could not possibly advance a million dollars—all he had on him was \$1. Whereupon the borrower exclaimed, "All right; give me the dollar; I am in no mood to dicker."

Now let's get down to brass tacks.

Although there is no one figure in our party's history the humility and humanity of whose philosophy can furnish a better guide to us for 1940 than Abraham Lincoln, yet the tradition and the glory of his leadership will not alone suffice for Republican success this year.

This is not a year when we can take down one of our past party platforms from the shelf, blow the dust off it, revise it a little and offer it in evidence as our statement of party doctrine.

The case against the administration should be thoroughly and simply stated. This is being done by our party spokesmen, articulately and forcefully. It is unanswerable.

But the Republican campaign of 1940 must not be an anvil chorus of abuse and criticism of the New Deal and all its motives and all its objectives.

There are those who claim that by admitting the validity of many of the social reforms of the past 7 years, we are betraying the Republican Party. That was the issue of our primary fight in New York last fall.

Do we betray our party if we approve a measure which limits hours of toil so that a wage earner can get a look at the sun and sky on week days as well as on Saturday afternoon and Sunday? Do we betray our party if we approve a measure which commands that a wage earner be paid at least enough to keep body and soul together? Do we betray our party if we approve a measure which protects the unwary, including the widow and the trustees of infants' and incompetents' funds against the glib patter of a high pressure stock salesman? Do we betray our party if we approve a measure which compels a boss and his hired man to sit down amicably and work out their own problems rather than resorting to strikes and lockouts, the price for which is ultimately borne by the consumer?

Betrayal? Nonsense. Let the truth be known. The Republican Party has too often been betrayed by those in whose hearts and minds there is no compassion or thought for the man behind the plow, the man in the factory, and the man on the street.

We must make an honest and realistic analysis of that which is good and that which is bad in the measures that have been produced during the past 7 years, and firmly determine to preserve the good, reject the bad, and revise, amend, and make workable such as need revision. We must not set the clock back; all we should try to do is to make the clock keep better time.

The clearest, the ablest statement of this point of view that I have seen may be found in a recent magazine article. If I were a college professor I would recommend it as required reading for those who will write the Republican platform for 1940. It is published in the January issue of the American Mercury magazine. Even the title is challenging: "The New Deal Must Be Salvaged."

The Republican Party has no choice. It must look forward. A great deal of water has flowed over the Norris and Boulder Dams. It would be a sorry program that sought to make it flow back.

Let us curb sectional, local, and narrow group loyalties in the interest of national unity. Our program must not be designed to single out any group for criticism or for favor.

A great opportunity for national leadership is here. It must not be neglected. It must not be misused. Let us, in conclusion, as Republicans, highly resolve that we may so set our own house in order and so set our faces to the rising sun, with firm conviction that our cause is just, that the party of Lincoln shall again be the instrument of national salvation.

Senator William E. Borah

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

TRIBUTE TO SENATOR WILLIAM E. BORAH BY DEAN FRANK A. RHEA AT BOISE, IDAHO, JANUARY 25, 1940

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following appropriate tribute paid to our deceased illustrious statesman, Senator WILLIAM E. BORAH, by Dean Frank A. Rhea, delivered at the funeral services at the State capitol in Boise, Idaho, on January 25:

One's sense of inadequacy, as well as one's sense of inopportune-ness, acts as a deterrent to words. Wisdom would suggest that silence is the highest tribute one can pay to this truly great man whom the whole world mourns today. And yet, and yet, there are certain things which cry out to be said. The simplicity of the man himself, however, will be a restraining influence in the rush of thoughts stirred within us by a contemplation of his life and service to mankind.

It is of his simplicity that I would speak first. The simplicity of dress, for which he was noted, the simplicity of his manner of living, was not a studied simplicity; it was the very essence of Mr. BORAH's character.

There stands in the hinterland of Idaho a peak which soars above its fellows as the man for whom it was named soared above his fellow men. The peak stands in simple grandeur, its escarpments plain and unadorned, reaching upward into the heavens, the very expression of simplicity and strength. The simplicity of Mr. BORAH was a constant rebuke to the air of sophistication with which the modern world seeks to veil its impoverishment of straightforward thinking. His simplicity was expressed in the clear thinking of the man and in the beautiful diction, in which he knew no equal. The world has much to learn of the beauty and endurance of simplicity.

The next thing of which I would speak is his integrity. Mount Borah stands not merely outlined in simplicity, but it stands firmly against the storms of wind and rain, firmly against the pressure of ice and snow. So did Senator BORAH stand against the winds of popular approval and political expediency. Nor could any pressure from without cause him to swerve from the path he felt to be the path wherein his feet should go. Men differed with Mr. BORAH, differed radically, but when they pronounced him wrong, they knew in their hearts that if he were wrong, he was honestly wrong. In integrity of character, Mr. BORAH stood as firmly as the peak that bears his name.

As we gather here to say our last farewell to him, the doors of our national Valhalla swing gratefully open to receive another of our American immortals. We, in Idaho, feel humbly proud and signally honored that he, who so richly deserved a resting place in the Nation's Capital, chose simply to return to his adopted State, to which he gave unstinted service.

Our thoughts turn naturally to her who was his comrade through the years, whose cheerfulness and unflinching radiance carried him through many dark hours. Some of us will remember a few years ago when the shadows of the valley of death closed in about him, not for himself, but for her whom he loved; as we watched him tread the hospital corridor in anguish of soul, we saw afresh the revelation of the great love he bore her. Among my prized possessions is a letter from Senator BORAH, written just after that, expressing his deep gratitude for Mrs. Borah's recovery. For her, the pathway into the future points alone, but there must come surging in upon her today, wave upon wave of affectionate sympathy, not only from those whom she knows, but from countless thousands whom she can never know save through this tender bond of sympathy. The harassed and perplexed men and women of war-torn Europe will forget their own grief today, and their hearts will turn toward this distant place, while across the vast expanse of space that separates her from them will come this message and this prayer: "Be brave! Be strong! God bless you this day and through the days to come." There comes to mind the lines of Grace Noll Crowell:

"I think that God is proud of those who bear  
A sorrow bravely. Proud indeed of them  
Who walk straight through the dark to find Him there,  
And kneel in faith to touch His garment's hem.  
Oh, proud of them who lift their heads to shake  
The tears away from eyes grown dim,  
Who tighten quivering lips and turn to take  
The only road they find that leads to Him.

"How proud He must be of them! He who knows  
All sorrow and how hard grief is to bear.  
I think he sees them coming, and He goes  
With outstretched arms and hands to meet them there,  
And with a look—a touch on hand or head—  
Each finds his hurt heart strangely comforted."

There are two portentous moments when God speaks to a man. Once, when He endows a man with faculties, or talents, as our Lord calls them in the parable; it may be five, or two, or one. The number is not significant, since God says to every man, "Occupy till I come." The next portentous moment comes with the day of reckoning when a man must give an account of his stewardship. Then happy is the man to whom God says, "Well done, good and faithful servant."

The constancy of Mr. BORAH in the fulfillment of the duties of his life, and the consecration of his talents to the welfare of his fellow men, disclose how diligently he heard God's first word to him with the bestowal of rich abilities, "Occupy till I come," and they assure us that he now happily hears God's second word, "Well done, good and faithful servant!"

God grant that some waiting hand will take up the torch he now lays down! God grant that some now silent tongue will speak the truth as courageously as he spoke it! How straight the heart of youth perceives the lesson of Mr. BORAH's life, as was witnessed by the tribute of a 16-year-old youth in Washington: "God give us men! The time demands strong minds, great hearts, true faith, and willing hands."

I conclude by reminding you of the Christian note of victory in death. As life comes from God, so life returns to God. Though our hearts be heavy with grief, we sorrow not as men without hope. Though tears dim our eyes, we look trustfully and hopefully up into the face of our loving Heavenly Father, and our hearts are strongly comforted by the words of our Blessed Lord, who by His death didst take away the sting of death, "Because I live, ye shall live also."

"God of the Living, in whose eyes  
Unveiled Thy whole creation lies,  
All souls are Thine; we must not say  
That those are dead who pass away,  
From this our world of flesh set free;  
We know them living unto Thee.  
Released from earthly toil and strife,  
With Thee is hidden still their life;  
Thine are their thoughts, their works, their powers,  
All Thine, and yet most truly ours;  
For well we know, where'er they be,  
Our dead are living unto Thee.  
Not spilt like water on the ground,  
Not wrapped in dreamless sleep profound,  
Not wandering in unknown despair  
Beyond Thy voice, Thine arm, Thy care;  
Not left to lie like fallen tree;  
Not dead, but living unto Thee."

There is an ancient prayer which the Christian Church has said for her children through the ages. We reverently repeat it now in behalf of the soul of WILLIAM EDGAR BORAH: "May he through the mercy of God rest in peace, and may light perpetual shine upon him."

The Gillie Lewd-Literature Bill

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ARTICLE FROM OUR SUNDAY VISITOR, HUNTINGTON, IND.

Mr. GILLIE. Mr. Speaker, under leave granted me to extend my remarks, I include an article from a recent issue of Our Sunday Visitor, a Catholic newspaper published at Huntington, Ind. The article concerns H. R. 5757, a bill which I introduced to discourage the publication of obscene literature. This bill has passed the House and is now awaiting action in the Senate Committee on Post Offices and Post Roads. The article follows:

[From Our Sunday Visitor, of Huntington, Ind.]

Two weeks ago we made mention in this column of House bill 5757, which is designed to force publication in all periodicals of the names of their editors and publishers. The purpose of this bill is to identify the publishers of lewd literature. Most of these

publishers try to conceal their identity and even the actual place of publication of their magazine. If they had to reveal their names, they would be too much ashamed to lend themselves to the production and circulation of printed filth. Since mention was made of this bill, many readers have asked for further particulars about it.

The bill has been passed unanimously in the House of Representatives and has now been transferred to the Senate Committee on Post Offices and Post Roads. It has won the support of thousands of individuals who are interested in the N. O. D. L. campaign and of many organizations which have been working for a clean-up in the movies, on the stage, and in the magazine field. Non-Catholics as well as Catholics approve it. Prof. Theodore Grabbner, of Concordia Lutheran Seminary in St. Louis, for instance, pledges support of the bill by the Civic Union of St. Louis when he writes to Representative GILLIE:

"The worst fiction obtainable today in America is being distributed in publications which cannot be traced by any indication on title page or wrapper. In every case the names and addresses are fictitious. As you well know, this material is being distributed by truck, so as to avoid indictment under the Federal law.

"Our organization represents some 40 religious and civic bodies of St. Louis, and we are certainly with you in this fight."

The Gillie bill would make it a criminal offense for any publication to conceal the identity of its publishers, editors, and owners, or place of publication. Violation would carry with it a maximum fine of \$2,500 and imprisonment for not more than 1 year.

We urge all who would reduce the quantity of moral filth distributed throughout the Nation to write to members of the Senate committee and recommend passage of the Gillie bill by the United States Senate at this session of Congress.

We list below the names of the members of the Senate Committee on Post Offices and Post Roads. They may be addressed at the Senate Office Building, Washington, D. C.

Kenneth McKellar of Tennessee (chairman); Carl Hayden, of Arizona; Josiah William Bailey, of North Carolina; W. J. Bulow, of South Dakota; James F. Byrnes, of South Carolina; James C. O'Mahoney, of Wyoming; James E. Murray, of Montana; Dennis Chavez, of New Mexico; Rush D. Holt, of West Virginia; Allen J. Ellender, of Louisiana; William H. Smathers, of New Jersey; James M. Mead, of New York; D. Worth Clark, of Idaho; Pat McCarran, of Nevada; Lynn J. Frazier, of North Dakota; Robert M. La Follette, Jr., of Wisconsin; Styles Bridges, of New Hampshire; James J. Davis, of Pennsylvania; and Clyde M. Reed, of Kansas.

## The Challenge of Individualism

### EXTENSION OF REMARKS

OF

HON. J. ROLAND KINZER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ADDRESS OF HON. J. WILLIAM DITTER, OF PENNSYLVANIA, AT  
URSINUS COLLEGE, COLLEGEVILLE, PA.

Mr. KINZER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include copy of an address delivered by the gentleman from Pennsylvania, Hon. J. WILLIAM DITTER, at Ursinus College, on February 15, at which time the honorary degree of doctor of laws was conferred upon our colleague, the gentleman from Pennsylvania [Mr. DITTER].

Dr. McClure, members of the faculty, and friends of Ursinus, I appreciate the honor of joining with you today in a reaffirmation of our faith in the "good and great traditions of Ursinus." They have been established by the fullness of past experiences. Today they are challenged by restless tides of disappointment and doubt. I believe the future will prove their stability, if their substance as well as their form survives.

More than a hundred years ago the German philosopher Von Humboldt declared that "the object toward which every human being must ceaselessly direct his efforts is the individuality of power and freedom." During the century that followed, this philosophy was the guiding principle in the growth of western civilization, forming the foundation upon which men developed new fields of opportunity and more abundant sources of satisfaction. Far-flung frontiers were conquered by the freedom of individual adventure and by the power of individual ambition.

But a change has taken place. A tendency to disregard this principle and to substitute for it a distinctly inconsistent and incompatible premise is apparent with the demand that power and freedom be exchanged for safety and security. We are in the midst of a confusion of ideas and ideals. At a time such as this I believe it is wise to reappraise the earlier principle as well as the divergence from it and to examine the results of the abandon-

ment where it has taken place. As for myself, I am still persuaded that the full development of the individual in all of his faculties should be the prime purpose of society, and that from the standpoint of the individual himself and from the standpoint of society an irreparable damage will be done if the abandonment is made.

Why is it wiser to adhere to the principle that the well-rounded development of the individual as a personality through his own efforts, so far as is compatible with the rights and interests of other individuals, than to accept the premise that he is but an instrument of society—a property right of the state?

To a large degree the course of our lives is determined by the things that give us satisfaction. What may be pain to one is a joy to another. Experience is purely personal. Each individual has his own sensations. Out of such feelings his idea of life results. His experience is a product of his own sensations. As a consequence, the individual, as a member of society, is the one who must determine those things which give him the maximum amount of pleasure and the minimum amount of pain, and he alone can decide the burden he is willing to carry to secure the benefit which he seeks. Against the background of his own objectives and ideals, his own experiences, each individual can best weight the sacrifices which he believes are necessary and worth while to attain his goal. No one else has his identical experiences and ideals. He determines values. He decides the price he is willing to pay for that which he believes will satisfy him.

Having made his decision the individual must equip himself for the attainment of the object toward which his energies are directed. He must exercise his faculties so that his own personality may develop and expand. Through the application of the mind to the problems requiring thought the intellectual equipment of the individual grows. Through the development of manual skill the productivity of the individual is increased. Day by day the exercise of individual talents makes for growth and improvement, with society reaping the benefit of a larger and fuller life from the increased ability of each individual sower. But the principle of individualism is just as desirable from the standpoint of the state as it is from the standpoint of the citizen. To the extent that the individuality of each citizen is developed such citizen becomes more valuable, not only to himself, but to society as a whole, for society is but the sum total of those who make it up. It has no existence apart from the constituent individuals that compose it. It is not an end in itself. It exists only because of individuals, and its strength is dependent entirely upon the hardihood of those who are a part of it. To the extent that the individual personality of each member of society is developed he becomes a more valuable contributor to the group with which he is identified. To the extent that the personality of the individual is developed there is a greater fullness of life, not only for such individual, but for all others with whom he lives and works and mingles. He becomes a lever for the group.

The restriction of the development of individual personality is justified by some on the ground that limitations must be established in order to permit the possible development of individuals who lack the urge which is indispensable to growth, or to whom the fields of opportunity are said to be closed. It seems to me, if society is to develop, to progress, to meet new conditions successfully, leaders must be developed. If society is to move forward, men of genius must be available, and such genius can only come through the free development of the individual, as those of more marked ability can find avenues of increasing usefulness. I believe that individualism is submerged; we face the danger that mediocrity rather than superiority will dominate the state; that the average level, instead of being lifted, will be lowered; that genius will be restricted rather than expanded. Mediocrity has always had a tremendous antipathy to genius, for, as John Stuart Mill so wisely said, "Originality is the one thing which unoriginal minds cannot feel the use of." As men search for truth, light alone can come by the development of freedom of thought and expression on the part of those who search, and only, as their individual ambitions stimulate their endeavors, can new discoveries be made.

The idea that the primary aim of society is the development of well-founded individuals through the application of their own faculties became a part of the social, political, and economic thought of western civilization in the last quarter of the eighteenth century. In the political field this principle was the main influence that produced the concept of constitutional democracy, for a constitutional democracy is essentially founded on the theory that every citizen must have an equal voice in his own government. That government should be the agent, not the master, of the citizen. Every charter of human liberty from the days of a weak King John has been a victory of individualism.

Our own political philosophy was established upon the theory that the individual should be secure against the will of a man, a mob, and a majority. We placed constitutional limitations upon the will of the majority in order to protect the individual and those who make up minority groups from what otherwise might be the impulsive decisions of those in power, with the constant thought that the individual citizen's rights should never be invaded or despoiled.

In the economic field, the application of the doctrine of individualism has led to the development of the division of labor and of the free market. With this division of labor, each individual has been free to specialize, to utilize, and to develop his own individual skills, his own talents, along those lines in which he is

best fitted and in which his own personal tendencies direct his ambitions. Only where an individual has freedom of choice of the occupation that he wishes to follow can a satisfactory system of labor develop. If society is stultified by the dictates of custom, by unreasonable regulation, or by the regimentation of men, a system of industry founded upon the contribution of individual skills is impossible. In order to have the successful operation of a system of the division of labor, there must be a free market. There must be a place where the goods and services produced by the specialized skills of individuals can be exchanged for the goods and services they require from others. The talent of one is exchanged for the talent of another. Each life is enriched by the exchange.

It is safe to say that the development of the division of labor and of the free market have made possible the tremendous increase in the standard of living in western civilization during the past 150 years. When an individual was forced to use his skills in diverse and divergent directions, he could not possibly use his own natural abilities to their fullest extent, for he was required to produce many things that his own skills did not lend themselves to readily. But when each individual can use his own skills for the production of those things for which he is best fitted, and then exchange the product of such skills for the goods and services that he needs, it makes possible the production of a vastly greater amount of wealth and a fuller and richer life for all.

The free market and the full application of the division of labor go hand in hand, and a free market and the division of labor are dependent entirely for their successful operation upon the development of the individual. When an individual is free to bargain and trade the goods and services produced by his own specialized skills for the goods and services produced by the application of the specialized skills of others, he is given full opportunity to develop his individual talents with the assurance that his skill will inevitably increase the value of his worth in the market place, and give him a greater return for his endeavor than he might otherwise secure.

It seems to me that the best proof of the value to society of the principle of individualism is to be found in the results that have been produced. It has given us the Magna Carta, the Habeas Corpus Act, the Bill of Rights, the Declaration of Independence, the Constitution, the extension of the franchise, free education, religious freedom and toleration, the destruction of feudalism and autocratic privilege, and the expansion of culture on a wider and broader scale than has ever been known before. It has created the wish for better things and inspired the will to obtain them. Above all else, the individual has been magnified. His horizons have been broadened. His ambitions have been challenged. His abilities have grown. His satisfactions have been increased and the abundance of life and the joy of living it have been lifted from the dull drudgery of monotony to new vistas of endeavor. Freedom stimulates adventure. Security invites stagnation.

The accomplishments of individualism have been far reaching. They did not occur overnight. They were the result of perseverance and patience. Time was required for the seed to germinate, for the plant to grow, for the flower to blossom. But there are always those who are impatient for the seed to ripen before the stalk has its full strength. Despite the record of the past, we have those in our midst who insist that greater progress could be made if the supremacy of the state, rather than the sovereignty of the citizen, were established; if individual freedom and power were surrendered for safety and security; if collectivism were substituted for individualism. It is the same philosophy so well described by Mussolini as that "which accepts the individual only insofar as his interests coincide with those of the state." It is the philosophy which is premised on the foundation that the state is all wise and all powerful; that the state exists as an end in itself; that there are no limitations on the intelligence or the integrity of the rulers and no limitations on their competence or their conscience. It is the philosophy that has given to the world a Stalin, a Mussolini, a Hitler. It is the philosophy upon which dictators must depend. It is the antithesis of freedom and liberty. It is a philosophy which dictates what men may plant and how much they may harvest; where they may work and how much they may earn; what they may worship and how they may pray; when they may speak and what they may hear. It is the same philosophy that has always given to the world its days of tyranny and its times of despotism.

I believe one of the greatest dangers incident to this new philosophy is the threat which it holds to our idea of a universal franchise. The franchise has been extended to all citizens. All persons capable of exercising an informed judgment may express that judgment in the management of the body politic. It is the heart of our democratic process. It depends upon the individual, upon his ability to weigh and determine issues; to think things through clearly; to let his reasoned judgment express itself; to make him the master of his own destiny. He is a free agent, neither dictated to nor controlled by the judgment or the will of others. You and I cannot be unmindful of the travesty of the elections that are held by Hitler. They are idle gestures, burlesque performances, meaningless parades. They could not be otherwise, for where the right of the individual is submerged by the collectivism of the state, the right of franchise inevitably must be forfeited so that the will of the master may be supreme.

The new philosophy has placed what I believe to be a dangerous emphasis on security. I would not be misunderstood. I believe that society should assure a sense of security to those upon whom

misfortune has fallen, and also upon those who have suffered from the demands which society makes upon them. On the other hand, I believe that each individual is chargeable with the responsibility of establishing the utmost security for himself and that a policy of paternalism, such as many advocate today, robbing, as it must, the individual of his sense of responsibility, will destroy the vitality, the courage, and the hardihood upon which the strength of the Nation depends. Security is assured to the slave. Freedom is the prized possession of the master. I believe there are still frontiers to conquer. I believe there are resources yet to be developed. I believe there is wealth yet to be mined. I believe there are blessings yet to be found. I believe that these frontiers can be conquered. I believe that these resources can be developed. I believe that this wealth can be mined, and these blessings can be found, only as the spirit of adventure is permitted to be the prized possession of the individual; only as the individual is willing to assume the risk; only as the individual is willing to surrender his insistence upon security as he breaks new ground, marks new trails, sees new vistas, and conquers the summits of new achievements. Decadences always come in the wake of complete security. Progress has always been made by the freedom of adventure.

We look out today upon a troubled world. There is one ray of hope. Its light can be seen where the sovereignty of the citizen continues to defy the supremacy of the state. Individualism has given, and still gives, the world progress and life. Collectivism has given what it always will give, stagnation and decay. If further progress is to be made, it can only be made through the continued development of the individual, not by his subjugation to society and the state. Individualism has freed the minds of men. It has stimulated the thoughts of men. It has challenged the affections of men. It has had the courage to oppose the creeping collectivism which inevitably leads to despotism; the collectivism that stultifies the thought, suppresses the freedom, and crushes the initiative, by which all progress has been made in the past. I cherish the hope that it may have the strength to survive the present conflict, for I believe that it can help in the building of the kingdom of heaven in the hearts of men. That is our task. That kingdom can be built only by "men who possess opinions and a will; men who can stand before a demagogue and damn his treacherous flatteries without winking; tall men, sun crowned, who live above the fog in public duty and in private thinking." The hope that I said I cherish is fortified by my belief that the substance as well as the form of the traditions of Ursinus will survive. That hope is further fortified by my conviction that the morality of individualism will be reestablished as you and I have the courage to be free and the ambition to be of service.

## The National Transportation Bill

### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

RADIO ADDRESS OF MR. FRED BRECKMAN, FEBRUARY 17, 1940

Mr. HARRINGTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a radio address by Mr. Fred Brenckman, Washington representative, the National Grange, over stations of the National Broadcasting Co., on the Grange hour, from Washington on February 17.

Mr. Brenckman said:

It will be recalled that about a year and a half ago President Roosevelt appointed a Committee of Six to survey the situation confronting the railroads of the country and to prescribe remedies for their ills. One half of the members of this committee was composed of railway executives, the other half represented railroad workers. Other forms of transportation had no representation on the committee, nor was the general public represented.

In due time bills embodying the recommendations of the committee were drafted and introduced in both Houses of Congress. After somewhat lengthy hearings before the House and Senate Committees on Interstate and Foreign Commerce, these bills were favorably reported. The Senate passed a bill representing an attempt to codify the entire Interstate Commerce Act. When this measure reached the House everything but the enacting clause was stricken out, and a new bill was substituted, which was passed after heated debate.

Action on this legislation came so late during the last regular session that there was not sufficient time remaining before adjournment to reconcile in conference the differences between the two bills. However, a conference committee is now engaged in the arduous and difficult task of attempting to compose the many differences between these two bills and to pave the way for final passage.

## LEGISLATION THAT SUITS NOBODY

A curious situation has arisen with reference to the matter. First of all, the President's Committee of Six, which sponsored this legislation, has issued a pamphlet of 43 pages suggesting 36 necessary changes in the Senate bill. Another pamphlet of 91 pages issued by the Committee of Six recommends 27 changes in the House bill. The Interstate Commerce Commission has made a special report dealing with this subject which covers 84 printed pages.

As this report sets forth, the Senate bill, from the standpoint of codification, was produced under great difficulties and is regarded by the Interstate Commerce Commission as "a forced and hurried job." The Commission is of the opinion that any attempt to codify the Interstate Commerce Act should be worked out with great deliberation and that a preliminary report should be issued, setting forth a tentative draft, giving the reasons for all the changes that are proposed. After that, in the opinion of the Commission, all concerned should have an opportunity to submit briefs on this tentative draft, after which a final report should be issued for the consideration of Congress.

It will be seen from this that the legislation in question is far from satisfactory to the Committee of Six, which inspired it. In its present form, it is considered imperfect and unworkable by the Interstate Commerce Commission. It meets with the disapproval of a large percentage of railroad workers; it is likewise opposed by those who are interested in water and motor transportation. There never was any public demand for this legislation, and there is justification for saying that its enactment would be contrary to the public interest.

## GRANGE OPPOSES UNNECESSARY REGULATION

The Grange and many other farm groups are opposed to the proposal contained in both House and Senate bills that the carriers on our inland waterways should be subject to regulation by the Interstate Commerce Commission. The Grange likewise opposes this legislation because it goes farther than the Motor Carrier Act of 1935 toward placing private motortrucks, including the 1,000,000 trucks on our farms, under the regulation and control of the Interstate Commerce Commission.

We maintain that there are only two legitimate grounds upon which the Government could justify itself in attempting to regulate transportation on our inland waterways. One of these grounds would be in the interest of public safety, and the other to protect the public against monopolistic practices. So far as safety is concerned, the Bureau of Marine Inspection and Navigation, coming under the Department of Commerce, looks after that; and when it comes to protecting the public against monopoly, the truth is that no monopoly whatsoever exists among the carriers on our inland waterways, nor in the coastwise trade. The rivers, the lakes and the seas are open to all. These are highways that were created by Nature herself. So, far from breaking up any monopoly among the water carriers, which in reality is nonexistent, the pending legislation takes a long step toward creating a monopoly.

The carriers that are now operating would be permitted to continue, subject to rules and regulations laid down by the Interstate Commerce Commission; but before it would be possible to establish a new service, it would be necessary to secure from the Commission a certificate of public convenience and necessity.

If this bill should be enacted, there would be no new carriers, for the simple reason that the restrictions of the legislation virtually instruct the Interstate Commerce Commission to deny any person or concern a certificate of convenience and necessity if the Commission comes to the conclusion that present transportation facilities are adequate to take care of existing commerce.

This raises the question Who owns the rivers of the United States? It is the people of the country who own them. That being true, why should not the people be allowed to use their own rivers under proper conditions, without let or hindrance on the part of the railroads, the Interstate Commerce Commission, or any other agency?

Most of us remember having heard that when Abraham Lincoln was a young man he made a trip on a flatboat carrying some farm produce down the Mississippi River to New Orleans. What a pity it would have been if it had been necessary for him and those associated with him to make application for a certificate of public convenience and necessity before starting on this trip.

## THE MILLER-WADSWORTH AMENDMENT

If the pending transportation bill should be enacted, it is of supreme importance to those who are interested in the development of the transportation facilities of our inland waterways, and to the public as well, that the amendment sponsored by Senator MILLER, of Arkansas, and by Congressman WADSWORTH, of New York, should be retained. Briefly stated, this amendment provides that in order that the public at large may enjoy the benefit and economy afforded by each type of transportation the Interstate Commerce Commission shall permit each type of carrier or carriers to reduce rates, so long as such rates maintain a compensatory return, after taking into consideration the overhead and other elements entering into the cost of the service rendered. This amendment is so fair and reasonable that it would be nothing short of preposterous if the bill should be enacted without it.

There is justification for saying that those who inspired and drafted the legislation under consideration have lost sight of the fundamental purpose for which Government regulation was established, and that was to protect the public interest. We have drifted so far away from this original and legitimate purpose that the effort of our lawmakers now appears to be to equalize competition

as between different modes of transportation. The truth is that an attempt is being made under the guise of regulation to raise the rates of water and motor carriers to the point where they will be comparable with rail rates. This is not only unsound economically but it is prejudicial to the welfare of the entire country.

## FARMER WOULD BE PENALIZED

Agriculture, in particular, would be hard hit if the proposed legislation should be enacted. Transportation constitutes the heaviest service charge that the farmer has to pay. The farmer pays the freight both coming and going. Last year the farmer received only 39 cents out of every dollar paid by the consumer for food. At the depth of the depression, the farmer's share of the consumer's dollar dropped to 33 cents. While transportation and distribution must be regarded as legitimate and indispensable functions in the affairs of our civilization, the fact remains that when those who merely transport and distribute the products of our farms receive vastly more than the share that goes to the producer, it amounts to the same thing as an economic crime.

Several months ago I filed a brief with the Interstate Commerce Commission on behalf of the Grange, protesting against the proposal that private motortrucks, including farm trucks, engaged in interstate commerce should be subjected to Federal regulation in the interest of safety. While we are, of course, in favor of proper restrictions and regulations to promote safety on the highways, we take the position that this is a matter that is already being looked after by the several States. In addition to this, a survey discloses the fact that not one private truck in ten ever crosses a State line.

## OVERCENTRALIZATION OF GOVERNMENT

Under the circumstances, it is proper to ask why Federal control and regulation should be superimposed upon State control and regulation. With the deficits of the Federal Government aggregating billions of dollars a year, why should this expense be duplicated? Can there be any reasonable doubt that if Washington undertakes to control and regulate the private motor carriers of the country, in due time this will result in a tremendous increase in the number of Federal employees? During the past 7 years the number of civil employees on the pay roll of the Federal Government has risen from 563,000 to 933,000, an increase of nearly 70 percent. During the same period the national debt was increased by more than \$21,000,000,000.

As these facts and figures convincingly prove, the Government has already assumed greater obligations and responsibilities than it is capable of carrying without increasing taxation to the point of confiscation.

The wise rule laid down by Thomas Jefferson, that government should restrain men from injuring one another and leave them otherwise free to follow their own pursuits, should apply in this case.

## Consolidation of Railroads

## EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

## RESOLUTION FROM TOLEDO CITY COUNCIL PROTESTING CONSOLIDATION OF RAILROADS

Mr. HARRINGTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution published in the Toledo (Ohio) City Journal, on December 23, 1939, protesting consolidation of railroads:

## RESOLUTION NO. R. 362-39, PROTESTING CONSOLIDATION OF RAILROADS

Whereas the session of Congress adjourned last July had before it several bills for the rehabilitation of the railroads of this country, none of which provided for the protection of the employees in the matter of consolidations and mergers; and

Whereas Congress was unable to agree upon a solution of this question before adjournment, but did, however, appoint a joint committee of both Houses for the purpose of agreeing upon a bill that would be presented to the new Congress meeting next January; and

Whereas at the closing days of the last session there was introduced an amendment to S. 2009, pending in the House, known as the Harrington amendment, having for its purpose the protection of railroad employees and the public from consolidations and mergers, being introduced by the Honorable VINCENT F. HARRINGTON, Congressman from Iowa, the said amendment reading as follows:

"Provided, however, That no such transaction (consolidation, merger, purchase, lease, operating contract, or acquisition of control) shall be approved by the Commission, if such transaction will result in unemployment or displacement of employees of the carrier or carriers, or in the impairment of existing employment rights of said employees"; and

Whereas said amendment was passed by the House of Representatives on the 26th of July 1939 by a large majority, but the bill as amended did not have time to come before the Senate, we feel that the joint committee of both Houses should therefore embody this amendment in whatever bill is agreed upon by their committee, for the following reasons:

1. Information available leads us to believe that any consolidation of railroads would seriously affect the communities along the line of railroad abandonment.

2. For the reason that property values would be reduced, small cities would be isolated, and the citizens of such communities would be required to depend upon bus and truck transportation, which would seriously affect the shipping of farm products raised along such line of railroad.

3. Further information leads us to believe that the consolidations now proposed would lead to the unemployment of some 200,000 employees now working upon said railroads, and other industries cannot at this time absorb this displaced labor.

4. The city of Toledo has for years been known as the third largest railroad center in the United States; if the railroads entering this city are consolidated or merged, it would not only affect real-estate values, due to the many railroad men owning their own homes, it would also greatly affect all business interests as well as displace many of the 25,000 employees who would have to join the ranks of the unemployed: Therefore, be it

*Resolved, by the Council of the City of Toledo, Ohio, That the mayor, vice mayor, and the members of council endorse this resolution in its entirety; and be it further*

*Resolved, That a copy of said resolution and their action be forwarded to United States Senators VIC DONAHEY, ROBERT TAFT, and Congressman JOHN F. HUNTER, also a copy of same be furnished to the Toledo Blade and the Toledo Times for publication.*

Adopted December 22, 1939, recess session.

ROY C. START, Mayor.

Attest:

L. W. DAVIS, Clerk of Council.

I hereby certify that the foregoing is a true and correct copy of a resolution published in the Toledo City Journal December 23, 1939, and adopted by council on December 22, 1939.

Attest:

[SEAL]

L. W. DAVIS, Clerk of Council.

TOLEDO, OHIO, January 26, 1940.

## One Concrete Proposal Concerning Unemployment in Arizona

### EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. MURDOCK. Mr. Speaker, because we as a nation have achieved recovery without diminishing unemployment, we must acknowledge this startling fact, that conditions have so changed in the field of economic production that a mere return of prosperity will not automatically solve our basic problem of employment. Manifestly, in 1939 we were able to produce as much material wealth as we produced in 1929 with about a million fewer employees. Such has been the advancement in technological management, involving machines more and more with fewer men, and such has been the increased use of power on the farm, in the factory, and for transportation that human labor has been greatly displaced. This makes it possible for the Nation to produce more than it has ever produced before with fewer participating in the production thereof. This scientific fact looms as a curse over our Nation today, whereas, by all logic, it ought to be a blessing.

Since economic values are involved in "goods" and "services," and since "goods" are now more easily produced with fewer hands, it seems logical that expansion must take place in the direction of "services." If this be so, the question arises, What are those "services," which an increasing number of our population must be able to render in order to be employed, and how can these citizens be best prepared to render such services? This solution may require some modification in our long-accepted philosophy of economics and business. I will not take the time to develop that matter

further concerning "services," but would like to do so later in a discussion of educational needs.

This Nation has been founded and has grown to greatness and wealth on the basic philosophy of private enterprise and the sanctity of private property. Although, as might be expected, instances of abuse and wrongdoing have shown up throughout our history, it is the business of government to minimize such abuses and wrongdoings and to foster economic progress on the original basis. That is the American way. Of course, we cannot be as individualistic in our present complex society as the founding fathers were in their simple economic society, so we must accept the inevitable and have an increasing degree of governmental regulation. However, our object should be to keep governmental regulation down only to the absolutely necessary level.

Fifty years ago the American citizen who was a rugged individualist declared, "The world doesn't owe anybody a living." We have modified that idea some today, and our theory now is that "the world" does owe each individual something, but we still feel that he must work energetically to collect. Common sense indicates that procuring of jobs for our unemployed ought to encourage their employment in private business having an approved economic and social purpose. This means giving encouragement to business—private business—and the creation of jobs. By this I do not mean that the Government should lend itself as the pliant tool of big business interests who already, because of monopolistic power, have a strangled grip on the American people, but Government should give encouragement to small-business men. I believe the small-business man is the forgotten man.

This Government has helped the most desperate portion of our population in their poverty, and it has extended aid to some of the largest business concerns, but it has heaped tax burdens and hampering regulation upon the small employer. The Government's attitude toward the small-business man reminds me of the indignant words of a great leader, delivered centuries ago, about another matter when he said, "Ye lay upon men's backs burdens grievous to be borne, and ye lift not one finger to remove them." I am not suggesting that we should do away with the social legislation that we have recently put on the statute books because it constitutes such a grievous burden to the small-business man, but I am suggesting that we ought to be more thoughtful of the small-business man, and the Government ought to aid him in every legitimate way.

What concrete proposals can be suggested? I come from the West, from one of the newer portions of the far West, where opportunity should be greatest and where "the world is still in the making." Maybe I have been kidding myself and trying to fool others by telling young people that there is more "pioneering to be done" in that part of our country than the remarkable pioneering which has already been done there. Just take one line of industry for example. One of the basic economic supports for my State is mining. When I went there a quarter century ago, an occasional crepe-hanger predicted gloomily "that the State must go like all other mining States, for the mines would play out." Now I do not believe that for one moment, and even if it were true concerning mining, other industries would come along—have come along—to supplement mining as an economic support. Copper mining has been our greatest mining reliance and bids fair to continue so. It must continue so and must be protected. I would be happier to see some new copper mines being developed along with those now operating.

The small mine operators of Arizona call my attention to certain opportunities and needs. Thoughtful leaders among these men declare that mining, although one of the most basic extractive industries, drawing wealth from the great source of wealth, has been most neglected by all of our legislating during the last few years. They claim that thousands could be profitably employed in private, necessary, productive employment, if hundreds of the best mining men were given encouragement. This encouragement might need to be loans, but more particularly favorable markets, and

that with the revival of mining there would be an increase of purchasing power and a stimulation of all other lines of business accordingly.

Of course, the small mine operators are not thinking directly of the refugees from the Dust Bowl, that is, the transient and desperately poor migratory farm laborers that have recently come into Arizona, for such cannot be used directly in mining. However, leaving them out of consideration for the moment, the small mine operators of Arizona maintain that the Government could entirely eradicate unemployment in Arizona by certain legislation, which legislation would not require direct appropriations from the Federal Treasury. I, myself, believe this, and I would go further and say that it would be possible to give employment to every employable person in Arizona directly; and also indirectly give employment to those recent comers to the far West from the Dust Bowl. As a first move in this direction, I believe the enactment of my bill, H. R. 8206, should be done at this session of Congress. Since I am not a mining man, I am not thoroughly competent to explain this whole matter, and for that reason I am anxious that the Committee on Banking and Currency, to which this bill has been referred, should have hearings on the bill, and let others more competent explain its purpose and possibilities.

### Jobless Tax Rating Gives Pay Stability

#### EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

#### AMERICAN LEGION PROGRAM FOR GREATER REGULARITY IN EMPLOYMENT OF WORKERS

Mr. AUGUST H. ANDRESEN. Mr. Speaker, Nation-wide interest is now being shown by industry and labor, as well as many individuals and organizations, in the adoption of a sound and workable plan to provide regularity of employment for workers in the country.

The American Legion has taken an active leadership toward a solution of this important problem. Its committee on employment-stabilization service has worked out a plan which provides for more regular employment for American workers. Prof. E. P. Schmidt, of the University of Minnesota, economist for the committee, has explained the Legion plan. His statement appears hereafter as it was given in the Washington Evening Star on February 22, 1940.

[From the Evening Star, Washington, D. C., February 22, 1940]

**JOBLESS TAX RATING GIVES PAY STABILITY, ECONOMIST HOLDS—PROF. E. P. SCHMIDT, HERE TO SEE LEGION OFFICIALS, CITES BENEFITS**

Use of employer experience rating in unemployment compensation insurance systems, as a means of promoting the broad objective of employment stabilization, was advocated today by Prof. Emerson P. Schmidt, of the University of Minnesota, who came here to confer with American Legion officials.

Professor Schmidt is serving as consulting economist in the American Legion employment stabilization service, which is seeking nationally to foster programs for making employment for the worker a more regular and assured prospect. He holds that the possibility of achieving a somewhat reduced pay-roll tax rate, by stabilizing employment, spurs employers to find means of avoiding worker lay-offs.

His views were sought on the employer rating system, since this is one of the major elements under consideration here in connection with proposed amendments to the District's Unemployment Compensation Insurance Act.

#### PERFECTED SYSTEM SOUGHT

Members of the Washington Board of Trade, the Merchants and Manufacturers Association, and other District business groups are urging adoption of a perfected rating system in the District meas-

ure to replace the old provision now destined to go into force next January 1 unless the plan is stricken from the law.

An employer rating plan, it has been explained, is a system under which those employers who achieve stability in their pay rolls are given as a reward some reduction in their pay-roll tax as an incentive to continue to strive for job regularity. Four States now have such plans in operation, and the laws of 35 other States provide for use of the plans within the next several years.

"If such a plan is not invoked, what incentive remains for the employer to make any effort to maintain a steady pay roll?" Professor Schmidt asks. "Why would not the employer drop a worker just as soon as he figures it possible, so as to save the amount of the worker's wages and to save on the amount of his annual pay-roll tax? If all employers are required to pay exactly the same tax, year after year, why should they make serious efforts to maintain steady pay rolls?"

#### SEES REAL ACHIEVEMENT

On the other hand, Professor Schmidt finds that in Wisconsin, the only State where the employer experience rating plan has been given a trial of any length, so far, a long list of employers, striving to earn a tax-rate differential, have made real achievements in maintaining steady pay rolls. He cites many cases to prove the point.

In this connection Professor Schmidt explained that the American Legion is developing a national program encouraging employment stabilization. The service has been organized under the national employment committee of the Legion. Statements of actual experiences of manufacturing and mercantile establishments of many kinds, in regularizing employment, are being mailed out to other employers.

"Once the top management of a business or an industrial plant is committed to a labor stabilization policy," he declares, "it is surprising how many ideas will flow from the personnel of the organization to preserve regular pay rolls."

He was asked whether adoption of an employer experience rating system had a tendency to reward the successful operator and to hurt the little fellow.

#### SEES OPPORTUNITY

"No" was his answer. "Take the case of the little-shop keeper who employs but a few clerks and other help. He may keep his pay roll steady and earn the lowest possible rate, just the same as the biggest employer in town."

"In fact, some of the larger employers whose operations have been somewhat seasonal have had to use real thought to achieve pay-roll stability, and some of them have adopted diversified production programs in order to do so. This program can prove of value to the producer as well as to his workers."

In a generalized discussion of the rating systems, Professor Schmidt said:

"According to the Wisconsin Industrial Commission, out of 8,500 employers, 31 percent have never had any benefit payment withdrawals (for former employees) up to June 30, 1939. Approximately 63 percent of the employers had benefit withdrawals of less than 10 percent of the tax contributions made. In 1939, out of 7,200 employers, 39 percent were given reduced rates in spite of the fact that 1938 was a somewhat poor year for business and employment."

"Contrary to many assertions, experience rating may be used to provide more adequate benefits for the unemployed. If seasonal, casual, and technological unemployment can be met largely by experience rating so that much short-time unemployment is eliminated, this will reserve the unemployment funds for long-time or cyclical unemployment. Then, instead of providing for 13 to 16 weeks of benefit payments as most State laws now do, it should be possible to provide for several times as many weeks."

#### "RAIDS" CONDUCTED

"In those States where experience rating has not yet been incorporated in the law, little special effort at stabilization was found. Indeed, in some of these there was found something of a design to raid the unemployment compensation fund. That is, the employer felt that he had helped to build up the fund and his employees might as well get the benefit thereof. So, when business became a bit slack, instead of devising means of keeping the men on the pay roll, he readily laid them off and helped them to collect their unemployment compensation. Obviously, this is not desirable."

"Instances of substantial achievements under experience rating could be multiplied by the dozens. In another instance, a Wisconsin contractor, by combining house construction with lumber yard operations and cement-block manufacturing, has been able to qualify for the 1 percent rate. A building-supplies manufacturer has diversified his line so that now nearly 40 percent of his raw material is fabricated into nondurable products, this furnishing him a cushion when the construction industry hits a toboggan."

"Employers, for the most part, in the past have not made continuity of employment a major goal. Stabilization for many of them is a new objective. Time is required to dislodge long-established habits and while the achievements under the Wisconsin law have been considerable, it may be anticipated that time will bring still more substantial results."

## Seventh Anniversary of the Civilian Conservation Corps

### EXTENSION OF REMARKS

OF

HON. DAVID J. WARD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. WARD. Mr. Speaker, on March 31, 1940, 7 successful years will be the record of the Civilian Conservation Corps. In March 1933 President Roosevelt invited to the White House several men, among them the Secretaries of Agriculture, War, and Interior, and talked with them about discouraged, jobless young men, and waste and destruction of forests and other natural resources of our country.

The President wanted to know if it were possible to put one-half million unemployed young men to work at once. A plan was quickly worked out and Congress passed the Civilian Conservation Act of March 31, 1933. The purpose was to have 250,000 men employed early that summer. On July 1, 275,000 men had enrolled and were soon on their way to the various camps which had been built by the War Department.

The Department of Labor selected the men from State and Federal relief rolls. The Department of Agriculture and Interior furnished the projects.

The act of 1933 stated a twofold purpose—employment of persons on relief and restoration of the country's depleted resources. The act of 1937 again emphasized conservation and set up a threefold program:

To provide employment, to provide vocational training, and perform useful public works in connection with the conservation and development of the natural resources of the United States.

On August 7, 1939, the President approved an act of Congress, which provides for continuation of the Civilian Conservation Corps to July 1, 1943. The conservation projects, 150 types in all, include drainage, erosion control, reforestation, park development, and wildlife conservation, which are of interest, and have added to, the welfare and happiness of the people of my district.

The 1939 Annual Report of the Civilian Conservation Corps gives for a 6 years' period the following figures for the United States:

Total number of men employed.....	2,600,000
Trees planted.....	1,855,000,000
Truck trails and minor roads built.....miles..	106,800
Telephone lines erected.....do.....	73,590
Bridges constructed.....	42,870
Reduction of fire hazards, over.....acres..	2,000,000,000
Building of check dams in gullies.....	4,890,000
Fences built.....rods.....	17,100,000
Forest stands improved.....acres.....	3,406,000
Construction of impounding and diversion dams.....	5,575
Development of springs, waterholes, and reservoirs.....	18,000
Days spent fighting and preventing fires...man-days..	9,375,000,000

At the present time there are 1,500 Civilian Conservation Corps camps throughout the United States, and an average enrollment of 300,000, including young men, war veterans, Indians, and Territorials. We have in Maryland 20 camps, with an enrollment of approximately 3,200, 7 of which are on the Eastern Shore of Maryland. They are Elk Neck State Park, Cecil County; State forest camp, Worcester County; and 5 drainage and soil-conservation camps in Kent, Somerset, Caroline, Dorchester, and Wicomico Counties.

The camp in Wicomico County was recently established for drainage work in the upper reaches of Pocomoke River, the authorization for which was obtained in the 1939 session of the Maryland State Legislature, the State to contribute \$30,000 and Wicomico and Worcester Counties each to contribute \$5,000 a year for 2 years.

The work accomplished by the Civilian Conservation Corps on the Eastern Shore of Maryland has been of inestimable value in reforestation and in serving agriculture by cleaning and clearing out ditches to produce channels of adequate

capacity, and building water-control structures to prevent erosion. Funds expended for conservation work is money well expended. The Civilian Conservation Corps is being administered efficiently and economically. From funds appropriated for operations during the fiscal year 1939, the Civilian Conservation Corps will turn back to the Treasury over \$4,500,000 in savings and unobligated balances.

In addition to the benefits to the Nation provided through the work of the camps, the men in the camps have received valuable practical experience and training which will greatly influence their future lives. Good care, good food, and vigorous outdoor work develop the young men physically while they learn at first hand conservation practices. They receive also vocational education which helps to prepare them for jobs after they leave the camps.

There is a heavy demand for Civilian Conservation Corps camps. A survey conducted during the past year indicated that work projects already suggested by Federal and State departments would keep a C. C. C. of 1,500 camps busy for from 30 to 50 years.

During the past year there were three times as many applications for enrollment in the camps as there were vacancies. An enormous amount of conservation work has been done, but there remain many years of work which should be done; and now that we have a real conservation program in this country, it should be continued. It should be continued also for the reason that it is one of the ways to aid in the problem of unemployment, which is of vital interest at this time.

### Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

EXCERPTS FROM RADIO ADDRESS OF HON. EDWARD J. NOBLE, UNDER SECRETARY OF COMMERCE

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD on the subject of reciprocal-trade agreements, I include excerpts from a radio address delivered by Hon. Edward J. Noble, Under Secretary of Commerce, which states the matter in regard to trade agreements in a very concise way, as follows:

First, a trade agreement is nothing more nor less than a method of opening the channels of trade between ourselves and another country.

On our farms, from our mines and forests, and in our factories we produce many products which the rest of the world would like to buy and which we should like to sell. When we can sell these goods more smoke comes out of our factory chimneys, more wages go into workers' pay envelopes, more food and other products are bought from farmers, more mines, saw-mills, trains, and trucks run and hum with wage-making activity. Yes; that is what world trade means—more prosperity for all of us.

But note that this profitable activity is called world trade, not world selling. Trading means just what it always has meant—the exchange of goods for goods, as when our grandmothers took their surplus eggs to town and traded them at the village store for groceries. Hence to have world trade we must buy as well as sell. As a nation we must take the goods of another country in exchange for ours.

And this is where a trade agreement comes in.

Each agreement is an arrangement with another country whereby increased opportunities are provided for expanding its purchases of goods from us and for expanding our purchases of the other country's products. It also provides that the trade of one country shall be treated by the other country fairly and equitably relative to the trade of any third country. In other words, it guarantees nondiscriminatory treatment.

You might well say: Why is such an agreement necessary? Why shouldn't our individual traders in each country just go along and trade where and as they can?

It is because our individual traders have been handicapped in doing this that a trade agreement is necessary. It is by helping these individual traders recover their normal opportunities that a trade agreement helps us all.

The reason why these traders have been handicapped lies principally in that mysterious thing called the tariff. But also in such things as import quotas, foreign exchange controls, and other restrictions on trade.

But the truth is that in the last decade or so our tariffs, and tariffs all over the world, have become much too high—higher than necessary to furnish proper protection. With such other restrictions as import quotas and exchange controls added to them, they have become serious barriers to world trade. As a result there has developed throughout the world a tendency toward what is called economic nationalism, a jealous neighbor policy that has been destructive not only to world trade but world peace.

To get rid of these barriers to trade all at once is impossible. But unless we do cut them down enough to encourage trade instead of discourage it, the road to world peace and prosperity may be blocked indefinitely.

So that is what the trade-agreement program tries to do. It is and has been an effort to find a practicable means by which the high tariffs and other restrictions to trade could be modified, so that the exchange of goods between nations could be increased to the profit of all concerned.

To put it briefly, a trade agreement between our country and another is a method of reducing our tariffs on some goods in exchange for an agreement on the part of another country to reduce its tariffs and other restrictions on our goods.

So much for what a trade agreement is. Now, how do we go about making one? Well, here is the way we do it:

The Trade Agreements Act is a law which was passed by the Congress giving the President and the executive departments of the Government the power to negotiate such agreements. It specifically gives the Executive power to reduce tariffs on imports into this country only up to 50 percent of the present tariff rate.

Before we enter into trade-agreement negotiations with a country, public announcement is made of our intention to do so. The trade-agreements work is conducted by the Trade Agreements Committee, an interdepartmental undertaking in which participate the Departments of State, Treasury, Agriculture, and Commerce and the Tariff Commission. This committee is made up of nonpartisan experts, men of experience and judgment in foreign trade who have no interest in anything except what is best for the country as a whole.

As a result of study of the trade and products of the two countries, there is published at the time announcement is made of intention to negotiate a trade agreement a list of products in respect of which we will consider making concessions to the other country.

When these products have been announced in this open and aboveboard manner, so that everybody who produces or deals in these products may know about it, then a date is set when all interested persons may be heard. If you don't think a product in which you are interested should be included in these negotiations you have a full chance to say so. You can appear before the Committee for Reciprocity Information at public hearings in Washington and state your case; or you can file a written brief of your arguments and have them carefully considered. In one way or another everybody affected has a chance to be heard—an equal chance. There are no back-door methods, no chances for lobbyists to exert political pressure, no secret deals or swaps.

Let us take a specific case. Suppose you are a farmer, and that, among other things, you raise juniper berries. So far as I know nobody does raise juniper berries, but suppose you did. Suppose it is proposed to reduce the tariff on juniper berries so that more of them may be sold here by a foreign country. Now that naturally worries you. You think maybe the foreign producer will be able to undersell you and will ruin the market for your product.

As I say, it is natural for you to have these fears. But actually they are groundless. Although juniper berries may be included on the published list of commodities for consideration in trade-agreement negotiations, no decision is made to grant any concession on them until you have had ample opportunity to state your case and until after a thorough and complete study of the situation has been made by experts on the basis of the facts and views you have presented, as well as on the basis of facts and expert advice available from Government sources.

I have seen the trade-agreement organization work, and I can assure you that the most scrupulous care is taken to see that no American manufacturer, farmer, or other producer is hurt. And the figures show that, with the trade agreements with 20 countries now in force, no producer has been hurt, so far as we know.

This is the careful way, the unbiased, scientific way in which these trade agreements are prepared. After all the facts are in and the final lists are in, then we begin the actual negotiations with the other country. Then we know what we want from them and what we are prepared to give to get it. And eventually we strike a bargain or agreement and the deal is made. After that there is just one other main feature. The Trade Agreements Act provides that any tariff concession made to one country as a result of a trade agreement shall be extended to all other countries, except those which are found to be discriminating against our trade or pursuing

policies opposed to the purposes of the act. Thus every new agreement made not only opens up possibilities of increased trade between ourselves and another country, but extends the benefits to our trade with many countries.

You may say, "Well, if all this care is taken to see that no American producer is hurt, and if the figures show that none has been hurt, why is there opposition to the continuance of this program?"

I wish I could answer that question. It is a puzzle to me. All I can think of is that the opposition to this program grows out of the natural fears we all have of competition. We all tend to cry before we are hurt. If you will analyze what is said in opposition to this program, I think you will find it is mostly based on such fears rather than on facts.

So this trade-agreements program, which President Roosevelt and Secretary Hull have so ably sponsored, is essentially a program for reducing the excessively high tariffs and removing the other restrictions which have been choking the trade of nations.

I have never personally met anybody who did not believe, in general, that these barriers to world trade should be modified. Of course, when it comes to reducing the tariff on a particular item in which a man may be interested that is sometimes a different matter. It depends, as the saying is, on whose ox is to be gored.

But I ask you to consider this: If we agree that these trade barriers should come down, then the question is, What is the best way to get the job done? What method are we to follow to reduce our own tariffs so that more people can sell more goods to us and buy more goods from us in return?

Shall we return to the former logrolling methods of tariff making? They are adapted for tariff increases, but not for tariff reductions.

Or shall we continue the method of tariff adjustment which has been tried and found wanting, the so-called flexible tariff provision, under which the rates may be moved up or down, within limits, depending on differences between costs of production at home and abroad? This method requires elaborate cost studies. It is slow, clumsy, and impracticable. Sufficient cost data are sometimes difficult and even impossible to obtain. Moreover, the method assumes that there is one cost at home and another abroad. As a matter of fact, there may be a wide range of different costs.

No; the way to get tariffs down is to get them down with proper safeguards for the American producer. The trade-agreements program does that. It not only does that, but it uses the leverage of those reductions to get similar barriers removed throughout the world. The total effect is an improvement in world trade, from which all profit. Agreements with 20 nations have been negotiated and are now in force. We have had a chance to see how they work. Not only does our Department of Commerce statistics show that our exports in 1938 and 1939 were approximately a billion dollars greater than in 1934, when the program was adopted, but they also show that our exports to countries with which trade agreements have been made increased more rapidly than exports to nonagreement countries.

Yes, the trade-agreements program has justified itself in immediate dollars and cents returns to the American people. But it has done more, much more, than this. It has created the most hopeful way that has yet been devised to restore among the peoples of this earth that interchange of goods and services on which the hope for future world peace and prosperity depends.

For let us make no mistake about it: Economic isolation is one of the roots of world wars and conflicts. Barriers to trade are barriers to the welfare of mankind. When people cannot get goods they fight. If we want to see peace and sanity restored to this world we must maintain the economic framework within which this peace must be constructed. The trade-agreements program offers such a framework.

As President Roosevelt said, it "should be extended as an indispensable part of the foundation of any stable and durable peace." If for your children and your children's children you want this Nation to exert world leadership in the ways of peace, then see that this trade-agreements program is kept intact."

## The Reciprocal Trade Agreements Program

### EXTENSION OF REMARKS

OF

HON. BEVERLY M. VINCENT

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. VINCENT of Kentucky. Mr. Speaker, slightly more than 5 years have passed since Congress on June 12, 1934, enacted the Trade Agreements Act authorizing the President within well-defined limits to negotiate reciprocal-trade agreements with foreign countries for the purpose of restoring and expanding foreign markets for American agricultural and industrial products. The history of that legislation in stimulating and facilitating the reciprocal flow

of foreign trade with its consequent benefits accruing to farmers, workers, businessmen, industrialists, railway and steamship operators, which may be clearly observed from an unprejudiced examination of relevant facts, are such to inspire confidence in the formula for restoring foreign trade established by the act and the skillful administration of it.

Events of recent years have emphasized the need for a less partisan and more constructive national approach to the tariff problem. Yet, periodically during the past few months a small organized group of vociferous critics of the reciprocal trade agreements program, purporting to be friends of the farmer and interested solely in promoting national welfare, but in reality interested only in protecting their own favored position regardless of the larger interests of the Nation and the people as a whole, have attempted to make it appear that the program is injurious to the farmers and to the country. Objective consideration of this liberalized policy of trade between nations on the basis of its economic merits is obscured by criticism of a partisan political nature which should have no place in the determination of important national policies. Some sincerely held views at variance with the program of reciprocal adjustment of excessive trade barriers is to be expected. Honest differences of opinion may reasonably arise, and such differences will command respect. Innuendoes, half truths, and deceptive statistical manipulations, on the other hand, particularly as we now enter a new period of widespread war, requiring that we think in terms of national welfare and work for national interests, can only serve to interfere with our country's economic progress.

I inserted in the Appendix of the CONGRESSIONAL RECORD, volume 84, pages 4026 and 4120, articles exposing the fallacies of a study prepared by the American Good Government Society, adopted and inserted in the Appendix of the CONGRESSIONAL RECORD by the gentleman from South Dakota, Representative KARL E. MUNDT, attacking the trade-agreements program. It was to have been expected, of course, that the authors of the study and the gentleman from South Dakota, Representative MUNDT, would not look with favor upon my articles for the very obvious reason that by pointing out in those articles, that the true facts of the trade-agreements program and an honest appraisal of the results were studiously avoided, the partisan political nature of the attack was clearly revealed.

Subsequently, the gentleman from South Dakota, Representative MUNDT, adopted and inserted in the Appendix of the CONGRESSIONAL RECORD, volume 85, page 858, a later study prepared by the same organization, the American Good Government Society, renewing the attack on the trade-agreements program. It is disturbing, indeed, for those who understand what is really at stake to observe that the authors of this later study, motivated solely with an unholy eagerness to disparage the program, have again had recourse to the same deceptive methods of presenting statistics employed in the previous one, seeking thereby to elicit farm support in upsetting it. It gives me satisfaction to be able to say that, great as has been the attempt in this later study to discredit Secretary Hull's reciprocal-trade policy and undermine his efforts to reverse the trend toward a ruinous national policy of economic self-sufficiency, the points which I made in my earlier articles revealing the absolute lack of basis to support the charges made against trade agreements have not been impugned.

Despite vigorous avowals by the authors that theirs is a "patriotic, educational organization" free from partisan feeling—a laudable purpose if adhered to—it would be difficult to find a study more biased in its assertions, more deceiving in its deductions, and more partisan in its attitude. Just why the authors elected to list total national income during the Dingley tariff period and the Fordney-McCumber tariff period, meanwhile refraining to list figures showing national income during the Hawley-Smoot tariff period and the trade-agreements period, cannot be explained on the ground of unselfish devotion to safeguarding the American farmers' welfare. When it is considered that following enactment of the Hawley-Smoot Tariff Act, which economists generally are

agreed was in large measure responsible for the disastrous collapse of our foreign trade, followed, as such revulsions inevitably must be, by the precipitous decline in national income from \$79,498,000,000 in 1929, the year preceding enactment of that act, to \$44,713,000,000 in 1933, the year preceding enactment of the Tariff Agreements Act, according to figures published by the National Industrial Conference Board; and when it is further considered that farm cash income dropped from \$11,221,000,000 to \$5,278,000,000 between the same 2 years, according to figures published by the Department of Agriculture, whereas estimated national income has increased to \$68,500,000,000 and cash farm income to \$7,625,000,000 by the close of 1939, the partisan political nature of the attack receives an emphasis which is undeniable. Indeed, it would be necessary to step backward a quarter of a century to find a year in which farmers received an equally low cash income as in the year 1932.

#### TRADE AGREEMENTS VERSUS HAWLEY-SMOOTISM

A complete appreciation of the trade-agreements program involves a full understanding of the forces which made its creation absolutely necessary as well in the interest of the farmer as of the Nation.

By the close of the World War international economic relations were in a state of violent disorder. Normal channels of trade and finance had been seriously disrupted. Maladjustments and dislocations in agriculture and industry plagued governments everywhere. The practical necessities of prosecuting the war had forced European nations to replace home production by huge purchases in the United States, which, in turn, forced the growth of our productive capacity, both in agriculture and industry, in a degree far in excess of normal peacetime requirements. Europe emerged from the war heavily burdened with billions of dollars in foreign debts and the urgent necessity of reviving its economic system which had been seriously weakened and disrupted by the long conflict. Figuratively, almost overnight we found our position changed from a debtor to a creditor nation.

The general post-war economic situation—depreciated currencies, the huge financial expenditures necessary to repair the vast destruction caused by the 4 long years of war, and the general social rehabilitation which each of the warring nations were obliged to face—clearly called for the fullest restoration of normal trade relations with foreign countries, an indispensable element for establishing secure foundations for lasting prosperity at home and promoting permanent peace throughout the world. It meant importing more if we expected to continue to sell. Instead, during the decade of reconstruction following the war, under the mistaken view that the mere restricting of imports would serve at once to benefit the domestic producer, we raised tariff duties higher than ever before and higher than the situation fairly justified, meanwhile maintaining our export trade by lending billions of dollars to European nations with which to pay for our exports products. Foreign governments, responding to the policy of extreme protection asserted by the United States, particularly at a time when they most urgently needed to redevelop their former markets abroad, in self-protection seized upon such measures as exchange control and import-licensing systems, in order to protect their gold supply and insure that necessities have priority among imports. Finally, at the end of the 1920's American agriculture, industry, business, and labor paid a stupendous price for the short-lived period of prosperity which resulted from such unstable foreign-trade relations.

In the face of the world-wide economic collapse at the end of the 1920's our national leaders failed to recognize the realities of the situation and compel adoption of a commercial foreign policy appropriate to reverse the critical conditions that had been created, in such large measure, by a foreign policy of extreme nationalism. Instead, we resorted once again to the very same policy which lay at the root of the disaster by adopting a still more exaggerated protectionism in the form of the Hawley-Smoot Tariff Act of 1930. Our country's costly experience following enactment of that act

strikingly manifests the disruptive consequences that embargo tariffs have on our foreign trade and the heavy penalty in terms of want, distress, and human suffering which all segments of our population must inevitably pay when trade between nations is seriously impaired.

By the terms of the act tariffs were raised arbitrarily and capriciously to embargo levels without regard to the larger interests of the country, subjecting those interests to local and sectional considerations. The history of what happened during the years which followed shows conclusively the folly of indiscriminate raising of tariff barriers. Foreign countries which had been profitable markets for American products quickly retaliated by drastically increasing their own tariffs and other trade barriers in order to exclude our products from their markets. The result: Within 3 years, under the combined influence of retaliatory tariffs and other factors, our total foreign trade, including both exports and imports, had shrunk in value to less than one-third of its former amount. Surpluses of farm and other products piled up in warehouses; prices and values collapsed; business was in a state of bankruptcy; factories were closed; and millions of our workers were thrown out of employment, thereby deprived of their only means of earning a living for themselves and their families.

Confronted with a situation such as this it would be idle to expect that a satisfactory degree of lasting economic recovery could be achieved in this country without restoration of our foreign trade. Congress recognized this and the question of method was meticulously considered. Mere unilateral actions, under the conditions which prevailed, to revise such of our own tariff rates as were excessively high, however prudently adjusted, could give no promise of success toward the accomplishment of the purpose sought, for the very obvious reason that it offered no assurance that the complex variety of barriers to our commerce established by foreign nations would be likewise adjusted. On the other hand, it could not have been expected that foreign nations would modify their trade barriers in the absence of reciprocal action on the part of the United States. In view of these considerations, a commercial foreign policy founded upon the principle of reciprocal action to reduce trade barriers alone gave promise of success in restoring and maintaining foreign trade on a high level, thereby promoting economic recovery at home. The practical-minded man desirous to see a fuller measure of prosperity for the United States as a whole will see this. The tariff lobbyist concerned solely in protecting his own interests will never admit it.

Substantial progress has been made in restoring our foreign trade since the policy of mutually profitable trade relations with foreign countries was adopted as a national policy. Agreements have been negotiated with foreign countries which account for nearly three-fifths of our total foreign trade. Valuable concessions expanding sales opportunities abroad have been obtained on hundreds of agricultural and industrial products.

Proponents of the trade-agreements program have never claimed that the Hawley-Smoot tariff was the sole cause of the severe decline of our foreign trade and the widespread economic collapse which followed—though expert foreign-trade observers generally are agreed that the severity and long duration of the depression was in large measure the aftermath of it. Neither, on the other hand, have any claims been made that the recovery which has occurred in our foreign trade since the reciprocal trade agreements program was adopted is entirely the result of the liberalized policy of commercial intercourse with foreign countries which it embodies.

There is no way of disentangling the effects of the many factors which influence the flow of trade so as to permit the presentation of a precise statistical measurement of the degree in which trade agreements have increased our foreign trade. Nevertheless, analysis of the movement of our foreign trade since the program was increasingly being implemented—by the negotiation of additional agreements—amply indicates that much of the progress is directly due to it.

The following study released a short time ago by the Department of Commerce compares the foreign trade of the United States between the two periods—the trade-agreements period and the Hawley-Smoot tariff period.

The contrast between the two is striking. The study reveals that our exports to all foreign countries increased by slightly more than \$1,000,000,000, or nearly 46 percent. As stated previously, there is no way to separate and measure precisely the effect of the many factors which caused this \$1,000,000,000 increase, but the effectiveness of the trade-agreements program in restoring our foreign markets is amply indicated by the fact that our exports to trade-agreement countries increased by 61.2 percent, while our exports to nonagreement countries increased by only 37.9 percent.

*United States foreign trade with trade-agreement countries and with all others, 1937-38—compared with 1934-35*

[Values in millions of dollars]

	Average value		Change	
	1934 and 1935	1937 and 1938	Value	Per cent
<b>UNITED STATES EXPORTS, INCLUDING REEXPORTS</b>				
Total, all trade-agreement countries <sup>1</sup> .....	759.8	1,224.8	+465.0	+61.2
Total, all nonagreement countries.....	1,448.0	1,996.8	+548.8	+37.9
Total, all countries.....	2,207.8	3,221.6	+1,013.8	+45.9
<b>UNITED STATES GENERAL IMPORTS</b>				
Total, all trade-agreement countries <sup>1</sup> .....	793.9	1,073.6	+279.7	+35.2
Total, all nonagreement countries.....	1,057.4	1,448.5	+391.1	+37.0
Total, all countries.....	1,851.3	2,522.1	+670.8	+36.2

<sup>1</sup> Including the 17 countries (and colonies) with which agreements were in operation during the greater part of 1938. Only 1 of the agreements was in operation throughout 1935, 6 throughout 1936, 12 by the middle of 1936, 15 by the middle of 1937, and 18 by the end of 1938. The last (with Ecuador) only came into force on Oct. 23, 1938, and is therefore not yet included in the above calculations as an agreement country. The new agreement with Canada, and the agreement with the United Kingdom (including Newfoundland and non-self-governing British colonies) which became effective Jan. 1, 1939, the agreement with Turkey, effective May 5, 1939, and the agreement with Venezuela, effective Dec. 16, 1939, bring the number of agreement countries up to 21.

GENERAL NOTE.—Percentage changes have been calculated upon fuller figures in thousands.

#### HONEST APPRAISAL OF THE TRADE-AGREEMENTS PROGRAM NEEDED

The arguments adduced by the authors of the study adopted and inserted in the Appendix of the RECORD by the gentleman from South Dakota, Representative KARL E. MUNDT, are broadly the same in substance as the stock assertions made by other self-styled protectors of the farmers' interests and guardians of the Nation's welfare.

The study adroitly presents a table showing national income during carefully selected tariff periods—the Dingley tariff and the Fordney-McCumber tariff. By studied omissions of material facts and a deceptive twist of phraseology, the authors of the study stoically attempted to make it appear that the United States was more prosperous during the periods of high tariffs following enactment of the two named tariff acts than during the "lower tariff reciprocal agreements."

An answer to the query of just why, after making such a stoical endeavor to disparage the program, figures showing national income during the Hawley-Smoot tariff period and the trade-agreements period were suppressed must be sought on the grounds that a full disclosure of essential facts would have effectively destroyed their arguments.

The inherent fallacy involved in the theory that high tariffs promote national prosperity is nowhere better demonstrated than by our own disastrous experience under embargo tariffs. If the theory was sound, it follows logically that, during the years following enactment of the Hawley-Smoot Tariff Act, which raised tariffs to the highest level in our history, the United States should have reached its golden age of prosperity. The facts, however, show that our Nation suffered the most appalling economic disaster of modern times.

The tariff is an economic problem; it touches every phase of our economic life. To assume that any downward revision of tariffs injures this life is as absurd a position as to assume that the mere imposition of high tariffs serves to benefit it. Tariff duties which restrict imports to a point where foreign commodities cannot be imported or to where they are imported only in fragmentary quantities do not stimulate the growth of our economic life but destroy it instead. For this reason alone it should be evident that if such a highly technical and intricate matter as tariff adjustment is to result in the establishment of protective rates of duty rather than rates which destroy international trade, such adjustments must be scientifically calculated in the light of economic facts, not on the basis of academic theory. Accordingly, the framers of the trade-agreements program developed a system which investigates facts with the deliberation and impartiality characteristic of judicial inquiry.

Contrary to the rash assertions made by antagonists, inquiry reveals that where adjustments of excessive tariffs have been made through trade agreements care has been exercised to preserve unimpaired adequate tariff protection to safeguard vital American interests.

The following tables summarize material facts essential for a proper appraisal of the merits of the trade-agreements program and its effects on the economy of the country.

TABLE I.—National income

Year	Total realized national income	Per capita realized income	National cash farm income <sup>1</sup>	Per capita cash farm income
Dingley-tariff period:				
1899	\$15,364,000,000	\$205		
1900	16,158,000,000	212		
1901	17,170,000,000	221		
1902	18,444,000,000	232		
1903	19,595,000,000	242		
1904	20,090,000,000	243		

<sup>1</sup> Cash income received by farmers from marketings. Government payments are not included; cash farm income from 1897 to 1910 is not available.

TABLE I.—National income—Continued

Year	Total realized national income	Per capita realized income	National cash farm income	Per capita cash farm income
Dingley-tariff period—Con.				
1905	\$21,428,000,000	\$254		
1906	23,165,000,000	270		
1907	24,403,000,000	279

TABLE II.—United States tariff duties on agricultural products

Item	Unit	Rates of duty			
		Dingley tariff, 1897	Fordney-McCumber tariff, 1922	Hawley-Smoot tariff, 1930	Trade agreements, 1934
Sheep and lambs	Each	75 cents (lambs), 75 cents (sheep less than 1 year old), \$1.50 (1 year old or over).	\$2	\$3	\$3. <sup>1</sup>
Hogs	Pound	½ cent to ¾ cent (approximate).	½ cent	2 cents	1 cent.
Live poultry: Chickens, turkeys, ducks, geese.	Pound	3 cents.	3 cents.	8 cents.	4 cents.
Beef, fresh, chilled, or frozen	Pound	2 cents.	3 cents.	6 cents.	6 cents. <sup>1</sup>
Veal, fresh, chilled, or frozen	Pound	2 cents.	3 cents.	6 cents.	6 cents. <sup>1</sup>
Pork, fresh or chilled	Pound	2 cents.	¾ cent.	2½ cents.	1½ cents.
Bacon, hams, shoulders, and other prepared pork.	Pound	2 cents.	2 cents.	3¼ cents.	2 cents.
Poultry: Dead, fresh, chilled, or frozen	Pound	5 cents.	6 cents.	10 cents.	6 cents.
Lard	Pound	2 cents.	1 cent.	3 cents.	3 cents. <sup>1</sup>
Cream: Fresh or sour	Gallon	16½ cents (fresh)	20 cents.	50½ cents.	28½ cents. <sup>1</sup>
Whole milk: Fresh or sour	Gallon	2 cents.	(2½ cents (fresh milk), 1 cent (sour milk))	6½ cents.	3¼ cents. <sup>1</sup>
Butter	Pound	6 cents.	12 cents.	14 cents.	14 cents. <sup>1</sup>
Cheddar cheese	Pound	Not listed.	5 cents but not less than 25 per cent ad valorem.	7 cents but not less than 33 per cent ad valorem.	4 cents but not less than 25 per cent ad valorem.
Eggs: Chickens', in the shell	Dozen	5 cents.	8 cents.	10 cents.	5 cents.
Barley	Bushel	30 cents.	20 cents.	20 cents.	15 cents.
Barley malt	Pound	1¼ cents.	¼ cent.	¼ cent.	¼ cent.
Corn	Bushel	15 cents.	15 cents.	25 cents.	25 cents. <sup>1</sup>
Buckwheat	Pound	¾ cent.	1 cent.	2½ cents.	1½ cents.
Oats	Bushel	15 cents.	15 cents.	16 cents.	8 cents.
Rye	Bushel	10 cents.	15 cents.	15 cents.	12 cents.
Rye malt	Pound	Not listed.	4 cents.	4 cents.	3½ cents.
Rye, flour and meal	Pound	½ cent.	4½ cents.	4½ cents.	4½ cents.
Wheat	Bushel	25 cents.	42 cents.	42 cents.	42 cents. <sup>1</sup>
Wheat flour	Pound	25 per cent ad valorem.	1½¢ cents.	1½¢ cents.	1½¢ cents. <sup>1</sup>
Oil cake	Pound	Free.	Free.	¾ cent.	¾ cent. <sup>1</sup>
Oil cake meal	Pound	20 per cent ad valorem.	Free.	¾ cent.	¾ cent. <sup>1</sup>
Soybeans	Pound	Not listed.	½ cent.	2 cents.	2 cents. <sup>1</sup>
Cottonseed	Pound	Free.	½ cent.	½ cent.	½ cent. <sup>1</sup>
Hay	Short ton	\$4.	\$4.	\$5.	\$2.50.
Peas, canned	Pound	Not listed.	2 cents.	2 cents.	2 cents (value less than 10 cents per pound) 1½ cents (value more than 10 cents per pound).

<sup>1</sup> Rates of duty established by the Hawley-Smoot Tariff Act have not been affected (reduced or bound against increase) by any trade agreement.

<sup>2</sup> Limited to an annual quota.

TABLE II.—United States tariff duties on agricultural products—Continued

Item	Unit	Rates of duty			
		Dingley tariff, 1897	Fordney-McCumber tariff, 1922	Hawley-Smoot tariff, 1930	Trade agreements, 1934
Tomatoes, canned	Pound	40 percent ad valorem	15 percent ad valorem	50 percent ad valorem	50 percent ad valorem. <sup>1</sup>
Asparagus, canned	Pound	Not listed	35 percent ad valorem	35 percent ad valorem	35 percent ad valorem. <sup>1</sup>
Beans, canned	Pound	2½ cents	2 cents	3 cents	3 cents. <sup>1</sup>
Arrowroot	Pound	Free (in natural state) 1½ cents (flour or starch).	Free	Free	Free.
Sago	Pound	Free	Free	Free	Free.
Tapioca	Pound	Free	Free	Free	Free.
Potatoes	100 pounds	40 cents	50 cents	75 cents	37½ cents from Mar. 1 to Nov. 30, inclusive. <sup>1</sup> 60 cents from Dec. 1 to last day of the following February. <sup>1</sup>
Apples, green or ripe	50 pounds	25 cents	25 cents	25 cents	15 cents.
Peaches, green or ripe	Pound	½ cent	½ cent	½ cent	½ cent. <sup>1</sup>
Pears, dried or prepared	Pound	2 cents	2 cents	2 cents	2 cents. <sup>1</sup>
Pineapples	Crate	49 cents	22½ cents	50 cents	35 cents. <sup>1</sup>
Oranges	Pound	1 cent	1 cent	1 cent	1 cent. <sup>1</sup>
Flaxseed	Bushel	25 cents	40 cents	65 cents	65 cents. <sup>1</sup>
Hides and skins	Piece or pound	Free	Free	10 percent ad valorem and free.	10 percent ad valorem and free.
Flax, hackled	Pound	3 cents	2 cents	3 cents	1½ cents.
Hemp, hackled	Pound	1½ cents	2 cents	3½ cents	3½ cents.

<sup>1</sup> Rates of duty established by the Hawley-Smoot Tariff Act have not been affected (reduced or bound against increase) by any trade agreement.

<sup>2</sup> Limited to an annual quota.

Table I exposes in a striking manner the paucity of the reckless assertion that the trade-agreements program has brought so many American farmers and raw-materials producers to their knees and deprived them of honest income. By the end of 1933, after 3½ years during which Hawley-Smoot embargo tariffs were in force, national income had fallen to \$44,713,000,000 and cash income received by American farmers to \$5,278,000,000. In sharp contrast to this is ranged, by the end of 1939 under trade agreements, an increase in national income to \$68,500,000,000 and in cash income received by farmers to \$7,625,000,000. Was the Nation and were the farmers deprived of honest income by this increase?

If table II, which merely attempts to list a few examples of those products which have been the particular object of attack, is examined in detail, it will be discovered that existing rates of duty on many commodities have not been changed by any agreement. Moreover, passing to an analysis of the rates of duty with regard to those commodities on which tariff adjustments have been made, it will be observed that in many instances the tariff duties, even after being modified through trade agreements, remain substantially higher than they were under the Dingley Tariff Act and the Fordney-McCumber Tariff Act. The facts revealed in table II clearly attest to the thorough study and deliberation which marks trade-agreements negotiations in order to safeguard vital American interests with adequate tariff protection.

#### HAWLEY-SMOOT DID NOT MITIGATE THE DEPRESSION

The claim that the Hawley-Smoot tariff prevented the depression from becoming worse is a perverted justification of the embargo tariffs established by that disastrous legislation. The only evidence adduced to support the claim is the citation of a theory—that when a country devalues its currency, other countries whose currencies are not devalued in the same degree inevitably find their imports from the depreciated-currency country increased and conversely their exports to that country decreased.

It is easy to attach an exaggerated significance to the theory, meanwhile completely ignoring other and more important factors which influence trade. As a practical matter, the theory in actual operation usually has only a minor and indeterminable influence on trade. Experience has demonstrated conclusively that fluctuations in the value of a country's currency by relation to the currencies of other countries constitute only one among many factors which influence a country's export and import trade. Depending upon the extent to which these other factors tend to govern commerce between nations, a devaluation of foreign currencies may or may not affect the foreign trade of a depre-

ciated-currency country to the detriment of the commerce of other countries. To protect American interests against the possibility that a currency devaluation may, at some future date, have an adverse effect upon our commerce each trade agreement contains a safeguarding clause providing for rescission of the agreement if a variation should occur in the rate of exchange between our currency and the currency of the other contracting party which in fact adversely affects our trade.

There can be no escape from the conclusion, if material facts are impartially and fairly examined, that the Hawley-Smoot tariff by intensifying interferences with the movement of foreign trade at a time when the situation sorely demanded measures to stimulate and expand trade on a basis of reciprocity largely accentuated the severity and prolonged the duration of the depression.

#### OUR NATIONAL WELFARE DEMANDS CONTINUANCE OF THE TRADE-AGREEMENTS PROGRAM

The experience of the decade immediately following the termination of the World War has shown in convincing terms that the really serious and lasting destructiveness of war, apart from the loss of human life, lies in the permanent dislocation of the normal markets of trade and in the internal economic collapse and social disorganization which follows.

In the present unhappy world situation the United States must look forward to the day when the present European war, so largely the outgrowth of narrow nationalistic trade practices, whatever its immediate provocation, will be terminated, and prepare now to lend effective aid to the establishment of a sound basis for international economic relations for the purpose not only of rehabilitating the world but also of insuring our own economic progress and welfare. Permanent peace between nations of the world, an indispensable element for maximum and stable prosperity at home, is an illusion unless there can be provided to support it equal opportunity for profitable trade between all nations. The trade-agreements program, with its emphasis on sensible and scientific adjustment of excessive trade barriers and equality of treatment for all nations, is the only commercial foreign policy which gives promise for the establishment of friendly trade relations among the nations of the world. The only alternative to reciprocity in trade is economic nationalism with all the evil consequences which that phrase implies in lowered standards of living, restricted production in agriculture and industry, widespread unemployment, deteriorating factory equipment, idle capital and resources, international animosity, and precariously impermanent peace. Under such conditions there can be no sustained prosperity for any nation, our own included.

To abandon the trade-agreements program at this time would be an unthinkable backward step to the orgy of Hawley-Smoot embargo tariffs or their equivalent. Those who propose such a step have failed to grasp the fundamentals of foreign trade. They presume, against reason and experience, that American producers can reserve the entire domestic market for themselves and continue to enjoy export markets as well. They fail to understand, or deliberately ignore the fact, that extreme protectionism by making it difficult for foreign nations to sell to us, makes it equally difficult for them to buy from us.

Progress and prosperity are the result of expansion, not contraction. It is impossible to expand our trade with foreign countries and thereby promote progress and prosperity at home while subjecting our import trade to arbitrary and capricious tariff regulation.

### United We Stand

#### EXTENSION OF REMARKS

OF

HON. PATRICK J. BOLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ADDRESS OF HON. JAMES A. FARLEY, HARRISBURG, PA.,  
FEBRUARY 3, 1940

Mr. BOLAND. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of the Honorable James A. Farley, chairman of the Democratic National Committee, at the banquet of the Democratic State Committee of Pennsylvania, held at the Zembo Mosque, Harrisburg, Pa., on Saturday evening, February 3, 1940, at 7 o'clock.

#### UNITED WE STAND

It is, of course, a delightful thing for me to attend this reunion with my fellow Democrats of Pennsylvania in the never-ending fight for democracy.

Your loyalty as Democrats has never been questioned anywhere or at any time, and your vigor and perseverance as fighting Democrats have won the admiration of the world. I am not the man to restrain a good fighter, and on the morning after election I am depending on you to show up for work, not with a black eye on your face but with a verified report of two black eyes on the face of the Republican machine.

For 40 years Pennsylvania was a conquered province, subject to all the discomforts of Republican misrule. You were dominated by the Quays, the Penroses, and the Vares. They dictated the personnel of your State government and your Federal delegations, with the natural result that in at least one of your greatest industries the labor situation was a stench in the nostrils of the Nation. Corruption was a commonplace in your public service; favoritism was so recognized that people actually forgot that it was not a normal condition.

Time brought the inevitable reaction. There was a national uprising against the policies and processes that had brought our Nation to the depth of misery with the worst depression that ever came upon the United States. With the advent of liberal sentiment Pennsylvania in 1934 joined the proud procession of States that redeemed the American people from impending bankruptcy.

Perhaps no event of that year caused more consternation in Republican ranks and gave greater satisfaction to our own people than the switch of Pennsylvania—rock-ribbed Pennsylvania—to the Democratic side. The minority party sought comfort in the thought that the overturn of the Grundy bund was a mere flurry in political circles; that the old regime would regain its ascendancy as soon as the people had recovered from their terror at the depression. But to their dismay they found that succeeding elections merely emphasized that the Keystone State was really Democratic. This brief review of the trend and course of your political development brings us down to 1938.

That interruption to the continued democracy of your State was our own fault. It cannot be ascribed to Republican wisdom, or to any revulsion from the ideas and ideals that were the foundations of Democratic popularity. It was a battle thrown away by our own passions. Perhaps some of you may remember my remarks at the Jackson dinner of that year when I said:

"We cannot nurse our private feuds with the calm assumption that Democratic sentiment is so strong that we can afford to withhold support and strenuous effort from this candidate or that candidate. As national chairman, I have often advanced the

theory that primary struggles and rivalries are assets and not liabilities to a party. The striving of ambitious members for the honors of office preserves political organizations from dry rot and decay. It is the natural insurance that no faction nor group shall keep its grip on the party longer than it merits the confidence of its members.

"The other end of that picture is that the vendettas must end when the nominations have been made. Party loyalty is requisite for party success. Discipline is as necessary in the ranks of a political organization as in the files of an army. I have announced with all sincerity and without reservation that the national committee is behind every Democratic nominee. That has to be the guiding tenet of every honest Democrat if we are to continue in power in State or Nation."

What I said then is just as true with reference to the present situation as it was when the primary fight of 2 years ago brought defeat to us in this State. Let me admit in passing, however, that the sin of dissension did not apply to Pennsylvania only.

I think I am safe in saying that practically every defeat the party has had in recent years in debatable States, and in the Nation, was due to our own errors and to disunion in our own ranks. We can all remember with remorse the national-convention fight of 1924. We had the election in our hands. Numerous of my Republican friends admitted that the scandals of the Harding regime had ruined their chances. Yet our able and eminent Democrats so split and battled in that convention that the country was disgusted with us. That struggle put off the advent of Democratic national success for 8 years.

It isn't only a question of party harmony that confronts us now, important though that may be of itself. We have a duty as American citizens that, to my mind, transcends in importance even political loyalty. America looks out upon a world torn by strife and discord. We have seen dictators come to power and rise in authority because people had lost faith in the democratic process. There is nothing that will undermine our American institutions and our American form of self-government more rapidly or more dangerously than poor and inefficient government. At this time, therefore, it is of utmost importance that we do our part as citizens of the Republic in providing an honest, sincere, and able administration of public affairs.

I do not need to tell you that the opponents of the Roosevelt policies between now and November will exert every influence and extend every effort of which they are capable to defeat the Democratic Party. The Republicans have unlimited money for propaganda, and they are counting on disunion in the Democratic ranks to give them the electoral vote of this State.

Now the big question comes, What are we going to do about it? Your registration figures are evidence that we have the votes to preserve democracy in Pennsylvania, and you have here every element that makes for a decisive victory.

Pennsylvania advanced during the Democratic regime; Pennsylvania has gone backward under the present Republican administration.

Democratic Gov. George Earle found when he took over the State house that he had to meet a deficit of \$36,000,000 in the State's finances. The relief cupboard was bare. Governor Earle left office with that appalling deficit wiped out, with relief paid up to date, and there were a few millions as a nest egg for a surplus.

The Republicans presented the issue in their campaign that Earle had been extravagant, and that his emergency taxes were "driving industry out of Pennsylvania." Yet the first session of the legislature under Governor James reenacted every Earle tax, and the new Republican budget was the biggest in the State's history. Naturally the budget was not balanced. Governor James, as an economy gesture, cut the biennial relief appropriation in two. But, I am informed, he has explained that this appropriation will be exhausted next June. This means either an additional appropriation or a deficit that will amount to the staggering sum of \$10,000,000 a month for the ensuing year.

You, of course, know a great deal more than I about the failure of your Republican State administration to meet any of the day's problems successfully. For this reason I do not intend to review the miners' march on Harrisburg, which defeated the proposal to crucify these workmen at the behest of the anthracite-coal barons; nor do I need to do more than refer to the onslaught on labor which resulted in the A. F. of L. and the C. I. O. uniting in a campaign of self-defense.

I have been told that a bill which would have reformed Philadelphia's charter and reorganized its halting, debt-ridden municipal machinery was slaughtered at the request of Mr. Jay Cooke, Mr. Pew's Philadelphia representative, who, I understand, is the minority party's candidate for Senator this year. Moreover, in contrast with the Earle administration's efforts to bring about peace and harmony between Pennsylvania industry and its workmen, Governor James' legislature ripped the State labor-relations act until it was beyond recognition. That legislature practically destroyed the Workmen's Compensation Act, increased maximum hours of women in industry, and authorized a teachers' pay cut in Philadelphia.

Even the Republican press of your State referred scornfully to the session. "Legislation was submitted," said the Philadelphia Ledger, "which had for its purpose putting Pennsylvania back into the same position as when the Democrats swept the Republicans from power in 1934."

The Philadelphia Evening Bulletin declared: "The legislature did not reduce taxes, because it couldn't. It manifested a disposition to throw relief and liquor control back into politics. . . . By and large, it did the bidding of political managers whose concern,

like that of the dominant interests in the 1937 body, was largely the advancement of partisan interests."

The Democratic Philadelphia Record put it even more bluntly, for it said of this general assembly: "It sold out organized labor in order to please certain employers; it sold out the employers by failing to keep the tax-reduction promise. It sold out the unemployed, and it sold out those who believed James' promises about relief."

I don't know just what is the state of the James Presidential boom at present. But I do know the Pittsburgh Press said of the State department of commerce's \$340,000 advertising appropriation—advertising James—that it bordered on "outright dishonesty," and added: "The expenditure of State funds to boost the personal stock of the Governor is a gross misuse of public money."

In hunting about for an alibi for the disastrous results of his administration so far, the Governor has elected W. P. A. as the villain. The argument is practically that if the W. P. A. were to take care of all relief, Pennsylvania could balance the budget without new taxes. There is no doubt about that. He should have added that if all the funds in the Federal Treasury had been turned over to Governor James, the State might even have a surplus.

Casting about for something with which to point with pride, the James administration seeks to be credited with the \$65,000,000 Pennsylvania Turnpike project. It was a Democratic legislature that authorized that project and it was Democratic aggressiveness that got the money from the P. W. A.

I don't think I need go further in describing what a bad investment it was for your State to turn things over to the Republicans.

Pennsylvania has done her part in bringing about the vast improvement in our national situation from the terrible condition in which the last Republican national administration left us. Under Democratic rule our country has weathered the great economic storm and is perhaps, thanks to Democratic policies, the only great nation in all the world unvexed by terrible fears of war; the only nation where people can pursue their usual avocations without dread of what tomorrow may bring.

But, taking it by and large, estimating things as they are as compared with things as they were, we must all be proud and happy with the improvement. It is the duty of us all to see that there is no interruption in the process of putting America back where it belongs. It is your job and my job and the job of every individual who has the interest of his country at heart to do everything possible to continue our orderly progress. And, more particularly, it is our job to do nothing that will encourage the forces that would upset things.

I have no doubt as to the result of the November election, but we must never risk the danger that is always present of losing through overconfidence. It will not do to assume that we are so strong that any of us can spare our efforts. Fortunately, there are many sturdy candidates for the nominations of the national convention, and I anticipate an honest and earnest presentation of their respective claims. I believe I can assure you, however, that there will be no deadlock in the convention, and when the final ballot is taken it will represent the will of our party. It will give us a ticket to which every Democrat will subscribe, in full faith that it is the party's choice; a ticket that will present not only what is best for the Democrats but also best for the welfare of our country.

We have had two terms of a successful Federal administration that have saved the Nation from collapse and disorder. But the work is anything but complete. I am sure that Pennsylvania wants to share in the program of preserving the humane results of the courage, patience, and statesmanship of Franklin D. Roosevelt. I am sure that all of you would contemplate with dismay and indignation a relapse into the old Republican system that almost destroyed us. So it is with confidence that I leave with you a final word. Do your full duty. Your first allegiance is your country; close behind it is loyalty to your party.

The Nation asks you to be faithful to both.

### Prayers for the Polish People

### EXTENSION OF REMARKS

OF

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ARTICLE FROM THE COURIER-EXPRESS, BUFFALO, N. Y.

Mr. SCHWERT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following article from the Courier-Express of Buffalo, N. Y.:

ALBANY, February 7.—Gov. Herbert H. Lehman today proclaimed next Sunday Poland Day in the State of New York and called upon residents of the State "to pray for the millions of Poles who are now undergoing untold suffering, misery, and persecution."

The executive's proclamation, issued in response to the request of the New York State Conference of Polish Clubs and the United St. Stanislaus Societies, follows:

"Our country has long recognized thankfully the contributions to her greatness and glory made by Polish patriots. Our history is replete with incidents which give testimony to their accomplishments."

"Accordingly, it is fitting that in the midst of our manifold blessings, among which are national unity, peace, and security, we pause to remember the courageous Polish religious and lay martyrs of the war and the millions of people upon whom again is visited great sorrow."

"Now, therefore, I, Herbert H. Lehman, Governor of the State of New York, do proclaim Sunday, February 11, Poland Day."

"It is proper that this be done at this particular time so that all Americans may observe the birth anniversary of Abraham Lincoln and Gen. Thaddeus Kosciuszko, beloved Polish American Revolutionary War hero, whose memory will always be held in grateful recognition in this country."

"I am confident that Americans, always responsive to the call of distress, will heed the plight of the unfortunate people of Poland, and in their homes, churches, and synagogues will pray for the millions of Poles who are now undergoing untold suffering, misery, and persecution."

### The Threat to Free Speech

### EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

RADIO ADDRESS OF HON. SAMUEL B. PETTENGILL, NOVEMBER 12, 1939

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a radio address delivered by the Honorable Samuel B. Pettengill, formerly a Member of the House of Representatives, and now the chairman of the National Committee to Uphold Constitutional Government, which was broadcast over the Columbia Broadcasting System on Sunday, November 12, 1939.

The National Association of Broadcasters have decided that the American people need a guardian. They have elected themselves the guardian. They did this without our knowledge or consent, but it is now the fact. You and I are now their wards. It is only by their leave that you can now discuss a controversial question over the air waves of America. You can say nothing, you can hear nothing except with their majesties' gracious permission. Papa knows best.

The broadcasters' recent code is a threat against the free speech of a free people. No law authorized their action. No constitution sanctioned it. No election ratified it. They did what Congress itself does not have the power to do. The lords of the air decided that they would decide what you shall hear. They decided that you shall not decide what you shall hear.

As always in cases of this kind, their action is surrounded by sanctimonious reasons why what they are doing to us is a good thing for us. This is old stuff—as old as Caesar and the divine right of kings. Abraham Lincoln, man of the people, knew this game inside and out. Lincoln said, "Tyrants always bestride the necks of the people on the claim that it is for the people's good."

I wish Lincoln and Jefferson were living now—or Andy Jackson or Theodore Roosevelt, or many another who trusted the plain people of this great country, who did not think they needed a guardian. Woodrow Wilson was one of these men. He said, "I do not want to be taken care of by the Government, directly or indirectly. I want only to have right and justice to prevail. I have never heard of any group of men in whose hands I am willing to put the liberties of America in trust."

Ladies and gentlemen, are you willing to hand the liberties of America over to the National Association of Broadcasters, or to the bureaucracy in Washington that regulates radio?

This is government by men, and not by law. Somebody arbitrarily dictates what rights you may or may not exercise. Our forefathers called this tyranny. I predict that the American people are not now going to stand for dictatorship at home which they condemn abroad.

No controversial question can be discussed in Germany unless Hitler consents. No controversial question can be discussed in Russia unless Stalin consents. No controversial question can be discussed in America unless the National Association of Broadcasters or some of the members consent. All three dictate what shall be heard, and who shall speak.

After you remove the camouflage of all the clever reasons why the code is good for you and why papa knows best, these facts remain: Inside wire pullers can alone determine, first, what is a

"controversial issue"; second, how much time shall be spent discussing it, if any; and third, who discusses it, if anyone. I challenge any member of the association to deny that this is the exact fact.

I am speaking on the subject today. But I am doing so by permission only. Somebody, and I don't know who, has consented that I may speak. Somebody, and I don't know who, could withdraw that consent. Then I could not speak. What you and I have today is a permit and not a right. But free speech is the right of all and the gift of none. A gift may be refused; a right may be stoutly held.

This goes to the very root of our free institutions. A subject, not in hand, cringing for a favor from his gracious lord, is the curse of the old world. A citizen standing on a right safeguarded by law, and looking his official in the eye and telling him to watch his step, is what makes a man an American.

Rights and not favors is the whole distinction between freemen and slaves. When our Constitution was before the people in 1787 Jefferson insisted that a bill of rights "is what the people are entitled to against every government on earth." We wrote the guaranty of free speech into the first article of our Bill of Rights. We said, "Congress shall make no law abridging the freedom of speech . . . or the right of the people peaceably to assemble and to petition the Government for a redress of grievances."

We recognized that free speech is basic to all other freedoms. For it is the right to criticize one's own government when those other freedoms are invaded, and by communicating with one's fellows to make common cause against the tyrannies that always return. The same truth was stated when the French Revolution overturned centuries of oppression. In the manifesto on the rights of man, appended to the French Constitution of 1791, the men who then fought for liberty, equality, and fraternity wrote these noble words: "The free communication of ideas and opinions is one of the most precious rights of man."

Please note that these brave men always talked about rights, not about favors. It would be no answer to them and it ought not to be to us that some group of invisible and unelected gentlemen behind the scenes gave sweet-smelling assurances that they were all-wise and all-good and would always dispense or withhold their gracious favors with even-handed equity to friend and foe, Tory and Liberal, members of their party and members of the opposite party. They knew better. They refused to live under even a good tyrant.

As Justice Brandeis said in one of his famous opinions: "Experience should teach us to be most on our guard to protect liberty when the Government's purpose is beneficent. Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. The greatest dangers of liberty lurk in insidious encroachment by men of zeal, well meaning, but without understanding."

Let this code stand, and you have set up an "invisible government" over "one of the most precious rights of man," the "free communication of ideas and opinions"—mass communication by radio.

The other day it was announced that a radio station would no longer carry a broadcast called The Voice of Labor. It is controversial. Why shouldn't labor have its radio voice where it may freely communicate its social or legislative program? Who is so wise as to say when labor must be mute? I was glad to note that the Congress of Industrial Organizations announced it would not take this lying down. I have little doubt that the American Federation of Labor will also throw its weight against this invisible government.

Is there to be no "voice of agriculture"? Are the farm organizations, the Grange, the bureau, the union to be denied the right to buy time on the air to advocate measures they are deeply interested in? And what about the great women's organizations interested in social and political reform? Are they to be denied the right to speak their minds?

At the moment the code falls hardest upon Dr. Townsend and Father Coughlin. They are to be snuffed off the air. The millions who want to listen to them are to be denied that right. Again, I say this is tyranny. I do not agree with much that these gentlemen advocate.

But the question now is not whether Father Coughlin and Dr. Townsend's views are sound. The question is whether they shall be denied the right to speak, and the right to be heard. The question is whether all minority groups—now or in the years to come—shall have the right to present their cause at the bar of public opinion, even of a hostile public opinion.

As a leading Catholic journal, America, has said: "It is hard to exaggerate the serious menace to rightful freedom in this double censorship. Today the victim is Father Coughlin. Tomorrow it may be another Washington or Lincoln who strives to denounce a national dictatorship established on the ruins of the American Constitution."

On its face the code has a clever appearance of fairness. A sort of promise is held out that all sides of all controversial questions will always be presented on balanced programs. But no one whose eyeteeth have been cut need be fooled by any offer to give "free time" on balanced programs.

The power to select the speakers is the hidden knife. Every "cause" becomes identified with someone who gives it the electric spark of his personality. Separate the leader from the cause and you give the cause a mortal blow.

In their opposition to slavery, William Lloyd Garrison and Wendell Phillips made an abstract proposition a living thing. To have gagged them would have been all that a Simon Legree could ask.

Take woman suffrage. Can you separate that movement from Elizabeth Cady Stanton and Alice Stone Blackwell? Had they been gagged, the thing they fought for would have been strangled.

Gag Frances Willard and all who fight for temperance and sobriety—that is a controversial question, is it not? What more would the gamblers, racketeers, and their corrupt political allies want than a situation wherein the controllers of broadcasting may secretly decide who, if anyone, shall be permitted to attack them?

Advertisers, station owners, and manufacturers and merchants of radio sets had better wake up. Their interests are at stake. If the American people once get the idea that someone behind the scenes is deciding what they shall not hear, they may tune off, to someone's huge detriment. When the people lose confidence in the program, they will lose confidence in the advertiser. Put the integrity of the editorial page of the air under suspicion, and watch listeners, advertisers, and buyers slip away.

But, ladies and gentlemen, it would be unfair if I were to allow you to assume that the National Association of Broadcasters is wholly at fault in this matter, or that all broadcasters want to control the discussion of controversial questions. The contrary is the case. Many broadcasters are as much opposed to this provision of the code as anyone. Some have already withdrawn from the association in protest, such as Elliott Roosevelt. Others want the code changed and will join in the fight that is going to be made to change it. We have support also within the Federal Communications Commission itself.

There is good reason to believe that the association adopted this code either under hidden pressure or the threat or fear of it. The effort to control radio has been going on a long time. A few years ago the Federal Radio Commission at Washington—believe it or not—actually argued in court that a radio address is not "speech" within the meaning of the United States Constitution. Since then there has been a silent censorship over broadcasters through the power to cancel their licenses, to refuse to renew them, and the short term of the license granted them—until lately only 6 months; now 1 year.

This makes every broadcaster, with his large investment at stake, a constant suppliant for the favor of the Commission. He knows that the Commission may refuse to renew his license if during the past 6 months some Commissioner has not liked something spoken from his station programs. Commissioners have themselves made radio speeches criticizing the programs. That was a "tip-off" as to what programs not to have. In June, without authority whatever, the Commission undertook a direct censorship of international broadcasts. This created such a wave of indignation that they recalled their order, and only the other day the new Chairman of the Commission let the cat out of the bag by giving the new code his implied blessing.

But that is not all. By virtue of his declaration that an emergency exists, the President today has the legal power to close every radio station in America, or to turn them over to a Government agency where they might be exclusively used for Government propaganda as in Germany, Russia, or Italy. He has not exercised that power. I trust he will not undertake to do so. I trust that a once-free people may still be permitted, even as a favor, if not as a right, to criticize governmental policies with respect to war or the problems of peace.

But the sword of Damocles now hangs over the head of every station owner, and here let me make it plain that the sword is exercising its secret power, even though the thread that holds it remains uncut. A loaded revolver held at your heart has power over you even if the trigger is not pulled.

For these reasons, while we utterly condemn the code forbidding the right of Americans to discuss controversial questions by paid radio broadcasts, those who agree with me are not fighting the broadcasters as such. We propose to fight for them and with them to regain the freedom that is rightfully theirs, and to put the radio on the same firm and unassailable foundations before the law, and Government bureaus, as is now enjoyed, after centuries of struggle, by the press and the platform.

Specifically we shall ask Congress at the next session to repeal the power of the President over the radio, except under the emergency of actual war in which we are involved, and then under safeguards against the abuse of power.

Second, that in all cases licenses shall be granted for the full maximum period of 3 years, permitted by existing laws, rather than 6 months or 12 months only, as heretofore. There is not a station owner in America who would not welcome this change.

Third, take from the Commission all power to suspend, revoke, or refuse to renew licenses for any illegal offense other than those which Congress may constitutionally forbid, and then only after an independent court, and not the Commission, has found the licensee guilty.

Ladies and gentlemen, the black-out of freedom is spreading throughout the world. The lights of liberty are being dimmed. Freedom of speech was the first liberty lost under European dictatorships. When that went, all other freedoms followed. Are we moving in the same direction?

This is a new fight in an age-long war. The dictators of today are riding the tumult, but the deep tides of human destiny are against them. Men have always struggled to be free.

Because he insisted on the right to freely speak, Socrates went to his doom. But before he drank the hemlock he said, "I would rather speak in my fashion and die than speak in your fashion and live."

Under the British Stuarts men were burned to death for criticizing the policies of their governments. The Hitlers of that day

required the press to be licensed, so that only those who kissed the royal hand and bowed the obsequious knee might publish a newspaper. It was then that Milton wrote his noble words: "Give me the liberty \* \* \* to argue freely according to conscience above all other liberties."

In France Voltaire said: "I disagree entirely with what you say, but I will defend with my life your right to say it."

And so the torch of freedom has been carried down the centuries. Only in recent years the Huey Long machine, now shown to have been unspeakably corrupt, tried once more to crush a free press. It was then that the United States Supreme Court said that an untrammelled press was intended to be preserved as "a vital course of public information \* \* \* to allow it to be fettered is to fetter ourselves."

We fight today for the same values our fathers fought for. They fought for a free press. We fight for a free microphone.

Men and women of America, are you with in this fight to preserve free radio? If so, write for a copy of this address to the National Committee to Uphold Constitutional Government in New York City, address 205 East Forty-second Street, New York City.

## Reciprocal Trade Agreements Act

### EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

ADDRESS BY JAMES M. DUFFY AT COLUMBUS TOWN MEETING,  
FEBRUARY 19, 1940

Mr. LEWIS of Ohio. Mr. Speaker, there is no industry in America that is more dependent upon the protection of its American markets from the competition of competing foreign products for its very existence than the American pottery industry, and no working people employed in any American factories are more dependent upon such protection for their jobs and their livelihood than the potters, and it is very timely and fitting that the president of the National Brotherhood of Operative Potters, Mr. James M. Duffy, should speak on the subject of the so-called Reciprocal Trade Agreements Act at the moment the House is considering the resolution to extend the term of the act, and I quote his speech as follows:

Mr. Chairman, ladies, and gentlemen and members of the Town Meeting of the Air, I greet you. Representing the workers dependent for their opportunities for employment in the American pottery industry we wish to have you know that we most emphatically oppose the continuation of the present alleged reciprocal trade treaty policy.

The workers in the American pottery industry, the products of which actively compete in American markets with the pottery products of the virtual slave wage paid labor of Japan, are conversant with the workings of tariff legislation. Such legislation and the administration thereof means the difference between jobs or idleness to thousands of American pottery workers.

These observations are based not only on our own practical knowledge and experience but upon findings and published reports of the United States Tariff Commission. After a careful and exhaustive study of the competitive conditions which the products of American pottery workers must meet in American markets, the Tariff Commission found that some 40 percent of the household tableware yearly sold in American markets is the product of workers in foreign countries, and 85 percent of such imports are the products of the workers of Japan.

It is hard to understand the hypocrisy and the inconsistency of those who on the one hand allege that they favor effective administration of our Asiatic exclusion law, our restrictive immigration laws, our Fair Labor Standards Act, and yet, will support legislation which results in making impossible the effective administration of the protective laws which I have just cited. Further, it is hard to understand how a group of educated and presumably well-informed persons will seek, under a Democratic administration, a delegation of power pertaining to the raising of revenues and the entry into treaties with foreign countries when such a policy has been bitterly opposed by every Democratic-controlled Congress from the earliest days of the history of our country down to the passing of the Collier bill in 1932. For your information, I might say that prior to 1934 no authorization has ever before been granted, authorizing our entry into trade treaties, unless such trade treaties were ratified by the Senate and approved by the House of Representatives.

The arguments which have been put forth by the State Department proponents of this un-American legislation are based on misrepresentation and the distortion of known facts. The cry-baby appeal of the State Department proponents of these reciprocal-trade treaties reminds one of a 4- or 5-year-old child, who, having stolen a lollipop, fears it will be taken away from him because he sees the parent coming down the street.

Labor opposes this unconstitutional delegation of power because we do not believe in fascism, nazi-ism, communism, or any other foreign isms. We still have confidence in the elected representatives of the American people, and we believe that persons seeking election to the Congress of the United States should either perform the obligations which they assume or should resign and let others who will accept and perform the obligations of office take their place. We are unalterably opposed to appointed officials of our Government taking over the obligations which the elected representatives of our country are obligated to perform.

When the proponents of reciprocal-trade treaties started their propaganda, a year or more ago, to secure the extension of the unconstitutional delegation of power which they now, we trust, temporarily possess, they compared our exports of 1932 with our exports of 1937 and 1938. They knew that before any trade treaties were entered into, other than with Cuba and a few other small nations, our exports had increased from \$1,675,000,000 to \$2,282,000,000. Further, they knew that our imports had increased from \$1,325,000,000 in 1932 to \$2,038,000,000 in 1935. While our exports of automobiles, radio sets, office machinery, and canned fruits increased in value these champions of tariff reductions, through our entry into trade treaties, said but little of the increase in our domestic trade. Our domestic trade from 1932 to 1938 increased from \$30,000,000,000 to more than \$60,000,000,000. Surely an increase in productive or service capacity of \$30,000,000,000 provides more jobs for American workers than did an increase, at the most, of less than \$1,700,000,000, most of which was in increase in values rather than in quantities.

Despite the distortion of facts presented in an attempt to mislead the American people into believing that through our entry into these reciprocal-trade treaties and the reduction of some 30 percent in tariff rates on some 1,000 or more foreign-made articles, an analysis of our imports and exports since these trade treaties were entered into will show that for every possible job secured for American workers we have transferred the jobs of at least 4 American workers to workers in foreign countries.

One must bear in mind when reading these figures that our exports are based upon the value of such articles in our country, while our imports are based upon the value in the foreign country, Japan for instance. There are some articles, most of which are on the free list—coffee, tea, rubber, tin, and raw silk—which we do not produce and will import anyway. Labor has never asked that tariff duties be imposed on articles not produced in America.

Labor seeks the imposition of tariff duties only on those products which are competitive in American markets with the products of American workers and farmers. In other words, we ask for tariff legislation which will protect the job opportunities and living standards of American workers.

This is not a new or selfish policy. It is a policy the effect of which has the support of the vast majority of the American people.

Some 60 or 70 years ago American labor realized that to protect the jobs and the living standards of American workers it was necessary to exclude from the American labor market the competition of the Asiatic coolies. Labor demanded and Congress finally enacted that Asiatic exclusion law, not because of any racial hatred, but solely to protect the wage and living standards of American workers. In later years we realized that we could not assimilate and provide jobs at decent wages for the many millions of European workers landing and settling along our Atlantic seaboard cities. Congress again, almost unanimously, heard the cry of labor, supported by millions of real Americans, and enacted restrictive immigration laws, which again protected the job opportunities and living standards of our American workers.

We submit in all sincerity that the protective values of such laws to American workers are virtually set aside when the products of these excluded workers are permitted entry to American markets at total-delivered costs which are less than American costs of production of competitive products.

Naturally, the question arises, why, in view of the well-known policy of Congress to exclude Asiatic workers and restrict the entry of European workers are the products of these excluded workers permitted entry into American markets at total costs which displace and transfer the job opportunities of American workers to these very excluded workers in their countries, produced under what Congress has set forth in the fair-labor-standards law as substandard?

The answer is a simple one: Greed, money, profits.

The international bankers and the large exporters—there are comparatively few of them—profit through the purchase and sale of foreign exchange. Their principal profit comes from the successful manipulation of price values, of money values, and the keeping of a set of books. They, in themselves, because there are so few of them, have only that political influence which comes through the expenditure of moneys. Naturally, as this is practically their only tool, they know how to apply this tool to secure the best profits for themselves.

Great stress has been laid on the benefits which the great body of American consumers secure through reductions in our tariff rates. Very little has been said of the profits which a few have made

through loss of millions yearly in revenue to our Treasury through these trade treaties. To illustrate this point, I will take a household necessity—sugar. In 1933 or 1934 the United States Tariff Commission found that there was 25 percent less cost in producing Cuban sugar than American sugar. President Roosevelt promptly reduced the duty from 2 cents to 1½ cents per pound. Again, through our entry into a trade treaty a few months later, we reduced the rate to nine-tenths cent per pound. Who are the principal owners of Cuban sugar plantations? The United States Tariff Commission reported that they are mainly some five or six large American bankers or banks. What has been the effect of these reductions as they relate to the prices paid by the American housewife for sugar? The facts are that, despite this reduction of more than 1 cent per pound, the American housewife has paid a higher rate for sugar since the reduction of the tariff duty than had been paid prior to that date. The United States Treasury has lost yearly, I believe, some \$40,000,000 in revenue, which naturally went into the pockets of these few banks or bankers who own these Cuban sugar lands. I might cite other illustrations, but time will not permit.

In closing, I might draw your attention to the fact that history warns us that at the conclusion of the present European and Asiatic wars many of the countries engaged in such wars will be impoverished and will seek to better their economic position by the production of such goods as they may find a market for in foreign lands. Already the labor movement of France and of England have made many sacrifices, which, to our mind, it will take them many years to again secure. We do not believe that anyone with a knowledge of history and having any common sense can believe that the present economic conditions of the United States can be preserved and American wages and American living conditions maintained unless our markets are protected now from the inevitable flood of cheaply manufactured goods and products which will flood our country, the production of impoverished nations driven to destruction by war expenditures.

Let me reiterate our emphatic opposition to Congress delegating to a few appointed officials of the Government that responsibility which they are obligated to perform.

We believe America should continue to be a government by law applicable to all and not, as some would have it, a government of men.

## Reciprocal-Trade Program Has Failed

### EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

Mr. HOPE. Mr. Speaker, you have heard much during the course of this discussion as to the effect of the reciprocal trade agreements program on agricultural imports. I happen to represent a district which is perhaps more interested in agricultural exports than imports, and to me it appears that the most conspicuous failure in connection with the trade-agreements program has been its inability to increase exports of our surplus agricultural products.

When the program was inaugurated this was stated to be one of its principal objectives; and certainly as far as agriculture is concerned, the program must be considered as a failure unless it does result in increasing exports of our surplus agricultural commodities. Unless it can be shown that the program has done something constructive along that line, even its proponents must concede that it has been a failure.

There have been some feeble attempts to show that foreign markets for agricultural surpluses have been reopened under the trade-agreements program, but the facts in the case are all against any such contention. Exports as a whole have increased; farm exports have declined. Thus, total exports from the fiscal year 1932 to the fiscal year 1939 have increased from \$1,908,000,000 to \$2,885,000,000, or 51.2 percent. Agricultural exports, on the contrary, have actually declined from \$752,000,000 to \$683,000,000, or 9.2 percent, over the same period. In fact, agricultural exports, as a percentage of total exports, reached an all-time low, or 23.7 percent, in the fiscal year 1939.

Some may prefer to take the figures since 1935, but they offer little more encouragement. Agricultural exports for 1939, as compared with 1935, show an increase of 2.1 percent. Exports of all commodities, however, show an increase of 38.4 percent.

Total figures, however, do not tell the whole story by any means. In order to understand the real effect of the program on agriculture it is necessary to break down its application to specific commodities. I am especially interested in increasing our wheat exports, because I happen to represent the greatest wheat-producing district in the country.

What has the trade-agreement program done as far as the wheat farmer is concerned? Proponents of the program have talked long and loud about what they have done for wheat. They say that in 1938 we exported over seven times the quantity of wheat and wheat flour which we exported in 1935. What they neglect to point out, however, is that exports to concession countries increased but four and a half times, while exports to nonconcession countries increased nearly nine times, or almost twice as much. Equally significant is the decline of exports from 17 percent of domestic production in 1929 to 11.4 percent in 1938.

Finally the thing that apologists for the trade-agreements program neglect to mention entirely is that most of the recent increase in exports is due to the export subsidy program and not to the trade-agreement program at all. In fact, the export subsidy program was undertaken because of the fact that trade agreements had utterly failed to solve the problem of exportable wheat surpluses.

Thus, during the fiscal year 1939 export subsidies were paid on approximately 94,000,000 bushels of wheat in the form of grain or flour at a total cost of \$25,700,000 paid out of the United States Treasury. An additional 16,735,000 bushels were exported during the months of July, August, and September 1939, with an average subsidy payment of 32 cents a bushel.

Not only does this indicate the utter failure of the administration's trade-agreements program as far as wheat is concerned but it puts the administration in the position of indulging in practices which are the very antithesis of the reciprocal-trade program, and practices which it has wholeheartedly condemned on numerous occasions.

Surely no one can contend that the reciprocal-trade program has been anything other than an utter failure as far as wheat is concerned. Kansas wheat farmers are too smart to be fooled by any arguments which may be advanced to the contrary.

Practically the same story holds good for three other principal export commodities—cured pork, cotton, and tobacco. These, together with wheat, account for from 65 to 70 percent of our total agricultural exports. Iowa corn and hog farmers have been generously regaled with stories of what the reciprocal-trade program was doing in the way of promoting pork exports. What are the facts? From 1935 to 1938 the quantity of hams, shoulders, and bacon exported to all countries increased 3 percent. Exports to countries which gave us concessions, however, actually declined 9.5 percent, while exports to all other countries increased 4.6 percent. Further, exports of pork products, as a percentage of production, declined from 5.7 percent in 1929 to one-tenth of 1 percent in 1938.

It might be of further interest to know that the quantity of total exports of all meat products increased 2 percent from 1935 to 1938. To concession countries, however, exports declined 14 percent. To all other countries they increased 4 percent. Figure out if you can how the trade-agreements program has helped the livestock producer.

What about cotton? The case of cotton offers further illumination on the agreements program. The trade agreements have had no direct effect on cotton, as it enters all the important world markets duty-free. Cotton does offer, however, an excellent test of the theory often advanced that trade in all commodities would increase whether the subject of concessions or not. If there was any validity to this theory, certainly exports of cotton, in which we hold a dominant world position, should be the first to feel the upsurge. From 1935 to 1938, however, the amount of American cotton entering foreign markets has declined 22 percent, while over the same period foreign mill consumption has increased 10 percent. Even more significant is the fact that cotton exports

as a percentage of previous years' production have dropped from 44.9 percent in 1929 to 28.1 percent in 1938.

Like wheat, the only progress which has been made in stimulating exports of cotton is by means of the subsidy program. This program was inaugurated July 27, 1938. During the first 4 months of its existence 4,332,000 bales, either in the form of raw cotton or cotton manufactures, were sold. The subsidy was paid at the rate of 1½ cents a pound, which means that approximately \$32,500,000 has been spent on this subsidy program, exclusive of storage, transportation, and other costs. Yet this subsidy program, like that on wheat, is entirely out of harmony with the whole theory of trade agreements and was resorted to in desperation after the trade-agreements program had been such a tragic failure in promoting cotton exports.

Finally, let us examine the figures on tobacco. Here we find that from 1935 to 1938 total exports increased 23.4 percent. Exports to concession countries increased 29.1 percent, while to all other countries the increase was but 22.7 percent. This would seem to indicate that the trade-agreements program had been successful in promoting our exports of tobacco. It is necessary, however, to look a little deeper. Of the six concessions we received, only two represented decreases in duty. One of these concessions was made by Cuba, one of the world's largest tobacco-exporting countries, and the other by Colombia, which annually takes about 100,000 pounds. Further, from 1932 to 1938 exports to all countries increased 19 percent. Exports to concession countries, however, actually declined by 33.8 percent, while to all other countries there was an increase of 33.8 percent. Even more significant from the standpoint of removal of the surplus production of tobacco is the fact that exports of unmanufactured tobacco in 1929 were 35.3 percent of our total production and in 1938 exports were but 28.8 percent of production.

No doubt proponents of the trade-agreements program can find isolated instances where some minor export commodity has benefited from the agreements. As already stated, however, the four commodities to which I have referred comprise the great bulk of our agricultural exports. As far as they are concerned, this program has been a demonstrated failure; and the fact that it has failed, after a trial of almost 6 years, is surely a substantial basis for opposing a continuation of the program at this time.

Foreign trade is important. I firmly believe that we cannot have agricultural prosperity in this country unless we can increase our exports of our surplus crops. We are getting nowhere, however, under the present program. If we can get rid of it, we will be in a position to approach the matter in a realistic manner and in a way which is consistent with world conditions as we find them today.

### Responsibility Not To Abuse Civil Liberties

#### EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

EDITORIAL FROM THE SAN FRANCISCO CHRONICLE,  
FEBRUARY 14, 1940

Mr. HAVENNER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the San Francisco Chronicle entitled "Responsibility Not To Abuse Civil Liberties."

The editorial is as follows:

Never before in the history of the United States has there been such a mobilization in defense of civil liberties. It is a vital cause. Our civil liberties are the foundation of the American system. Our forefathers fought and bled and died for them. They are no less

important to us than our forefathers thought they were important to them. We, too, must guard them with our lives if necessary.

In the very nature of things we must protect the civil liberties of unpopular persons engaged in unpopular causes as jealously as we protect our own. If we do not do this we are undermining our own civil liberties. Civil liberties must extend to all. If they are denied to some the way is opened to deny them, in turn, to the deniers. Exceptions open a fatal course.

The protection of American civil liberties, however, puts a responsibility also on those who appeal for the protection of their own civil liberties. When they abuse their civil liberties they are putting a strain on the system. We have to protect them even in this abuse, if it stays within the law, but they are not helping to uphold the system. It is a paradox that, for the safety of our own, we are obliged to protect the civil liberties of even those who, by abuse, attack the system by this treachery. For the abusers of civil liberties are by that abuse traitors to the cause of civil liberty.

There is another point on which a word needs to be said just now. In our zeal for the safeguarding of American civil liberties have a care lest, in efforts to protect the civil liberties of one group we attack the civil liberties of another group. To do this is another obvious disservice to the cause of civil liberty.

Nothing can be done with the hypocrites who shriek for civil liberties when in their hearts they wish to destroy the whole system. They are congenial knaves and traitors beyond cure. We address this only to sincere Americans. The sincerest zeal sometimes needs a touch of the brake in the interest of the cause zeal seeks to advance.

### The Trade Treaties—Old and New

#### EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1940

LETTER TO HON. EDWARD A. O'NEAL, PRESIDENT OF THE  
AMERICAN FARM BUREAU FEDERATION

Mr. PLUMLEY. Mr. Speaker, by virtue of the consent granted me, I extend my remarks in the RECORD. I desire to place in the RECORD a copy of the letter I wrote to the Honorable Edward A. O'Neal, president of the American Farm Bureau Federation, in response to a telegram I received from him relative to my vote on the so-called trade agreements. I have heretofore, and at possibly too great length, undertaken to make clear my reasons for opposing the enactment of the pending legislation. I do not wish to cumber the RECORD, but I am anxious that my position be made unmistakably clear.

Hon. EDWARD A. O'NEAL,  
President, American Farm Bureau Federation,  
Washington, D. C.

DEAR PRESIDENT O'NEAL: Re your stock telegram to Members of Congress urging support of House Joint Resolution 407.

There is no question in my mind that these agreements are treaties under whatever name, or by whatever means it may be sought to hide the fact, or conceal the legal effect of failure to comply with the provisions of the Constitution.

I am opposed to the delegation of the treaty-making power to the Departments of State, Commerce, and Agriculture, or the violation by them under a claim of right and specious color of authority, delegated by what I consider an unconstitutional act of Congress. In my opinion, they are worthless scraps of paper, as treaties or agreements. I will not vote for their continuance nor will I vote to ratify or condone a violation of what I believe to be the fundamental law. To ask me to do this is both a request for me to violate my oath of office and to stultify myself. I propose to do neither.

Yours very truly,

CHARLES A. PLUMLEY.

The telegram to which reference is made is as follows:

HON. CHARLES A. PLUMLEY,  
Washington, D. C.:

The last American Farm Bureau Federation convention, representing farmers in 39 States, endorsed without a dissenting vote continuance of reciprocal-trade agreements. All agreements to be approved by Secretaries of State, Commerce, and Agriculture. We respectfully urge your support of House Joint Resolution 407.

EDW. A. O'NEAL,  
American Farm Bureau Federation.

## Tolerance and Peace

## EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

ADDRESS BY HON. DENNIS CHAVEZ, OF NEW MEXICO

Mr. MEAD. Mr. President, under leave to extend my remarks in the RECORD, I submit a copy of the remarks of the distinguished Senator from New Mexico [Mr. CHAVEZ], delivered before the B'nai B'rith George Washington Day celebration at the Plaza Hotel, New York City, February 25, 1940. The topic of the speech, Tolerance and Peace, recommends careful perusal of the subject which is most effectively presented by the Senator from New Mexico.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a genuine pleasure to be here as your guest today, not only because it again brings me to a great city where I always like to visit, but because I am able to participate with you of the Independent Order of B'nai B'rith in observing the birthday of that great patriot and Father of his Country—George Washington.

As I pass through the streets and public places of New York on my occasional trips here, I am at first overwhelmed by the magnitude of it all, and I am then reminded of the great progress you have made, and the Nation has made, since those early days when Washington and succeeding patriots laid the cornerstone of our democracy.

Although there are impressive examples of our national progress throughout the length and breadth of our Nation, including my own native State of New Mexico, where population and industry and education and culture have been constantly on the increase, it really takes a trip to New York to impress the average American with the immensity of our growth.

We might make some contrast by saying that in the mountains and valleys and wide-open spaces of the West and Midwest we are more likely to be awed and impressed with the great handiwork of God, our Maker, while in the East, and in New York in particular, we are impressed by the work that mankind has done for itself with the tools and genius our Maker has given to us.

No American who travels over his country today—to the east and west and the north and south—can escape a growing reverence for God, a respect and admiration for his fellow man, and a deep-seated love for the country in which we live.

George Washington in his time could not have envisioned all of our great progress, but he did have the vision and wisdom to lay a solid foundation on which our generation and generations yet to come have built and will build to an extent which even we, in this ultra progressive age, cannot even comprehend.

His foundation was that of fundamentals, composed of principles of patriotism and of religious freedom and of peace and tolerance, which are the bedrock of all civilization and of humanity. He knew then as we know now that the things that are worth while in life are the things that endure. And he founded our Nation on that concept.

As we progressed as a people and as a nation, we also had the help and inspiration of many organizations throughout the land which were also grounded on the same firm principles. Among these is the Independent Order of B'nai B'rith, which for nearly a century since its formation on October 13, 1843, has actively contributed to the Americanism which George Washington founded.

Those early founders of your organization had experienced the sharp stings of their new environments, the ignorance of the language, the battle for economic equality, the lack of knowledge of the social status—and yet, with heroic fortitude, a wide grasp of the situation, and with intelligent insight, they worked and watched, day and night, not to build a state within a state, not to establish a sectarian exclusive organization as a menace to the peace or the perpetuity of the Republic, but in aid of incoming future Americans, to educate, stimulate, and encourage, to the end of bringing the Jewish people into close touch, not only with each other but with their fellow citizens of all faiths.

In these respects I believe that the founders of your organization gave you a start in a direction that is not only right but necessary from the standpoint of developing true Americanism.

Ordinarily one might feel that the association or grouping of all persons of a similar faith would tend to create class or racial consciousness, which in a nation like this might lead to factions, and then to misunderstandings and intolerance. But in following that original objective of keeping the Jewish people in closer touch, not only with each other but with their fellow citizens of all faiths,

your organization has helped to cement the cornerstone of our democracy and to develop a national patriotic unity. It has contributed not only to our Americanism but especially to cementing those two great structural parts of our Americanism—tolerance and peace.

We need only to glance at the rest of the world today to see what happens to the peace of mankind when intolerance prevails; and, if we take Europe as an example, we can imagine how easily we could have fallen into the same difficulties here at home, with the many different classes of people who settled here, if we had not founded our Government upon a unity of States, upon a freedom of religious worship, and upon the other principles of our democracy which have enabled it to endure. When we think of it and realize "what might have been," we should really be more than thankful that we had predecessors like George Washington and other patriots who followed him.

Intolerance and war—how potent and full of meaning these words are today. Throughout the ages intolerance has reared its ugly head to threaten the peace of mankind, and today it is again at the bottom of much of our warfare and discord throughout the world. The problem today is the same problem of past generations. It is not simply one of antisemitism, though that is a part of it. There have been and are many scapegoats in the world—the Negroes, the Ethiopians, the Communists, the Fascists, the Spanish, the Protestants, the Catholics, the Jews, the farmers, the workers, and, some would assert today, even the capitalists and the bankers.

As was well said by Morris S. Lazaron in his book entitled "Common Ground"—I quote:

"No nation can endure whose people are divided against themselves, whose groups are self-conscious, jealous of their privileges; whose leaders seek to preserve their personal power; whose thinking is provincial, and whose classes are arrayed against each other.

"So far as Jews are concerned," he says, "it matters very little in the long run what happens to a few thousand or a hundred thousand of them. With us prejudice and persecution are familiar experiences and we are a people well acquainted with sorrow. But it does matter a great deal what happens to America. It matters to us and to our children. It matters to the world. None of us can ride out of the present trouble on the back of anyone else; we shall lose in the end. The task of responsible leadership in America today is to lay before our citizens the larger loyalty to America, which embraces the lesser loyalties of group and class and creed, the larger loyalty, without which the lesser loyalties cannot be saved, nor even the greatest loyalty of all—the loyalty of man to his Maker. It must envision the America that might be and, in a world which flouts democracy and invades and destroys the sanctities which are the inherent privilege of every human being, resolve to realize in ever-greater measure the America of our hopes and dreams."

And I might also add, the America of the hopes and dreams of George Washington.

Recall with me the Biblical story of David and Goliath. It may be applied today to the story of man's fight against prejudice, ignorance, or custom. No greater giant was ever slain than that of bigotry and religious intolerance. No greater beacon light in history was ever kindled than that whose rays brought religious liberty into the world. And no nation has ever contributed more to the slaying of intolerance than has our own America.

And if we are to have peace and prosperity in this Nation during the turbulent times that seem to be ahead for the people of other countries, we must preserve our sense of tolerance at home. In this connection I like to remember the admonition of Woodrow Wilson who, though engaged hopefully in the cause of world peace, warned that there could be no peace unless each nation that wanted peace would engage in the practice of justice itself. If peace was desired, he said, contentment would have to be assured, because there could be no peace with troubled spirits or with a sense of injustice.

Some of you no doubt recall that those words were spoken in 1919 on the occasion when President Wilson was honored by B'nai B'rith with a gold medal award as the man regardless of creed, who contributed most during the year to the Jewish people and to humanity. I am glad to recall this honor to Woodrow Wilson, who was a great leader of my own political party.

But if we analyze his statement in the light of present-day affairs, we realize even more than we did then just how correct was his admonition—that each nation that desired peace would have to practice justice.

As we study the course of world events and wonder what will happen to the United States if things continue as they are abroad, let us develop a firmer resolve to practice justice here at home. And I interpret this to mean more than just the practicing of justice—I interpret it as meaning the justice that signifies tolerance in all things—not just tolerance in religion—but tolerance in all of the social, commercial, industrial, and other activities in which we engage. Though the concept of tolerance is more firmly rooted in religion—it cannot—it must not end there. It must be all inclusive—it must be tolerance that embraces all things within the scope of law and order and good public morals.

And although Wilson was speaking chiefly of our Nation when he spoke of justice and tolerance beginning at home, his remarks are equally as applicable to the component parts of our Nation, and to the individual. We must have tolerance between the States of our Nation, between the political parties, between organization, and between individuals. After all, tolerance really begins in the heart

of the individual, although it may be inspired or accentuated by the social order, or by the organization, or by the patriotism of the nation of which he is a part. It is essential that he set his own house in order and practice justice and tolerance, if he is to expect tolerance in return. It would be hypocritical and suicidal for the individual or the organization to preach tolerance on the one hand and practice injustice and intolerance on the other.

I feel deeply on the subject, not only because I am in public office and have a responsibility to the Nation and to the people of New Mexico, but because I personally belong to a religious faith and race of people, which like other groups, has at times felt the effects of intolerance in the progress of national and world affairs and I might add, a race which on occasions has possessed its share of intolerance. I am of the Catholic faith and my people are of Spanish ancestry, having been among the first to settle in this country under land grants from the King of Spain.

In the south and in the west the Spanish people fought the wild tribes, explored the lands, built homes, and left a race, culture, and heritage which today enriches the basic civilization of our land.

And now in the region settled by the Spanish they still constitute a large proportion of the population along with the other large group, the Anglo-Saxons who have come there since American occupation.

Perhaps you would say that having two peoples living side by side should lead to strife and intolerance. Sometimes it does but not necessarily so. In New Mexico we are divided about equally in numbers, but we are united 100 percent in Americanism, and as long as Americanism prevails we are not concerned with prospects of intolerance.

It is precisely because my people have felt the sting and anguish of intolerance, on those occasions when Americanism was overlooked in the hurry to settle and exploit the West that we out there do not take Americanism lightly or for granted. We know that it is a living principle, and that it must be actively practiced in order to bring results.

Today in New Mexico a new order is being created. Through enlightenment and education the ignorance and prejudices of the past are being wiped out, and instead the new spirit of tolerance, which is nothing more than Americanism in full flower, is creating peace and harmony among our peoples.

Thus we, in New Mexico, are thankful that the principle of Americanism is sufficiently broad that it encompasses all races, all groups, and all religions, and that under it it is possible to harmonize all differences in the spirit of tolerance and peace, and that by maintaining harmony at home we contribute to tolerance and peace and harmony abroad.

And since I am a member of a religious faith and of a class of people who have known what intolerance meant as practiced against them in some degree throughout history, I am in a better position than some to understand just how it starts and grows, and how it must be overcome by patience, by understanding, and by great faith in our religion, and in the enduring principles of Americanism.

Today, for instance, the world is ending a decade or more of intense depressions which have thrown into bold relief the social and economic maladjustments of our times. Because the Jewish people have always devoted much of their great intellect to business, financial, industrial, and economic progress of our Nation it was only natural that the depression found them among the great leaders of those fields. But as the common man began to lose ground in the economic struggle, as unemployment increased, as discontent spread, it was a somewhat natural result that there should be some protests against all persons in charge of our economic machinery—whether Jew or Catholic or Protestant. This is to be expected in all such eras of economic need—for it is a protest of the people, who are crying out for reforms that are sorely needed for the welfare of all classes.

Although this feeling of protest is natural, and beneficial, in that it inspires those reforms and improvements which are needed—such as many of the reforms undertaken during the past few years—we must realize that it is a feeling that is potentially dangerous to any particular group that may be a scapegoat by fanatics and uninformed persons who direct the protests of the people into emotional outbursts and then into a stampede of intolerance.

We must also realize that as long as this possibility of intolerance exists it is all the more important that we keep our own house in order—individually—or as an organization—or as a nation—so that the intolerant appeals of fanatics cannot take root. We must search our own hearts first, and ask ourselves whether we are tolerant in all things. And we must look around us at our organizations and see if they are tolerant. Those who are in the business and financial world today must look to see whether there exist within their ranks persons who are engaging in sharp practice, in domineering methods of control, in predatory action against industrial enterprise, and in favoritism of various kinds that may appear to be discrimination against others. If we find these conditions, let us remember that they are the stones on which the moss of intolerance gathers. Let us cast them out—clean our own houses—and make sure that tolerance is given as well as received.

I think we are on far safer ground in attacking our problems in this way than in closing our eyes to the situation and expect-

ing intolerance to be wiped out overnight by some great victory on the battlefields of Europe. Regardless of where our sympathies may rest in the present European war, I believe that on this day when we honor the Father of his Country—George Washington—we should hear again his words of warning against any foreign entanglements or alliances which might lead us into the conflict. In his great farewell address to the people of the United States, Washington said, I quote:

"Against the insidious wiles of foreign influence (I conjure you to believe me fellow citizens), the jealousy of a free people ought to be constantly awake; since history and experience prove that foreign influence is one of the most baneful foes of republican government. But that jealousy, to be useful, must be impartial, else it becomes the instrument of the very influence to be avoided, instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike for another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests.

"The great rule of conduct for us, in regard to foreign nations, is in extending our commercial relations, to have with them as little political connection as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop."

And I might continue by quoting from that memorable address, to emphasize the wisdom of his words, his plea for no foreign entanglements, his insistence upon law and order and peace and Americanism at home as the greatest safeguards to our Republic and to the happiness of individual Americans. Now, more than ever before, do we need to heed his advice, so that we may keep our own house in order and strengthen ourselves for a greater task that may be just ahead, the task of preserving the principles of our democracy for the entire world. If we dissipate our energies by participating actively in the turmoil abroad and divert our attention from problems at home, we may come to our sorrow. To paraphrase that well-known Biblical quotation, "For what doth it profit a man if he gain the whole world and lose his own soul," in this case the soul of democracy, of Americanism, and of all the liberty, freedom, and tolerance that are the foundations of our democracy. And, of course, there is no assurance that we would gain the whole world for peace, even if we should take a chance with sacrifices at home. We did not succeed in establishing permanent peace or permanent democracy for other nations after the World War.

Great men and great Presidents since the time of George Washington have realized the wisdom of his position against entangling alliances; and they have sought valiantly to avoid them. Woodrow Wilson was just as firm in these convictions but unfortunately was drawn into a conflict which seemed unavoidable. And afterward, possessed of a great heart and a great ideal, he believed that in the cause of peace—and peace alone—we might be justified in modifying the Washington doctrine against foreign alliances to an extent necessary to assure world harmony and world peace. In that he failed, as we all know, and it yet remains to be seen whether even that modification of the doctrine of Washington is either possible or wise. We all hope for peace, and we admire those who have ideals of a permanent peace among all nations of the world, but we must face the practicalities of our time and realize our limitations. We can only hope that the steps taken by our great President, Franklin D. Roosevelt, to insure peace at home, will be permanently effective. And in this connection we also may hope and fervently pray that our Government's emissary and representative, the Honorable Sumner Welles, who is visiting other countries in the interest of peace, may find some basis on which America can make a contribution to the cause of peace.

In closing I want to tell you how impressed I was when I recently opened a souvenir edition of the general convention of the Independent Order of B'nai B'rith and saw there on the frontispiece the emblem of your order, the American flag, printed in its natural colors, the red, the white, and the blue. I was impressed because I had just finished reading of the history and the objectives of your organization; and then, as I was closing the book, the front page turned toward me, and there, in its vivid colors, in the small space of a single page, I learned the story of B'nai B'rith more fully than from all the pages and all the words that I had just finished reading.

It is a glorious emblem for your organization and for all Americans—a symbol of the achievements, aspirations, and objectives of a people. Flags everywhere epitomize the romance of history and incarnate the chivalry of the ages. Around the bits of varicolored bunting which the people of each land select as a national flag there cluster thoughts of loyalty, of patriotism, and of personal sacrifice which have enabled the world to move forward toward a new civilization.

May the Stars and Stripes always be the emblem of the Independent Order of B'nai B'rith, to guide and inspire you, just as it was the flag of George Washington and remains the flag of all Americans today.

I thank you.

## Factual Record of Census Inquiries

## EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

## QUESTIONS INCLUDED IN DECENNIAL CENSUS FROM 1790 TO 1940

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a factual record of census inquiries for 150 years and acts of Congress governing compulsion and fixing penalties, showing the type of questions included in each decennial census from 1790 to 1940.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

## FACTUAL RECORD OF CENSUS INQUIRIES FOR 150 YEARS AND ACTS OF CONGRESS GOVERNING COMPULSION AND FIXING PENALTIES

Census of 1790: President, George Washington. Names of heads of families; free white males of 16 years and up (including heads); free white males under 16; free white females (including heads); all other free persons; slaves.

Census of 1800: President, John Adams. Name of head of family and residence; free white males under 10; free white males of 10 to 16; free white males of 16 to 20 (including heads); free white males of 26 to 45 (including heads); free white males 45 and over (including heads); free white females under 10, from 10 to 16, from 16 to 26, from 26 to 45, from 45 up; all other free persons except Indians not taxed; slaves.

Census of 1810: President, James Madison. Name of head of family and residence; free white males under 10, from 10 to 16, from 16 to 26 (including heads of families), from 26 to 45 (including heads), from 45 up (including heads); free white females under 10, from 10 to 16, from 16 to 26 (including heads), from 26 to 45 (including heads), over 45 (including heads); all other free persons except Indians not taxed; slaves.

Census of 1820: President, James Monroe. Heads of families and residence; all inquiries regarding free white males and females as in previous censuses, with same age groups; foreigners not naturalized; male and female slaves grouped in ages as follows: Under 14, from 14 to 26, from 26 to 45, from 45 up; free colored persons in same age groups and sex divisions; all other persons except Indians not taxed.

Census of 1830: President, Andrew Jackson. All heads of families, residence, etc., as in previous censuses; slaves, male and female. Number of deaf and dumb under 14, between 14 and 25, 25 and upward; number of blind; aliens; foreigners not naturalized.

Census of 1840: President, Martin Van Buren. Identification as in previous censuses. All heads of families required to report slaves, male and female, and pensioners for Revolutionary or military service.

Census of 1850: President, Zachary Taylor. In addition to standard identification, age and sex questions, all persons required to indicate color—white, black, or mulatto. Profession, occupation, or trade of each male person over 15; value of real estate owned; married within the year; attended school within the year; those aged 20 and over who could not read and write; whether deaf and dumb, blind, insane, idiotic, pauper, or a convict.

Census of 1860: President, James Buchanan. In addition to identification; residence; number of families; age; sex; white, black, or mulatto; profession, occupation, or trade (both males and females over 15 years of age, all free inhabitants were required to give value of real estate owned, value of personal estate, place of birth, married within the year, attended school within the year; all 20 years of age or over required to indicate whether they could read and write; and all free inhabitants were required to report whether deaf and dumb, blind, insane, idiotic, pauper, or convict.

NOTE.—In the 1860 census Abraham Lincoln reported value of real estate and value of personal estate as did all other persons.

Census of 1870: President, Ulysses S. Grant. In addition to residence; families; names; ages; sex; color; profession, occupation, and trade; value of real estate; value of personal estate; place of birth (as in previous censuses); whether father and mother were foreign-born; if born within the year; if married within the year; if attended school within the year; ability to read and write; deaf; blind; insane; or idiotic.

Census of 1880: President, Rutherford B. Hayes. Identification; house number; dwelling houses; families; all names; color, including Chinese and Indian; sex; age; relationship to head of family; servants and boarders; single, married, widowed, divorced; married within the year; profession, occupation, trade; number of

months each person has been unemployed during the year; whether person is sick or temporarily disabled so as to be unable to attend to ordinary business or duties; if so, what is the sickness or disability; blind, deaf and dumb, idiotic, insane, maimed, crippled, or bedridden; attended school within the year; ability to read and write; place of birth; place of father's birth; and place of mother's birth.

Census of 1890: President, Benjamin Harrison. Full name; dwelling house; number of families in house; number of persons in house; number of persons in family; whether a soldier, sailor, or marine during Civil War (both Union and Confederate or widow of such person; relationship to head of family; white, black, mulatto, quadroon, octoroon, Chinese, Japanese, or Indian; sex; age; single, married, widowed, divorced; married during year; mother of how many children and number living; place of birth; place of father's birth; place of mother's birth; years in the United States; whether naturalized; whether papers have been taken out; profession, trade, or occupation; months unemployed during year; months attended school during year; ability to read and write; ability to speak English; if not, the language or dialect spoken; whether suffering from acute or chronic disease with name of disease and length of time afflicted; whether defective in mind, sight, hearing, or speech, or whether crippled, maimed, or deformed, with name of defect; whether a prisoner, convict, homeless child, or pauper; is home rented or owned by head or member of family; if owned by head or member, is it free of mortgage; if head of family is a farmer, is farm rented or owned by him or a member of his family; if owned, is it free of mortgage; if mortgaged, give post-office address of owner. Exact language from the law signed by President Benjamin Harrison requiring mortgage information in the 1890 census:

"That it shall be the duty of the Superintendent of Census, in addition to the duties now required of him by law, to ascertain the number of persons who live on and cultivate their own farms, and who live in their own homes, and the number who hire their farms and homes, and the number of farms and homes which are under mortgage, the amount of mortgage debt, and the value of the property mortgaged. He shall also ascertain whether such farms and homes have been mortgaged for the whole or part of the purchase money for the same, or for other purposes, and the rates of interest paid upon mortgage loans."

Census of 1900: President, William McKinley. All identification; residence; number of families; number dwelling in house; relationship; color and race; sex; day of birth; age; single, married, widowed, or divorced (as in previous censuses); number of years married; mother of how many children; number of children living; nativity of person; also father and mother; year of immigration; number of years in United States; naturalization; occupation, trade, or profession of each person 10 or over; months not employed; months attending school; ability to read, write, and speak English; home owned or rented; if owned, is it free of mortgage.

Census of 1910: President, William H. Taft. Location; identification; relationship; color; sex; age; single, married, widowed, or divorced (as in previous censuses); number of years present marriage; mother of how many children; how many now living; nativity of person, father and mother; year of immigration; whether naturalized or alien; ability to speak English; if not, give language; trade or profession or particular kind of work; occupation, including nature of industry, business, or establishment; whether an employer, employee, or working on own account; if an employee, whether out of work and number of weeks out of work during year; ability to read and write; whether attended school during year; home owned or rented; if owned, free or mortgaged; whether a survivor of Union or Confederate Army or Navy; whether blind or deaf and dumb.

Census of 1920: President, Woodrow Wilson. Standard identification; location; relationship (as used in previous censuses); home owned or rented; if owned, free or mortgaged; sex; color; age; marital status; year of immigration; naturalized or alien; year of naturalization; attended school anytime during year; ability to read and write; nativity of person, father and mother; ability to speak English; trade, profession, or kind of work; industry, business, or establishment; employer, salary, or wage worker, or working on own account.

Census of 1930: President, Herbert C. Hoover. Standard identification; home owned or rented; value of home if owned, or monthly rental if rented; radio set; attended school during year; ability to read and write; nativity of person, father and mother; language spoken before coming to United States; year of immigration; naturalization; ability to speak English; occupation, industry, class of worker; whether actually at work previous day (or the last regular working day); whether a veteran of United States military or naval forces; which war. Special schedule used for further detail on unemployment.

Legal authority for the 1940 census: The 1940 census (except the housing census) is being taken under the authority of the act providing for the fifteenth and subsequent decennial censuses as passed by the House and Senate in June 1929 and approved by President Herbert Hoover June 18, 1929. The congressional act providing for the 1940 housing census was adopted by Congress August 4 and approved August 11, 1939.

Questions on income: Inquiries respecting income from sales and use of farm products have been a part of the census of agriculture for 20 years. The agriculture census for 1930, for instance, showed that out of a total of 6,288,648 farms, 3,216,117 had incomes from

sale and use of products of \$1,000 and less per year. The agriculture census of 1935 showed that 3,210,224 farms were operated by owners, 2,865,155 by tenants, 48,104 by managers, and 688,867 by part owners, and that the farms operated by owners had values of \$14,824,644,795 and the farms operated by tenants had values of \$10,952,747,497.

The Census Advisory Committee: Assisting the Bureau of the Census in the selection of questions to be included in the final census schedules is the Census Advisory Committee, a group of widely known experts from outside the Government, including Dr. Robert E. Chaddock, of Columbia University; Dr. J. Frederick Dewhurst, of the Twentieth Century Fund; Paul T. Cherington, market analyst; Dr. William F. Ogburn, of the University of Chicago; Dr. Willard L. Thorp, of Dun & Bradstreet, and economic adviser to the Secretary of Commerce; and Dr. Murray R. Benedict, of the University of California.

*Acts of Congress requiring answers to census inquiries and fixing penalties*

Census	Penalty

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

ADDRESS BY HON. JAMES M. SLATTERY, OF ILLINOIS

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague [Mr. SLATTERY] at the dedication of the post office at New Salem, Ill., on February 12, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is an occasion of great eloquence.

That statement, of course, does not refer to the simple words which I shall say here. The eloquence of which I speak transcends even the wisdom and oratory of the great leaders on this program today, the illustrious senior Senator from Illinois and the universally beloved Postmaster General of the United States.

It is the eloquence of Abraham Lincoln, which has been speaking to us all day from every log and stone in this splendid reincarnation of the town where the Great Emancipator grew to manhood. I think every man, woman, and child gathered here has heard over the tumult of our celebration, and particularly in its intervals of silence, the voice which now belongs to the ages.

And through our minds have run words which we learned in our school days:

"A house divided against itself cannot stand"; "with malice toward none, with charity for all"; and "Government of the people, by the people, and for the people."

In these surroundings those words take on renewed force and have a new significance, even in our modern American life.

It seems to me particularly fitting that my good friend Henry Horner, whose lifelong avocation has been the collecting of things that were Lincoln's, and whose lifetime record in public and private affairs has reflected the ideals that were Honest Abe's, should be the Governor of Illinois when the United States Post Office Department formally restores Lincoln's New Salem to the map of the United States.

We who live in Illinois have been fortunate in that we have been able to supplement the record of Abraham Lincoln with a wealth of story and legend about our State's most beloved hero. And all of these stories emphasize the two most endearing and enduring traits that marked his footsteps all along the path from log cabin to the White House.

One was the gentle and generous kindness of the man whose religion was to love his God with all his heart and with all his might, and to love his neighbor as himself. The other was his deep devotion to freedom and equality that would brook no compromise in its "firmness to do the right as God gives us to see the right."

In the present hour of national emergency we need both that kindness and that firmness. In a world torn by war and hate we must preserve that true neighborliness toward all peoples which was Lincoln's, but we must stand resolute to maintain our Union against perils from within and defiance from beyond our borders.

In our domestic life we have equally as great a need for the courage that was Lincoln's.

Eighty years ago this Nation rallied to the declaration of Abraham Lincoln that the fundamental American rights of life and liberty must apply to all the people of the United States. Today, under the leadership of another great President, whom I am proud to acclaim as worthy of the Lincoln tradition, we have stated the proposition that equally inclusive in its application to all the people is the third great right listed in our Declaration of Independence, the right to the pursuit of happiness.

In the last decade we have embarked on a great national program that has carried us far on the road to equality and opportunity and security for the common man, whom Lincoln loved so well. America today, as in Lincoln's time, has the choice of holding to that road or turning off on the easy bypaths of compromise.

Abraham Lincoln made his choice in 1858. He spurned the easy path of compromise and went on the hard way to his glorious destiny. Today we have the same choice—a choice which transcends all partisanship and which every American must make for himself. Now, as then, the forces of reaction in all parties are offering arguments of cost and political expediency to sidetrack a program dictated by American principles of justice for all the people.

Now, even as then, America needs the kindly wisdom and resolute courage of Abraham Lincoln. And I am sure that all of us who are here today have caught the eloquent message of New Salem and will return to our several tasks with a richer faith and a deeper devotion to the American people for whom Lincoln lived and died.

### Reciprocal-Trade Treaties

#### EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

RADIO ADDRESS BY HON. ARTHUR CAPPER, OF KANSAS

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address on reciprocal-trade agreements delivered by me over the University of Chicago Round Table on February 18, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am opposing extension of the Reciprocal Trade Agreements Act because I believe the reciprocal-trade agreement that have been made in the past 5 years have impaired the income and the purchasing power of the American farmer, and thereby impaired to a much greater extent the purchasing power of the American people.

I am in favor of increasing our foreign trade, but not at the expense of our domestic welfare.

Certainly the statistics of our foreign trade for the 5 years following adoption of the trade-agreements program, as compared to the preceding 5 years, do not indicate that agriculture has been helped.

In the 5 years immediately preceding 1934, the imports of competitive farm commodities—those commodities produced in marketable quantities in the United States—averaged \$495,395,000 annually.

In the first 5 years of the trade agreements, these imports of competitive agricultural commodities averaged \$616,149,000 annually; an increase of \$120,754,000, or almost 25 percent, and this in the face of a much diminished world trade.

On the other hand, imports of noncompetitive agricultural commodities—those we do not produce in this country in marketable quantities—decreased from \$574,143,000 annually to \$536,933,000.

This decrease amounted to \$37,210,000 average for the 5-year period, or about 7 percent. Also this decrease was in line with the general decrease in world trade.

Agricultural exports also showed a decrease for the 5 years—in the 5 years before trade agreements—the average was \$982,593,000; for the 5 years of trade agreements, \$748,244,000.

I might also call attention to the fact that since the trade-agreements program became effective, the percentage of our export trade in agricultural commodities has dropped from 39.4 percent in 1933 to 23.7 percent in 1938 (32.1 percent in 1934, 32.3 percent in 1935, 26.3 percent in 1936, 26.5 percent in 1937).

Now, that is the record for the 5 years of the trade agreements, so far as agriculture is concerned; imports of competitive farm products, 25 percent up; imports of noncompetitive farm products, 7 percent down; exports of farm commodities, 25 percent down; percentage that farm exports are of all exports, steadily down.

Now, our trade, foreign and domestic, depends more largely upon purchasing power than upon anything else. The sound way to build up our foreign trade, as well as domestic, is to increase domestic purchasing power.

The purchasing power of the American farmer is a major factor—personally, I believe the foundation—of the purchasing power of the entire American market.

I know that we cannot sell abroad without buying abroad. But I also know what some of the advocates of foreign trade at any price seem to have forgotten—that we cannot buy either at home or abroad without domestic purchasing power.

The record shows that the trade agreements have been accompanied by decreased exports of farm products, by slightly decreased imports of noncompetitive farm products, by greatly increased imports of competitive farm products.

Now, that combination is bound to drive farm prices downward. This in turn means impaired farm-purchasing power, which in turn spells greatly impaired purchasing power for the American people as a whole.

The underlying principle of the trade-agreements program is to encourage imports; we promise countries with whom we make them that they will sell more of their commodities in the United States. And I maintain that the brunt of these increased imports falls upon the American farmer.

Just another point in closing.

For the United States Government to subsidize through payments to our farmers to reduce production through the Department of Agriculture; for the United States Government in effect to subsidize farmers of other nations to produce more for the American market, through the Department of State—I say these two programs as I see it just do not make sense.

I have high regard for Secretary Hull and I give him full credit for his good-neighbor policy, but he is wrong on this reciprocal trade agreements program. I supported this legislation when it was first presented to the Senate because I thought there was a chance it would do something for the farmers who were struggling to get out from under the burden of a troublesome surplus. But the program has proven a great disappointment. It simply will not work. I am for a reciprocal-trade program, but I want one that will work, for the farmers as well as for the manufacturers. The strongest support at this time for the reciprocal-trade agreements comes from the eastern manufacturers. The program has undoubtedly helped some manufacturers, and that is all right, providing it is done on a basis that is fair to other industries. But the Reciprocal Trade Act as now administered trades off the farmer for the benefit of other business interests. I say that is not fair and it is not for the good of the country as a whole. Another reason why I oppose the Reciprocal Trade Agreements Act is that it gives autocratic power to one man. In that respect I think it is unconstitutional. I am for a reciprocal trade treaty program that will include ratification by the Senate, the same as all other treaties receive. The 21 treaties negotiated with other countries the past 5 years were all ratified by their parliament or congress. No other country gives such arbitrary power to its president or secretary of state.

I might add that I have received protests against the Reciprocal Trade Act as now in effect from 53 national, State, and local farm organizations. The farmers are overwhelmingly against it because it works against their industry. They are worse off today than they were when this legislation was enacted.

### Walter-Logan Bill

### EXTENSION OF REMARKS

OF

HON. FREDERICK VAN NUYS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

### REPORT OF INDIANA BAR ASSOCIATION

Mr. VAN NUYS. Mr. President, recently the Indiana State Bar Association took affirmative action on the so-called

Walter bill in the House and the Logan bill in the Senate. I ask that a summary of that report be printed in the Appendix.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

#### REPORT OF COMMITTEE ON ADMINISTRATIVE LAW

At the annual meeting of the Indiana Bar Association held in August 1939 the committee on administrative law presented its report which had been carefully considered and unanimously approved and upon submission thereof the same was unanimously approved and adopted by the association.

That report is published in the October 1939 issue of the Indiana Law Journal.

After briefly reviewing the growth and present necessity for administrative law, pointing out weaknesses in our system, citing abuses and outlining suggestions for the efficient functioning of administrative law within the framework of our Constitution that committee in its report submitted the four following recommendations, to wit:

"(1) While recognizing administrative agencies should be free to develop and formulate rules and regulations, it is our recommendation that no rule or regulation which shall have the force and effect of law, shall be made or prescribed by any administrative agency, unless and until it has given reasonably published notice of a hearing and unless it has afforded a reasonable opportunity for public hearing and until such rule or regulation has been published in some manner reasonably calculated to give notice thereof and filed or made of record so as to give access thereto, except in case of public emergency duly declared by the Chief Executive, in which event such rule or regulation shall be approved by such Executive.

"In this connection it is our further recommendation that upon petition filed in a court of competent jurisdiction within a reasonable time from the date any rule or regulation is published and filed or recorded such court may hear and determine whether such rule or regulation is in conflict with the Constitution, or statute under which it is promulgated, or is unreasonable or was capriciously or arbitrarily issued or was promulgated without reasonable notice or opportunity for hearing, in either of which events such rule or regulation shall be unlawful. Such court shall give preference to such petition and shall have no power in the proceeding except to render a declaratory judgment holding such rule or regulation valid or contrary to law and invalid.

"(2) While recognizing administrative agencies should have broad latitude when functioning in an adjudicative capacity in order to effect the purpose of the law which is being administered, it is our recommendation that we adhere to the principles that interested parties should be given reasonable notice of the hearing; that they should be given the right to their day, and a full day, of fair hearing; that the decision shall be based upon the law applied to the facts presented with the right to judicial review to determine whether the decision or order is based on findings and whether such findings are clearly erroneous or are supported by substantial evidence, to ascertain if it infringes the Constitution, statutes, or is otherwise contrary to law.

"(3) While it is recognized that uniformity of legislative practice in making provisions for judicial review may not be practicable, it is recommended that, to the extent reasonably practicable, legislative provisions therefor should be substantially uniform.

"(4) It is our recommendation that legislation appropriate to carry out the foregoing recommendations, with such other provisions as are adequate to permit a proper functioning of administrative law within the framework of our present system of government, be enacted by the General Assembly of the State of Indiana."

This association in unanimously approving that report went on record as being in accord with the spirit and purpose of the draft of Senate bill 915 introduced in the Senate by Senator LOGAN, entitled "A bill to provide for the more expeditious settlement of disputes with the United States and for other purposes."

This committee has reviewed and studied that report and is in accord with its observations and recommendations.

At about the time this association approved and adopted that report, Representative WALTER introduced in the House of Representatives a bill designated H. R. 6324 and entitled "A bill to provide for the more expeditious settlement of disputes with the United States and for other purposes." Although the Walter bill is not identical in wording with the Logan bill, they are in fact companion bills, their terms are substantially similar and the purpose of each bill is the same.

After extensive hearings by the subcommittee of the Committee on the Judiciary of the House of Representatives, the Walter bill was reported out with certain minor amendments with recommendation that it do pass.

Section 1 of the Walter bill is devoted to definitions.

Sections 2 and 3 thereof are devoted to the mandatory requirements of administrative implementation of statutes by means of rules and regulations and to provisions for judicial review thereof in the United States Court of Appeals for the District of Columbia. Section 2 provides that all rules and amendments or modifications or supplements of existing rules implementing statutes affecting rights of persons or property shall be issued only after publication of notice and public hearing and it requires that such rules be published before they become effective, except when the President declares a public emergency exists. It further provides that all rules shall be issued within 1 year after the enactment of the statute being implemented. Section 3 provides that upon petition filed within 30 days from the date any rule is published, the

court, upon proper petition, shall have the power to review the rule to determine whether it is in accordance with the Constitution and the statute under which it has been issued.

Section 4 is devoted to statutory approval and authority for administrative boards and prescribes their procedure. It provides for a uniform procedure for appeals within single-headed administrative agencies and for uniform procedure before multiple-headed agencies. It permits any person aggrieved by a decision of any officer or employee of a single-headed agency to object thereto and to request that it be referred to an intra-agency board composed of three employees of that agency, one of whom must be a lawyer. It requires that within 30 days after evidence is heard and arguments closed that the board shall make written findings of fact and separate decision thereon which shall be subject to the approval or disapproval of the head of the agency concerned.

This section, at paragraph (e), provides that where any matter arises out of the activities of a multiple-headed agency, such matter may be heard in the first instance by a trial examiner, who shall file a written record and his written findings of fact and separate decision, which shall be made in all instances, whether by the examiner or board or commission, after reasonable public notice and a full and fair hearing. This paragraph further provides that at the expiration of 30 days an appropriate decision shall be entered, unless the aggrieved party sooner consents or files objections, in which last event such agency shall not enter its decision without according a public hearing upon reasonable notice to such parties.

Section 5 pertains to judicial review of decisions and provides that a party aggrieved by the final decision or order of a single or multiple-headed agency may have it reviewed by filing a petition within 30 days with the clerk of the United States Court of Appeals for the District of Columbia or the clerk of the circuit court of appeals within whose jurisdiction such aggrieved party resides or maintains his principal place of business, or in which the controversy arose. It further provides that any decision may be set aside if it be made to appear to the satisfaction of the court (1) that the findings of fact are clearly erroneous; or (2) that the findings of fact are not supported by substantial evidence; or (3) that the decision is not supported by the findings of fact; or (4) that the decision was issued without due notice and a reasonable opportunity having been afforded the aggrieved party for a full and fair hearing; or (5) that the decision is beyond the jurisdiction of the agency or independent agency, as the case may be; or (6) that the decision infringes the Constitution or statutes of the United States; or (7) that the decision is otherwise contrary to law.

Section 6 provides that courts shall have jurisdiction and power to impose damages in any case where the decision of the agency is affirmed and the court finds that there was no substantial basis for the petition for review.

Section 7 provides for the continuance of existing judicial remedies, if any, and for the exemption of certain governmental agencies from the terms of the bill.

The principles of the foregoing bill have been approved by the American Bar Association and by the State Bar Associations of California, Colorado, Illinois, Nebraska, Ohio, Oregon, and Indiana, as well as by a number of city bar associations.

This committee believes that it is now proper for this association to take action with reference to the Walter bill (H. R. 6324); and we accordingly recommend:

1. That this association, by the adoption of this report, evidence its approval of the Walter bill as approved by the subcommittee of the Committee on the Judiciary of the House of Representatives.

2. That a copy of this report be transmitted to each of the United States Senators and Members of the House of Representatives from the State of Indiana by the secretary of this association.

3. That the Senators and the Members of the House of Representatives from the State of Indiana be requested vigorously to support and vote for the passage of the Walter bill, to the end that said bill may be duly passed by Congress and become law.

Respectfully submitted.

JOHN RABB EMISON.

## Reformation of Administrative Procedure

### EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

ARTICLE BY LUDWELL DENNY

Mr. MINTON. Mr. President, there is pending before the Senate a bill (S. 915) about which there has been a great deal of discussion, the bill to reform administrative procedure. I ask unanimous consent to have inserted in the Appendix of the Record an article by Ludwell Denny, which recently appeared in the Washington News, entitled "Sweeping Legislation."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

#### SWEEPING LEGISLATION

(By Ludwell Denny)

The most sweeping but least publicized legislation before Congress in many years will be aired next week if Senator KING succeeds in calling up again the Logan-Walter bill curbing Federal administrative agencies. It has a good chance of passing the House soon over New Deal opposition.

Widely advertised proposals for restricting the National Labor Relations Board, the Wage-Hour Division, and other individual agencies are but pinpricks compared with this plan to reverse the half-century-old development of administrative law and agencies.

Despite the "revolutionary" changes involved, the bill slipped through the Senate last summer by accident and without debate. Later the administration obtained reconsideration, which has been delayed partly because of Senator Logan's death.

The real author of the bill is the American Bar Association's committee on administrative law. The purpose is "to prevent administrative absolutism." It provides for:

Uniform procedure for establishing rules and regulations of administrative agencies, with prior notice and public hearings, and authority for the United States Circuit Court of Appeals here to pass on such regulations; intradepartmental appeal boards; wide expansion of judicial review.

Both House and Senate Judiciary Committees reported the bill favorably after 1 day of House hearings and none in the Senate.

Opposing the bill are most of the Government departments and agencies, the National Lawyers Guild, and various outside experts such as specialists of the Brookings Institution.

The Brookings study of legal and administrative aspects of Federal regulation of business, made by Dr. F. F. Blachly and Dr. M. E. Oatman, was published today. It opposes stricter judicial control of administrative agencies, as provided by the Logan-Walter bill, and also the opposite extreme of increasing Presidential control of such agencies. It approves reform through revision of existing procedures "rather than by radical alterations of the regulatory system."

These Brookings experts deny there is danger of administrative absolutism under the present system.

Senator MINTON (D., Indiana) and other New Deal leaders in the fight against the Logan bill will be able to cite not only this Brookings report but also recent Supreme Court decisions and the interim Acheson report of the Attorney General's committee on administrative procedure.

A unanimous Supreme Court decision in the Pottsville Broadcasting case, written by Justice Frankfurter, a recognized authority in this field, stated:

"To assimilate the relation of these administrative bodies and the courts to the relationship between lower and upper courts is to disregard the origin and purposes of the movement for administrative regulation. \* \* \* Unless these vital differentiations between the functions of judicial and administrative tribunals are observed, courts will stray outside their province and read the laws of Congress through the distorting lenses of inapplicable legal doctrine."

Although the recent interim Acheson report refrained from making recommendations pending public hearings on its investigators' studies and its final report next autumn, it warned against "premature and facile generalization."

Without naming the Logan bill, it expressed "skepticism that a single formula" can control the "various and changing situations." "A too rigid prescription of administrative procedures" often would defeat the purposes of the laws.

This committee was named at the President's suggestion a year ago under the chairmanship of Dean Acheson, former Under Secretary of the Treasury. It has completed preliminary studies of only 15 agencies.

If the New Deal finally is forced to submit to review of administrative rules, it probably will choose partial review by congressional committees rather than by courts. This would be a much modified form of the British system, as suggested by Dean James M. Landis, of Harvard Law School, in his authoritative book *The Administrative Process*.

## Citizens of Tomorrow

### EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

ADDRESS BY HON. PATRICK J. HURLEY TO BOYS' CLUBS OF WASHINGTON, D. C.

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address by a

former Secretary of War, Hon. Patrick J. Hurley, at a meeting of the boys' clubs of the Washington area, at Washington, D. C., February 23, 1940, on the subject Citizens of Tomorrow, which affects the interests of the youth of America.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure to be permitted to address the boys of Washington tonight.

Your leaders invited me to give you a lot of good advice. I am reminded of the story of the Choctaw girl who had reached that place in school where she was studying Greek history. As a test she was required to write the story of Socrates. When she turned in her work it read like this: "Socrates was a Greek philosopher. He went around giving the people 'a lot of good advice.' They poisoned him." I must escape the fate of Socrates.

You are the citizens of tomorrow. Your thoughts of today will be reflected in your conduct of tomorrow. Your government of tomorrow will be remarkably similar to what you are being taught that it is today.

If you work hard and intelligently today you are laying the foundation for your success tomorrow. Intelligent action, work, is your passport to success. Do not be misled. No one can make you successful. Success will come to you, if it comes at all, because of your own efforts. If you idle away your time today the chances are that you will be an idler tomorrow. If you will work you are almost certain to succeed.

You are to be citizens of that mighty Republic that is known throughout the world as the land of liberty. On a former occasion your speaker of tonight said:

"The Government of the United States has given more happiness to more human beings for a greater period of time than has any other government at any time."

That statement was made at the beginning of the first depression. The correctness of the statement was immediately challenged. Many people at that time denied categorically that the American system assured justice, or liberty, or equality of opportunity to its citizens. There were many who maintained that democracy had failed. Then came a great push to set up some strong central government, collectivism, dictatorship, or plain bureaucracy, all of them being suggested for the purpose of promoting the welfare of the people. The Constitution under which our Republic has been built was then in the dog house. It was said to be a horse-and-buggy contraption, to be disdained by intelligent people. In disparagement of our system of liberty the mayor of a great municipality was quoted as having said "You can't eat the Constitution." That statement was repeated with approval by millions. Of course, anyone capable of understanding Americanism should know that the Constitution was never intended to be eaten. Liberty, justice, and equality of opportunity which the Constitution guarantees to everyone are very desirable, and we believe essential to the general welfare, but we readily admit that they cannot be eaten. We have had a definite swing back toward the spiritual, cultural, and material aspirations of Americanism.

Communists, whose avowed purpose was the destruction of our Government by violence, were very popular in the beginning of the depression. It was smart to be communistic and anti-American. It was considered the height of intelligence to poke fun at our institutions. Now the defamers of Americanism are not so popular. They are being investigated almost but not quite as ruthlessly as if they were American taxpayers. This great change in attitude toward our institutions did not take place because of events within our own borders. The defamers of Americanism continued in their stride until events in Europe and China led a majority of our citizens to renew their faith in the American way and to a realization of the fact that our institutions were in danger. The great majority of the American people are enlisted again under the banner of liberty, justice, and equality of opportunity.

We predict, therefore, that the American system, the rights and privileges guaranteed in the Constitution, will unquestionably descend to you. But the American system that you will inherit has a mortgage against it of \$45,000,000,000. These generous men who have been preaching to you that you are underprivileged have been paying their own salaries and emoluments and supporting their big automobiles out of funds that they have obtained from a mortgage on your future. Do not let anyone tell you that the money that these gentlemen have obtained from the mortgage on your future has been used for your benefit. It has not been used that way. Some of the money, of course, has been used for laudable purposes. Your future has been mortgaged to procure funds to make suitable appropriations to keep well-organized minorities and pressure groups on the right side of the political line-up. Recently your pretended friends who have been saying that you are underprivileged have asked Congress to allow them to increase the mortgage against your future to \$50,000,000,000 so that they will have sufficient funds for "welfare purposes" during the impending campaign.

These gentlemen who are constantly increasing the mortgage on your future also try to dampen your ardor for success by constantly telling you that you are underprivileged. Let us look at this underprivileged idea for a moment. With the exception of insane persons and those convicted of a felony, there is no individual or class of individuals in the United States who under our laws are underprivileged. No one individual has less privilege or more privilege than any other individual under the law. You are not underprivileged, but as citizens of tomorrow you are handicapped by a

\$45,000,000,000 mortgage on your future. That is the most severe handicap that ever confronted a generation of Americans.

LINCOLN

Our tax-supported "welfare leaders" continuously hold Lincoln up to the youth of the Nation as a man who was underprivileged. Lincoln was handicapped, terribly handicapped, but as a free white man he had all the privileges and immunities guaranteed by the Constitution of the United States. Recently I ran across a little poem by Rosemary and Stephen Benet, which illustrates the point I am making, that Lincoln was handicapped but not underprivileged.

NANCY HANKS: 1784-1818

If Nancy Hanks  
Came back as a ghost,  
Seeking news  
Of what she loved most,  
She'd ask first:  
"Where's my son?  
What's happened to Abe?  
What's he done?"  
"Poor little Abe,  
Left all alone  
Except for Tom  
Who's a rolling stone.  
He was only nine  
The year I died:  
I remember still  
How hard he cried.  
"Scraping along  
In a little shack  
With hardly a shirt  
To cover his back,  
And a prairie wind  
To blow him down,  
Or pinching times  
If he went to town.  
"You wouldn't know  
About my son?  
Did he grow tall?  
Did he have fun?  
Did he learn to read?  
Did he get to town?  
Do you know his name?  
Did he get on?"

To indicate that he was not underprivileged, Lincoln aspired to and attained the highest office in the gift of the people. He had a definite purpose in view and that purpose was to procure for the slaves the same privileges and immunities that he enjoyed. Lincoln succeeded in emancipating and enfranchising the slaves. Among every people of the world who have a written language the story of Lincoln's life and Lincoln's achievements is read. There is not within the sound of my voice tonight a healthy boy who is faced with as many handicaps and disadvantages as Lincoln experienced. But the rights and privileges that were the birthright of Lincoln are your birthright. You were born to liberty, to the right to justice and to the privilege of equality of opportunity. You inherited the greatest school system on earth. You inherited the privilege of being the captain of your fate; you inherited the privilege of being a captain of industry or a king of commerce; you inherited the privilege of creating wealth for yourself and for your fellow men; you inherited the privilege of making work for yourself and giving employment to your fellow men. You inherited the privilege of being a leader. You inherited the privilege of contributing to the spiritual, cultural, and material welfare of your fellow human beings. Don't ask your fellow men for help. You should help your fellow men.

LINCOLN'S FOSTER BROTHER, JOHN JOHNSTON

Abraham Lincoln's stepmother had a son whose name was John Johnston. By reason of his mother's marriage to Lincoln's father John Johnston became the foster brother of Abraham Lincoln. They loved each other sincerely and were brothers in every relation, except by blood. John Johnston had better lineage, more successful ancestors than Lincoln. He had a sound body and mind. His chances for success seemed greater than those of Lincoln. Johnston was a failure. He surrendered to his handicaps. The people who do not understand Americanism would call John Johnston underprivileged. During 1851 Lincoln wrote certain letters to his foster brother, John Johnston, which show that Lincoln thought that failure is due to a defect in the person who fails rather than to a lack of privilege. Lincoln realized that the privileges of our institutions were open to both himself and his foster brother, that to avail themselves of the privileges they must work, they must develop their minds. Lincoln did this. His foster brother did not. Let those who call Lincoln underprivileged read these letters and find how completely Lincoln disagreed with them. The first one of the letters from Lincoln to his foster brother is in part as follows:

"At the various times when I have helped you a little, you have said to me, 'We can get along very well now'; but in a very short time I find you in the same difficulty again. Now, this can only happen by some defect in your conduct. What that defect is, I think I know. You are not lazy, and still you are an idler."

In this same letter Lincoln said to his brother:

"You say you would almost give your place in heaven for \$70 or \$80. Then you value your place in heaven very cheap; for I am

sure you can, with the offer I make, get the \$70 or \$80 for 4 or 5 months' work."

In a letter to Johnston dated November 4, 1851, Lincoln said: "Now, do not misunderstand this letter: I do not write it in any unkindness. I write it in order, if possible, to get you to face the truth, which truth is, you are destitute because you have idled away all your time. Your thousand pretenses for not getting along better are all nonsense; they deceive nobody but yourself. Go to work is the only cure for your case."

Lincoln did go to work. His foster brother, John Johnston, did not go to work. Lincoln educated himself. His foster brother remained illiterate. Lincoln developed the splendid mind that God had given him. His foster brother, Johnston, remained ignorant and an idler to the end of his days. Lincoln wanted to work for others as well as for himself. Johnston wanted others to work for him. Johnston wanted a "brain trust" to do his thinking for him and a bunch of bureaucrats to plan his future and taxpayers to work for him so that he could enjoy being a pauper.

When Lincoln fell a victim of an assassin's bullet he was the greatest American and probably the greatest man in the world of his period. Lincoln's foster brother died in poverty, a complainer, who thought he was underprivileged. In light of these facts one fails to understand why those of today who call themselves underprivileged use Lincoln as an example. The privileges of justice, liberty, and equality of opportunity were his heritage as they are the heritage of every citizen of the United States.

Instead of telling you to take up the fight and dare and do, you are being told that it is the duty of someone else to think for you, to provide jobs for you, to work out your future for you, to give you economic security. If all this is given to youth, what is youth going to do?

#### SOCIAL SECURITY

Do not misunderstand me. We have fellow citizens who are handicapped, persons who, by reason of their own defects, by reason of environment, or by reason of unmerciful economic conditions, have been unable to take advantage of the privileges that are guaranteed to all American citizens. These handicapped fellow citizens command our attention. They are entitled to our constructive help. Our Government has inaugurated an extensive social-service system which to the minds of many was long overdue. The elements of that system are in keeping with our free institutions. The fundamental principles involved are approved by all forward-looking Americans. Social security provides principally for old-age pensions for those who have been unable to provide a competence for their own declining years, for unemployment insurance, which provides for those who are unable to keep themselves employed. Also we have labor laws which materially enhance the rights of the worker for sanitary working conditions, reasonable hours, and reasonable pay. The social-security program has not been perfected. It will be perfected and the beneficiaries themselves will be the largest contributors to its success. As citizens of tomorrow, you will approve social security.

#### SELF-RELIANCE

Be warned, citizens of tomorrow. These false prophets of today can never donate to you economic security. Economic security must be wrought in the sweat of those who work. You should doubt all those who preach to you that means can be devised whereby you will be permitted to live by the sweat of someone else's brow. That cannot happen permanently. You should make up your minds that you will live by the sweat of your own brow and that you will create jobs and wealth for your handicapped fellow citizens. Wealth must be produced before it can be distributed. The people themselves must pay for security. The idlers claim everything, but contribute nothing. These people who promise that they will give you economic security and save you from work cannot do it, but they can deprive you of your liberty. We are convinced that these preachers of despair who tell you that you are "underprivileged" and that you should rely on others to create jobs and opportunity for you are closing from your vision the broad and beautiful view of the countless opportunities in every field that American liberty, American equality of opportunity, American justice, American kindness, American courage, and unrivaled American resources hold out to everyone who says "I will." Citizens of tomorrow, do not permit any false prophet to deprive you of your American heritage or your spirit of self-reliance.

### Case of the "Altmark"

#### EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

LETTER FROM JAMES W. RYAN

Mr. MINTON. Mr. President, recently there has been much comment in the newspapers and over the radio about the case

of the *Altmark*. The legal aspects of this case are very brilliantly discussed by James W. Ryan, a distinguished maritime and international lawyer of New York. I ask unanimous consent that his letter to the New York Times of February 25, 1940, discussing the case of the *Altmark*, may be inserted in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of February 25, 1940]

#### CASE OF THE "ALTMARK"—ACTION OF NORWEGIAN AUTHORITIES HELD AGAINST LAW

TO THE EDITOR OF THE NEW YORK TIMES:

It has been international law since time immemorial that public vessels of one country may not, in peace or war, enter the territory of another without the latter's permission. In the case of the *Exchange* (7 Cr. 116) our Supreme Court recognized this rule.

The only exception to it is the special case in which such entry into another country's territory is urgently necessary to protect the former's citizens or property lawfully within the latter's country from an obvious danger menacing them. The danger must be one which the local government is not controlling and which is not the result of any illegal act of the persons endangered.

Our own Navy through Admiral Yarnell recently claimed to be acting within that long-recognized exception when our naval vessels entered ports in China under Japanese domination without permission of the Japanese authorities for the purpose of using any force necessary to protect American citizens and their property endangered by the various military and naval operations in that area.

#### BRITISH CASE UPHELD

The fundamental question in the *Altmark* case, therefore, is whether the British have brought themselves within that exception. After careful consideration of the facts as publicly stated by both sides it seems to me clear that they have.

The captain of the *Altmark* in applying for entry to Norwegian waters concealed the material fact that his vessel was not merely a public vessel as described in her ship's papers—namely, an armed tanker supplying oil to German battleships—but was also temporarily engaged in acting as a prison ship in holding by force a large number of British civilians or sailors from numerous merchant vessels who had been seized on the high seas and had committed no offense or forceful aggression of any kind.

The *Altmark* was functioning otherwise than as authorized by her ship's papers or government commission, and was menacing the safety and freedom of innocent British sailors who were within Norwegian territory. The Norwegian Government was not only doing nothing to remove this danger, but was actually affording the vessel an escort of two Norwegian gunboats.

The case is different from that of the *Sitka*, in which the neutral government, with full knowledge of the facts, granted permission to enter and was therefore bound in fairness to permit her to leave. It is also, of course, different from the *Appam* case, in which the intention was to stay indefinitely in the neutral port.

#### BREACH OF NEUTRALITY

If the Norwegian authorities did not know that the prisoners were on board, the proper Norwegian attitude under international law would be to claim lack of fault because of permission granted in good faith on an application which was fraudulent or concealed material facts. If the Norwegian authorities did know that the prisoners were on board, then, having granted permission to enter with full knowledge of all the facts, it was bound in fairness to Germany, as the local sovereign was in the *Sitka* case, to permit the vessel to leave, but was guilty of a breach of neutrality toward Great Britain by voluntarily permitting innocent British civilians to be incarcerated by force within its territory by a foreign nation at war with Great Britain.

Only merchant vessels have the right under international law of innocent passage in the territorial waters of other countries, and even that right in nearly all cases is incorporated in the commercial treaties between the nations of the world. This right is fully discussed in the case of *Queen v. Keyn* (L. R. 2 Exch. Div. 63—1876).

But no vessel, public or merchant, is exempt from reasonable inspection at the time of entering another country's territorial waters for the purpose of ascertaining whether its passage should be permitted or is innocent.

In the case of the *Altmark* the captain submitted without question to a visit or examination by a boarding party from a Norwegian gunboat. That examination, if conducted with reasonable diligence, should have disclosed to the Norwegian authorities the presence of the British prisoners and the variance between the ship's papers and the service the vessel was actually performing.

#### IN NORWEGIAN WATERS

The *Altmark* case is not one in which international waters are involved, such as the Suez Canal or the Panama Canal, through which the merchant vessel *Duesseldorff* passed last Christmas while in charge of a British prize crew, giving a right of unrestricted passage secured by international treaties. The waters in which the *Altmark* was sailing were within the 3-mile limit claimed by Norway as her territory. It is immaterial, therefore, whether or not the *Altmark* entered the Norwegian port of Bergen or merely stopped or anchored near it.

The admitted use by the *Altmark* of her radio-transmitting equipment within Norwegian territory was a violation of neutrality

and of Norwegian municipal law, and was of itself a circumstance requiring investigation. As the *Altmark* was in naval service, it must have been an important message in code to the German Government giving information regarding the immediately observable military situation or presence in the area of British naval vessels, or regarding the *Altmark's* activities or intentions within the next few days in Norwegian waters, because otherwise the captain would not have risked the known and inevitable penalties from sending it. If it were not for that rule, belligerent naval vessels could in effect use neutral territory as a base of naval information or operations while being protected by the neutral navy against attack by the other belligerent.

It is incorrect to say that the British civilians on the *Altmark* were prize. At the time they were seized by a vessel other than the *Altmark* they were unarmed civilian sailors on several British merchant vessels. Being unarmed, they were not prisoners of war. Nor had they committed any offense or act of aggression, military or otherwise. The captured merchant vessels and their cargoes were prize, but the capturing vessel sank them and did not assert any right to have the crews assist prize crews in navigating the vessels to Germany for condemnation as prize.

The duty of the capturing vessel was therefore to save the lives of the seized British seamen and give them a reasonable opportunity to reach freely a British or neutral port.

The truth appears to be that the *Graf Spee*, the capturing vessel, was holding the British sailors for so many months in order to keep its own location and armed raiding activities secret, and that when the *Graf Spee* was unexpectedly scuttled the captain of the *Altmark* mistakenly concluded that the captured men were prisoners of war who ought to be taken to Germany rather than freed, although there no longer existed the reason the captain of the *Graf Spee* had for keeping their seizure secret.

From any point of view the holding of innocent civilians as alleged prisoners of war for several months on the high seas under miserable conditions on a tank steamship in the vicinity of neutral ports, where the men could have been delivered and freed safely, was a clear violation of international law. That violation continued after the *Altmark* entered Norwegian territorial waters, and its further continuance should have been prevented by the Norwegian Government.

#### NO NECESSITY SEEN

Assuming that the *Altmark* did not enter a port of Norway and was therefore not, strictly speaking, within the 24-hour rule as expressed in the Hague Convention, nevertheless the fact is, according to the official statement of the Norwegian Prime Minister, that the *Altmark*, to the knowledge of the Norwegian authorities, was a belligerent public vessel which had been within Norwegian territorial waters from February 14 to February 16 before the Norwegian naval authorities made the demand, when the *Altmark* arrived at or off Bergen, for leave to revisit her, which was refused by the captain of the *Altmark*.

The *Altmark* could have proceeded on the high seas outside the 3-mile limit during those 2 days, and indeed during all the time until her subsequent stranding at Jossing Fjord. It is quite obvious, therefore, that the *Altmark* was not in Norwegian territorial waters from necessity but because she desired protection from attack by British vessels while proceeding to Germany. A neutral country is under no duty to permit belligerent public vessels to use its territorial waters for such a purpose.

JAMES W. RYAN,

Chairman, American Bar Association Committee on Law  
Protecting Americans and Their Property in Foreign  
Countries and on the High Seas.

NEW YORK, February 23, 1940.

### Mexico and Silver Legislation

#### EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

STATEMENT BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE,  
AND ARTICLES FROM THE NEW YORK TIMES AND THE  
WASHINGTON TIMES-HERALD

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by the Senator from Delaware [Mr. TOWNSEND] on the subject Mexico and Our Silver Legislation; also an article from the New York Times of February 21, 1940, under the heading Soviet Ship Loading Metals in Mexico; and an article from the Washington Times-Herald of February 21, 1940, entitled "United States Is No. 1 Source of Red War Supplies."

There being no objection, the statement and articles were ordered to be printed in the RECORD, as follows:

#### STATEMENT BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE

The buying of foreign silver under the Silver Purchase Act of 1934 is a matter subject solely to the discretion of the American people. Although the process involves the bestowal of large benefits on foreigners who sell silver to us, those foreigners are not asked to make any reciprocal contribution to us. It would seem crystal clear, therefore, that the foreign-silver-buying program was something for this country to initiate or not as it chose, and that its continuance or discontinuance now is something for the Congress of the United States alone to decide. It seems to me highly improper and an impertinence for any foreign country which benefits from our silver buying but which does not reciprocate or compensate such action on our part to interfere with any action Congress chooses to take in the matter. Yet that is exactly what Mexico has been doing and is now doing.

Thus, the Associated Press, according to the Evening Star of Washington, on February 13, 1940, reported from Mexico City that some Mexican Government officials "have said that Mexico was using all her influence in Washington to sidetrack legislation intended to end the American Government's present silver policies."

Mexico's attitude is not that of a country which has been seizing American properties without prompt or adequate compensation. Its attitude is not that of a country which has been receiving from us all sorts of favors on the theory that it is "a good neighbor" of ours. Rather, Mexico's attitude is that of an urchin who kicks his neighbors' shins in the knowledge that said neighbor is too big and too polite to express displeasure or to withdraw favors currently being granted.

From 1934 through 1939, while the Treasury was buying silver hand over fist, Mexico produced silver for which it received approximately \$220,000,000, an average of \$36,666,000 a year. Had there been no American silver program, that silver would have brought Mexico between \$80,000,000 and \$100,000,000 less money than Mexico actually received. The \$80,000,000 to \$100,000,000 has been an unadulterated gift handed over by this country to Mexico. And have we had so much as a "thank you" for it? Quite the contrary. All through these years Mexico's attitude has been one of ingratitude and impertinence, and indeed defiance of international law.

Here is what Mr. Duncan Aikman, veteran newspaperman and author of a recent book, *The All American Front*, states about Mexico's attitude on such matters:

"Mexico, not impossibly, is developing a technique for getting what she wants under the good-neighbor policy \* \* \* the technique of standing on the borders and shouting, 'We dare you to go back on it.'" (As quoted by Leon Pearson in the Washington Times-Herald of February 13, 1940.)

It is no secret that Mexico participated in the agitation for American purchases of foreign silver prior to the passage of the Silver Purchase Act of 1934. Also, last June, Mexico successfully objected to the Senate's vote in favor of my amendment to the monetary bill, a vote designed to end our buying of foreign silver. It will be recalled that last year, when the Banking and Currency Committee was preparing to vote on my bill, S. 785, following public hearings, the Evening Star, Washington, of June 28, 1939, reported that the Mexican Government was "making anxious inquiries" in Washington regarding this country's silver policy.

The statements made on the floor of the Senate by the majority floor leader during the debate over the Townsend silver amendment on June 26 and again on July 28, 1939, clearly reveal the successful results of Mexico's propaganda here to prevent repeal of the law calling for the purchase of foreign silver.

Finally, this year, the committee which held hearings on my bill reported favorably on my proposal to end the buying of foreign silver. The Associated Press on February 13, 1940, gave details of the action of the subcommittee. At the same time it reported the failure of the full committee to endorse immediately the subcommittee's action, because, in the quoted words of Senator BARKLEY, "this matter involves our foreign policy, as well as purchases here by nations who have been sending us silver." After almost a year of congressional delays at the administration's instance, the Associated Press quoted the Senator from Kentucky as again urging consultation of the State and Treasury Departments before acting.

I trust that those Departments will find no further reason for postponing repeal.

Presumably opponents of repeal are only echoing Mexico's sentiments when they force us to buy Mexican silver, "so that Mexico may make purchases of our goods." According to the Associated Press in a dispatch of January 11, 1940, Mexico has asked this Government to "adopt a definitive attitude" toward silver and "maintain a reasonable price" for that metal, so that Mexicans may in turn buy therewith "relatively luxury items, which we can import from the United States, with the advantage for that country that they are precisely those articles which furnish the best results for their producers," whatever that may mean.

The defense of foreign silver buying given by the Senator from Kentucky is reported in the press, as follows:

"We have been increasing our trade with Mexico and South and Central America as a result of wars elsewhere. These nations are buying things from us they formerly purchased from Europe. There is a question of keeping that trade permanently. If we cease buying their silver, the results might be serious.

"It would be perfectly ridiculous to say we will loan you money but won't take your silver in repayment."

If it is ridiculous to refuse to take silver from a country to which we are lending money, is it not equally ridiculous to be lending money to a country which we are already helping by silver purchases? Why not take sea shells? Mr. Eccles thinks they would be just as useful to us, and far less harmful.

Is it not ridiculous to help in any way a country like Mexico, that has long been seizing American property and flouting our interests?

Is it not ridiculous to say that our purchases of foreign silver enable the foreigners concerned to buy our goods, without at the same time admitting that by this process we are simply buying worthless foreign silver with our valuable goods and services?

If buying Mexican and other foreign silver is so helpful in making jobs in our factories here at home, why is it not ridiculous that we pay Mexico only 35 cents an ounce for its silver, when by paying \$1.05 an ounce, Mexico could buy three times as much American goods with the proceeds? Why not be even more ridiculous and pay Mexico 10 times 35 cents an ounce for silver, and so get 10 times as much export business with Mexico?

Or why not simply put Mexico on our pension list, and make it an annual gift of so many millions of dollars, so that Mexico can buy goods from our exporters? I wonder whether the administration would not be frank enough to introduce such a bill on good neighbor Mexico's behalf? It would have a great advantage over the present Mexican silver subsidy; namely, there would be no creation of silver certificates to complicate and endanger our monetary and financial structure at home. Concerning the dangers to the value of our money as a result of the foreign silver-buying program, Chairman Marriner S. Eccles, of the Federal Reserve System, last year warned the Banking and Currency Committee. In his testimony in favor of my silver-repeal proposal, Mr. Eccles stated:

"Well, of course, what we could do is this: We could take anything that a foreigner might give us that we did not need, for instance, and give him our goods. Now, whether it is silver or some other metal or some other product, we could take it as well as we could take silver and, as a result, we would find a foreign market for our goods. Then we could issue money against what we took, whether it happened to be copper or seashells or what not. We could issue money to pay for what we took, or we could give a foreign loan; and the foreigners could spend the money. We would get the export trade that way. The point I am trying to make is that there is no particular argument from a monetary or a credit standpoint to justify our continued purchase of foreign silver \* \* \*

"Silver is almost useless as an international reserve. \* \* \*  
"I did not know of anything that tended to destroy ultimately the domestic silver industry as thoroughly as the present silver program. \* \* \*

"During the period from 1935 to 1937 the annual average of the United States Government purchases was 400,000,000 ounces, whereas, in the previous period, the Government had purchased only an average of 5,000,000 ounces, possibly for subsidiary coinage. \* \* \*

"Now, that, it seems to me, creates a rather serious situation—I mean a continuation of that sort of program—because it tends to make the United States Government the only market for silver. And looking at it from the standpoint of the domestic industry, a program of that sort, of course, could only protect it under the assumption that the United States Government forever would continue such a program. The unfortunate thing, as it seems to me, is that whereas this country was a rather important exporter of silver to other countries, the Silver Purchase Act had the effect of making it almost the sole user and importer of silver."

On the matter of Latin-American countries other than Mexico, few of them produce any silver. Last July I stated:

"Barely one-fifth of the silver bought by this country since the end of 1933 has come from Latin-American countries. Most of the rest has come from the Far East, either directly or by way of Europe.

"Mexico has been the chief, and indeed the outstanding, beneficiary of our silver policy in Latin America. Of the \$237,000,000 we have paid for Latin-American silver since 1933, \$217,000,000 has been paid to Mexico. Only 2 percent of this country's expenditures for foreign silver have gone where they could in some roundabout way promote Pan Americanism outside of Mexico since the Treasury's purchase of foreign silver began. How well the past 6 years' buying of Mexican silver has worked out there, the public may judge for itself."

As an economic measure the Silver Purchase Act has certainly failed miserably. This has been attested by scores of economists and disinterested observers, who are on public record on the matter.

That the law is retained is due solely to the argument we have heard in the Senate that silver buying gives us a convenient instrument of foreign policy. Silver purchases, we are led to believe, are to be regarded as a means of buying good will abroad; as if lasting good will could be purchased.

In reality, what it amounts to is that, in effect, we spend millions of dollars a month—month after month, year in and year out, endlessly—to attempt to buy good will abroad.

From 1934 to date this country has paid foreigners close to \$1,000,000,000 for unneeded silver. Imagine what Congress would do if, instead of resorting to silver buying through inflation of our currency the Treasury had frankly put that \$1,000,000,000 on the Budget, as, for example, \$36,666,000 a year (on the average) to buy good will from President Cardenas. It is an insult to the intelligence of Latin Americans to think that the silver policy will work, and I am not so gullible as to believe it can work.

In addition to protecting Mexico's interests, the defenders of the foreign silver buying probably are also concerned in the program from the standpoint of the inflation-spending nest egg which it thereby is acquiring.

The limit on the public debt has been fixed by Congress at \$45,000,000,000. The actual public debt is very close to that limit. If Congress does not extend the limit, the silver program enables the Government to spend additional money anyway because of the so-called profit or seigniorage which the Treasury puts aside for itself when it pays out silver certificates to foreigners.

The Daily Statement of the United States Treasury for February 9, 1940, shows this unutilized nest egg on hand now amounts to 1,230,000,000 ounces of silver, against which, at the monetary value of \$1.29-plus per ounce, the Treasury may issue nearly \$1,600,000,000 of American currency overnight. The Treasury has now the necessary power and authority to do that.

Every ounce of foreign silver now being bought under the 1934 Silver Purchase Act simply increases that nest egg.

The foreign silver program should be stopped at once. It is wasteful, futile, and dangerous.

[From the New York Times of February 21, 1940]

SOVIET SHIP LOADING METALS IN MEXICO—COPPER FROM UNITED STATES IS BELIEVED DESTINED FOR GERMANY

MEXICO CITY, February 20.—The Russian freighter *Kim* is at present in Manzanillo, in the State of Colima, loading 12,000 tons of copper and lead for Vladivostok, Siberia.

Eight thousand tons of copper were unloaded by the American freighter *Harpoon*, which arrived at that port February 6. The lead has arrived by rail since then. The presumption is that these metals will eventually find their way into Germany by railroad.

Two of the four German ships now at Tampico show signs of activity, indicating attempts to run the Allies' sea blockade. The freighter *Idarwald* is loading coal. The freighter *Phrygia* is bunkering oil at Elagulla terminal, formerly the property of the Royal Dutch Shell Oil Co.

Naval experts concede these ships small chance to get across the Atlantic. Therefore they surmise the vessels may try to cause international complications by tempting British or French warships to attack them within the American safety zone.

[From the Washington Times-Herald of February 21, 1940]

UNITED STATES IS NO. 1 SOURCE OF RED WAR SUPPLIES—MATERIAL BOUGHT HERE FOR FINNISH INVASION

(By John M. Fisher)

Communist Russia is leaning heavily upon American supplies in prosecuting its war with Finland, a survey showed yesterday.

Despite President Roosevelt's recent denunciation of the Soviet as an "absolute dictatorship" and expression of sympathy for Finland, the fact remains the administration has made the United States the No. 1 source of vital materials now used in its invasion of Finland.

#### SOVIET RECOGNITION FACTOR

This situation has been brought about by the following factors: (1) Recognition of the Soviet Government; (2) a commercial treaty according the Soviet Union unconditional most-favored-nation treatment, which means tariff concessions; (3) licensing of armaments for sale to Russia; (4) purchase of Russian gold, which establishes credits in this country; and (5) valuable technical assistance obtained from the United States.

In 1939 Russia imported \$56,638,000 worth of American goods, and, significantly enough, approximately 50 percent of these imports into Russia were made in the last 4 months of the year, which covered preparations for the assault on Finland.

Last year's exports to Russia compared with \$69,691,000 in 1938, when the United States was also the leading exporter to the Soviet Union. The decline is chiefly accounted for by smaller shipments of metal-working machinery.

#### PRINCIPAL ITEM

But such machinery—necessary for armaments—remained the principal item on the Soviet's shopping list in the United States, amounting to about \$29,000,000 in 1939. Soviet purchases also included increased amounts of other war commodities, particularly of copper, molybdenum ore, wheat, and aluminum.

Since Europe's conflagration began last September 1 nearly 90 percent of Russia's purchases in the United States consisted of materials and machinery useful in war industries or of vital need under wartime conditions. A special analysis available at the Commerce Department shows that approximately \$33,000,000 out of more than \$36,000,000 in exports to Russia in the 5 months ended January 31, 1940, consisted of items needed for warfare.

Exports in January amounted to \$11,313,000, compared with \$10,528,000 in December and only \$2,816,000 in January 1939. Nearly all of the shipments to Russia this January consisted of copper and metal-working machinery. A complete break-down for that month is not available, but in the preceding 4 months of the European wars leading exports to Russia were as follows (in thousands of dollars):

	Sep-tember	Octo-ber	No-vember	De-cember
Wheat.....		215	436	172
Gasoline.....	481	686	782	
Molybdenum.....	192	1,945	732	1,906
Aluminum ingots.....	535	283	2	
Refined copper and scrap.....		21	1,544	4,519
Brass and bronze.....		35	564	365
Metal-working machines.....	377	1,096	1,836	1,811
Electrical apparatus.....	22	311	437	758
Total selected items.....	1,608	4,592	6,333	9,531
Total all exports.....	1,785	5,455	7,027	10,528

According to commerce officials, all of Russia's 1939 purchases of gasoline were made in the 3 months ended with November. The Soviet invasion of Finland began on November 30. They said, however, that none of the fuel was aviation gasoline. All of it was shipped from the Pacific coast to Vladivostok in Siberia.

#### PURCHASING AIRCRAFT

The list of arms exports licensed by the Secretary of State shows that Russia has confined its armaments imports from the United States to aircraft and their accessories, indicating that machinery and materials imported sufficed for their own production of munitions and armaments.

Russia led in the amount of exports under license during 1939. Its total armament purchases of \$1,097,015 consisted of \$845,966 in assembled or unassembled aircraft, \$74,514 in parts, and \$176,536 in airplane engines. In January of this year engine shipments to Russia amounted to another \$45,192, comprising all of the arms imports for that month.

The War Department says it does not have any figures on how much other equipment is American made. But it is known that Russia has bought considerable amounts of tractors, trucks, and other motor equipment which could be easily transformed from civilian to military use.

#### EMPLOYED BY RUSSIA

Similarly, the State Department claims no count on the number of American technicians, engineers, and other experts borrowed by Russia from the United States for consultation on industrial and mining developments. But their employment by Russia is a matter of public knowledge. The State Department now thinks that most of these American technicians have left or are leaving Russia. The Army has a military attaché located at Moscow, but there are no officers loaned to Russia, according to the War Department.

How does Russia pay for its huge purchases in this country?

The answer is principally through goods sold to this country, which amount to something less than half of exports to Russia, and through sale of the gold mined by Russia, which is one of the world's leading producers. The United States Treasury has denied until recently that it has purchased any gold from Russia within the last 2 years.

#### UNITED STATES COPPER SEEN BOUND TO NAZIS

MANZANILLO, Mexico, February 20.—The United States freighters *Harpoon* and *Buenaventura* unloaded cargoes of American copper at this Pacific port today. The copper will be reloaded on the Russian steamer *Majakovsky* for transshipment to the Soviet Union. The *Majakovsky* also will take aboard Mexican lead.

It has been recently reported on good authority that the American copper being picked up in Mexico in considerable quantities by Russian ships is earmarked chiefly for eventual shipment from the Soviet to Germany.

### Gold and Silver Inflation

#### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

ARTICLE FROM THE NEW YORK TIMES

Mr. TOWNSEND. Mr. President, the Honorable Marriner S. Eccles, in a letter made public in today's New York Times, has made a very informative statement relative to the Government's present powers to inflate the currency through the issuance of idle bullion which it now holds, and of greenbacks.

Because of the current interest in the gold and silver powers, I ask consent that the New York Times' account of Mr. Eccles' statement be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times]

**ECCLES CITES CURB ON SPECIAL FUNDS—THEIR USE FOR RELIEF NEEDS VOTE OF CONGRESS, HE SAYS IN LETTER TO LASSER—WOULD PREVENT DEBT RISE—WORKERS ALLIANCE HEAD ASSERTS STATEMENT ANSWERS "EXCUSE" FOR LIMITING OF AID**

WASHINGTON, February 25.—Marriner S. Eccles, Chairman of the Federal Reserve Board, said in a letter made public today that the use of the Government's cash resources "for increasing work and consumer buying power" would avoid an increase in the public debt but that "the Government can spend only what Congress authorizes and appropriates" and "consumer buying power in the hands of the low-income groups would not be increased thereby unless increased expenditures were voted by Congress."

His letter was to David Lasser, president of the Workers Alliance, who made it public along with a statement saying that Mr. Eccles' figures "clearly reveal" that the issue of the debt limit as an excuse for not appropriating "sufficient funds for our social needs is a lot of sound and fury signifying nothing."

Mr. Eccles' letter, as given out by Mr. Lasser, was as follows:

"I have your letter of February 5 in which you inquire as to cash resources available to the administration without further legislative authority. You mention specifically the stabilization fund, the power to issue silver certificates, and the Treasury's working balance.

#### STABILIZATION FUND TERMS

"Under the Gold Reserve Act the stabilization fund is available for expenditure under the direction of the Secretary of the Treasury for any purpose in connection with carrying out the provisions of this section, including the investment and reinvestment in direct obligations of the United States of any portions of the fund which the Secretary of the Treasury, with the approval of the President, may from time to time determine are not currently required for stabilizing the exchange value of the dollar." I am advised, however, that it would require legislation to apply the fund to meet current expenditures.

"As to silver, I am informed that approximately \$1,500,000,000 would be available by monetizing the difference between what has been paid by the Treasury for the silver and the official price of \$1.29, and that this would not require legislation.

"The Treasury's working balance as of today is approximately \$1,600,000,000. Tentative estimates made in our statistical division indicate that without any new financing the balance will not fall to less than \$1,000,000,000 at the end of the present fiscal year and may be somewhat more than that if sales of so-called baby bonds continue at the volume at which they have been selling of late.

"I understand that prior to the advent of the present administration it was not customary to keep working balances in excess of \$250,000,000 or \$300,000,000.

#### THOMAS AUTHORIZATION

"In addition, as you point out, there is the unused authority under the Thomas amendment, which provides that up to \$3,000,000,000 of currency may be 'issued only for the purpose of meeting maturing Federal obligations.'

"Finally you ask what the economic effects would be of using such funds for increasing work and consumer buying power. The Government can spend only what Congress authorizes and appropriates. To the extent that these funds were used to meet such expenditures, it would avoid an increase in the public debt, but consumer buying power in the hands of the low-income groups would not be increased thereby unless increased expenditures were voted by Congress."

Mr. Lasser in his statement said:

"Mr. Eccles' letter clearly indicates that there are three immediate sources of funds without touching the power of the administration to issue large sums of new currency.

"With regard to the gold stabilization fund I have been informed that the amount available is about \$2,000,000,000 without endangering our own currency one bit. This, together with the silver fund and excess Treasury working balances, makes nearly \$5,000,000,000 available to hurl back the tides of new recession advancing on us and to give purchasing power and work to needy unemployed youth and farmers."

### Bermuda and the American Mails

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE OF FEBRUARY 23, 1940

Mr. REYNOLDS. Mr. President, in view of the recent searching of American mails at the point of British bay-

onets in Bermuda recently, and in further view of the discussions of that particular incident upon the floor of this Chamber, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD the editorial appearing in the columns of the Chicago Tribune of February 23, 1940, entitled "Bermuda and the American Mails."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune of February 23, 1940]

#### BERMUDA AND THE AMERICAN MAILS

Bermuda is the spot where the British blockade, with its censorship of the mails, rubs the rawest. Practically, there is very little difference between a mail seizure at Bermuda and a mail seizure at Gibraltar or any other control point, but it is more irritating to have mail sacks taken from the clippers at this British island off our own coast than it is to have the letters opened at the spot where Great Britain has been trespassing on the soil of Spain for over 200 years.

Bermuda is an American island. It is one of the foreign possessions which have escaped natural historic processes. As British soil it is an illogical survival of an old imperial movement which once flooded over these shores and then receded to seek other continents. Every time the mails of the clippers are removed and the passengers examined, Americans must feel that only by a serious fault of diplomacy does that island remain in its present jurisdiction. Political gravity would drop it into the domain of the United States.

Not until this week did it become known to the public that when the British began taking letters from the Pan American Airways clippers, January 18, the airplane was boarded by marines after the captain of the plane had ordered the censors off his ship. Our Government apparently has accepted the British rule that mails may be opened when there is any suspicion that they contain contraband, such as money or articles which directly or indirectly might reach Germany.

Before the war, Pan American trans-Atlantic ships did not stop at Bermuda. They went directly to the Azores and from there to Lisbon. An independent shuttle service was maintained between New York and Bermuda. When the tourist trade fell off because of the war, the British asked that the trans-Atlantic planes make the Bermuda stop to avoid the isolation the island was beginning to feel. Consequently the ships with their European mails come under the British censorship because the company did the British a favor by making Bermuda a stop on the way across.

If our Government consents to the violation of the mails, it is no concern of the company, although the captain of the first ship boarded resisted as long as he could. The company regards the landing privilege as a commercial advantage which could be withdrawn. If our Government insisted that our mails be delivered intact, they could be carried by way of the Azores to Lisbon. What happened to them after that would at least happen after they had passed into other hands.

Our Government accepts the theory that the mails as conditional contraband may be taken off American planes and American ships, delayed for weeks even when bound for neutral countries, and may be seized as prizes of war. Whatever may be the legalistic arguments pro and con on the contraband issue, it is at least a

sour proceeding when the mail sacks are removed at an island which ought to be an American possession and which has already been paid for.

Whatever may be the transfer problems presented by the debt as a money obligation, nothing of the kind arises to obstruct the transfer of title to pieces of real estate which the debtor owns in our waters and refuses to apply in settlement. A private debtor with so scant a regard for his obligations would be compelled by the courts to pay according to his ability to do so and in the manner he could. Nations are too proud to pay their debts, and their creditors are too silly to insist that they do.

### Veterans' Statistics

#### EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. VAN ZANDT. Mr. Speaker, on February 12 I inserted in the RECORD some interesting and illuminating information concerning the veterans of the World War.

At this time I am supplementing my previous insertion with the following facts and figures showing the average age and death rate of officers and enlisted men of the Indian, Civil, Spanish, and World Wars. The average age of widows on the pension rolls in 1940 is also shown.

The attention of the House is called to the fact that Gen. Frank T. Hines, Administrator of Veterans' Affairs, is authority for the statement that the death rate of World War veterans has now reached the appalling figure of 91 daily and that the last veteran of the World War will die in 1996.

#### Age and death rate in 1940

	World War	Spanish-American War	Civil War	Indian war
Average age of all veterans in 1940.....	47	65	95	80
Average age of widows on rolls in 1940.....	46	61	78	
Average age of emergency officers in 1940.....	52			
Estimated number of veterans dying per day in 1940.....	91	23	4	1

Another interesting table is shown by the following facts and figures concerning the estimated number of living World War veterans at the beginning of each calendar year by age groups:

Estimated number of living World War veterans at the beginning of each calendar year, by age groups

Attained age	1931	1932	1933	1934	1935	1936	1937	1938	1939	1940	1941

Average age in 1939, 46.

Mr. Justice Black

## EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

EDITORIAL FROM LABOR AND ARTICLE BY ERNEST LINDLEY

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from Labor and an article from the Washington Post written by Mr. Ernest Lindley, relative to recent opinions delivered in the Supreme Court of the United States by Mr. Justice Black.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From Labor of February 20, 1940]

NOW THEY'RE PRAISING HUGO BLACK—FLORIDA DECISION WINS WIDE-SPREAD COMMENDATION, AND PHILADELPHIA RECORD RECANTS HARSH CRITICISM OF THE PAST

A little more than 2 years ago, when President Roosevelt selected Hugo L. Black, then a Senator from Alabama, for a place on the bench of the Supreme Court of the United States, Labor was one of the few papers that approved the appointment. We believe we may be pardoned for calling attention to that fact, because just now almost every editor in the land is heaping encomiums on Justice Black for his decision outlawing third-degree confessions and thus saving the lives of four poor Negro boys down in Florida.

The Philadelphia Record is gallant enough to offer a public apology for what it said about him and it adds this handsome compliment:

"This decision is far and away the most direct, sweeping, and brilliantly written application of the fourteenth amendment to human rights that has come from our highest court."

It points out that famous amendment, adopted right after the close of the Civil War, was designed to force all States to grant all citizens, including Negroes, "equal protection of the laws" and specifically provided that no person should be "deprived of life, liberty, or property without due process of law." But for half a century and more the courts have so twisted the due-process clause as to make it a never-failing refuge for utility corporations and other predatory interests.

Now Justice Black, with the unanimous support of his colleagues, has used the amendment as it framers intended it should be used.

When Labor refused to bend before the blasts of prejudice and propaganda, it was confident time would vindicate its judgment of Hugo Black.

It pointed to the fine record he made in the Senate, and predicted he would make an equally fine record on the bench. He has more than verified Labor's good opinion.

[From the Washington Post of February 18, 1940]

ERNEST LINDLEY SAYS BLACK'S DECISIONS DEFEND MINORITIES

The President suggested a few days ago that apologies to Associate Justice Hugo L. Black may now appropriately be made by the newspapers and prominent citizens who so bitterly attacked Black's appointment to the Supreme Court 2½ years ago.

So far there has been no noticeable rush of apologies. Some northern journals apparently did not even regard as news Black's Lincoln's birthday decision, on behalf of a unanimous Court, overruling the conviction and sentencing to death of four Negro youths for the murder of a white man.

Yet Black's opinion in this case contains some of the most stirring affirmations of the rights of minorities before the law which ever issued from the Supreme Court.

The Court held that these four young Negro men were convicted by confessions wrung from three of them. There was no evidence that they were beaten or subjected to other physical violence. There was evidence that they were frightened and bulldozed until after 5 days of continued questioning, during which none of them was permitted to see or confer with counsel or even with relatives, one of them "broke."

"To permit human lives to be forfeited upon confessions thus obtained would make the constitutional requirement of due process of law a meaningless symbol," wrote Black.

"We are not impressed by the argument that law-enforcement methods such as those under review are necessary to uphold our law. The Constitution proscribes such lawless means irrespective of the end. And this argument flouts the basic principle that all people must stand on an equality before the bar of justice in every American court. Today, as in ages past, we are not without tragic proof that the exalted power of some governments to punish manufactured crime dictatorially is the handmaid of tyranny. Under our constitutional system, courts stand against any winds that blow as havens of refuge for those who might otherwise suffer

because they are helpless, weak, outnumbered, or because they are nonconforming victims of prejudice and public excitement. Due process of law, preserved for all by our Constitution, commands that no such practice as that disclosed by this record shall send any accused to his death. No higher duty, no more solemn responsibility, rests upon this Court, than that of translating into living law and maintaining this constitutional shield deliberately planned and inscribed for the benefit of every human being subject to our Constitution—of whatever race, creed, or persuasion."

It would be hard to find a better text to carry around in your pocket in these days when prejudice and even hysteria are easily aroused against nonconforming minorities.

## BLACK UPHELDS RIGHTS OF INDIVIDUALS

This was not the first time that Black had spoken for the Court in defense of the most scrupulous observance of the due process of law where the rights of the individual are concerned.

A year ago he knocked out the conviction for murder of a Louisiana Negro on the ground that Negroes had been excluded from the grand jury which brought the indictment. Negroes were on the panel from which trial jury was finally drawn. But Black, speaking for the Supreme Court, said this was not enough; that the exclusion of Negroes from the grand-jury panel was a violation of due process.

Black also spoke for a majority of the Court in the case of a young man who had been convicted of counterfeiting. The young man had waived his constitutional right to counsel, but later pleaded that he did so in ignorance. The Supreme Court directed the district court to find out whether the defendant had waived his right "competently and intelligently."

Since Black went on the Supreme Court there have been other decisions involving civil liberties and due process of law. In every one he has voted for the strictest protection of the rights of the individual citizen. This is not surprising to those who examined Black's earlier record, instead of letting themselves be carried away by the outcry over the discovery that he had had an ephemeral association with the Ku Klux Klan. Twenty-five years ago, as solicitor of the criminal court—prosecuting attorney—of Jefferson County, Ala., Black obtained a grand jury presentment denouncing irregular and unconstitutional practices, including resort to the "third degree," by the police of Bessemer.

## MAJORITY COMES AROUND TO HIS VIEW

Black's contribution on the Supreme Court is by no means limited to his stalwart defense of civil rights. In May 1938 the Court, by a divided vote, upheld the right of the United States to tax members of the Port of New York Authority, on the ground that these officials were not performing functions essential to the continued existence of the State government. It was a breach in the earlier Court doctrine, established in defiance of the sixteenth amendment to the Constitution, that the Federal Government could not tax employees of State governments.

In a concurring opinion, Black poured scorn on the attempt of the Court to differentiate between essential and nonessential Government services. He said all State employees could be taxed by the Federal Government under the sixteenth amendment. Ten months later a majority of the Court adopted, in substance, Black's contention.

In May 1938 the Court knocked out the Indiana gross-income tax as applied to sales made in other States and foreign countries by an Indiana corporation. It said that the tax was an impediment to interstate commerce. Black dissented. On January 29, 1940, a majority of the Court upheld the New York City sales tax on grounds nearly parallel to Black's dissent in the Indiana case.

In March 1938, Black and Associate Justice Reed dissented from an opinion in a complicated case involving the liability for fraud of the agent of a surety company. This week, in a nearly parallel case, the Court ruled the other way. The majority opinion, written by Justice Stone, distinguished between the two cases. But the distinction was so fine that Justice Roberts, in dissenting for himself and Justice McReynolds, said, "It is apparent that, under the guise of distinguishing the earlier case, the Court in fact overrules it."

In February 1938, Black, in a lone dissent, said that the Montana law, instead of Federal law, properly had been followed in the trial of an insurance case in a Federal court. Shortly afterward, in similar cases, the Court supported the Black doctrine that State laws should govern. Incidentally, the Montana case was retried in the Federal district court. On review, two members of the circuit court of appeals said the law in Montana was what Black had said it was, and one dissented. The Supreme Court refused to review the case again, which left standing the verdict which Black, as a lone dissenter, had defended.

## HIS DISSENTS LATER BECAME LAW

Few members of the Supreme Court have ever seen their dissents become the law of the land within so short a time. Other notable dissents by Black have not yet become the doctrine of the majority of the Court. Some may never be generally accepted as sound. At times he seems deliberately to have adopted the gadfly's role. He has said, in effect, that a corporation is not a person entitled to the protection of due process under the fourteenth amendment. This seems sensible enough to a layman, but too much law has been spun around the fiction to be cut through with one slash.

Justice Black is getting along very well without the apologies or praise of those who assailed him so virulently 2½ years ago. If he quit the Court tomorrow he would leave a record distinguished enough to make a historian wonder what caused the spasm of hysteria which swept so much of the press and of the Nation in the late summer of 1937.

## The Census of 1940

## EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

ARTICLES BY ARTHUR KROCK

Mr. TOBEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two articles written by Mr. Arthur Krock and published in the New York Times, with reference to the census of 1940.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

IN THE NATION—TROUBLE BREWING OVER THE CENSUS QUESTIONNAIRE  
(By Arthur Krock)

WASHINGTON, February 21.—The intimate questions which the 1940 census takers have been empowered by Secretary Hopkins, with the President's approval, to ask of the American people have already come under the critical examination of Congress. Under the stimulation of Mr. TOBEY, of New Hampshire, a Senate subcommittee has ordered hearings to determine whether, as he suggests, enumerators should be barred from inquiring as to individual incomes and other very personal facts. But unless Congress or the courts come to the rescue, the Federal Government will soon know more than it ever has about the private affairs of its citizens.

The breadth and depth of this year's census appear to be a part of that centralization of government which has been a major contribution of the New Deal. It is typical of the passion for charts and statistics which recently took stupendous form in the S. E. C.'s break-down of insurance-company figures. No one seriously questions the right of government to collect and publish these; they are corporate and properly subject to the inspection of officials and investors in the companies (the policyholders). The proposed census report is very different.

There is a penalty including fine and imprisonment for anyone over 18 years of age who refuses, or willfully neglects or falsifies, answers to questions put by the enumerators. Should any of these publish or communicate any of the information thus received without the authority of the Director of the Census, fine and imprisonment are also stipulated.

## ALL CAN BE PUBLISHED

These provisions would seem to assure a full census and a confidential one. But the trouble with the latter assurance is twofold. Citizens are asked to believe that under no circumstances will their neighbors, the local enumerators, find some way to communicate what they have learned. And, though the census takers may neither publish nor communicate, their superiors can. Also they do. On several occasions the President, by Executive order, has made available to Congress and other Government agencies information marked "confidential" by law. He has the power to do this with the census.

Since the Supreme Court never had cause to define the extent of the powers of Congress in the census, there is nothing to indicate that Congress cannot empower the Secretary of Commerce to ask any questions he decides upon and to enforce a penalty for noncompliance. But Congress can and has limited the extent of the inquiry. Some lawyers hold that the statutes outlining the 1940 census do not authorize some of the questions proposed. Others contend that, if they do, they violate the due-process clause of the Constitution and remove the prohibition against unlawful search and seizure. Thus the questionnaire is being attacked on two legal points which, if the courts get no opportunity to construe, Congress could accept.

This year there are two censuses being taken—one on population and unemployment, the other on housing. No doubt has been cast on the legality of the latter. It is in connection with the former that the legal objections have been raised.

The law organizing the 1940 census restricted the population inquiry to 21 questions. But the amendment authorizing the unemployment census left the questions to the discretion of the Federal authorities. They have exercised it in a way to bring the protests, to arouse the fears that local political machines will get possession of facts which they can use for pressure on citizens and pass on to favored persons for the preparation of sucker lists and possibly more sinister rosters.

## VERY PERSONAL INQUIRIES

There follow some of the census questions which have been attacked as violative of the Constitution, the census statutes, or both; and as perilous to the sources of the information:

Nos. 32 and 33, which relate to 1939 income, and seem to be unauthorized in the law as well as not germane to an unemployment census.

Questions 36 to 50, inclusive, which are supplementary for 5 percent of the population in an effort to make a cross-section. These go into all sorts of personal and family details, and appear discriminatory in that 85 percent of the population are excused from them.

While the legality of the housing census is little disputed, because Congress made it specific and the courts have never questioned the right of Congress to take as broad a census as it may wish, some parts of this schedule have aroused indignation and suspicion. It seeks to discover the number of refrigerators and types of refrigeration, radios, monthly rentals, costs of utilities and fuel, mortgage indebtedness and frequency and amount of mortgage payments. The American people have heretofore taken the view that none of this is a census taker's business.

In his proclamation the President said the census was designed as an "intelligent guide to the future"; and has nothing to do with taxation, military, or jury service, compulsory school attendance, or the enforcement of any law. This is doubtless his firm purpose. But government confidences, especially when locally acquired by many political appointees, may easily come to other uses.

IN THE NATION—THE BASIS OF RELUCTANCE ON THE CENSUS  
(By Arthur Krock)

WASHINGTON, February 22.—The argument over the 1940 census questions, outlined in this space yesterday, involves so definitely the convictions of a large American group that a second analysis of the questionnaire may have interest. While there is as yet no proof that a national majority has shifted from support of the New Deal, its last general opponent, Alf M. Landon, got more than 17,000,000 votes on an attack far weaker than the one now forming, which indicates the existence of an immense critical minority.

Among this group, as in 1932, 1934, and 1936 are great numbers whose opposition to the present administration is merely partisan; many whose objections are unenlightened or selfish; and others who just don't like the President. But the overwhelming preponderance is undoubtedly represented, and will be in November, by citizens who distrust and disapprove of the personnel and methods of the New Deal. Largely from these have come the alarmed outcries against the detail of the 1940 census which have impelled the Senate Commerce Committee, at the urging of Mr. TOBEY, of New Hampshire, to order hearings.

This attitude is based on belief and experience, recently much intensified, that the Government is a poor keeper of confidences and that the constitutional guaranty of certain privacies is not sacred in Washington. In proof of this, memory need revert no further than the unlawful seizure and publication of private correspondence by Justice (then Senator) Black, and the periodic issuance of Executive orders by the President to open to public inspection information gathered by the Government on a confidential basis.

## POLITICAL APPOINTEES NUMEROUS

Also, this is an intensely political administration; the census enumerators were chosen in large part on the request of politicians; and some of the information they have been instructed to obtain from citizens would be very useful in arranging for that planned society which is the goal of many new dealers of the inner circle.

The first few questions in the census schedule are harmless and legitimate: Where do you live; how many in the household; do you own or rent; your sex, age, marital status; educational record; place of birth and previous residence. But in the midst of these are two inquiries which no citizen should be compelled to answer on pain of fine, imprisonment, or both: "Value of home, if owned, or monthly rental;" "color or race." It is conceivable that a political machine or an envious neighbor could make improper use of the first. And since the anthropologists are far from a unit on how to define races except by the color standard, why demand that, for example, a citizen of mixed ancestry (which means nearly everybody) should give an assured answer? Color anyone ordinarily can see.

Then come questions 32 and 33, which would throw open to the enumerator who rings the doorbell—who might be a neighbor, the servant of a corrupt local political machine, or a total unknown—personal facts wholly private in their nature, according to the American concept. Unless Congress withdraws the question, the citizen must tell "the amount of money, wages, or salary received, including commissions," and whether he got an income of \$50 or more from other sources. He must tell these things also with the knowledge that they could easily be passed on to unauthorized persons, twisted to fit a political theory, or exposed to the general gaze if high political authority decided to expose them. And no penalty for the latter, either.

## THE CENSUS GUINEA PIGS

The citizen whose doorbell is rung may also find that he is one of the special 5-percent guinea pigs of the New Deal; that twentieth person on the enumerator's beat who must answer 16 questions not submitted to 19 of his neighbors. He must give the birthplaces of his parents; the language spoken at home in his childhood; and various personal details about previous marriages and divorces. After all this is done, he as well as his 19 neighbors will be expected to furnish facts about how their homes are heated and cooled, the cost of utility service and appliances, and many details about the state of home indebtedness, if any.

If the citizen is less than 14 years old, of course, he need answer very few of the questions, and presumably will not be fined or sent to jail if he declines. Perhaps this generous concession is in deference to the American Youth Congress.

It is interesting to speculate whether, if Congress should fail to curb the questionnaire, or at certain points remove the penalties for failure to respond, there will be any considerable refusal to answer. At other periods of American history the jails would have been full of nonresponders if such questions had been put and the penalties invoked. Among the reasons given by the signers for the Declaration of Independence were that King George III had "sent hither swarms of officers to harass our people \* \* \* and tried [us] for pretended offenses." They remarked also that "all men \* \* \* are endowed by their Creator with certain inalienable rights," and that "governments derive their just powers from the consent of the governed." The inalienable right to refuse to answer some of the 1940 census questions might well be conceded in the spirit of that document.

### Our Cross of Silver

#### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

EDITORIAL FROM SCRIPPS-HOWARD NEWSPAPERS

Mr. TOWNSEND. Mr. President, I ask unanimous consent that there be printed in the RECORD an editorial entitled "Our Cross of Silver," which appeared in the New York World-Telegram and the Washington Daily News, Scripps-Howard newspapers, on February 22 and February 23, respectively.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Scripps-Howard newspapers]

#### OUR CROSS OF SILVER

We have been studying up on silver again, and our head aches. At the risk of spreading the pain, we submit a few facts, figures, and thoughts:

The Silver Purchase Act of 1934 directs the Treasury to buy silver until either—

1. The market price of silver reaches \$1.29. (That would be one-sixteenth of the pre-Roosevelt price of gold. Remember Bryan and "16 to 1"?) Or—

2. The Treasury's pile of silver (at \$1.29 an ounce) is worth one-third of the Treasury's pile of gold (at \$35 an ounce).

Senator PITTMAN, the leading silverite in Congress, proclaimed that we wouldn't need to buy more than a billion ounces of silver to raise the world price to \$1.29.

What has actually happened?

1. The Treasury has bought more than 2,000,000,000 ounces of silver, yet the price on the London market is around 33 cents. Economists say it would skid much lower if the United States Treasury were not offering 35 cents for foreign silver.

2. The Treasury is farther than ever from the statutory goal of one dollar's worth of silver for every three of gold. (That's because it has also been buying all the gold in sight.)

The odd part is, all this silver and gold we've been buying "doesn't cost anything." It works this way: The Treasury buys a million ounces of foreign silver, pays \$350,000 in cash for it, then prints up \$350,000 in new silver certificates and is right back where it started. Not a penny is added to the national debt. But, say the economists, wait until we try to sell some of that silver and then the cost will show up, because we'll sell at less than we paid.

Senator TOWNSEND has a bill to stop the buying of foreign silver, which was endorsed this week by the 12 bankers of the Advisory Council of the Federal Reserve Board.

The council pointed out that these silver purchases are increasing "the already excessively large bank reserves." In other words, they are a potential source of run-away credit, and of inflation.

Some argue that the silver policy provides purchasing power abroad with which to buy American goods. Well, so did our war and post-war loans to Europe. So did those Latin-American bonds.

It is argued that if we kicked the props from under silver we would ruin Mexico, the greatest producer of silver. And what has Mexico done while profiting from our silver policy? Ask any oilman.

Sponsors of the Silver Purchase Act predicted that it would be a boon to China and to our trade with China. What happened? Our silver policy made a mess of that country's finances, forcing it off the silver standard. And today we are probably buying less

silver from China than from Japan—to finance Japanese purchases of our oil and scrap iron with which to Japanize all Asia.

It seems to us that it is time for Congress to pay heed to Senator TOWNSEND's one-man crusade against this foolishness.

Senator PITTMAN and the other silverites are afraid of hurting the silver interests in their home States. But their concern is with the price of domestically mined silver, for which the Treasury pays the political price of 71.11 cents an ounce. That is an out-and-out subsidy, from which a few big companies, notably the Sunshine Mining Co. of Idaho, profit enormously.

It is apparently useless to attack this domestic subsidy. But let's stop swapping dollars—which means swapping American airplanes and automobiles and typewriters and oil—for more foreign silver to inter at West Point. If we must buy to hoard, let's buy cheaper, more useful materials that might come in handy in a crisis.

### The Career Employees at Mare Island Navy Yard

#### EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. BUCK. Mr. Speaker, in February 1938 I had occasion to speak on the construction record at Mare Island Navy Yard. In the course of my remarks I commented upon labor conditions at the yard and pointed out that its labor market was drawn from the immediate vicinity, including Vallejo, Napa, Benicia, and the surrounding territory. I further stated:

To a very great extent, the employees own their own homes and have a record of 10 or more years employment on the yard. In many cases, those now employed represent the third generation of workers on the yard. That this is conducive to a splendid morale, no one can dispute. The pride of the workers in their handwork is unbounded, and this plays a large part in the surpassing examples of cheaper cost of naval construction. It is not too much to say that the relationship between the supervisors, naval officers, and workers could not be improved upon.

Today I desire to call the attention of the House to data concerning Mare Island Navy Yard employees, which was compiled by the authorities at the yard in January 1940, which fully confirms the statements that I then made. A copy of a list showing the names of employees with service record of over 30 years has been sent to me, and I append that list as a portion of my remarks. In it I recognize the names of many of my friends who have faithfully performed their work for the Government for 30 years or over. This list is a striking indication of a labor situation that is indeed healthy.

Mare Island is recognized by the department and the fleet as an efficient yard. Much of this efficiency is because of the spirit of these employees, which is reflected in the attitude that they have of regarding their jobs as careers. This has led to many instances where the fourth generation of one family is now employed on the yard and there are countless cases of third-generation employees. The efficiency of the yard is no doubt attributable to this esprit de corps which has made it noteworthy as harboring a family of ship-builders.

In the following list are given the names of employees with longest service records. The time recorded includes complete Government service, civil and military. Where military service is included, the data is succeeded by an asterisk (\*).

This information has been compiled from official sources and is believed to be correct.

1. C. A. Fitzgerald, master shop 31, 47 years 2 months.
2. Henry Driscoll, Supply Department, 45 years 11 months.\*
3. N. E. Hanson, chief clerk P. W. Department, 45 years 9 months.
4. Thomas Raines, material engineer, 45 years 4 months.
5. Charles E. Walsh, Labor Board, 45 years.
6. J. B. Buss, drafting, 43 years 8 months.
7. J. T. Moroney, master shop 11, 43 years 5 months.
8. Thomas Vice, survey and inspection, 43 years 5 months.
9. J. L. Ney, shop 72, 43 years 4 months.
10. James A. Brosnahan, drafting, 43 years 3 months.
11. I. M. Hull, shop 31, 43 years 3 months.\*
12. T. J. Cahill, shop 56, 43 years 1 month.

13. A. Reid, shop 72, 43 years\*.
  14. George A. Walker, industrial offices, 42 years 10 months.\*
  15. D. J. O'Connor, ammunition depot, 42 years 6 months.\*
  16. C. B. Helm, ammunition depot, 42 years 5 months.\*
  17. C. C. Smith, shop 63, 41 years 10 months.
  18. W. A. Kirkland, drafting, 41 years 4 months.
  19. C. F. Faber, ammunition depot, 41 years 4 months.\*
  20. James R. Forbush, shop 56, 41 years 4 months.\*
  21. J. E. Benson, drafting (weight), 41 years 1 month.\*
  22. Marcus H. Goshen, chief, planning and estimating, 40 years 11 months.
  23. George C. Huston, master shop 23, 40 years 10 months.
  24. John R. Greig, assistant shop superintendent, 40 years 10 months.
  25. R. W. Carter, shop 56, 40 years 9 months.
  26. M. Hickey, ammunition depot, 40 years 8 months.
  27. M. V. Davis, head accountant (accounting), 40 years 4 months.
  28. A. A. Jennings, junior assistant estimating and planning superintendent, 40 years 3 months.
  29. W. A. Shillingsburg, master shop 72, 40 years 2 months.
  30. G. G. Peabody, master shop 94, 40 years.
  31. A. J. Nesbit, ammunition depot, 40 years.
- NOTE.—The above 31 men in the 40-year bracket have an aggregate service of 1,315 years.
32. J. B. Claxton, master power plant, 39 years 10 months.\*
  33. J. T. Murphy, master shop 56, 39 years 10 months.\*
  34. R. F. Miller, shop 63, 39 years 8 months.
  35. J. M. Droast, shop 56, 39 years 7 months.\*
  36. G. E. Holzhauser, shop 51, 39 years 4 months.
  37. R. E. Moreland, master shop 63, 39 years 1 month.
  38. Joshua Emerson, principal marine engineer, 39 years 1 month.
  39. J. F. Conway, shop 74, 39 years 1 month.
  40. J. B. Danner, shop 94, 38 years 11 months.
  41. Quincy M. Spencer, supply department, 38 years 11 months.
  42. George C. Colon, progress section, 38 years 10 months.
  43. William Herbert, power plant, 38 years 9 months.
  44. L. Kaarsberg, drafting, 38 years 9 months.
  45. R. Newcomb, master shop 71, 38 years 9 months.
  46. George T. Gribner, Jr., foreman, supply, 38 years 9 months.\*
  47. C. B. Cunningham, shop 63, 38 years 8 months.
  48. C. Fritshaw, accounting, 38 years 8 months.
  49. H. H. A. Hay, job-order clerk, 38 years 6 months.
  50. George Hadley, public works, 38 years 6 months.
  51. William Wiley, shop 51, 38 years 6 months.
  52. M. F. Winchell, master shop 17, 38 years.
  53. R. J. Tormey, shop 56, 37 years 9 months.
  54. H. F. Vieregge, shop 31, 37 years 8 months.\*
  55. A. Gholikely, shop 72, 37 years 8 months.\*
  56. J. C. Burns, supply department, 37 years 8 months.\*
  57. R. M. Gibbons, drafting, 37 years 6 months.
  58. Charles Horsted, shop 38, 37 years 6 months.
  59. T. W. Keeshan, shop 51, 37 years 4 months.
  60. J. C. Quinn, shop 56, 37 years 3 months.
  61. R. J. Robinson, drafting, 37 years 2 months.
  62. J. M. Hay, supply department, 37 years 2 months.
  63. C. M. Willis, shop 17, 37 years.
  64. F. P. Young, shop 72, 37 years.\*
  65. W. R. Stephens, shop 38, 36 years 11 months.\*
  66. C. Hubbard, ammunition depot, 36 years 8 months.\*
  67. P. S. Creedon, shop 72, 36 years 7 months.\*
  68. C. C. Coleman, planning section, 36 years 7 months.\*
  69. F. W. Savage, master shop 51, 36 years 6 months.
  70. E. Fougere, Jr., supply department, 36 years 6 months.
  71. R. Ryan, supply department, 36 years 6 months.
  72. F. E. Dunklee, radio engineer, 36 years 3 months.\*
  73. E. H. Ries, public works, 36 years 3 months.\*
  74. M. Hill, shop 72, 36 years 3 months.\*
  75. George S. Dimpfel, Jr., shop 38, 36 years 3 months.\*
  76. A. MacDonell, shop 17, 36 years 2 months.
  77. B. F. McManus, shop 17, 36 years 2 months.
  78. E. M. McCool, shop 38, 36 years 1 month.\*
  79. D. C. Jewett, public works, 36 years.\*
  80. D. C. Jewett, public works, 36 years.
  81. A. Goldberg, shop 31, 35 years 9 months.\*
  82. A. Morris, shop 72, 35 years 9 months.\*
  83. J. F. Volkner, public works, 35 years 9 months.\*
  84. Fred Graff, ammunition depot, 35 years 8 months.\*
  85. E. J. Dorris, foreman, public works, 35 years 5 months.
  86. I. B. Wyman, shop 38, 35 years 5 months.\*
  87. M. Caprini, ammunition depot, 35 years 4 months.
  88. P. L. Maxwell, shop 11, 35 years 3 months.
  89. J. J. Connolly, shop 56, 35 years 3 months.
  90. R. D. Patton, shop 56, 35 years 3 months.\*
  91. William Reay, ammunition depot, 35 years 3 months.\*
  92. C. R. Waters, public works, 35 years 2 months.
  93. Joseph H. Ward, shop 51, 34 years 1 month.\*
  94. J. J. Fleming, shop 56, 34 years 1 month.
  95. Fred A. Ullman, print shop 93, 35 years.
  96. Herbert Gordon, supply department, 35 years.
  97. A. Morrow, shop 31, 35 years.\*
  98. C. A. Triebel, head chemist, 34 years 11 months.
  99. W. W. Carr, shop 11, 34 years 11 months.
  100. J. A. Meeks, shop 72, 34 years 10 months.\*
  101. J. B. Ullman, power plant, 34 years 9 months.
  102. R. C. Whitthorne, drafting, 34 years 9 months.
  103. W. L. Blackmore, shop 56, 34 years 6 months.
  104. T. F. Kelly, shop 17, 34 years 6 months.
  105. B. C. Whiteley, drafting, 34 years 6 months.
  106. A. J. Perry, power plant, 34 years 5 months.
  107. E. J. Bettencourt, public works, 34 years 2 months.
  108. R. H. Demmon, supply department, 34 years 1 month.
  109. C. T. Tyte, supply department, 34 years 1 month.
  110. D. D. W. Smith, commandant's office, 33 years 11 months.
  111. T. E. Branstetter, shop 74, 33 years 11 months.
  112. A. J. Stribling, ammunition depot, 33 years 11 months.\*
  113. Ray Beckwith, shop 38, 33 years 11 months.\*
  114. I. L. Shaw, shop 11, 33 years 11 months.\*
  115. M. M. Metcalf, drafting, 33 years 10 months.
  116. E. Moore, shop 72, 33 years 10 months.\*
  117. W. H. Culver, public works, 33 years 10 months.\*
  118. J. A. McInnis, shop 81, 33 years 9 months.\*
  119. C. A. McDevitt, shop 38, 33 years 8 months.\*
  120. F. C. Sachs, shop 31, 33 years 8 months.\*
  121. F. A. Bade, planning section, 33 years 7 months.
  122. Louis Boss, survey, 33 years 7 months.
  123. H. L. Thurman, shop 31, 33 years 7 months.
  124. J. R. Romeo, drafting, 33 years 7 months.\*
  125. W. J. Murray, shop 11, 33 years 7 months.\*
  126. W. A. Gollnast, master transport, 33 years 7 months.\*
  127. T. J. Montague, sergeant of police, 33 years 6 months.\*
  128. J. G. Watson, shop 63, 33 years 6 months.
  129. J. B. Canham, drafting, 33 years 5 months.
  130. D. B. Brown, principal naval architect, 33 years 4 months.
  131. C. P. Sobey, shop 81, 33 years 4 months.
  132. H. N. Hunt, drafting, 33 years 4 months.
  133. C. J. O'Donnel, shop 31, 33 years 4 months.
  134. W. T. Smart, shop 31, 33 years 4 months.\*
  135. T. M. Lauer, shop 51, 33 years 3 months.
  136. R. R. MacDonell, drafting, 33 years 3 months.
  137. William Dickie, drafting, 33 years 3 months.
  138. R. M. Stow, progress section, 33 years 2 months.
  139. D. M. Pye, power plant, 33 years 2 months.\*
  140. A. A. Ohlson, planning section, 33 years 1 month.
  141. J. C. Hansen, shop 31, 33 years 1 month.
  142. H. D. Austin, chief draftsman, public works, 33 years.
  143. A. P. Hart, public works, 32 years 11 months.
  144. D. L. Barry, planning section, 32 years 10 months.
  145. G. Higuera, shop 81, 32 years 9 months.
  146. J. E. Tucker, shop 31, 32 years 9 months.
  147. J. S. Andrews, shop 72, 32 years 9 months.\*
  148. C. W. Causbrook, progress section, 32 years 8 months.

### Demonetization of Silver By Greece

#### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

REPORT BY AMERICAN COMMERCIAL ATTACHÉ AT ATHENS, GREECE

Mr. TOWNSEND. Mr. President, further demonetization of silver is indicated by a report from the American Commercial Attaché at Athens, Greece, dated January 2, 1940. I ask consent that this item, consisting of one paragraph, be printed in the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

A decree just issued orders the withdrawal from circulation of all silver coins of 10 and 20 drachmas denominations during the second half of 1940. Pending the issuance of other metallic currency to replace these coins, the Minister of Finance is authorized to issue paper notes of 10- and 20-drachma denominations in an amount not exceeding 700,000,000 drachmas. There are about 350,000,000 drachmas of 10- and 20-drachma coins now in circulation.

Mark Twain

#### EXTENSION OF REMARKS

OF

HON. MILTON A. ROMJUE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. ROMJUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, Postmaster General of the United States, at a public banquet preceding the first-day sale of the Samuel L. Clemens—Mark Twain—commemorative stamp, Hannibal, Mo., Monday, February 12, 1940:

It is something more than a coincidence that the people of this section of the Nation should gather in distinguished numbers on the same day to pay tribute to Mark Twain and Abraham Lincoln. This morning we observed at New Salem, Ill., the one hundred and seventh anniversary of Lincoln's appointment as postmaster, and tonight we assemble to celebrate the arrival of a new and distinguished member in the family of the famous American series of stamps.

This is an event that you may write in the family Bible, the same as John and Jane Clemens may have done on a November night in 1835 when, with Halley's comet in the sky, their little son, Samuel Langhorne, arrived in their humble home in the nearby village of Florida in this State.

Abe Lincoln and Mark Twain are two of the most characteristic and certainly among the most loved of our noted Americans. Each followed the American ideal of rising to a place of acclaim through character and hard work. One was the devoted leader of our Nation in its period of trial; the other expressed the spirit of the Nation in its age of expansion. They have one great thing in common—a genuine and wholesome sense of humor. Probably at no time in American history has this attribute been of more importance in our national life than it is today. As long as we can keep our sense of humor there is no danger for the safety and welfare of our country.

Samuel Clemens, known the world over as Mark Twain, was about 4 years old when the family moved to Hannibal. Because he spent his boyhood days in this typical American town, among typical American people, you cannot hear the name of Mark Twain without also thinking of Hannibal.

As I stand here tonight in Mark Twain's "little white town," I visualize your wide rolling Mississippi and catch the strains of the echo announcing the approach of the steamboat. I can see the twin smokestacks with their black clouds of smoke, the paddle boxes, flags, and in the pilot house the white-haired captain puffing away—like a true son of Missouri—on his corn-cob pipe. Some of you in Hannibal remember, I'm sure, this picture of early days on the "Father of Waters." You recall this robust America of that authentic American, Mark Twain.

The home town of Tom Sawyer has grown since those days of river glory. How ideal it is that you have preserved the celebrated board fence on Hill Street, Injun Joe's cave, and Jackson's Island where Tom and Huckleberry Finn played pirates together. How fine it is to discover below Holliday's Hill realistic statues of these two boys.

"To be good is noble, but to show others how to be good is nobler—and less trouble," was one of Mark Twain's favorite sayings. What a figure he must have made in the streets of Hannibal, St. Louis, New Orleans, New York, or of Hartford, Conn., where he spent most of his later writing years! Fierce, yet genial, blue eyes alive under heavy brows. A sheaf of wild white hair and a handlebar, Buffalo Bill mustache, and a special river-flavored vocabulary of description and anecdote to help him look and act the part.

We can imagine Twain with his alluring western drawl reciting the talk about "The Jumping Frog of Calaveras County." We can see him orating good-naturedly on the Sandwich Islands, or, when he was rumored dead, sternly instructing a reporter, "Just say that the report of my death has been grossly exaggerated."

Mark Twain's life and work radiated the American essence. Not even Horatio Alger could match this success of roving type-setter to Oxford degree of doctor of literature.

He was of the frontier; self-reliant, tender-hearted, democratic; and he knew and cherished every corner of the country; his native good humor and optimism are classic. In later life, in spite of having no legal obligations when his publishing firm failed, Twain paid off his debt to a penny. And he lived the great American ideal of romance by falling in love at first sight with a portrait of Olivia Langdon, his future wife.

With the writings of Mark Twain, literature in the United States became distinctive American literature. Twain saw with his own eyes the beauties of the surging Mississippi, of the western prairie, and the mountains. He wrote his own thoughts, and he expressed himself in speech that was typically and freshly American. Whether it was in labeling himself during his piloting days as "half horse, half alligator;" whether it was in Huck Finn's saying, "you feel mighty free and easy and comfortable on a raft;" or in Smiley bragging about his jumping frog, "it might be a parrot, or it might be a canary, but it ain't—it's only just a frog." Everywhere Mark Twain was the expression of earthy American sentiment.

I remember a story which Twain told about finding a \$50 bill, which his conscience pricked him to advertise. "I didn't describe it very particularly," he said. "And I waited in dire fear that the owner would turn up and take away my fortune. By and by," he reports, "I couldn't stand it any longer. My conscience had gotten all that was coming to it. I felt that I must take the money out of danger."

Yet Mark Twain had a full existence beyond that of writing what may be termed the "American Declaration of Independence in Literature." He was a trampler of many roads; a thoughtful student in the university of life during those eager, boisterous times of a frontier a day. In this, too, he was typically American—restless, suffering ups and downs of fortune with the same serenity.

In his teens, Twain started off gayly to South America and wound up learning the turns and twists of 1,300 miles of Mississippi, under the guidance of Horace Bixby, whom his life on the Mississippi has made famous. It was from this experience that Sam Clemens took on his nom de plume of Mark Twain. This pleasant-sounding name was even more welcome on the river where it indicated a leadman sounding the safe depth of 2 fathoms.

From then on Twain's life was one of energetic action, recorded in a succession of volumes which dangled at the end of his facile pen. He dabbled in everything—gold mining, journalism, inventions, and publishing General Grant's memoirs. But his real career lay in his speeches and the unquenchable vigor of his writings.

Though Twain looked upon his work as journalism, it was literature. For whatever he thought of himself, Twain was a master at telling a story. Perhaps because he had lived so many in his own life. Not only Tom Sawyer, but Mark, himself, fished in the Mississippi, explored caves, and fed "pain-killer" medicine to the unsuspecting cat.

Certainly Mark Twain is the most generally read and enjoyed of all American writers. What boy has not envied Tom Sawyer's fence-painting strategy? What girl has not played at being Becky Thatcher? These people—Huck and Becky, Aunt Polly, Colonel Sellers, and the hard-boiled Connecticut Yankee—have become as much a part of our history as of our literature.

In his personal recollections, Twain touched other universal aspects of American nature. He is the tired pilot-to-be falling asleep at the wheel; the innocent tourist bothered with barbers, guides, hotels; the friend declining a drink before breakfast because, "first, I am a prohibitionist; second, I never drink before breakfast; and third, I already have had four drinks."

Of all our authors in their lifetime, Mark Twain was the most popular. Whatever he did, wherever he went, this Twain was met with tumult and applause. America took him to heart at once. Aristocratic Europe—its poets and dukes—marveled at him. Not since Charles Dickens had such wide enthusiasm been shown. London had to change its traffic rules whenever he came to town. Strange that the Old World did not resent his satire and defiant New World patriotism. Even the famous George Bernard Shaw ventured praise: "I am persuaded that the future historian of America will find your works as indispensable to him as a French historian finds the political tracts of Voltaire."

Shaw was right about Mark Twain. We have found indispensable the writings of this distinguished representative American who believed firmly that the proper study of mankind is man. "I'm from Missouri" is a proud slogan, since it portrays a man who all his life loved the fair and square and hated hypocrisy and oppression. Long before our present radio comedians Mark Twain knew that a joke about himself was twice as good as a joke about somebody else. Such a sense of humor is a valuable asset. Any man or nation that has this sense of humor is bound to be healthy, wealthy, and surely wise.

When Twain's career was at its height some of his friends were discussing in his absence who was the best-known American. Someone suggested Mark. Another friend added that since it was near his birthday they should send him some message of congratulations. They wrote a few pages of friendly greeting, then discovered they didn't know his address. Finally they decided to address the letter to "Mark Twain, Lord Knows Where." Some weeks later they received a card from Twain in London. The card said, "He did."

The United States mails then, as now, were true to the trust and running on time.

How interesting to recall the last days of this American—playing billiards (one of his favorite pastimes), smoking his pipe, or perhaps reading Carlyle's French Revolution, with the serenity that comes

from the satisfaction of a life well spent. Just a few hours before he died in 1910, Halley's comet again appeared in the sky. The Divine Providence thus seemed to signalize the beginning and the end of a great career. With his death the world lost some of its smile. America mourned for him more than it had for any other literary figure.

What was Mark Twain? His still warm presence among us and on this stamp merits some deeper title than "humorist." Humor that is only funny does not linger beyond an evening's broadcast. Twain's humor bore the thought of a serious man. His nonsense often had good American common sense back of it. In his field Twain had the leadership of a Jefferson, the literary wisdom of a Whitman, and the humor of a Will Rogers. When he said, "Always do right; this will gratify some people and astonish the rest," he was not just joking but telling the truth. If he advised "When in doubt, tell the truth," he was preaching only what he practiced. He was earnest. He was intensely human. He was true to his country and himself. That is why Mark Twain is today one of our immortals.

I cordially invite all of you to be present tomorrow morning at 9:15 o'clock when the first sheet of these new stamps will be sold at the Hannibal Post Office. This stamp concludes the group of five authors in the famous Americans series and discharges a long-felt obligation of the Post Office Department to American literature. I commend this new issue to the people of Hannibal as an honor to their most illustrious citizen; to the people of Missouri as commemorating one of their most famous sons; to the people of America as depicting a figure who with his delightful characters and intriguing stories did so much to lighten the cares and burdens of the young Nation which was then surging upward and onward to a place among the great powers of the world.

## War Exports

### EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

EDITORIAL FROM THE NEW YORK TIMES OF FEBRUARY 18, 1940

Mr. GIBSON. Mr. President, I ask unanimous consent that there may be printed in the RECORD an editorial from the New York Times under date of February 18, 1940, entitled "War Exports."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of February 15, 1940]

#### WAR EXPORTS

A number of points of considerable interest are to be found in the most recent report of the State Department on American exports of war munitions. Total exports of "arms, ammunition, and implements of war" (to use the terminology of the Neutrality Act) were valued in 1939 at \$102,298,298.51. Of this amount almost all was for aircraft and aircraft parts, the unimportant residue being distributed among rifles, artillery, ammunition, high explosives, etc. Evidently, America's role to date as a purveyor of munitions in the strict sense has been closely confined to the field of aviation.

Nearly 70 percent of all the reported munition exports consisted of aircraft to France and Great Britain, with Canada and Australia taking small additional quantities. That the percentage was not higher shows to what extent the arms race during the past year has spread beyond Europe. For in the Western Hemisphere, such countries as Peru found it necessary to buy \$1,084,000 of American military aircraft (without including equipment for civil use); Mexico, \$996,000, and Argentina, \$956,000, while in Europe, purchases by the Netherlands reached a total of \$1,088,000 for the homeland (without including an additional \$2,203,000 for civil equipment and parts), and for its East Indian possessions the significantly very much larger total of \$4,877,000.

Of more importance in many respects for the nearer future are the data on munition export licenses issued by the State Department. Licenses issued to England and France, after the amendment of the Neutrality Act last autumn made possible the resumption of munition exports, reached the sizable total of more than \$200,000,000, of which over \$150,000,000 had not yet been used at the beginning of February. No less noteworthy were the aircraft licenses issued in December and January, covering nearly \$6,000,000 for Norway and Sweden. How much of this is destined eventually for Finland is uncertain.

## A Talk Given on the Ford Sunday Evening Hour

## EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

RADIO ADDRESS BY W. J. CAMERON AND STATEMENT BY  
JAMES B. MCLEISH

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. W. J. Cameron on the Ford Sunday Evening Hour, February 11, 1940. There is also included a statement by Mr. James B. McLeish.

RADIO ADDRESS BY W. J. CAMERON

Today is the ninety-third anniversary of Thomas A. Edison's birth. Since 8 years ago last October, when ripe in years and rich in good works for his fellow men, he left us, his birthday has been reverently kept at Dearborn.

Yesterday, however—Saturday—a notable observance of the day was held at Port Huron, Mich., where the blue waters of Lake Huron and the Georgian Bay flow down through the river St. Clair. In that city Edison lived the formative years of his youth—from the age of 10 to 17—and thither he returned briefly, a young man of twenty, before making the longer eastern flight that brought him to his permanent home in New Jersey. But he never forgot Port Huron. There his immediate forbears lived, and there they sleep. Through his long and deep friendship with Henry Ford, Dearborn knew Edison in the days of his maturity—the approachable, kindly, whimsical, uncannily observant man who had sloughed off most of life's nonessentials and attained a great altitude of peace; but Port Huron knew him as a boy—a boy that played pranks, a boy in restless quest of the meaning of things. He first ventured into the world as newsboy on the local train between Port Huron and Detroit. On his lay-overs at Detroit, he attempted to read his way through the public library from end to end regardless of the subjects of the books.

Twenty-five years ago, a world-famous and aging man, on Henry Ford's special train, Edison made a sentimental journey for old time's sake over the route his work as a newsboy has made historic. As the train stopped at the little way stations people came to meet him who had known him 40 years before, some of whom had bought a paper from him dally. Well, that sentimental journey was repeated yesterday. The old train of the sixties, with its wood-burning locomotive, familiar to all visitors at Greenfield Village, pulled out on its way to Port Huron. There is no use pretending that it ran very fast or that it arrived on time. It didn't. For at every country crossing crowds were standing in the snow demanding that it stop—which it did. Men and women dressed in the styles of the sixties were waiting all along the line. Here and there a faded old uniform was seen. People waved from farmhouse porches. The little way stations were thronged. Groups ran down the right-of-way in the track of the train loathe to see it leave. It was just as when Mr. Edison himself passed that way 25 years ago.

At Port Huron the town was transformed. The harsh rawness of the day was simply beaten back before the amazing warmth of the community spirit. One saw more Paisley shawls, more crinolines and hoop skirts, more tight coats on the men, more strange cravats—and it was apparent that the men of Port Huron had spent the last 3 weeks raising beards (some of which had only reached the state of vague suggestion) to complete the scene as the boy Edison saw it more than 70 years ago. One man never again will criticize the modern styles in women's hats after seeing the best approved styles of the sixties. Port Huron rose splendidly to the occasion; it was a day neither her citizens nor her tens of thousands of visitors will soon forget.

The ceremonies were graced by the presence of that lady who, through nearly half a century of happy wedded life, prolonged the years of Edison and kept him free for his work. Besides many nationally distinguished guests, there were present men past 85, men past 90, who had known the boy Edison and participated in his playful mischief. The day ended with the first showing of the new M-G-M film, Young Tom Edison, with Mickey Rooney in the star part. One of the nicest things of the day was a remark Mickey made at luncheon; said he—"When you see the picture I hope you will not see Mickey Rooney or Andy Hardy, I hope you will only see young Tom Edison." Mickey Rooney deserves all the good things said of him. He simply captured Dearborn when he worked there on the picture. As Mr. Edsel Ford said, speaking of Henry Ford's part in the celebration—"My father did it in honor of his old friend, Thomas A. Edison, and his new friend, Mickey Rooney."

Who can compass in words the work of Edison? He was the light bringer. He was the bringer of power. He was the dis-

solver of separating distance. He was the capturer and preserver and reproducer of all that is worthy and beautiful in sound and form and motion. Wherever he pointed his magic wand, wealth, employment, refinement, help sprang up for millions of men. It is estimated that \$28,000,000,000 of the productive wealth of the United States was created by Edison's ideas, and that \$7,000,000,000 of our annual national income is earned by the continuous employment provided by those ideas, and that one man in every nine employed in the manufacturing, mechanical, and communications industries owes his job to Edison's great mind.

The sight and sound of his achievements are all about us, in the air, on the sea, along the highways of the earth, and in the homes and workshops of men. With it all he left an unstained name—a name still vital with courage and vibrant with inspiration.

STATEMENT BY JAMES B. MCLEISH

James B. McLeish, vice president of the United Electrical, Radio, and Machine Workers of America and president of C. I. O. Local 407, which comprises several units of the Thomas A. Edison Industries in New Jersey, today paid tribute to Thomas A. Edison on the occasion of the great inventor's ninety-third anniversary, which will be observed nationally on Sunday, February 11.

McLeish's statement was issued today in commenting on the radio talk delivered by Congressman ALBERT L. VREELAND, of New Jersey, over the Mutual Broadcasting Co.'s network from Washington. He also pointed out that Local 407 recently passed a resolution urging that February 11 be known as Edison Day.

In speaking of Congressman VREELAND's remarks, McLeish said: "Since the Honorable ALBERT L. VREELAND represents the New Jersey district where Mr. Edison carried on his great work to benefit humanity, perhaps there is no more logical a person to pay tribute to that great man. And may I add that in paying tribute to Mr. Edison, VREELAND has brought before our members forcibly a realization of the great debt we owe the father of our industries."

"We realize that Mr. Edison's work in electricity, his research on the thermionic tube, which was the basis of our present radio tube, is making the generation and distribution of electric power possible, and scores of other inventions have brought employment in the electrical, radio, and machine industries. It is through Mr. Edison's work that millions of us are able to perform work of which we can be proud, since we are able to bring to thousands of people the conveniences, luxuries, and pleasures of electricity and radio."

"The men engaged in electrical industries today could well recall the Congressman's words to more fully realize the debt they owe the electrical wizard. VREELAND said in his talk, 'A recent survey has shown that 1 out of every 9 people gainfully employed in the United States in all transportation, communication, and mechanical industries owes his employment directly to the inventions of Thomas Edison.' \* \* \* As far back as 1931, the industries arising directly from the inventions and discoveries of Thomas Alva Edison represented a total of over \$25,000,000,000. A conservative estimate today would be well over \$30,000,000,000. The inventions of this one man have made the United States the greatest industrial Nation on the face of the earth."

"We can be proud that we are part of that vast industrial picture. We should feel privileged to work on products invented by Mr. Edison. Every one of us in the electrical industries today directly owes a debt to Mr. Edison and recognizes the fact. This was indicated by the recent resolution Local 407 passed."

## America Must Make a Decision

## EXTENSION OF REMARKS

OF

HON. THOMAS R. BALL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

EDITORIAL FROM THE PUTNAM (CONN.) PATRIOT OF  
FEBRUARY 22, 1940

Mr. BALL. Mr. Speaker, under leave to extend my remarks, I wish to include in the Appendix of the RECORD the following editorial from the Putnam (Conn.) Patriot of February 22, 1940:

[From the Putnam (Conn.) Patriot of February 22, 1940]

## AMERICA MUST MAKE A DECISION

As the war in Europe continues, or at least that part of it which affects Finland, America is being pressed more and more for a decision on the question of support. There is little doubt now but that the sentiments of the average person in this country are in favor of Finland in her military dispute with the "red" forces of gigantic Russia. Americans admire the Finns' courage against overwhelming odds and at the same time pity them in their present strife. Now comes the question of support, particularly financial. We feel sure that a considerable segment of opinion in favor of Finland feels that financial aid to that or any other of the war-

ring countries should be extended through private sources such as Herbert Hoover's relief committee and not by the Government itself.

It is not a question of economy, as far as the American people are concerned, but rather from the standpoint of national policy. It has been argued, and logically, that the minute this country extends a loan to a nation at war we will have a direct financial interest in the outcome of that war, and history has told us that financial intervention can easily lead to military intervention. Those in this country who foster this train of thought feel strongly that if we let our sentiments entice us into helping Finland or, in fact, any other country, we are immensely increasing the chances of being drawn into wars which are none of our concern and which we should stay out of entirely.

But however sound this philosophy may be Finland's need for our support increases daily and assistance is vital to the preservation of the little northern European democracy. With this thought in mind, we must look at the picture from the opposite direction. Suppose America did, as a government, go to the aid of Finland. What would be the outcome? We agree with President Roosevelt when he said, in a talk to the Youth Congress, the chances of Russia declaring war on the United States if we helped Finland are "too ridiculous to be worth considering." We agreed with him for this reason: More than a year ago we loaned China \$25,000,000 to help her in her undeclared war with Japan and the Japanese did not make an issue of it. If that country accepted our support of its enemy without controversy, does it seem likely that Russia, which has far less reason to desire any entanglement with the United States, would do likewise?

However, irrespective of what side of this controversy history finally proves right, the fact remains that Americans must take a stand and take it very soon or the chances are that any type of support will be useless in the saving of Finland.

### The Decennial Census

#### EXTENSION OF REMARKS

OF

HON. MATTHEW A. DUNN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

#### LETTER FROM THE DIRECTOR OF THE CENSUS

Mr. DUNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication received by me from the Director of the Census with the enclosure accompanying same:

DEPARTMENT OF COMMERCE,  
BUREAU OF THE CENSUS,  
Washington, February 26, 1940.

HON. MATTHEW A. DUNN,  
Chairman, Census Committee,  
House of Representatives, Washington, D. C.

MY DEAR MR. CHAIRMAN: Many false statements and inferences are being circulated concerning the decennial census. For your information there is enclosed a letter which I sent to the New York Times in answer to the more serious misstatements. I have marked certain paragraphs for your special attention, giving the facts on the following salient points:

1. No Federal official can reveal any census information pertaining to any individual.
2. Business organizations and many other groups outside the Government requested inclusion of the income question.
3. The income inquiry does not call for total income. The extent of the question contemplated is absolutely necessary to get a proper measure of unemployment, and Congress itself recognized this necessity by directly calling for income in the 1937 unemployment census. A measure of purchasing power is essential to business for the development of broader markets for its products. For 20 years one of the most vital parts of the census of agriculture has been the question on income of farms.
4. The demand for the housing census came from business organizations outside the Government for facts which would stimulate home construction. Several of the important organizations demanding these facts are listed.

I hope that the enclosed statement will be of assistance to you in answering correctly any inquiries which you may receive from your constituents and in the consideration of census matters.

Very truly yours,

W. L. AUSTIN, Director.

Enclosure.

FEBRUARY 23, 1940.

To the EDITOR, NEW YORK TIMES:

Mr. Arthur Krock's discussion of the coming decennial census in your issues of February 22 and 23 contains so many direct mis-

statements of fact and so many inferences, based upon false assumptions, that I feel impelled to make this statement so that your readers may have the facts.

I regret that Mr. Krock gave the Census Bureau no opportunity to present these facts to him prior to the preparation of his two articles, which do gross injustice to an important statistical department of the Government, which, during 150 years, has established a record which does not justify the implications he makes.

Mr. Krock's two articles contain direct misstatements of fact and improper inferences in the following particulars:

1. That the President has power, by Executive order, to make confidential census information available to other branches of the Government.
2. That Congress in its enactment of 1929, under which authority the 1940 census is being taken (this enactment approved and signed by President Herbert Hoover), specifically limited the population schedule of 1940 to 21 questions.
3. That the question in the housing schedule calling for information on home mortgages is new.
4. That the specific questions included in the 1940 schedules were selected with the approval of the President.
5. That the "income" question in the population schedule is not authorized by law and is not "germane" to the subject of unemployment.
6. That the determination of the specific questions resulted from the pressure of New Deal agencies.
7. That the questions in the supplementary census, to be asked of each twentieth person, involve discrimination, and that they have to do with subject matter not heretofore employed in census taking and not of vital public interest.

As to the right of the President or any governmental agency to publish or make use of any confidential information collected by the census, I quote from the Census Act of 1929, passed by Congress and signed by President Hoover:

"Sec. 11. That the information furnished under the provisions of this act shall be used only for the statistical purposes for which it is supplied. No publication shall be made by the Census Office whereby the data furnished by any particular establishment or individual can be identified, nor shall the Director of the Census permit any other than the sworn employees of the Census Office to examine the individual reports."

Again quoting from section 18 of the same act:

"That in no case shall information furnished under the authority of this act be used to the detriment of the person or persons to whom such information relates."

The same enactment fixes the penalties applicable to the public (all persons 18 years of age and over) for refusal to answer the census inquiries and for intentionally giving wrong information.

The same enactment provides penalties of fine and imprisonment up to \$2,000 or 5 years in prison or both for any census employee "if he shall, without the authority of the Director of the Census, publish or communicate any information coming into his possession by reason of his employment under the provisions of this act."

That it is within the power of the President, by Executive order, as Mr. Krock contends, to set aside an act of Congress or to compel sworn census employees to commit felonies is a new theory in government.

As to Mr. Krock's statement that the congressional enactment of 1929, which is the authority for the present census, specifically limited the questions on the population schedule to 21, I quote from the law:

"Sec. 4. That the fifteenth (1930) and subsequent decennial censuses shall be restricted to inquiries relating to population, to agriculture, to irrigation, to drainage, to distribution, to unemployment, and to mines. The number, form, and subdivision of the inquiries in the schedules used to take the census shall be determined by the Director of the Census, with the approval of the Secretary of Commerce."

As to Mr. Krock's charge that the question in the housing schedule calling for facts on home mortgages is new and to his statement that "the American people have heretofore taken the view that none of this is a census taker's business," I call attention to the following, quoted verbatim from the census law under which the census of 1890 was taken (this law was approved and signed by President Benjamin Harrison):

"That it shall be the duty of the superintendent of census, in addition to the duties now required of him by law, to ascertain the number of persons who live on and cultivate their own farms and who live in their own homes, and the number who hire their farms and homes, and the number of farms and homes which are under mortgage, the amount of mortgage debt, and the value of the property mortgaged. He shall also ascertain whether such farms and homes have been mortgaged for the whole or part of the purchase money for the same, or for other purposes, and the rates of interest paid upon mortgage loans."

The census of 1900, taken during the administration of President McKinley; the census of 1910, during the administration of President Taft; the census of 1920, during the administration of President Wilson all included questions on home ownership or rental and, if owned, free or mortgaged. The census of 1930, under President Hoover, called for information on home owned or rented; value of home if owned, or monthly rental if rented, and likewise called for information as to whether or not there was a radio set in the home.

I should like to call Mr. Krock's attention to the census of 1850 under President Zachary Taylor which required all persons to report the value of real estate owned, and to the census of 1860

under President James Buchanan which required all persons to report the value of real estate owned together with the value of their personal estates. In the census of 1860 Abraham Lincoln reported the value of his real estate and the value of his personal estate as did all other persons.

Those who charge that the questions in the 1940 census violate privacy should know that they will not be called upon to give an appraisal of their personal property as in the census of 1830.

As to Mr. Krock's intimation that the questions in the 1940 census schedules were selected under approval or suggestion of the President, I should like to say that, to my knowledge, the President has not seen these questions and to assert that no indication nor intimation as to the selection of questions came from the White House. If Mr. Krock jumped to the conclusion that the President favored these individual questions because of his formal proclamation calling upon the public to cooperate in the 1940 census, he should know that each President since 1900 has, prior to decennial censuses, issued such formal proclamations; that the draft of this message was prepared by Census Bureau employees, in line with the contents of previous presidential proclamations, and then submitted to the Bureau of the Budget and to the Department of Justice for their approval, before going to the White House. The implication that this proclamation was issued in response to criticisms of the contents of the schedules will not stand up in view of the fact that the draft of this formal proclamation was prepared many weeks ago, before any objections to the questions had been registered.

As to Mr. Krock's charge that the "income" inquiry in the population schedule is not in line with the precedent of congressional enactment and that it is not "germane" to the subject of unemployment, I should like to call his attention to the congressional enactment calling for the Unemployment Census of 1937. That law stated that its purpose was to provide information about persons "partially employed or unemployed and their dependents and income." The subsequent census of unemployment contained the question on annual income as required by that law.

Questions on income have been an important part of the census of agriculture for 20 years and the information yielded as to income from sale and use of farm products has been vital in legislative consideration of the farm problem. The 1930 census of agriculture showed that approximately 3,000,000 farms—nearly one-half of all farms—had incomes from the sale and use of products amounting to \$1,000 per year and less.

As to Mr. Krock's contention that income is not "germane" to the subject of population and unemployment I should like to say that wage income is a question relating in a very vital sense both to population and to unemployment. While the returns from this question will be of great service in the form of totals to be used in computing national income, the greatest value appears when they are used as a basis for classifying the population. Business organizations can plan their marketing activities much more effectively if they know in what areas high-income families are to be found, and in what areas low-income families, and also something about the other population characteristics which are found in combination with high and low income.

In other respects the relation between population and income is even more vital and fundamental. The annual increase in the population is now far smaller than it was a few years ago, and the number of children is rather rapidly declining. It has been frequently stated that a disproportionate fraction of these children are growing up in homes with very low incomes and thus receiving inadequate preparation for the duties of citizenship. Income data in the census will show to what extent this condition actually prevails. The income figures tabulated in combination with education will show the extent to which low income might be due to lack of education. Income tabulated in combination with age will show to what extent individual members of the American people are improving their economic status with increasing age, and also to what extent those approaching old age are compelled to get along on lower incomes.

The income question relates directly to unemployment. Under present conditions any statistics on employment which are to be of real use must go further than giving simply the number of those who have no employment whatever. It is necessary in addition to have some measure of the extent of employment of those not strictly unemployed but nevertheless very inadequately employed. The best possible measure of the adequacy of employment is the amount of income which the person receives from it, and when the amount of wage income is tabulated in combination with age, occupation, industry, and other characteristics shown in the population census, it becomes one of the most important of all factors available for the analysis of the unemployment situation.

The income question was used in the test census taken in two Indiana counties last summer, and it met with little resistance and was answered freely.

Mr. Krock's inference that certain questions on the 1940 schedule were included as a result of the pressure of New Deal agencies is devoid of all basis of fact. On the contrary, the very questions to which he registers objection were urged upon the Census Bureau by conservative businessmen and business organizations.

Businessmen, trade associations, chambers of commerce, advertising agencies, and marketing experts have long urged the inclusion of the question on income. Business has always wanted information on wages and salaries to determine the extent of national, regional, and local mass-buying power in the field of con-

sumers' goods. The value of these statistics is self-evident to every businessman, manufacturer, wholesaler, retailer, and others engaged in marketing goods. The fact is that the question on income in the 1940 census does not call for total income. It merely asks how much the person received in wages or salary, including commissions last year up to \$5,000. If he made more, he merely answers "over \$5,000."

The construction of this question, with its \$5,000 ceiling, makes it perfectly evident that its intention is to measure purchasing power for consumers goods and designate zones of high and low purchasing power. Anybody knows that salaries and wages below \$5,000 are expended largely for consumers goods, and that income above \$5,000 is not so expended. The very nature of the question therefore explains its purpose.

A year ago a large group of people prominent in business and economics was called to Washington to examine proposed census questions. This conference expressed particular satisfaction with the questions relating to migration, employment, unemployment, and economic status. Among those who attended this conference were Dr. Louis Dublin, of the Metropolitan Life Insurance Co.; Dr. David R. Craig, president of the American Retail Federation; Mr. Noel Sargent, secretary of the National Association of Manufacturers; Gen. Robert E. Wood, chairman of Sears, Roebuck & Co.; Sidney R. Katz, of the Congress of Industrial Organizations; Miss Margaret Scattergood, of the American Federation of Labor; and Dr. Stacey May, of the Rockefeller Foundation.

Letters and resolutions calling for statistics on earnings of the American people are in the files of the Census Bureau from such organizations as the American Home Economics Association, the National Industrial Conference Board, the Actuarial Society of America, the Population Association of America, also some ministers and church councils, Y. M. C. A.'s, insurance companies, automobile manufacturers, public utilities, labor unions, advertising agencies and market analysts, publishers of magazines and newspapers, and publishers of farm papers. One of these requests came from a conference sponsored by the National Bureau of Economic Research, which includes directors from such groups as the American Engineering Council, the American Management Association, the National Publishers Association, and the American Federation of Labor. This conference reported "the conference went on record as strongly recommending the inclusion of such questions (questions on income) in the Census."

It should also be remembered that this income question was approved unanimously by the Advisory Committee of the Census Bureau, composed of nongovernmental people, and including Dr. Robert E. Chaddock, of Columbia University; Dr. J. Frederick Dewhurst, of the Twentieth Century Fund; Paul T. Cherington, market analyst; Dr. William P. Ogburn, of the University of Chicago; Dr. Murray R. Benedict, of the University of California; and Dr. Willard R. Thorp, of Dun & Bradstreet.

Demand for the housing census likewise came from business. The organizations and individuals which expressed their desire and need for a housing census included the National Retail Lumber Dealers Association, the National Sand and Gravel Association, the Structural Clay Products Institute, the Metal Window Institute, the National Lime Association, the National Paint, Varnish and Lacquer Association, and others. The National Association of Real Estate Boards passed a resolution requesting Congress to authorize Census questions on housing, home ownership, and home finance. The National Association of Housing officials also petitioned Congress, as did the housing boards of New York State and Pennsylvania. William Green, president of the A. F. of L., called the housing census "a matter in which labor is particularly concerned." Other organizations supporting the housing census were the American Society of Planning officials, the American Public Health Association, the American Home Economics Association, the Associated General Contractors, the United States Conference of Mayors, the American Institute of Architects, the Producers Council, the Construction League of America, and the National Association of Master Plumbers. Hundreds of regional organizations have likewise expressed their interest.

As to the charge that the supplementary questions, to be asked of each twentieth person, involve discrimination and that they deal with subjects not heretofore employed in census taking, I should like to say that the very questions which Mr. Krock regards as invading privacy—requiring women to reveal marital status, number times married, and number of children ever born—have been used in varying ways since 1880 and that the census of 1890 under President Benjamin Harrison and the census of 1900 under President William McKinley and that of 1910 under President Taft called for much the same information.

One other query in the supplementary census calling for information as to whether or not a veteran was employed in the 1930 census under President Hoover, and has been included at the suggestion of the Veterans' Administration and the American Legion.

The only absolutely new question in the supplementary census is that asking whether or not the person has a social-security number and asking the range of deductions made from salaries or wages for social security. As a matter of fact the real reason for asking these supplementary questions of only 5 percent of the population is that most of the questions on it are old and that a sample involving between six and seven million will be sufficient to continue appraisal of the trends previously shown, and we are thus sparing 95 percent of the people the time required to answer these questions. Rather than being a step involving discrimination, it is a step in favor of public convenience.

The censuses of the United States, through 150 years, have made available the most complete and accurate statistical record possessed by any nation. At every decennial census there has been some resistance to new questions, introduced to obtain information called for by the increasing complexity of American life. Fortunately, the public generally appreciates the value of census statistics and cooperates willingly. This is evident from the fact that in all these years it has rarely been necessary to resort to compulsion. It is most regrettable, therefore, that statements and implications not supported by facts should be circulated to impair the efficiency of this once-in-ten-years study which comes more directly home to every one of our 132,000,000 people than any other activity of the Federal Government.

If Mr. Krock fears that the census violates the guaranties of the Bill of Rights, he should remember that the Nation's founders also wrote the provision for decennial censuses in the Constitution and it was they who provided for compulsion in the answering of census inquiries.

Very truly yours,

DIRECTOR OF THE CENSUS.

### The 1940 Census

#### EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. HARTER of New York. Mr. Speaker, the questions which Mr. Hopkins has prepared for use in quizzing the citizen in the 1940 census reach far beyond that which the wording of the law contemplates. We should not be surprised, however, as his activities while heading the W. P. A. show his leanings. These questions might well be expected in a totalitarian state but under our republican form of government they are unthinkable. The united efforts of the Members on the Republican side to save our citizens from being subjected to these very personal questions seem doomed. The very large number of bitter complaints at this further dictatorial direction find clearly demonstrates the righteous indignation which the questions have aroused. Centralization of power is leading us steadily but surely to more and more losses of our standing as a free and unfettered people. I predict that the time is not far distant when the people will see to it that our ever-increasing power in Washington be put in reverse. States' rights demand and entitle us to decentralization rather than more centralization. Economy dictates decentralization; aid for unemployment dictates it; aid for those in need dictates it and business can well benefit.

The census questions are only another stair to the throne of one-man control. The people of Erie County, N. Y., are all too awake to the seriousness of this situation. As evidence of their feeling, I want you to hear a resolution offered at a luncheon held under the auspices of the G. O. P. Women's Council in Buffalo last Saturday. This resolution was offered by Mrs. William C. Uhrhan, president of the Martha Washington Club, at the luncheon of over 500 people—almost all of them women—housewives and women who work in Erie County's industrial organizations. It was unanimously adopted, and reads:

Whereas the heretofore reliable and useful United States census established 150 years ago has been degenerated into a political snooping expedition according to advance publication of questions to be asked in the 1940 census; and

Whereas the intimate personal questions listed in the census forms constitute a flagrant invasion of the privacy and independence of American citizens and families; and

Whereas Federal requirement of accurate answers to all questions is compulsory under threat of fine and imprisonment, a form of inquisition entirely in conflict with the rights and privileges of American citizenship: Now therefore be it

Resolved, That this assembly under the auspices of the Erie County Council of Republican Women does hereby protest this bureaucratic procedure toward total regimentation of the people of the United States by government; and

That we call upon all citizens to repudiate unwarranted political snooping by the Federal Government in the private affairs of the people and to support for election to Federal office only candidates who are pledged to observe the traditional rights and privileges

of American citizenship and who will resist from any quarter efforts to regiment free men and women and undermine constitutional self-government.

### Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

EDITORIAL FROM THE POTTERS' HERALD

Mr. LEWIS of Ohio. Mr. Speaker, the action of this House last Friday, February 23, in passing the bill to extend the so-called Reciprocal Trade Agreements Act for another period of 3 years, thereby fastening upon the country for that period of time the policy of trading off American markets for some of our products for the purpose of thereby purchasing foreign markets for certain other of our products, recalls to mind the fact that one of the industries whose American markets are thus affected is the pottery industry. The fact that the people who are employed in that industry are awake to the situation and to the threat to their employment and jobs is clearly shown by an editorial appearing in the Potter's Herald of East Liverpool, Ohio, the official publication of the National Brotherhood of Operating Potters in its issue of February 22, 1940, which is as follows:

#### CONGRESS SHOULD EXPLAIN

The Congress is now considering, upon the demand of Secretary of State Hull and other State Department intellectuals, supported by President Roosevelt, the continuance of the reciprocal-trade treaties.

These trade treaties are contrary to the Constitution, are contrary to the express policy of every Democratic-controlled Congress from 1882 to 1932. They are contrary to and virtually set aside and nullify the protection of jobs and standards of living which American workers received through the Asiatic exclusion law, restrictive immigration laws, and fair labor standards law.

Secretary of State Hull, in serving as Congressman and Senator, bitterly opposed the granting of taxing and treaty-making power to any appointed officials of our Government.

Every leader of democracy, prior to 1933, has publicly opposed this type of legislation.

Daniel J. Tobin, vice president of the American Federation of Labor, president of Teamsters International Union, and chairman, of Democratic Labor Committee in 1932 and 1936, a keen student of world and labor conditions, in a leading editorial in the Teamsters February Journal, says, in part:

"The labor movement is destroyed in most of the countries of the world. That includes the Americas, north and south of the United States. If the war conditions continue for 2 years from now, what is left of the labor movement in the European countries will be destroyed because of the economic destruction due to war. \* \* \* Only those who close their eyes or through their ignorance or blindness to war conditions can fail to see that with the destruction of value in the European countries no matter who wins the war the economic conditions of those countries will be destroyed. \* \* \* The markets of the world will be drawn down and cheap labor will be forced upon all the workers of the European countries so that they can help pay the expenses of this awful catastrophe now obtaining in Europe and Asia.

The hours of labor established by the French workers' union 2 years ago have been totally set aside and instead of a 40-hour week they are now working 52 and 56 hours and will soon be working 60 hours, to meet the demands of a nation engaged in war and in danger of destruction. The trade unionists of England are alarmed and recently held a conference with the leaders of the French labor movement endeavoring to plan some method of procedure to protect the English worker; or let us put it another way—fearing that war will cause the destruction of the conditions which labor enjoys in that country similar to what has happened in France. Does anyone who has any sense believe that the economic conditions of the United States can be preserved and that union-labor wages can continue to obtain here if the world is flooded with cheap-labor products and the country invaded by the products of labor of nations driven to destruction by war expenditures?

In view of the statement of conditions so ably made by President Tobin and the historic policy of the Democratic Party we deem it fair to ask why the change in policy since 1932.

Can it be possible that international bankers, our few exporters, and our automobile, office appliance equipment, and canning trusts have been able to change this historic Democratic policy.

Surely, some explanation should be made for this most unusual change in attitude at a time when it should be apparent to everyone that American markets will soon be flooded with the products of the pauper-wage-paid workers of Europe and Asia.

Your Congressman and your Senator should know your views on reciprocal-trade treaties, the continuance of which jeopardizes your job opportunities and your standards of living.

### Omnibus-Transportation Bill

#### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

#### RESOLUTION OF ESTHERVILLE LODGE, BROTHERHOOD OF RAILROAD TRAINMEN

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks I wish to include the following resolution which I received from the Estherville, Iowa, Lodge of Brotherhood of Railroad Trainmen, regarding the omnibus-transportation bill:

ESTHERVILLE, IOWA, February 18, 1940.

To Our Honorable Representatives, Congress of the United States, Washington, D. C.:

The following resolution was adopted by Esther Lodge No. 352, Brotherhood of Railroad Trainmen at a regular meeting held February 18, 1940:

"Whereas it has come to our attention that the omnibus transportation bill is now in the hands of conference committees in both Houses of Congress; and

"Whereas said bill provides for consolidations, mergers, and abandonment of railroads which, we are informed, would add approximately 200,000 railroad workers to the army of unemployed; and

"Whereas such legislation is in direct opposition to our Government's policies regarding the unemployment situation, one of the greatest problems with which we are confronted, and

"Whereas an amendment, known as 'the Harrington amendment,' has been introduced in Congress by Congressman HARRINGTON, from Iowa, which prevents the Interstate Commerce Commission's approval of consolidations and mergers where unemployment is involved: Therefore be it

*Resolved*, That the membership of Esther Lodge No. 352, Brotherhood of Railroad Trainmen, in regular session this 18th day of February 1940, vigorously oppose the passage of the omnibus transportation bill, or any other transportation bill, without the Harrington amendment; and be it further

*Resolved*, That we respectfully request that our representative in Congress be urged to insist and request that the Harrington amendment be retained in any transportation bill reported out by committees; and be it also

*Resolved*, That in the event said bill or any other transportation bill is reported out in which said amendment is not retained, we respectfully request that our representatives vigorously oppose its passage. Be it finally

*Resolved*, That the secretary of this lodge affix his signature and the seal of this lodge to this resolution, forwarding copies to our representatives in Congress, members of both conference committees, officers of our State legislative board, President A. F. Whitney, and spread a copy upon the minutes of this lodge."

J. E. WEE,

Legislative Representative.

Attest:

O. L. Wee,

Secretary, Lodge 352, B. R. T.

### Missouri Shares in Benefits of Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. C. JASPER BELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. BELL. Mr. Speaker and colleagues, I wish to call your attention to the specific benefits received by the State

of Missouri under the Trade Agreements Act, the extension of which we are debating today and will perhaps vote on today.

A most interesting statement came to me from Mr. Clyde Miller, district manager of the Bureau of Foreign and Domestic Commerce at St. Louis, Mo. In his statement reflecting the studies made under his direction, and by the Bureau, we can see and appreciate what has been accomplished in Missouri, a State located in the center of our Nation, and which would not be considered a heavy exporter of goods in the sense that States along our seaboard are.

His factual statement reads as follows:

#### THE SIGNIFICANCE OF FOREIGN TRADE TO MISSOURI

The drastic shrinkage of our foreign trade during the depression year, made necessary the trade-agreements program, which was authorized on June 12, 1934, by means of an amendment to the Tariff Act of 1930. Between 1929 and 1933, the year before the Trade Agreements Act was passed, our total exports declined from \$5,241,000,000 to only \$1,675,000,000. More disturbing, our trade had fallen off proportionately more than had the international trade of the world as a whole.

Missouri is both directly and indirectly dependent upon foreign trade for continued economic development and sustained prosperity. It needs foreign markets for the surplus products of its factories, its farms, and its forests. It shares in the improved domestic market created when, by selling their surplus commodities abroad, other sections of this country increase their purchasing power. Total exports reported as originating in Missouri fell from \$49,296,300 in 1929 to \$9,451,200 in 1932. As the volume of exports from Missouri, and the United States as a whole, dropped, purchasing power throughout the State was reduced, large surpluses accumulated, and prices fell. The total accountable income of Missouri fell from \$2,104,000,000 in 1929 to \$1,277,000,000 in 1932, and cash farm income declined from \$354,000,000 to \$149,000,000 between the same 2 years.

However, according to a survey which has just been completed by the Foreign Trade Bureau of the St. Louis Chamber of Commerce, St. Louis alone during the year 1938 exported \$24,600,000 of manufactured goods to 97 foreign countries.

#### BENEFITS TO MISSOURI FROM THE TRADE-AGREEMENTS PROGRAM

Since the Trade Agreements Act was approved, agreements have been negotiated with 21 countries. With so many variables in the economic situation here and abroad affecting the movement of trade it is difficult to determine precisely the extent to which trade agreements have helped in the restoration of foreign markets for American farm and factory products. It is significant, however, that United States exports to the countries with which trade agreements were in force showed an average annual increase of 42 percent in 1936-37 over 1934-35, while exports to all other countries showed an increase of only 26 percent. Annual average exports to trade-agreement countries in 1937-38 were 61 percent above the 1934-35 average; exports to non-trade-agreement countries increased only 38 percent during the same period. Missouri undoubtedly shared in these increased exports.

#### CONCESSIONS OBTAINED WHICH BENEFIT MISSOURI FARMERS

Grains and flour, meat and meat products, boots and shoes, electrical machinery, chemicals and allied products are examples of important products of Missouri for which expanded and more stable foreign outlets have been obtained in trade agreements.

Wheat growers and flour millers of Missouri are benefited by concessions obtained for wheat and wheat flour contained in 11 agreements. The United Kingdom removed the duty on wheat, two countries bound the rate of duty, Canada reduced the duty, and two countries granted annual quotas. On wheat flour, seven countries either reduced the duty or gave assurances that existing duties would not be increased. The United Kingdom agreement removed the margin of Empire preference in five colonies.

Missouri producers of corn and oats are particularly interested in concessions obtained in 8 agreements on corn and corn products, and in 10 agreements on oats and oat products.

The livestock farmers and meat packers in Missouri benefit directly from concessions obtained in 17 agreements on various kinds of meat and meat products. Reductions in the tariff rates on lard have been obtained from eight countries, the duty was removed by one country, and the duty was bound against increase or increased annual quotas were obtained from four countries. The United Kingdom increased the annual quota for American hams and bound them on its free list. Twelve other countries granted some form of tariff concession on American hams, bacon, fresh, frozen, or cured pork, beef, and veal.

#### BENEFITS TO MISSOURI INDUSTRY

Of particular interest to the Missouri manufacturers of leather goods are the concessions obtained on leather and leather manufactures in 19 agreements. Four countries reduced their duties on leather footwear and selected leather manufactures; one country bound its duty on leather footwear; two countries bound their duties on selected leather manufactures; one country gave assurance that the quota would not be decreased on leather footwear; and many other concessions were received on raw hides and skins, upper leather, patent upper leather, and other selected leathers.

Provisions facilitating the restoration and expansion of America's export trade in electrical machinery are contained in 16 agreements. These provisions include reductions in duty, assurance against any increase being made in the existing rates of duty, and removal of the rates of duty on such electrical machinery and apparatus as electrical household refrigerators, telephone and telegraph apparatus, vacuum cleaners, electric heating and cooking apparatus, incandescent light bulbs, power-plant equipment, radios, and on a great variety of other electrical appliances.

Missouri's manufacturers of chemicals and related products benefit directly from the concessions which have been obtained for such articles in 17 trade agreements. Ten countries granted reductions on various medicinal and pharmaceutical preparations; 3 countries reduced and 2 countries bound the duties on biologics. Nine countries reduced or bound the tariff rates on various industrial chemicals. On paints and pigments, 10 countries reduced the duties, 1 country bound its duties against increase, and one bound its duties and increased the quota.

In addition to the direct concessions obtained, there is a most-favored-Nation provision in each trade agreement which automatically extends to American products reductions or limitations on tariff rates granted by the agreement country to countries other than the United States. For example, lower tariff rates on some 600 items formerly extended by Canada to France but not to the United States, now apply to American commodities. Among those Missouri is interested in reductions on meat products, on wheat and flour, on certain leather goods, on electrical apparatus and supplies.

#### BENEFITS TO MISSOURI LABOR

Many thousands of the persons employed in Missouri owe their jobs to the export trade of the State. The trade-agreements program by reopening and expanding foreign markets increases the demand for labor. When foreign countries increase their demand for American products, industry must employ greater numbers of wage earners to produce these commodities. Increased employment in industries manufacturing for export provides enhanced domestic consumer purchasing power and creates greater employment opportunities for those engaged in supplying the domestic market.

#### MISSOURI BENEFITS AS THE UNITED STATES BENEFITS

There is a direct interrelationship between prosperity of any section of the country and prosperity of the country as a whole. Thus, the concessions obtained on American products not produced in Missouri indirectly benefit the citizens of the State by creating increased domestic demand for meat, shoes, wheat, machinery, tools, automotive parts, cotton goods, paints and drugs, and the many other products of Missouri.

Expanding foreign and domestic trade means greater tonnage to be handled by railroad, steamship, and truck transportation industries. This in turn means more and steadier employment in these lines as well as in such service industries as banking, brokerage, advertising, insurance, and warehousing.

As a sample of what industrialists think of the Reciprocal Trade Agreements Act, I wish to call your attention to a letter from Mr. F. Edward O'Neil, president of the Fulton Iron Works Co. His letter is typical of many that I have received from my home State.

Mr. O'Neil's letter reads as follows:

You have no doubt heard of the political agitation to prevent an extension of the reciprocal trade agreement powers of the Department of State.

The important thing is whether or not the policies inaugurated by Secretary Hull in making reciprocal-trade agreements are of value to the wage earners, businessmen, and farmers of the country. It does not take much investigation to show that substantial benefits have accrued to all of these classes.

In St. Louis the question was raised as to what export trade meant to our community. Through the foreign-trade bureau of the St. Louis Chamber of Commerce a complete and detailed survey was made. Over 2,000 questionnaires were sent out. The replies showed that St. Louis exported in 1939, \$24,000,000 worth of manufactured goods and imported between fourteen and fifteen million dollars' worth of articles, most of them being raw materials, such as coffee, cocoa, rubber, etc.

If these figures are typical of other cities, little can be said in condemnation of a policy which has thus helped the exporter and the importer. We in foreign trade are all thoroughly convinced that a large portion of this business represents the results of Secretary Hull's activities, particularly since the figures do not extend into the period of the war in Europe.

A break-down of shipments of exports from the United States to Cuba, for instance, shows the following sources from which the goods originate:

July-September

	Percent
Farmers.....	46.5
Manufacturers.....	39.9
Lumbermen.....	7.5
Miscellaneous.....	6.1

In the first three-quarters of 1939 we exported to Cuba alone over 650,000 tons of commodities, one-seventh of which was rice from Louisiana. In order of tonnage the list is as follows: Wheat flour, lumber, petroleum, chemicals, fruits and vegetables, iron and steel, food meats and lard, textiles, paper, autos and machinery, grains, wire and pipe, and glass.

As a measure of the importance of exports to our national economy it might be mentioned that statistics covering the year ending in June 1939 show that the United States contributed over 36 percent of goods imported by Latin America. This is more than Germany, Great Britain, and France combined shipped to that market. Plainly, this is no minor item in our economic life; nor are the policies which brought this about lightly to be sacrificed to the ambitions of any particular group.

I would like to emphasize that the exporters in this district are fearful of what may be in store for them in this session of Congress when the reciprocal trade agreements program is attacked. We think that any reversal of this policy will be gravely detrimental to the interests of business and labor in Missouri.

This statement would not be complete without calling your attention to the opinions voiced by three great newspapers in my home State. They reflect the public opinion of the residents of my State. Those newspaper-editorial comments I wish to insert are from the St. Louis (Mo.) Post-Dispatch, the Kansas City Star, and the Kansas City Journal.

[From the St. Louis (Mo.) Post-Dispatch of January 9, 1940]

#### LABOR AND THE TRADE AGREEMENTS

An end of Secretary Hull's reciprocal-trade policy and repudiation of the agreements already signed has been demanded by the Wage Earners' Protective Conference, the A. F. of L. tariff group.

Leaders of organized labor, including John L. Lewis, have spoken against these multilateral pacts before this, but hardly in the sweeping terms with which Matthew Woll, a vice president of the federation, has sought to throw the weight of his organization against the administration in this instance.

Of course, it is obvious that some portion of the American working class is directly affected by these pacts. As an example, one can cite the effect of the Czech agreement on our shoe workers.

However, as James M. Carey, president of the C. I. O.'s clerical workers, has pointed out, it should not be forgotten that these so affected are only a handful among our workers. Their loss is more than offset by the reduction in living costs and the general increase in industrial activity brought about by the treaties.

Before pressing these demands, so far articulated only by a minority group in the labor camp, the high commands of both the A. F. of L. and the C. I. O. should ask themselves whether they are ready to adopt a stand that is penny-wise and pound-foolish. In other words, are they ready to raise prices—prices that all their members must pay—for the benefit of only a few holders of union cards?

[From the Kansas City (Mo.) Star, December 26, 1939]

#### THOSE FLOODING IMPORTS

The other day Senator McNARY, of Oregon, declared that the recent wartime depreciation of the currencies of France, Great Britain, and Canada had released upon this country a flood of imports which were competing with American products, and, inferentially, undermining our economic structure.

The latest available figures, however, far from bearing out Senator McNARY's assertion, appear to contradict it. Our imports from Canada in September, indeed, did show an increase of some \$23,000,000 over the corresponding month of 1938. But our exports to the same country rose by nearly \$36,000,000. In the case of Great Britain our imports for that month were higher by \$1,000,000, our exports by \$8,000,000. As for our trade with France, the September imports actually were off four and one-half million dollars, while the exports increased slightly.

In other words, there is no statistical sign of any such "flood" as the Republican leader mentioned. On the contrary, the figures imply that, despite the dislocations of the first month of the war, the trade pacts were continuing to stimulate international commerce and to stimulate it primarily in the form of larger exports from the United States.

[From the Kansas City (Mo.) Journal, January 8, 1940]

#### THE WRECKING CREW

The Republican minority in Congress is ganging up on the law empowering Secretary Hull to negotiate trade treaties and will attempt to establish that these reciprocal agreements have hurt the farmer. Their conduct is consistent with past Republican tariff policy. In the matter of tariffs the Republicans have sold the farmer down the river for half a century while pretending to be his friend.

The Hull treaties represent the first attempt in our economic history to approach the tariff from a national rather than a selfish, sectional viewpoint. Under the old method the group with the most to spend on a tariff lobby got the most out of the tariff law. Mr. Hull has put an end to lobbying, logrolling, and all the other abuses which make the tariff a sordid chapter in our national affairs.

The last Republican tariff, enacted in 1930, was directly responsible for the establishment of foreign-trade barriers against American commerce. It aided in destroying the farmer's market. Hundreds of economists warned against its effects. Even Herbert Hoover signed it reluctantly. But the grabbing, selfish interests had their way. American industry and agriculture, instead of

being protected, were dealt a crushing blow in those early depression years when they needed a stimulant rather than a club.

"The proposed changes in the trade-agreements law include one to require their ratification by Congress. There can be no reasonable objection to that. In the hands of a State Department controlled by special interests, the law could be grievously abused. The main thing is to keep its principle intact, to avoid a return to the old grab-bag system under which Congressmen swapped favors and the tariff emerged in a hopeless jumble."

These statements are conclusive of the consensus of opinion of the majority in Missouri. I know that if submitted to a referendum vote, Missourians would vote to continue the reciprocal trade agreements program because of the benefits which have accrued to our State and the realization of Missourians that only through this program can the artificial-trade barriers erected under Republican administration be eliminated.

### Stream Pollution Legislation

#### EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. ELSTON. Mr. Speaker, within a few days this House will undertake the consideration of a bill designed to control and eliminate so far as possible the menace of water pollution in the United States. This bill (S. 685) sometimes referred to as the Barkley-Spence bill, passed the Senate last year. In the form in which it passed the Senate it was virtually a repetition of a similar bill which passed both Houses in the Seventy-fifth Congress and was later vetoed by the President, solely because of the manner in which it provided for the authorization of loans and grants-in-aid. Not only have the President's objections been fully complied with in S. 685 but on February 15, 1939, the President directed a special message to Congress in which he expressed the hope that at this session of Congress the whole problem of water pollution would receive our attention. In the same message he added that he fully subscribed to the general purpose of the act which he had vetoed and that it was long overdue for the Federal Government to take vigorous leadership on this subject.

S. 685 as it passed the Senate provided for grants-in-aid and loans from the Federal Government to the States or their subdivisions as well as industry. When this measure was first reported to the House by the Committee on Rivers and Harbors the provision for grants-in-aid to industry was eliminated. That committee has now recommended that the provision for grants-in-aid to States and their subdivisions be also eliminated. Hence the bill to be considered by the House will provide only for Federal loans, the same to be made through the Reconstruction Finance Corporation. An authorization for \$700,000 per year for surveys and studies of stream pollution has also been stricken from the new bill in the interest of economy. The only appropriation now sought to be authorized is the sum of \$250,000 per year for expenses incident to the administration of the act. It is contemplated that the act will be administered through the United States Public Health Service. Within that division a board is provided to assist in administration. It will consist of four commissioned engineer officers of the Public Health Service, a majority of whom shall be experienced in sanitary engineering, and the Chief of Engineers of the United States Army.

This bill is the culmination of 26 years of intensive study of stream pollution on the part of the Public Health Service. This agency has been working with the States in the solution of health problems of mutual interest since 1880. Better health has been obtained without infringing upon States' rights. Based upon past experience, Federal and State cooperation is the proper method for handling the problem of stream pollution rather than through full and complete Federal control. S. 685 seeks to handle the stream-pollution question by the cooperative method. Those who object to this measure do so primarily because they claim its provisions are not drastic enough. They would give to the Federal Gov-

ernment the power, through injunction proceedings, to compel every State, municipality, or other public body, as well as industry, to cease stream contamination. A more palpable invasion of State's rights can scarcely be imagined. The willingness of the States to solve the water-pollution problem is illustrated by the rapidity with which they have ratified the interstate compacts essential to enforcement through the cooperative plan. It is further demonstrated by results accomplished during recent years.

Surg. Gen. Thomas Parran, of the United States Health Service, pointed out in the committee hearings that during the last 5 or 6 years a great increase has taken place in the amount of sewage-treatment works which have been constructed, many of which were made possible through Federal grants-in-aid. Data collected by the Public Health Service shows that 55 percent of the urban population of the country is served by sewage-treatment plants, representing an increase of 25 percent in sewage treatment during that period. Dr. Parran testified that more progress has been made in municipal pollution abatement in the United States during the past 6 years than in the preceding 25 years. There has not developed the necessity to resort to the drastic methods proposed, for example, in H. R. 7971, sometimes referred to as the Mundt bill, even if we were willing to assume that Congress would permit, or the American people tolerate, an unprecedented surrender of States' rights. Fancy if you will the spectacle of the Federal Government instituting injunction proceedings against a State, a city, county, or township, and possibly the imposition of a fine or jail sentence against their officers for noncompliance with the edict of a Federal agency. I am not convinced that those who believe in the sanctity of States' rights are ready to adopt that type of legislation.

Machinery for enforcement already exists within virtually every State in the Union. The nuisance of pollution may be abated by injunction proceedings within the States and, in many instances, specific penalties are provided for those who contaminate our waterways. Supplementing these remedies will be the authority conferred upon the States acting together under the interstate compacts authorized by the Seventy-fourth Congress for the purpose of combating the alarming increase in water pollution. The legislatures of the States to which compacts authorized by this act have been submitted have, without hesitation, ratified them. Notable among the compact agreements is the Ohio River water sanitation compact between the States of Illinois, Indiana, Kentucky, New York, Ohio, Pennsylvania, Tennessee, and West Virginia.

A further compelling reason against the necessity for the Federal Government to assume the extraordinary control over the States contemplated by the Mundt bill—even if we were to assume that such power was within constitutional limitations—is the willingness of local bodies and industry within affected areas to cooperate. In his testimony presented to the Rivers and Harbors Committee in support of legislation of the cooperative rather than the coercive type, General Parran further said:

In my view, the States and industries will be glad to have this Federal assistance so that a few years in the future, instead of having a job which is 50 percent done, we shall have a job which is 75 or 80 percent done. And if there still remain a recalcitrant 20 or 25 percent which is not willing to clean up as a result of this type of law, then I think will be the time to consider more stringent regulatory Federal legislation.

General Parran also stated that in New York State alone during the past 6 or 7 years more progress has been made than in all of the years previously, largely as a result of Federal assistance.

Judging from letters recently received by Members of Congress, the objection to S. 685 comes principally from the Izaak Walton League. While this organization favors the objectives of this bill, it objects to cooperative methods. It insists upon drastic Federal control and approves of enforcement by Federal injunction proceedings against the States, their subdivisions, and industry. That the Members of the House may know to what extent legislation similar to S.

685 has been approved, I am appending hereto a list of the groups and organizations referred to in the committee hearings as endorsing it. To this imposing list might be added the States themselves and the countless municipalities or other public bodies, the lives of whose citizens are being menaced by contaminated water. The population of the Ohio River Basin alone is 17,000,000 people. Raw, untreated sewage from localities containing almost 6,000,000 persons is discharged daily into the Ohio River and its tributaries. In addition thereto treated sewage from areas containing 2,500,000 additional persons is discharged into the Ohio River and its tributaries every day. Six million two hundred thousand persons are supplied with water from the Ohio and its tributaries.

The time was when the Ohio River flowed freely and thus created, to a limited extent, a natural process of purification; but it is now a series of navigation dams consisting of more than 50 in number. During low water these dams retard the flow and create a series of pools. Near the larger cities they are open cesspools and from such places these cities derive their water supply. I am sure that the views of millions of people in this and other similar areas in the United States are more to be considered than the expressions of officers of the Izaak Walton League. In his testimony before the Rivers and Harbors Committee, the general manager of this league, when asked as to the membership of the league, stated:

We have about 25,000 members in good standing. We have about 100,000 that call themselves members of the Izaak Walton League, but they are just a little slow in paying their dues.

Obviously, many of the members of this organization do not depend for their water supply upon polluted streams nor does the protest of the organization necessarily reflect the views of the entire membership.

Some opponents of S. 685, although agreeing with the objectives of the bill, have urged its defeat or recommitment for further study. This, I submit, would either kill stream-pollution legislation entirely or defer further consideration for a long time. In the light of the long years of study given this subject by the Public Health Service and the Army engineers, further delay would not only be unwise but highly dangerous. The deplorable conditions existing in many sections of the country call for prompt action. To delay is to gamble with the lives and health of millions of people. If there are any imperfections in S. 685, they may in subsequent years be corrected by Congress, but the entire program for the elimination of stream pollution should not be scuttled because of a difference of opinion as to methods of accomplishment.

Republican Rally, Council Bluffs, Iowa

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

ADDRESS BY A. M. PIPER

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I hereby include the following speech delivered by Mr. A. M. Piper, editor of the Council Bluffs Nonpareil, at the Seventh Iowa District Republican rally at Council Bluffs, Iowa, on February 8, 1940:

Tonight I step out of character and talk to you face to face instead of through the columns of the Nonpareil. I shall try to summarize and emphasize some of the things I have been saying in print about national affairs.

The function of an editor, as I understand it, is to discuss the news and advocate policies and principles in which he believes. In so doing he stimulates discussion and gets people to thinking and talking about matters that concern them and vitally affect their daily living.

We need to be more concerned about current events and issues. We need to exchange ideas. We should have more discussion of public affairs.

Freedom of the press and freedom of speech are precious rights that we of this era often fail to appreciate. In many lands a meeting like we are holding tonight either would not be permitted or government agents would be present and any free expression of opinion would be ruthlessly suppressed.

I am going to speak briefly about our present national situation as I see it. Then I shall venture to offer some suggestions regarding a few of the "hot potato" issues the Republicans will have to handle in the coming campaign.

The United States is almost the only great nation in which a free election can possibly be held in this year 1940. All of the others are at war or ruled by dictators or both. Our own country has moved toward dictatorship during the last 7 years. It cannot be denied that the trend is still in that direction. Despite some checks and interruptions, more power is constantly being centralized in Washington. Every State is dependent on Federal favors. Every county, city, town, and school district gets the consent and approval of various Federal boards and officials before embarking on any important project involving the expenditure of considerable sums of money. We are losing the ability and with it the power to run our own affairs. Our elected officials appear, hat in hand, before Federal overlords and make obeisance, begging for funds their communities have already paid in taxes or will have to pay in the future.

What is true of our public officials is also true of business firms and individuals. Literally millions of people look to Washington for succor and assistance.

And what about Washington? Any observing person who has been there in recent years or is at all familiar with national affairs cannot but be aware that chaos pervades almost every branch of our National Government. What we have in Washington today is really not a government at all but a heterogeneous collection of conflicting boards and bureaus without efficient administration. Power runs riot. Department heads are often figureheads. Congress is bewildered. Is it any wonder that the confusion in the National Capital is beyond belief? But the President enjoys it. In his Jackson Day address he said it was a lot of fun.

Do you ever wonder if there may be a method in all this madness? I do. I think that subversive forces are at work, secretly planning the destruction of our free institutions and of our national economy.

We have only to look abroad to see what has happened to other peoples whose government finances reached the state toward which we are rapidly moving. Without exception every nation whose budget has gotten out of control has become a dictatorship.

Our national resources developed by a determined, industrious, and intelligent people in 150 years of individual effort have enabled the most extravagant and wasteful administration in our history to function so far without precipitating a catastrophe. But we know that spending at the present rate cannot be continued much longer.

#### NATION'S PROBLEMS UNSOLVED

We also know that the problems that perplexed and dismayed the Nation 8 years ago have not been solved. Anesthetics and shots in the arm have made some of our sufferings less acute but no sound recovery has been achieved. The New Deal has failed.

This fall the American people have the opportunity to start the country in another direction. It is the duty and privilege of the Republican Party to make the issues clear, organize an effective campaign, win the election, and restore sanity and sound government to the Nation. This is a fitting and appropriate year for such a crusade. Just 80 years ago the Republicans won their first election and saved the country from disunion and disaster.

It would be pleasant to recount the progress and development of the United States under 56 years of Republican administrations but I shall forego that satisfaction and turn my attention to the task that is before us. How shall we proceed?

First let me say that it will not be enough to dilate on the mistakes of the present administration and damn the New Deal. We have something vastly more difficult and important to do than that. Something that will require the best brains and the highest intelligence we can muster.

Nor will it be sufficient to promise in general terms to give the people a better administration of their affairs. We must offer concrete, constructive, practical plans to correct mistakes and improve conditions. We must formulate a platform that will inspire confidence. I think it should be brief, couched in words that everybody can understand. It ought to be an optimistic, affirmative, living document worthy of a great party and a great nation. It should present an authentic picture of the great future that can be ours.

We must nominate candidates for the various offices who will command support and create enthusiasm. We have such men in the Republican Party, many of them. The candidates for the Republican Presidential nominations are able, substantial citizens eminently qualified to preside over the Government. Whoever is nominated will be supported with enthusiasm.

We must be prepared to meet the issues boldly and without equivocation. This is no time for weasel words.

I am convinced that the Government's financial situation will prove to be the most important issue of the campaign. It is the most urgent problem before the country. Ruin is ahead if we cannot reduce expenditures and bring the Budget into balance.

No individual, family, or group can have any security as long as the Treasury has a deficit of billions every year. Businessmen cannot make plans and provide new jobs. Workers cannot be sure of holding the jobs they have. Farmers cannot expect stable prices. Owners of life insurance and savings cannot have any idea what their holdings will buy a few years hence. The whole social and financial structure of the country may crash. It will not do for the Republicans to promise to balance the Budget and let it go at that. We must outline pretty definitely how we propose to do it. We must list specific economies that we propose to put into effect.

#### PATRIOTISM DEMANDS ECONOMY

A great deal has been said about economy but I do not believe it has been said in the right way. It should be urged not as a disagreeable necessity but as a patriotic course to pursue. You cannot make me believe that the American people will spurn economy if they are convinced that loyalty to their country demands it.

At the same time we must face the fact that millions of families are dependent on the Federal Treasury for the necessities of life. This situation will not be changed overnight. For a year or so at least the Government in conjunction with States and local communities will have to disburse considerable funds to prevent suffering. We are not going to let people starve. But we can stop waste, demobilize the political bureaucracy that absorbs so much of the relief funds, and see that help gets to all the people who really need it. Relief activities should be organized from the bottom up instead of from the top down, as at present. Here is what I mean. Not long ago the city manager of Cincinnati declared that city could provide more adequate relief and do a better job with half what the W. P. A. was spending there if the money could be handled by local agencies. The same thing is true in practically every community.

Our relief problem is largely due to unemployment. What do Republicans propose to do about that? The only answer is more jobs in private industry. We must release American enterprise from the tangle of oppressive regulations now strangling it. We must give the country a government that will encourage business expansion under reasonable regulations instead of a government that treats businessmen as public enemies.

The National Labor Act must be made fair to both employees and employers. The Securities Act must be amended to release capital for investment. A clear comprehensive plan for the encouragement of business is perhaps the greatest service we can render our country in this campaign.

American youth, many of whom have never had regular jobs, will welcome such a plan and enthusiastically support the party that offers it. Our young folks want something better than the N. Y. A., C. C. C., and W. P. A. They want the kind of jobs a revival of business will provide. It is up to us to convince the country that business will be given a fair chance under a Republican administration. We must stick to our guns on this issue.

#### THE FARM PROBLEM

The farm problem is still with us. It is older than this depression, and it is of primary concern to Iowa and the Middle West. Conditions are better than in 1932 and 1933 but not as good as in 1929, when they were by no means satisfactory. The palliatives now in effect are helpful, but how long will they last? Not even their most zealous proponents know. Certainly the problem cannot by any stretch of the imagination be considered solved when the whole program is dependent upon congressional appropriations for a year at a time. Look at the present situation. The House has just passed a bill reducing appropriations by nearly half. It will be weeks, perhaps months, before the matter is settled.

Farmers must have some better assurance of stability than the whims of Congressmen, most of whom represent districts in which farming as we know it is a minor occupation.

We may as well face the fact that it is not going to be easy to formulate a farm program. But I am convinced of one thing. We must start from where we are today, not where we were 10 or 20 years ago. We must not ask the farmers to surrender the advantages they have gained for something even more uncertain. The Federal Government has started to help the farmers, and it will have to continue to do so. Congress has put its hand to the plow, and it cannot let go.

Farmers constitute the only large group in the country who have practically nothing to say about the prices of what they have to sell. Manufacturers control output and fix the prices of their goods. Merchants regulate the size of their stocks and sell at fixed prices. Of course both have to make concessions from time to time but by and large they keep production and prices under pretty good control. Industrial and other workers are organized and have a great deal to say about their wages.

But the farmer has to read the papers or listen to the radio to find out the prices of wheat, corn, hogs, cattle, and everything else he produces.

Just suppose that Ford, Chrysler, and General Motors had to consult the papers every day to find out what they were going to get for their automobiles. Or International Harvester had to call up the market to find out the prices of corn planters, cultivators, mowers, binders, and tractors.

Farmers cannot control production and fix prices as manufacturers do. There are too many of them, they are too scattered, and what they raise depends on too many uncontrollable factors. Quite naturally they turn to their Government for help. They have

received assistance, and we cannot expect their support if they think farm benefits will be discontinued under a Republican administration. We cannot dodge this issue. The farmers will not be fooled by dissertations on the economy of abundance and by vague promises.

#### RETAIN GOOD FEATURES OF A. A. A.

I don't like the excessive administrative costs, the red tape, regimentation, and some other features of the A. A. A. Perhaps a better plan can be devised. But remember this, Republicans: We haven't thought up anything better yet. Therefore I am convinced that the Republican platform should guarantee continuance of soil-conservation payments, corn loans, and other A. A. A. features that are working satisfactorily, at least until greater markets for farm products can be developed.

Probably some appropriations will have to be reduced. The farmers expect that. They realize the Government cannot keep on going in the red year after year. They will do their share toward balancing the Budget for they are just as patriotic as the rest of us but they do not propose to have all the cuts made at their expense. We must assure them that will not occur.

I now come to a subject which we have ignored and brushed aside too long. I refer to our foreign policy. Our Nation has no consistent foreign policy. The Republican Party must formulate one and tell the country what it is. I do not pretend to be qualified to discuss this important question but I venture a few observations. We want to keep out of the war and we intend to keep out of it. At the same time we are not indifferent to the outcome of the struggle now going on in Europe. We do not propose to send any armed forces overseas but we should not set up obstacles that would prevent the allies from securing needed supplies in this country.

The whole international situation is menacing and we cannot be oblivious to what is transpiring beyond the seas. The United States is a part of the world and must participate in world affairs in a manner consistent with our rank among the nations. Our next President will be called upon to make many crucial decisions. The people have a right to know by what principles he will be guided and these should be set forth clearly in the platform upon which he is elected.

I have mentioned only four or five of the issues that will be debated during the campaign on which we are about to enter. Our national problems are many and great. Some of our people are so discouraged they think our problems cannot be solved. That is not true. The present administration has demonstrated its inability to achieve a solution. That is why we have chaos. But we can solve the Nation's problems if we have the will to do so. I believe the Republican Party will rise to the occasion.

#### BANISH DEFEATISM

Our first task is to drive defeatism out of the country. Republicans have restored confidence and accomplished what seemed to be impossible many times in the past. Under the leadership of Abraham Lincoln Republicans reunited a divided country. After the Civil War Republican administrations guided the country through a great era of reconstruction and expansion.

Some of us here tonight can remember the depression and despair of the nineties. McKinley was elected President in 1896, and by the turn of the century we were on our way to still greater achievements. All of us recall how quickly Republican administrations brought order out of chaos, reestablished sound government, and restored prosperity after the World War. I do not ignore or condone the mistakes of the latter twenties, but I am as sure as I am standing there that if the Republicans had won the 1932 election the depression would have been over and prosperity would have returned long ago.

The American people have been misled during the last 8 years, but they are coming to realize that a Republican administration assures them better business, better living, better jobs, and a better chance for success in whatever occupation they may engage. The majority cannot be fooled all the time. I do not believe they will be deceived this year.

By telling the people the truth, by presenting practical plans to remedy conditions, by nominating candidates of character and ability we can wage such a campaign that victory will be a certainty.

This is our year of opportunity. Once more it is for Republicans to lead the country forward to greater achievements.

### The Democratic Weapon of Investigation and Exposure

#### EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

RADIO ADDRESS BY HON. J. PARNELL THOMAS, OF NEW JERSEY

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

address delivered by me over station WOR, New York City, February 22, 1940:

American citizens and friends of America, after a year and a half of investigation and public hearings by the Dies committee, one fact stands out above all others—the subversive movements emanating from Moscow and Berlin are on the run. The old subterfuges and the old appeals no longer work. Let no one jump to the conclusion, however, that the emissaries of Stalin and Hitler have gone out of business here or that the work of the Dies committee is finished.

A spirit of public alertness to the menace of these foreign-controlled agencies has become prevalent. It is no longer safe to join this or that innocent-sounding organization without further inquiry into the unseen controls that are manipulating it for ulterior purposes. It is no longer safe to break the laws of this country on behalf of Russia and Germany. The Dies committee has taught the innocent dupes and the guilty lawbreakers as well that it means business in exposing to the light of day the un-American outfits that have so long operated here with impunity and often with the official blessing of the New Deal. All of this has been accomplished without jeopardizing even in the slightest degree the civil liberties that we cherish and without throwing us into a state of national hysteria. True, the Communists and the Nazis have tried to use the Bill of Rights as a shield for their attacks upon America. They have set up a howl that their democratic rights have been invaded. The real truth is that the exposure of the aims and the methods of the Communists and the Nazis has done much to preserve the democratic rights and institutions of our whole people. It may well be doubted whether any greater service has ever been performed for the preservation of the Bill of Rights in this country than the work of exposure.

The odds against the committee have often been great. Every device of misrepresentation, distortion, and smearing at which the Communists and their fellow travelers are so expert, has been used against the committee. There is good evidence for the belief that these same persons have expended at least five times the money the Dies committee has had at its disposal just for the purpose of putting pressure on Congress to bring the work of the committee to an end. The record of the Roosevelt administration is one of a lack of cooperation with the committee and its work. But the country and the Congress have given the Communists, the Nazis, their fellow travelers, and the New Deal forces a resounding rebuke in the overwhelming support which has been given us. The people of this country are at least 85 percent behind the committee. The House of Representatives voted 17 to 1 in favor of continuing the work of the committee.

The Communist and Nazi casualties resulting from the work of the Dies committee have been too numerous to catalog at this time, but certain outstanding examples will serve to show the power of the democratic weapon of investigation and exposure.

The latest of these casualties is William Weiner, the national financial secretary of the Communist Party. Weiner has been convicted for fraudulently representing himself as an American citizen. Weiner testified before the Dies committee that he was born in Atlantic City, and in so doing committed perjury. In addition to being the national treasurer of the Communist Party, Weiner has been the head of the International Workers Order and one of the chief officers of World Tourists. His recent conviction follows that of Browder and Fritz Kuhn.

If the law-enforcing agencies of the New Deal administration do their plain duty, there will be more convictions—scores of them. In that connection, however, I must point out one instance of the shocking situation in which certain new dealers find themselves with reference to the fulfillment of their sworn duty. This month, a Federal grand jury in the city of Detroit returned indictments against a group of Communists and Communist sympathizers for recruiting soldiers for the Spanish civil war on American soil in clear violation of the laws of this country. After a few days, the present Attorney General of the United States, Mr. Robert H. Jackson, threw these indictments out. When we look at the record, the answer to his extraordinary course of action will become plain. On August 4, 1938, the Daily Worker, official newspaper of the Communist Party, carried the following headline: "Peace March Is Endorsed by Jackson." In the article which appears underneath this caption, we read: "The march will be led by more than 200 veterans of the Abraham Lincoln Brigade." Earl Browder, convicted general secretary of the Communist Party, testified before the Dies committee that more than 60 percent of the veterans of the Abraham Lincoln Brigade were members of the Communist Party. We, therefore, have the astonishing spectacle of the present Attorney General of the United States having been one of the endorsers of the parade which was led by veterans of the Abraham Lincoln Brigade. This highest law-enforcement official of the United States Government has disqualified himself to prosecute those who had illegally recruited these Communist soldiers whose parade he publicly endorsed.

On January 23 of this year I announced on the floor of the House of Representatives that the American League for Peace and Democracy would shortly fold up and go out of business. That prediction was fulfilled in a little more than a week. The American league thus became the chief casualty from the work of the Dies committee. A year ago this Communist-dominated organization which professed an interest in peace and democracy was claiming adherents totaling seven and a half million people. When the spotlight of the Dies committee was turned upon it, the American

league could not stand the exposure. The members of the Dies committee were denounced as followers of "sordid procedures" when we exposed the fact that 563 tax-supported employees of the New Deal were listed among the members of the Moscow-controlled American league.

In the case of the American League for Peace and Democracy and also in the case of other transmission belts, the Communists dissolved the organization for the purpose of starting all over again. Already the American League for Peace and Democracy is being followed up with committees for democratic rights and with "keep America out of war committees," the latter featuring the slogan "The Yanks are not coming." The Communist Party, it is evident, has not gone out of the business of running front organizations. It is only changing fronts. Both the policies and the personnel of the old organizations have been carried over into the new. It is clear that the Dies committee must stay on the job to continue the work of exposure.

Today I am going to venture another prediction: The American Youth Congress faces early dissolution. Two weeks ago this Communist-controlled group, professing to represent the interests of millions of American young people, held a gathering in Washington with more than 3,000 delegates attending. At this gathering it was demonstrated beyond any possibility of further doubt that the Communists are in complete control of the organization. From start to finish, in all of its deliberations, this gathering of the American Youth Congress followed out the line laid down for it by the Communist Party and its overlords in Moscow. The voice of the American Youth Congress is and always has been the voice of Stalin. The President of the United States was indulging in a piece of extraordinary understatement when he described one of the Youth Congress resolutions as "unadulterated twaddle." It was something far more definite than that; it was the rigidly prescribed echo of Moscow's foreign policy.

The casualties from the work of the Dies committee are not limited to the front organizations of the Communist Party. Evidence has been presented to the committee which indicates the early dissolution of the Silver Shirt Legion of America. This Hitler-sympathizing, Nazi-aping organization of one of our own little "fuehrers" has not been able to stand the light of full publicity. It has found the going too tough.

At this point I must reiterate that the work of the Dies committee would have been made far easier if the New Deal administration had not so often made itself the official or unofficial sponsor of the very Communist groups which the Dies committee was trying to investigate. I have already cited the instance in which the Solicitor General of the United States, now the Attorney General, Mr. Robert H. Jackson, publicly endorsed a parade led by the veterans of the Abraham Lincoln Brigade. That parade was under the general auspices of the now defunct American League for Peace and Democracy. I can also cite the fact that Mrs. Roosevelt sponsored the leaders of the American Youth Congress when they appeared to testify before the Dies committee. Mrs. Roosevelt entertained at the White House leaders of the American Student Union when they were witnesses before our committee. In December 1939, when the American Student Union held its annual convention in Madison, Wis., and went whole hog for the Communist Party "line," that convention was opened with the reading of greetings from the President of the United States. The National Negro Congress, another of the front organizations named in the Dies committee report, has boasted the prestige of having the Secretary of the Interior, Mr. Ickes, address its annual convention. Mr. Ickes is honorary national chairman of the Spanish Refugee Relief Campaign which the Dies committee report named as one of the Communist Party's front organizations. I could recite a much longer list of the occasions when nationally prominent new dealers have lent their official blessing and prestige to Communist gatherings. For a long time it has been the exception rather than the rule that any gathering of national scope by organizations that are Communist fronts or Communist transmission belts, has not been opened with greetings from the President of the United States or from one of his Cabinet members, or that has not been addressed sympathetically by a New Deal leader.

The final desperate effort to discredit the Dies committee and to prevent its continuation was organized around a series of forged letters. The story of these bogus documents is so well known to the American public that I will not go into it at the present time, except to say that the individuals who secured the forged letters for use on the floor of the House of Representatives have always been well known as ardent new dealers.

But of one thing the American people may be assured. The Dies committee is firm in its determination not to be intimidated or frightened from the course of exposing all the un-American agents who have been striking at the foundations of our Government and society in the interests of Moscow and Berlin. This country and our institutions are still the most promising of all the age-old efforts of man to build a free and prosperous society. Regardless of the political fashions abroad, we do not intend to tolerate communism, fascism, or Nazi-ism here. The American flag and all that it stands for will continue to fly triumphantly after all the alien and modern totalitarian systems of Europe have been forever discredited and have perished from their own failures.

We, as free-loving, God-fearing Americans, intend to preserve for all time to come not only our form of Government but also the blessings of liberty and the infinite possibilities so clearly guaran-

teed under our Government. Let us, therefore, dedicate ourselves anew to the principles of real and true Americanism on this the birthday of the first President of our beloved Nation.

## American Youth Congress

### EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

LETTER FROM ALBERT REESE, OF NEWBURGH, N. Y.

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Mr. Albert Reese, of Newburgh, N. Y.:

NEWBURGH, N. Y., February 19, 1940.

I want to congratulate you on being hissed by the right people, who in this case were the left people. This Youth Congress bunkum has annoyed me no end for several years, out of all proportion, no doubt, to its real importance. When Margery was at Barnard College she was president of the dormitories during her senior year (1937-38) and her organization (like every other one there) was constantly under pressure from the very articulate and aggressive Communist groups, which tried to control everything in the way of "public opinion." The native American students, who accepted our institutions as a matter of course, saw no particular reason to make the effort necessary to voting down and sitting on these noisy minorities; the result being that a handful of Communists and fellow travelers would elect Rebecca Leftoverkewicz a delegate to the Youth Congress and Rebecca would lift her strident voice at the conclave as representing "A thousand students of Barnard College," whereas in fact she represented about 20. The same thing happened all over the United States, and the First Lady, who ought to have known better, swallowed them hook, line, and sinker.

What these vociferating youth, demanding a Federal appropriation of \$500,000,000, really need is a sound paddling with 24-inch cypress shingles. Only yesterday one of our best columnists said about the last word on the subject. Discussing the subject of the removal of discipline and authority from the education of children, which supposedly releases their natural goodness and spontaneously creates good ideas, he wrote:

"The fact is, however, that if you remove authority and discipline and tradition, what you create is an unsatisfied need, a vacuum, which is then filled by some other tradition and some other form of authority. Thus you emancipate the young from the alleged tyranny of their own elders and before you know it they are hypnotized by an alien tyranny. You teach them to believe that their own moral and political and religious tradition is an outworn, idolatrous superstition, and before you can say Jack Robinson they are worshipping the idols set up elsewhere." And the idols set up elsewhere do not compare very favorably with the principles we find in the Declaration and the Bill of Rights.

## Water-Pollution Control

### EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. MANSFIELD. Mr. Speaker, for many years intensive efforts have been made to find practical and successful methods for the elimination of pollution in the streams and coastal waters of the United States. Congress has enacted stringent measures for dealing with oil pollution, and in every State in the Union laws have been passed pertaining to pollution of all kinds.

All of these laws have been of a more or less drastic type, providing for fines, penalties, and injunction proceedings. For several decades our court records have been burdened with litigation over attempts to enforce the laws, but no abatement of pollution has resulted. In fact, the record shows

that the greatest pollution is frequently to be found in the States having the most stringent laws against pollution.

Six years ago a new program was inaugurated for dealing with this problem. Fines and penalties, injunctions, and other harsh methods were not applied, but instead loans and, in some instances, grants were made through the P. W. A. As a result, more pollution abatement has been secured within the last 6 years than in all time previous thereto.

These loans and grants were made on the advice of the Public Health Service. The P. W. A. is not taking on any more work of this character, but the R. F. C. has arranged to make such loans as provided in S. 685, the pending Barkley-Parsons-Spence stream pollution abatement bill.

Unfortunately the Izaak Walton League is using its influence to defeat the bill for those loans made from the R. F. C., because the bill fails to provide penalties or punishment of some kind for failure to comply with the law. If the league succeeds the matter will be just as it has been for 20 years or more with stringent laws in every State but unenforced and unenforceable.

The national headquarters of the Izaak Walton League has issued a statement in the form of questions and answers describing the Mundt bill, and advocating that the Barkley bill be defeated. One question and answer in this statement is as follows:

Question. Does the Mundt bill extend the authority of the Federal Government to every little tributary in the country?

Answer. The jurisdiction of the Mundt bill is limited to navigable waters.

Now what is the effect of this provision? One illustration only is sufficient to prove. The Beaver-Mahoning Valley is perhaps the second, or third greatest industrial valley in the United States. Congress has refused to make it a navigable stream. It empties a tremendous amount of industrial waste into the Ohio River which is a navigable stream. It is exempt under the Mundt bill. Hundreds of other rivers would be exempt.

Another question and answer of the Izaak Walton League is as follows:

Question. Would the Mundt bill require pollution to be eliminated immediately upon the passage of the bill?

Answer. No; it outlaws the spread of future pollution immediately, but gives a 2-year period of grace for existing pollution before anything need be done, and states that "a reasonable time shall be allowed for completion of treatment works" which are started within this period. It further provides that when necessity can be shown to the satisfaction of the chief of engineers after a public hearing, that a 5-year extension of time may be granted; and at the expiration of that time, following the same procedure, "such further extension of time as may reasonably be necessary."

This question and answer is entirely misleading, as will be seen by reference to the Mundt bill, H. R. 7971. There is absolutely no reference whatever in that bill to authorize any such statement or conclusion as that embraced in this question and answer. Page 5 of the bill, lines 9 to 14, provides for a 5-year extension of time to discover methods for dealing with those types of pollution for which there is no known remedy. There are only two or three known industries under this head. On page 6, lines 4 to 10, provision is made for cities to have further time where they have exhausted their constitutional limitation of taxation, but both of these provisions are killed on page 11, section 11, lines 7 to 11, in the following language:

SEC. 11. Nothing contained in this act shall be construed to limit in any manner the rights of any person or public body to bring actions for damage on account of the pollution of any waters or for the abatement of such pollution.

The head of the Izaak Walton League is trying to make the Izaak Walton Leaguers believe that he is placing policemen on every corner with a big stick to knock the polluters hell, west, and crooked, and at the same time playing into the hands of the polluters by trying to make them believe that the Mundt bill will not hurt them, which, of course, it will not. It is nothing more or less than a copy of the Izaak Walton League bills that have been enacted in every State, and which is now a dead letter on the statute books of each of the 48 States.

## Wheeler-Lea Bill

### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

LETTER FROM MISSISSIPPI RIVER SYSTEM CARRIERS' ASSOCIATION

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter from the Mississippi River System Carriers' Association regarding the Wheeler-Lea bill:

MISSISSIPPI RIVER SYSTEM CARRIERS' ASSOCIATION,  
Chicago, Ill., February 21, 1940.

The Honorable V. F. HARRINGTON,  
Washington, D. C.

DEAR SIR: You are doubtless familiar with the situation affecting the present status of the Wheeler bill and the Lea bill, now in the hands of conference committee of the House and Senate.

As you are aware, there are so many controversial features in these two bills that if any action is taken in conference it will undoubtedly be to bring out an entirely new bill, and because of the fact that such a bill will of necessity be substantially different from either of the two bills we are writing to urge that you use your influence to prevent hasty action on such a conference bill, and hope that you will have steps taken so that at least 30 days will pass before this bill is voted upon after it is reported from conference.

It is extremely important that the conference bill should not fail to include the four amendments which were added to the Lea bill when it was passed in the House.

We will appreciate very much your favorable action in this regard.

Very truly yours,

MISSISSIPPI RIVER SYSTEM CARRIERS' ASSOCIATION,  
A. C. INGERSOLL, Secretary and Treasurer.

## What Goes On in Congress

### EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

RADIO ADDRESS BY HON. WILLIAM J. MILLER, OF CONNECTICUT

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me yesterday over the radio:

At the conclusion of my monthly broadcast on January 25, I stated that I would devote the full 30 minutes of this month's broadcast to a discussion of the Reciprocal Trade Agreements Act. It was my understanding at that time that consideration of a resolution to continue this act would be presented to the House of Representatives some time in March, following the enactment of the routine appropriation bills.

For some undisclosed reason the leadership of the House decided to bring this resolution up at once, and it was called up last Monday. Instead of presenting this subject to you as something to be considered later, as I had intended to do, I will have to present it as a matter on which the House of Representatives has already passed.

Officially the resolution to continue the power of the President to negotiate additional trade agreements is known as "An act extending the authority of the President under section 350 of the Tariff Act of 1936, as amended." As you already know, this bill passed in the House by a vote of 216 to 168.

Before going into a discussion of the reciprocal-trade treaties it might make my presentation clearer if I made a few general observations. First of all, I think it is safe to assume that the overwhelming majority of our citizens believe in a protective tariff to a certain extent. By that I mean we believe that the American

workingman, American industry, and the American farmer must be protected from imports coming into this country from nations having low wage scales and poor working conditions. If that be true, the question resolves itself in determining who shall decide what the tariff rates should be and how this determination should be made. While it is true that the question of tariff versus free trade has been a political controversy for years, the decision as to whether or not the present trade-treaty act should be continued for another 3 years is of such importance to the welfare of the country that partisanship should not be a factor in that decision. With the importance of the problem in mind, I reached my decision without political consideration.

Three years ago I was of the opinion that the Reciprocal Trade Treaty Act would work out to our best interest. During the past 2 years I have devoted more time and study to the subject of tariff legislation and trade treaties than I have to any other legislative matter. I recently completed a reading of the 20 volumes of testimony presented to the House Ways and Means Committee while they were considering whether or not this legislation should be continued. I finally concluded that the 22 trade treaties that we have negotiated and signed with 21 nations were not reciprocal; that we were giving away a great deal more than we were receiving, and if the act is to be continued, it should be amended as I will explain in a few minutes.

It was pointed out during the hearings to which I have referred, that the Republican Party, on numerous occasions, advocated reciprocal-trade treaties, and that President William McKinley was a great exponent of such treaties. I would like to point out, however, that President McKinley put certain restrictions on his proposal, which have not been observed in the 22 treaties we have thus far consummated. In discussing the subject of trade treaties, McKinley said, and I quote: "The end in view is always to be the opening up of new markets for the products of our country by granting concessions to the products of other lands that we need and cannot produce ourselves, and which do not involve any loss of labor to our own people but tend rather to increase their employment." I certainly would favor reciprocity of the kind advocated by President McKinley which goes hand in hand with and supplements rather than supplants the traditional American protective tariff policy with respect to competitive imports.

It has been charged that the existing Reciprocal Trade Agreements Act is unconstitutional. I am not a lawyer, and I cannot say definitely whether it is or not, but I would like to point out to you that the sponsors of this legislation attempted to prevent our courts from ever passing on the question of constitutionality, and this is how it was done: They simply inserted in section 2 of the Trade Treaties Act this apparently innocuous provision: "The provisions of sections 336 and 516 (b) of the Tariff Act of 1930 shall not apply to any article with respect to the importation of which into the United States a foreign trade agreement has been concluded pursuant to this act, or to any provision of any such agreement." The effect of this provision insofar as it refers to section 516 (b) is to take away from American producers the right which they otherwise would have had under that section to litigate matters arising out of trade treaties, including the question of their constitutionality. This particular provision of the act was inserted on the floor of the Senate at the instance of the State Department. It was not considered either by the Ways and Means Committee or by the Senate Finance Committee. The chairman of the Finance Committee [Senator HARRISON] offered the amendment, and it was called to his attention that its effect would be to divest American producers of their right to litigate matters arising out of treaties. His reply was: "That is what we intend to do, since we want no interference or delay from domestic interests."

During the debate on the question of continuing the Trade Treaties Act reference was frequently made to the provisions of the Smoot-Hawley Tariff Act. You will undoubtedly recall that the Smoot-Hawley Act contained a so-called flexible provision giving the President the power to raise or lower tariff rates to the amount of 50 percent.

In view of the enthusiastic approval given to the reciprocal-trade treaties recently negotiated by Congressman DOUGHTON, chairman of the House Ways and Means Committee, and Secretary of State Cordell Hull, I would like to read to you what these gentlemen said about the flexible provision of the Smoot-Hawley Act. I quote Mr. DOUGHTON: "The administrative features are subversive of our system, idea, and ideals of government, and if enacted into law will be a violation of the fundamental principles upon which it rests. The fathers who framed the Constitution, wisely, in my opinion, left to Congress the initiating and enacting of laws raising revenue. The flexible provision giving the President the power to raise or lower tariff rates to the amount of 50 percent renders nugatory in spirit and practical effect this provision of the Constitution. In my opinion we have gone a long way too far already, in the centralization of power in the executive head of the Government."

Secretary Hull, speaking on the same subject, said as follows: "It is clearly unsound, unwise, impracticable, subversive of the plain functions of Congress, and should be speedily repealed. The proposed enlargement and broad expansion of the provisions and functions of the flexible-tariff clause is astounding. It is undoubtedly unconstitutional, and is violative of the functions of the American Congress. Not since the countries wrenched from an English king the power and authority to control taxation has there been a transfer of the taxing power back to the head of the Government on a basis so broad and so unlimited as is proposed in this pending

bill. As has been said on former occasions, this is too much power for a bad man to have or for a good man to want."

I think it is fair to say at this point that several tariff rates written into the Smoot-Hawley Act were too high, in light of world conditions, as they existed at that time but it is certainly unfair to say that the Smoot-Hawley Tariff Act brought about the present depression which, as a matter of fact, started 9 months before the Smoot-Hawley Act was even considered by Congress, nor is it fair to claim that the present world war is a result of this act. Both of these accusations were made repeatedly during last week's debate.

During the campaign of 1932 the Democratic Party vigorously attacked the Smoot-Hawley Act, and, in view of this attack, it is interesting to observe that 7 years after that party assumed control of the Government, the act has not been repealed, and 58 percent of the tariff schedules written into the Smoot-Hawley Act are still in full force and effect. It is also well to recall that two-thirds of our imports come into this country duty-free under this act.

As a matter of fact, President Roosevelt, in a speech made at Baltimore, Md., during the 1932 campaign said: "I know of no excessively high tariff duty on farm products; I do not intend that such duty shall be lowered." In spite of that statement, there have been 166 reductions of tariff rates.

It might be well at this point to see just what has been done to the Smoot-Hawley Act by the trade agreements into which we have entered. As a result of our new trade treaties we have donated tariff reductions to 64 countries. These donations are largely the result of the so-called most-favored-nation clause. I'll try to explain just how that clause works out. Let us assume that we enter into an agreement with Canada. We accept from Canada certain concessions and we grant Canada certain concessions in return, but here is where the catch comes in: We have agreed to give to every nation in the world, except Germany (and she is left out because it is claimed that she has discriminated against our trade), the same concession we gave Canada, although we get nothing in return from the other nations. It is exactly as if you and I traded horses; after our swap you couldn't expect me to give everyone else in the community a horse, could you? As a further result of our trade treaties, duties have been reduced on more than one-third of all commodities produced by American farmers and industrial workers. This means there has been a reduction on 1,063 competitive commodities, of which one hundred and sixty-two are strictly agricultural. Does it seem reasonable to reduce the tariff on competitive farm products at the same time our Government is forced to buy up surplus commodities to keep up prices?

Many witnesses who appeared before the Ways and Means Committee believed, and many Members of Congress believe, that if we are to continue negotiating these trade treaties, that they should be approved by the Congress. In that connection it is interesting to note that in every treaty but 3, or in 18 of these treaties, the legislative body of the country with whom we entered into a treaty has had to confirm the agreement before it was effective. The fact that every one of these legislative bodies approved the treaty leads some to believe that there can be no doubt but that they are a good thing for the other countries, whether they are good for us or not.

No one will deny that the so-called logrolling indulged in during consideration of the tariff legislation was an evil; that should be corrected. However, it does not follow that logrolling would be continued if Congress should decide that the reciprocal-trade treaties should be ratified by the Senate, or even by the Senate and House, before becoming effective. The provision requiring ratification of such treaties could be written in a way similar to the provision relating to the recent reorganization bills. The original reorganization plan made it necessary for Congress to either accept or reject the proposed plan in toto. If the same method were used in obtaining approval of the trade treaties, the opportunity for logrolling would be eliminated. While there are undoubtedly some advantages to the reciprocal-trade treaties, it seems that the mere fact that this important function of Government is taken away from duly elected representatives and placed in the hands of appointees of the President should make us stop and consider the advisability of continuing this program.

Prior to 1912 the revenue received from taxes against imports coming into this country was almost enough to pay the total running expenses of the Federal Government. Since then we have instituted the income-tax law, and correspondingly the cost of Government has gone up in leaps and bounds. A great deal has been said by the proponents of trade treaties to the effect that this is the scientific way of relieving the proper tariff rates; that the treaties are drawn up by experts. The fact remains, however, that the same experts who are now advising the State Department formerly advised the proper committees of the House and Senate. In addition to that, a reading of the hearings recently conducted would prove to anyone that there are quite a few qualified experts on tariff matters serving on the House Ways and Means Committee, some of whom have had 20 years' or more service on this committee, and who have acquired a very real knowledge on the subject of tariffs.

It is impossible to cover this subject in 30 minutes. I wish I had time to quote from certain tables which were inserted in the hearings by the Ways and Means Committee. However, almost anything can be proven by figures. Most of the proponents of this trade-treaty legislation used, as the basis of their argument, the fact that our exports had increased greatly since 1932. No one denies the truth of that statement. They further contend that our export trade has increased to a greater extent with trade-treaty

countries than with non-trade-treaty countries. This statement is also correct, but it is well to recall that several of the larger countries with whom we have not, as yet, entered into trade agreements are countries that are and have been, for the past few years, either engaged in war or who have been making preparations for war and aggression. This fact cannot be contradicted, that for the 2 years prior to the adoption of the Trade Treaty Act, our exports to all countries had increased 19 percent from the low point of 1932, but the average yearly increase since the consummation of at least 17 trade treaties has been only 13 percent. Unfortunately a major part of the increase in exports has been due to the huge amount of war material which we have exported to Europe and Japan in the years of 1937 and 1938. In 1937 our exports of war material amounted to three hundred and thirty-nine million three hundred and fifty thousand, and in 1938 export of these same materials amounted to three hundred and five million nine hundred and thirty-seven thousand, which more than offsets the export increases claimed by the proponents of the trade treaties. Certainly the people of this country do not want to base their prosperity on our exports of death-dealing implements of war.

When the trade-treaty program was first proposed back in 1934 we were assured that the American farmer would be the chief beneficiary under its operation. However, agricultural exports have declined over \$104,000,000 while imports of competitive farm products have increased by \$68,000,000 during the time that the trade-treaty program has been in effect. Before the trade-treaty program went into effect our export trade had increased 32 percent or at the rate of 16 percent per year from the low of 1932.

There are corn-processing concerns in the Middle West. In 1939 they turned 78,000,000 bushels of corn into starch. Seven thousand employees were required to handle this corn, each paid a minimum wage of \$5 per day. The mills burn a pound of coal for every pound of starch made, and trains are needed to haul the corn to the mills, and the coal from the mines to the mills. In 1935 we negotiated a trade agreement with the Netherlands. That country owns Dutch East Indies. From those islands there now pours in on us nearly 500,000,000 pounds of starch annually, all of it produced by workers who get 25 cents for a day's work. As each 34-pound lot imported displaces a bushel of corn, one can readily figure the heavy indemnity levied on the American farmer, railroad, and miner.

Then, too, take the case of our sugar industry. In Minnesota we have two beet-sugar factories which have been greatly restricted in their production of sugar, notwithstanding that we consume three times as much sugar as we are allowed to produce. The result is that the sugar acreage we could produce and consume at home is now given over to the production of wheat, corn, potatoes, and other crops of which we have a surplus.

This situation also holds good in many other States. In 1938 the sugar consumption was 6,250,000 tons, and of this amount, 1,800,000 tons came from Cuba. For every 100,000-ton increase in American production of sugar, 25,000 Americans will be given jobs, which means that 450,000 idle Americans could be employed if the beet and cane growers were given a fair chance at the home market. We are told that at least one-third of our sugar requirement must be purchased from Cuba because she is such a good customer of ours. Actually, during the period of 1935 to 1938 Cuban exports to the United States were \$200,000,000 more than her imports.

I could go on citing figures tending to prove that the reciprocal-trade treaties have not increased our commerce but as I said a few minutes ago, figures can be used to prove anything. I would much rather present my opposition to the continuation of this legislation on our own experience in the past and on plain common sense.

Every one of my listeners who can remember back to 1920 can recall the fact that in 1920 and 1921 and 1922 this country was deluged with manufactured goods shipped into this country under the Underwood Tariff Act then in effect; merchandise coming largely from countries with very low wage standards. Only the prompt enactment of the 1922 Tariff Act put a stop to this flood of cheap foreign goods. Is it not reasonable to suppose that when the present war now raging in Europe comes to an end, as it surely must, we will be faced by another deluge of imports from Europe and Asia? Just what position will be ours at that time, if our hands are tied by the reciprocal-trade treaties, effective for 3-year periods?

I have already mentioned that we have negotiated 22 reciprocal-trade treaties with 21 countries and have given concessions to 64 countries as a result of these treaties. About the only countries left with which we can negotiate further treaties are those whose surpluses are largely agricultural materials. Just a few weeks ago our State Department was attempting to negotiate a trade treaty with Argentina and Chile. Several Members of the House and Senate made such vigorous protests to the State Department that these negotiations were promptly terminated and the idea of a trade treaty with either Argentina or Chile deferred until some further date. I cannot understand how any Member of the House or Senate who publicly stated that if the Argentina agreement was negotiated he would vote against the Reciprocal Trade Treaties Act, can now justify his vote to continue the authority to negotiate trade treaties for another 3 years.

The 1934 authority which first asked for the right to negotiate trade treaties was on the plea of emergency. In 1937 the same emergency plea was used, and, in addition to that, it was stated that reciprocal-trade treaties would contribute materially to future peace. I am afraid the record completely repudiates any argument

that trade treaties lead to peaceful relations between nations. More countries in Europe and Asia are now at war than at any time since 1918.

I think it is safe to assume that everyone will agree that conditions which exist at the present time are far from normal. It is difficult to determine exactly what effect some of these treaties will have when peace is restored. Therefore, is it not reasonable to say that no harm could come from suspension of this program for the time being? Is it not much wiser to watch developments and ascertain the result obtained from the 22 treaties we have already negotiated, rather than enter into several new treaties when no one can say just what the outcome will be? If, after suspending this power for 2 or 3 years, the American people decide that the reciprocal trade-treaties method is an improvement over the old method of having Congress write tariff legislation, the authority could again be extended to the President almost overnight. Most of my listeners are familiar with the old procedure whereby hearings were held by the appropriate committees of the House and Senate, and any citizen interested in tariffs was given an opportunity to appear and express his views on the proposed revision of tariff rates. The procedure under the trade-treaty program, however, is not as well known. Under the present practice of the State Department, the only opportunity American producers have to be heard on the terms of the trade treaties is before the actual negotiation and before the terms are known. No hearing is ever held before any agency after a treaty is negotiated. In fact, the terms are not even known to the Congress, much less the public, until they have been signed by the President and thus are binding and effective so far as this country is concerned, and, of course, it is too late for anything to be done, and any protest would be unavailing. These hearings are actually conducted before a group known as the Committee for Reciprocity Information. This group receives written briefs and listens to testimony but has nothing to do with actual negotiation of the treaty. To what extent American producers are given consideration by those who actually negotiate the treaty no one has been able to learn. The Committee for Reciprocity Information is sometimes referred to as the "buffer" committee and, at the most, only serves to give the American producer the formality of a hearing and therefore satisfy the requirements of the act.

At the present time our tariff rates are being determined and life and death powers over American agriculture, industry, and labor are being exercised by a group of anonymous individuals who are not elected by nor directly responsible to the people. It should be understood that the power we have given the President and, in turn, Secretary of State Hull, is the power to destroy any given industry that is in competition with imports from abroad. Assuming that Secretary of State Hull has every qualification his friends maintain he has, and I am ready to concede that he is a loyal American and a fine gentleman, one cannot read his speeches printed in the CONGRESSIONAL RECORD while he was serving in the House and Senate without being convinced that he is and always has been a proponent of free trade. Suppose, for a moment, that in some future administration we had the misfortune to have a Secretary of State without the qualifications of Mr. Hull; it is certainly not difficult to imagine what he could do by way of harm to many of our industries under the power given the Secretary of State by the trade-treaty resolution.

Having considered the trade-treaty program in all of its aspects, I have reached the definite conclusion that it has not been successful in accomplishing its primary purpose of expanding the foreign markets for the products of the United States or its unstated but officially declared secondary purpose of promoting world peace; that it has not been administered in the national interest and that it should not be extended in its present form, and as now being administered, particularly in the face of present and prospective world conditions.

I believe that the present act should be allowed to lapse but, if it is extended, it at least should be modified to provide for congressional approval of trade treaties before they become operative; that a rate-making formula should be included in the act by which trade-treaty negotiators would be bound in making concessions, such formula to be so worded as to prevent reductions in rates below an amount reasonably necessary to give American producers at least an equal opportunity with low-cost foreign producers in competing for the home market.

It should be further provided that no reductions be permitted on foreign farm products when the price of the competitive American product is below parity, and certainly we should restore to American producers the right to litigate matters arising out of the trade treaties, particularly the right to determine the question of the constitutionality of the act.

I realize that there is a great deal of honest difference of opinion as to the effectiveness of the reciprocal-trade treaties. Mr. Taber, national head of the American Grange, for example, expressed strong opposition to a continuation of authority to negotiate trade treaties and the very next day the national head of the American Farm Bureau Federation appeared in favor of continuing the authority with a few minor amendments.

However, it is this very difference of opinion with respect to the effectiveness of the reciprocal-trade agreements among men of experience, which strengthens me in the conviction that we should proceed carefully. It is my frank opinion that the trade agreements are still experimental, and they should be so regarded for a sufficient period of time to allow for the proof of their success or failure. As emergency measures they may have had value, but as

established policy they might well prove to be detrimental to the best interests of our country. Until we are given more conclusive proof of their value I feel we are justified in demanding a return to the constitutional requirement which calls for ratification of trade treaties by the Senate.

I urge my listeners to devote as much time as possible to a study of the working of the reciprocal trade treaties agreement, as this question vitally affects every man, woman, and child in the United States, and it is important that the problem be solved and solved correctly.

In the remaining minute or two I would like to briefly refer to a subject which, judging from my mail, is causing a great deal of dissatisfaction, namely, the proposed census questions. Most of the objectionable questions are to be found in the so-called housing census which was authorized by act of Congress last year. I voted against the housing-census authorization because I felt it was a waste of \$8,000,000. No one anticipated that questions as to income would be asked by the census takers. As a matter of fact, I have been assured by attorneys serving in Congress that there is no act under which citizens could be compelled to answer such illegal questions.

A real effort is being made to compel Secretary Hopkins to modify his questionnaire. I hope this effort will succeed, but as the law now stands, there is a criminal penalty that can be imposed on any citizen who refuses to answer these questions.

## Seven Years of Progress in Agriculture

### EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

ADDRESS BY HON. C. ARTHUR ANDERSON, OF MISSOURI,  
BEFORE THE DEMOCRATIC BANQUET AT EATON, OHIO, ON  
FEBRUARY 24, 1940

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address which I delivered in Eaton, Ohio, on Saturday, February 24, 1940:

Fellow Democrats, I am particularly gratified in being afforded the great honor of addressing this fine gathering of Democrats. My colleague, Senator TRUMAN, of Missouri, was originally scheduled to be your speaker, and I hope that I shall not prove to be too great a disappointment. Senator TRUMAN was looking forward to this occasion with great anticipation, and only his recent illness prevents him from being here tonight. Permit me, on behalf of Senator TRUMAN, to extend his regrets in not being able to address you this evening.

There is more than one pleasant touch to this occasion, for it gives me a chance to see and visit with my former colleague and one of the great congressional leaders of his time, a truly great Democrat, Byron Harlan.

You know, this Congress isn't the same; it was a cold and depressing atmosphere that pervaded the Democratic caucus when the Seventy-sixth Congress convened. A great many of my good friends from Ohio failed to show up. But I understand the people of Ohio thought so highly of them that they didn't want them being preyed upon in Washington, so they called them home. I am sure now, however, that the good people of Ohio have discovered their mistake. We need men like Byron Harlan, and we need them in Congress.

I sincerely hope that the reverses we met at the last election will serve to wake up our party and get us into fighting trim for this November. We cannot—yes, the Nation cannot—afford to risk a Republican victory, which can only mean a “kick-back” to the days when there was no relief for the needy, no security for the aged and unemployed, no stability in our banks, no protection for the rights of labor, no market for the farmer, and no future for the country.

The fruitful gains which have been made can be retained only through a Democratic victory.

It seems that every Republican who has the courage to admit that he is one is a candidate for President. Ohio has the dubious honor of two such scavengers; your junior Senator and your beloved Governor. I don't think Ohio really wants to do that to the Nation. You can't be that sore at the rest of the country. The two esteemed gentlemen I have just mentioned made a great effort to embarrass the administration over a few social-security dollars that strayed away from Ohio, but they met their match in the flawless leadership of President Roosevelt, who demonstrated that the Democratic Party guards the principles of justice and good government as closely as the ballot box.

This will be a historic and momentous campaign of great issues. We cannot hope to consider them all in one brief address. I am going to confine myself tonight to one of the foremost of all the issues, namely, the Democratic Party's agricultural program.

This section of the country has a deep and vital concern in agriculture and it is my firm belief that abandonment of the present agricultural program will be a major, and perhaps fatal, disaster to the American farmer.

Before proceeding I want to say that I have not always condoned or approved some of the things that have been done by the present administration. At times I have been critical of the administration, and I am proud to be known in Congress as quite the opposite of a “rubber stamp.”

However, I am a Democrat, first, last, and always, and the few mistakes we have made represent more progress in themselves than the best efforts of the Republican Party in 10 administrations. This is especially true of the agricultural program of the present Democratic administration.

With all the sincerity I possess I join the farmers of this Nation in solemn supplication that the farm program of this administration be carried on unimpaired.

Farming is one of the most honorable of all professions. Truly, it is a profession and was recognized as such by George Washington and Thomas Jefferson, who both repeatedly referred to it as one of the highest callings in life. Yet when the Democrats were called to power by the people in 1932 the farmer was truly the “forgotten man.” Agriculture had reached its lowest ebb.

Thomas Jefferson, the founder of our party, when speaking of his chosen profession, farming, once said: “As long as agriculture is our principal object, which will be the case while there remain vacant lands in any part of America, popular government is safe. When we get piled upon one another in large cities, as in Europe, we shall become corrupt as in Europe and go to eating one another as they do there.” I think his wisdom and foresight are not open to question.

At another time Jefferson said, in effect, that he feared for the Republic when our free land should become exhausted. His fears apparently were well grounded. Today we are grappling with problems which have been thrust upon us since the closing of our last frontier. There is no free land to turn to. We live in a crowded and complex society. We live in a machine and power age. To survive we must meet and solve its problems. For a long time we were able to dodge the issues by running away from them.

The complete and utter break-down of agriculture during the years of Republican rule and exploitation is, more than anything else, responsible for the vast social and economic repercussions that have shaken our Nation. What a different picture we see today. Farming is definitely on the road back.

It is very interesting to observe that every year for the last 3 years a large number of businessmen in this country have acquired farms for farm purposes. It is estimated that men of this class spent in the neighborhood of \$45,000,000 for farms last year. That seems to be a splendid barometer of farm conditions today.

There has come a great change. No one who studies our times can fail to recognize that we have reached a turning point in our attitude toward agriculture. At last the United States has definitely embarked on a national agricultural policy.

The welfare of any nation is fundamentally dependent upon the proper conservation of its soil resources. History is replete with records of civilizations and governments that have fallen into decay as the result of soil depletion and waste. Fortunately, we have come to realize, before it has been too late, the danger of abusing and neglecting our soil resources. A farm program has been developed under which we are progressing simultaneously toward the two essential objectives of balanced production and soil conservation. More than 80 percent of all cropland has been brought under this program. The Democratic Party has given us the first legislation in the history of this Nation that recognizes the productivity of our soil as a natural resource.

This change in our attitude toward agriculture has come none too soon. If I read my history aright, no democratic nation has yet survived the independence of its farmers and the productiveness of its soil. Time and again a nation would emerge and thrive out of the fresh vigor supplied by its rural areas only to reach a turning point when farms were depleted of their fertility and of their stalwart people. So far as I know, without exception those nations have declined unless something was done to provide salvation for their agriculture.

Seven years ago in the face of utter distress the Democratic Party displayed the courage and practical foresight to master chaos and lay the sound foundations for the splendid farm program we have today. At that time farmers were suffering the privations that had come from such ruinous prices as 5-cent cotton, 32-cent wheat, 19-cent corn, and 3 cents for hogs. By 1932 the annual cash income of farmers had reached the incredibly low figure of less than \$40 per capita for persons living on farms. An engulfing wave of mortgage foreclosures was dispossessing farmers of their homes and lands. Farmers saw their export markets disappear as tariff barriers were built up by the Republicans to destroy foreign trade. Merchants in farming communities were going into bankruptcy and country banks were closing every day. Nothing had been done to bridge the gulf between unmarketable surpluses on the one hand and millions of hungry and idle workers tramping the streets of the large cities in search of work and food. I need not continue, for you people know this too well.

The great recovery and progress that have been brought about in the past 7 years is evident on every hand. Since 1932 the annual cash income of farmers has increased over 80 percent. Farm mortgages have been reduced over \$2,000,000,000. Interest rates have been lowered. Agricultural production has been brought more nearly into balance with industrial production. Farmers are better able to deal with their problems. The country banks have

reopened and their deposits have increased twofold. Rural merchants have had their business restored. Industrial activity has responded to the recovery in agricultural purchasing power. The sales of farm equipment have more than doubled.

The advances since 1932—advances won in the face of bitter and formidable opposition—are the result of hard and unselfish work by the Democratic Party and by most Members of the Congress; by our able Secretary of Agriculture; by the farmers themselves; and by an administration under a President who was never surpassed in understanding and sympathy for the problems of agriculture. More, perhaps, than any other single factor in the success of this program has been the unity among the farmers themselves. The farmers have refused to listen to sectional pleas and to familiar partisan political arguments. So long as this unity continues we will have a sound national program for agriculture.

Unfortunately, the great progress of agriculture during the past 7 years has caused many people to arrive at the conclusion that there remains no serious necessity for further increase in farm income. Anyone who holds such a belief is badly misinformed or is not mindful of the great depth to which agriculture sunk during the years of Republican administrations.

Agriculture today, after all the gains we have made, has approximately 24 percent of the Nation's population and 31 percent of the Nation's children, yet it has only 11 percent of the national income. The need for further advancement is obvious and imperative.

Some people seem to feel that the war will result in a substantial increase in farm prices and that the farm problem will be solved thereby for the time being. There is no basis in fact for such a conclusion.

Agriculture is not profiting from the war in Europe, and it is not likely to profit at any time in the future. For some producers the war has been an economic calamity. Early in the war farm prices rose sharply in a speculative boom, but the anticipation of the speculators was not sustained by subsequent events. The net effect of the war on agriculture has been to shut off a large part of the world market for our farm products. Great Britain and France are using their dollar exchange to buy airplanes and munitions in this country. For farm products they are turning to their colonies and to countries where they can acquire such commodities on credit or in exchange for their own goods. Our trade with Germany has been almost totally cut off. Even our trade with neutral countries has been badly upset by the actions of the belligerent nations. This should be a full and complete answer to those who might hold the false and untenable belief that war brings favorable business conditions. I think we all know now that war brings nothing that is good.

The present farm program represents 7 years of steady progress and solid achievement in the welfare of agriculture and of the Nation. It constitutes a broad, deep-rooted, and sound foundation for the future security and well-being of all the people.

On the other hand, the Republican Party seeks to destroy the agriculture program we have put into effect. They brag about their liberal minds and yet let me point out to you a very lucid expression of Republican philosophy in regard to the farmers of this Nation. I call your attention to an article in Collier's magazine last summer written by Congressman BRUCE BARTON, of New York (he happens to be in a receptive mood for the Presidency also), regarded as one of the liberal and progressive Republicans in Congress, and undoubtedly one of America's outstanding businessmen. He had this to say: "There are more farmers than the Nation needs. The most efficient should be allowed to raise food as cheaply as possible and sell it to the people in the cities at the lowest prices consistent with a reasonable profit." There, my friends, is the perfect example of the Republican's regard for the farmer. They have no sympathy nor understanding that the farmer who makes every penny of his purchases in a protected market should have some opportunity to offset the benefit enjoyed by the manufacturer through protective tariff. God help the American farmer if the Republican philosophy prevails next November.

The farm issue—while it is not the only major issue of the campaign—is certainly one of the most vital of all issues. We of the Democratic Party can justly be proud of our agriculture program that has been built up during two administrations. Our achievements are known to every thinking American. That this is true will be demonstrated next November.

Thank you.

## Great Lakes-St. Lawrence Waterway Project

### EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

EDITORIALS FROM THE SHEBOYGAN (WIS.) PRESS

Mr. KEEFE. Mr. Speaker, for more than 20 years I have actively supported every effort to make the Great Lakes-St.

Lawrence waterway project a reality. For years the people of Wisconsin of all political faiths have urged the ratification of a treaty with Canada to make the construction of this waterway possible.

I am pleased to note that the negotiations with Canada are nearing completion and that as a result this great waterway project will ultimately become a reality and the great Middle West will at last be given the advantages of close contact with world commerce.

One of the leaders of this great movement in Wisconsin is the Honorable Charles E. Broughton, editor of the Sheboygan Press, of Sheboygan, Wis., whose many forceful editorials on this subject have kept the public aroused and informed. I am pleased to be permitted to place in the RECORD for the benefit of the people of the Nation two splendid editorials on this subject recently published in that paper.

The editorials follow:

#### READY FOR THE TREATY

The Great Lakes-St. Lawrence waterway and the power treaty with Canada is near completion, and there is every indication that its approval and ratification is near at hand.

Nothing in your time or mine has meant so much to lake and ocean transportation as the culmination of this great enterprise. It has had the approval of two Presidents, Herbert Hoover and Franklin D. Roosevelt. Mr. Hoover, when he was President, said:

"The St. Lawrence seaway is a project that is very close to my heart and is a sound and worthy undertaking. I came to Toronto quite a few years ago to negotiate a treaty with Canada over the St. Lawrence project, and at that time we thought things would go ahead. It's so obviously an improvement to the North American Continent. Anything that cheapens the cost of transportation is at once a benefit to everybody. It is a project that is nonpolitical and its completion will be a great thing for both the United States and the Dominion."

President Roosevelt, in addressing the officials of the National Seaway Council, outlined his position when he said:

"For many years it has been my sincere conviction that the St. Lawrence project would prove second to none in its direct contribution to the economic welfare of millions of people on both sides of the border. In my message of January 10, 1934, requesting consideration of the earlier treaty, I expressed the belief that fears the St. Lawrence development would work to the disadvantage of other transportation were groundless. I am more than ever convinced of that fact today. Any area which has grown in economic importance becomes a greater market for the products of other regions. More products are exchanged and all transportation agencies participate in the growing prosperity."

After years of labor the United States and Canada have come to an agreement and there is every indication that unwarranted opposition has broken down to the point where admission is made that it will prove beneficial both to Canada and to all the areas in and around the Great Lakes. With the discovery of iron ore in the upper peninsula of Michigan and the digging of the canal in the St. Marys River at Sault Ste. Marie the foundation was laid for a great commercial enterprise. Fleets of schooners became one of the big assets on the lakes, and then followed steam vessels of wood, later followed by steam vessels of steel.

With a treaty such as is now about completed and ready for ratification, the whole transportation system of the country will be revolutionized. Landlocked areas will be opened to the commerce of the world. Michigan, Wisconsin, Minnesota, and the Middle West will all profit as a result of this. The Great Lakes will become a beehive of activity and in addition we will be able to develop a great system of waterpower unequalled the world over.

We have long championed this cause because we realized that it was for the general good of all the people. It will increase transportation by rail and water and it will mean a saving in transportation rates so that our markets can compete in the markets of the world. We will bring the ocean that much closer to our fire-side, and when you are doing that you are benefiting millions and millions of people. It will give added employment on the Lakes and from every viewpoint it will be a godsend.

#### GREAT LAKES COMING INTO THEIR OWN

By a ruling of the Maritime Commission in Washington yesterday Sheboygan becomes an export base to Europe along with all of the ports on the Great Lakes, thus moving us that much closer to the commerce of the world.

In these few words let us visualize, if we can, the attitude of the Atlantic boat lines who have been insisting that a Sheboygan shipper, or for that matter, any shipper on the Great Lakes who wanted a contract rate for his export shipments would of necessity have to agree to ship 100 percent of his shipments over their lines, and that they must be delivered at Atlantic ports.

Under the agreement it is necessary to deliver shipments to ports at Norfolk, Newport News, Baltimore, Philadelphia, New York, Boston, Portland, Montreal, Quebec, Halifax, St. John, or West St. John.

If this maritime ruling is upheld, these contracts will be canceled. For years the Atlantic shipping lines have been insisting that if a Sheboygan manufacturer, for instance, wanted a contract rate for his export shipments he would have to agree to shipping 100 percent of his shipments over the Atlantic lines and having

them delivered to Atlantic ports. If the Great Lakes shipper violated the order of this arbitrary monopoly, his contract would be canceled and he would have to pay a penalty rate on all shipments of the season.

This meant nothing but an effort to defeat the Great Lakes seaway, and the Maritime Commission, sensing the injustice, has issued an order invalidating the present contract. Under the ruling issued yesterday the 33 carriers are given 20 days in which to modify their contracts or face cancellation of the conference agreements under which they were made.

Ohio, Indiana, Wisconsin, and Michigan have been putting up a joint fight, and the ruling will, if sustained by the courts and in fairness it ought to, be of tremendous value to the shippers of the Middle West. It is a victory for every industrial plant, and it is all the more pleasing because the monopoly has been dethroned for the time being.

R. F. Malla of Milwaukee, secretary of the Great Lakes Harbor Association, gave out the following announcement immediately after the receipt of the Associated Press dispatch:

"This is the most important decision in years on matters affecting the Great Lakes, and now makes those lakes a direct foreign trade route. It is a prelude to development of the Great Lakes-St. Lawrence seaway.

"The shipping industry previously had been localized through the contracts to the eastern coast. Now it can go westward and will give unlimited millions of dollars in shipping employment, business, and finance to the Middle West. It means the removal of the shackles of business slavery imposed upon us for the best part of 10 years by the Atlantic shipping interests who gave no service whatever to the Great Lakes."

In the fight that has been going on, the attorneys general of these four States, including Attorney General John E. Martin, have insisted that there was discrimination, and the rulings of the Commission justify the position that was taken at the hearings. Atlantic lines, some time ago, were asked by the Maritime Commission to show cause why their contracts were not illegal, and why they should not be canceled or amended.

The United States Maritime Commission instituted on its own motion on February 17, 1939, an order requiring carriers, parties to agreements of the North Atlantic United Kingdom Freight Conference and North Atlantic Continental Freight Conference, North Atlantic French Freight Conference and North Atlantic Baltic French Conference to show cause why an order should not be entered modifying or canceling the agreements "on the ground that contracts made by them with shippers pursuant thereto are unjustly discriminatory, unfair, operate to the detriment of the commerce of the United States, and are in violation of the Shipping Act, 1916. The matter was heard before Examiner F. J. Horan, representing the Commission with all of the parties present, and the following ruling, which has been sustained by the entire Commission, was rendered:

"The Commission, by its order instituted this proceeding, requiring respondents to show cause why an order should not be entered modifying or canceling agreements on the ground that the contracts made pursuant thereto were unjustly discriminatory, unfair, operated to the detriment of the commerce of the United States, and were in violation of the Shipping Act of 1916. This they have failed to do.

"The Commission should find that respondents have failed to show cause why an order should not be entered modifying or canceling the agreements in question. \* \* \* The Commission should enter an order modifying each of the agreements to provide that the parties thereto shall not, by contract or otherwise, resort to discrimination because a shipper has patronized another carrier operating a direct line from ports on the Great Lakes."

Here is the story of a great victory for the Middle West. It is a story of how a large monopoly for years has throttled shipping on the Great Lakes. Can you imagine boats ready and willing to carry the products of the Middle West to European markets and their forced idleness resulting from an Atlantic boat lines' monopoly? This ruling can be viewed as a great victory. Previously there was a stranglehold upon every shipper because the contract provided that if he were to patronize a carrier operating a direct service from ports on the Great Lakes to Europe by way of the St. Lawrence River there would be a penalty. The discriminatory part was that the shipper would have to agree to sending 100 percent of his shipments over certain lines for delivery at Atlantic ports. The monopoly controlled practically all the Atlantic boats in the commerce of the world.

It is a big day for Sheboygan if we can only sense what this decision means. This morning we went over a mass of material, editorials, and local stories running into columns of print. We recall our early conference at Muskegon and the enthusiasm that Sheboygan manifested at that time, and then, because it seemed a long way off, we forgot to do anything here at home.

Congressman FRANK B. KEEFE, under date of May 5 last, threw his full support back of the St. Lawrence waterway in an address in Congress. At that time Congressman KEEFE filed editorials of the press and an address given by the Honorable William George Bruce, of Milwaukee, chairman of the Wisconsin Deep Waterway Commission, and had them included in the CONGRESSIONAL RECORD. We said editorially at that time:

"Congressman KEEFE has rendered a fine service in bringing this matter to the attention of the Congress of the United States, for it indicates clearly that Sheboygan and the port cities are just as enthusiastic for the deep waterway today as they were 20 years ago when this movement was first launched. It proves that despite

the organized attacks of certain shipping interests the great rank and file are for the deep waterway to prevent unfair discrimination in rates which prevents marketing their goods."

That discrimination in rates is clearly brought home to us today in the ruling of the Maritime Commission that the Atlantic seaboard lines, a great monopoly and working with certain railroads, has discriminated against the Middle West and the area in and around the Great Lakes.

### Colonel Ecker Says

#### EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. JENKINS of Ohio. Mr. Speaker, I am glad to make a few remarks about a good friend of mine who is a prominent Democrat in my district. He has for years been writing a weekly letter to the newspapers of his county. Those letters are widely read, for they are full of wise philosophy. Last week he spoke out in meeting, as it were, and said what he thought of certain New Deal policies. I am glad to read a portion of his letter to which I refer:

Just about now is getting the time for the tree salesmen or the flower salesmen to come around and show you those beautiful catalogs of a cherry bigger than a Rome Beauty apple or a blue spruce about three times bigger than they ever will grow, or the latest, I guess, is hybrid corn. You know I don't believe we would have had any use for a county agent if it hadn't been for hybrid corn, and paying the farmers for not raising something. You know what I would do if I was a Gallia County farmer? Well, I would forget about the Government and look out for myself. I would have plenty of cattle, plenty of sheep—that is, all my farm would stand—some chickens, some horses, and some hogs. I would raise enough feed to keep my stock through the winter; I would raise a crop of tobacco, regardless of what some "white collar" guy told me I could raise, even if I had to bootleg it when it came time to sell it. And to make a long story short, I would run my own business. If I had listened to the advice of what are called experts, I would have been broke long ago.

Why, about 11 years ago a Chevrolet Motor Co. auditor called on me and told me I would go broke within a year because I was not making enough per new car sold. Well, I have made plenty of money by selling two or three times the number of cars any other dealer in a town this size sells and I sell them cheaper, while that auditor that thought he was giving me that expert book knowledge is today on relief. What I am getting at is I don't think it is one darn bit right to let Kentucky tobacco raisers tell us how much tobacco we can raise, when some of them raise as much as 50 acres per farm down there, then want to tell us to raise one-fourth or one-half acre. One man down in Guyan Township who had 7,000 pounds that brought him \$1,500 told me they want to cut him about one-half this year. Sure, tobacco brings us in hard money, and I would surely rebel against such a thing. This thing they call a "base" is all wrong here in Gallia County. Remember I am in favor of the county agent, but I am strictly against Kentucky tobacco raisers robbing our tobacco raisers of enough tobacco to make an honest living. Sure, I would rebel!

### Strangers in Our Midst

ARTICLE FROM THE CHRISTIAN ADVOCATE

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Advocate of February 8, 1940:

#### STRANGERS IN OUR MIDST

Laundered socks turned inside out, even as at home, and a home-town newspaper in the guest's mailbox were only two of the bits of friendly service that the late Ralph Hitz used to win cus-

tomers for \$80,000,000 worth of American hotels. He was an immigrant who began his work as a bus boy on \$3 a week and rose to the position of operator of hostleries doing a \$15,000,000 annual business.

We have had other immigrants among us; in fact, if we go back far enough in our history, all of us, except the descendants of the Indians, are immigrants.

In view of this fact it is hard to understand why there must be such an organization as the American Committee for Protection of the Foreign Born, and why this committee has to do some Americanization work on those who discriminate against and sometimes persecute newcomers from abroad—all in the name of patriotism.

"The existence of war in Europe emphasizes the necessity of giving serious and immediate attention to the elimination of certain tendencies in American life which threaten our concept of equality, regardless of race, color, creed, nationality, or place of birth," the committee says.

"Efforts are being made to divide the American people by advocating the deportation of noncitizens and by fostering discrimination and antagonism against the foreign-born. Noncitizens are being denied jobs and are being threatened with registration, fingerprinting, and concentration camps. More than 70 so-called antialien bills pending in the Seventy-sixth Congress indicate the manner in which attacks upon the freedom of noncitizens can be used to destroy the constitutional rights of American citizens as well."

The committee is meeting at Washington March 2 and 3 to work out plans for counteracting anti-foreign-born propaganda, for facilitating the process of naturalization, for securing the passage of remedial legislation, for maintaining American traditions of right of asylum, for preventing the destruction of American families by deportation, by preventing the passage of so-called antialien legislation, for promoting better understanding between native and foreign born.

The writer is heartily in favor of the naturalization of aliens in our midst. But there is a democratic way of doing this and an undemocratic way of doing it—an American way and an un-American way. It seems that Federal Judges John Biggs, Charles Alvin Jones, and Albert L. Watson stated all this pretty well when they declared Pennsylvania's alien registration law unconstitutional. Said they: "Naturalization 'must never be compelled by an act of oppression or tyranny.' \* \* \* While naturalization of aliens residing within our borders is a matter to be encouraged, the desire of the applicant for citizenship should be inspired and engendered by his observation of and experience with the living example of true democracy."

## The Southwest's Playground—Platt National Park

### EXTENSION OF REMARKS

OF

### HON. MIKE MONRONEY

OF OKLAHOMA

### IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. MONRONEY. Mr. Speaker, I want to take this opportunity to call the attention of the House of Representatives to the increasing popularity of the Southwest's national park, Platt National Park at Sulphur, Okla.

While the general attendance at the 25 national parks was increasing by 3½ percent for the fiscal year ending September 30, Platt National Park increased in attendance by more than 25 percent.

A total of 358,240 persons visited Platt during the year, as compared with 286,486 for 1938. This outstanding increase was the largest recorded by any of the 25 national parks and definitely marks the growing appreciation of the public of the Southwest in the advantages of this popular playground and health center.

Situated as it is in the center of the Southwest region of the United States, it serves a wide area. Thousands of people residing in northern Texas, Oklahoma, Arkansas, Louisiana, and Kansas find the health-giving waters and scenic beauties of Platt an ideal place for a vacation.

The nearest national parks to Platt are to be found at Hot Springs, Ark., Carlsbad Caverns, N. Mex., and Rocky Mountain National Park, Colo. With this wide area to be served, there is little wonder that Platt is increasing every year in popularity.

Platt is accessible on wide, paved highways that put it within easy reach of every city and town in Oklahoma in less

than a day. Points in Arkansas, northern Texas, and other nearby States also can reach Platt with ease in a short time.

Mr. Speaker, because of the rapidly growing popularity of Platt National Park, I would like to incorporate in my remarks an article written regarding the park and the city of Sulphur, adjacent to it, by Mr. Jack Diamond, editor and publisher of the Sulphur Times-Democrat:

#### PLATT NATIONAL PARK FOR RECREATION AND HEALTH

Platt National Park, adjoining the southern boundary of the city of Sulphur, Okla., is one of the Nation's greatest health and recreational resorts. Ancient outing place of the red man, it has been beautified under United States Government supervision and dedicated forever to the health and pleasure of all the people of the United States. As evidence that the people appreciate this playground of the Southwest, Government figures show that there were 285,000 visitors to the park in 1937. Almost every State in the Union was represented around the many springs and beauty spots of this noted resort.

The total area of the park is 848 acres, and through its entire length runs the scenic silvery Travertine Creek, with its numerous waterfalls and placid lakes, all fed by the Buffalo and Antelope Springs, two huge nonmineral springs 1,100 feet above sea level at the upper end of the park and yielding approximately 5,000,000 gallons of cold water daily.

#### MINERAL-WATER BATHS

Thirty-two medicinal springs flow health free to all. A course of the baths, drinking the mineral waters will improve the appetite, induce sleep, soothe the nerves, and give anyone a new lease on living. The waters are particularly recommended for stomach and liver trouble, rheumatism, and nervous disorders.

In the modern, well-equipped bathhouses one may take any desired type of health-giving, invigorating bath. No rigorous medical treatment. The cure is in the water that bubbles from Mother Earth in the pure air and the delight in the park scenery.

#### SWIMMING

Swimming is one of the park's most important sports, and adjacent to the park are some of the finest outdoor swimming pools to be found in the State. They are supplied by great artesian sulphur wells, flowing 3,500 gallons of cold water per minute, and are kept in almost perfect sanitary condition. Some of the pools have dance pavilions and cafes so that you may dine, dance, and swim.

Travertine Creek within the park has six or eight dams constructed to form free swimming pools for those who wish to take advantage of them. This stream is fed by two immense pure-water springs. It is great fun to hike along the park trails and then take a plunge into some of these excellent pools.

#### HIKING

Several miles of alluring hiking trails extending the entire length of the park and winding along Travertine Creek always appeal to visitors. They lead to many sylvan nooks and picnic areas where rock tables and cooking ovens make an outing a real joy.

A wonderful scenic drive also extends the entire perimeter of the park. It takes you to the top of Bromide Bluff, where you have a panoramic view out over Travertine Valley and the city of Sulphur. An herbarium of all the park plant life is now available in the park office, where you may see specimens of all the flowers, with description, and directions as to where to locate them on your hikes. In the spring and summer the park is the flower lover's paradise.

#### FISHING

Beautiful Veterans' Lake, adjacent to the park, covers approximately 200 acres and is a fisherman's paradise, stocked with bass, crappie, and other suitable fish.

Lacy's Lake is a beautiful small lake located within 1 mile of the park. It is known to anglers all over the State as an excellent fishing place. It covers about 50 acres and is fed by a huge mineral well.

Rock Creek, Mill Creek, Pennington, and Blue are four of the finest fishing streams in southern Oklahoma, and all of them are within a few miles of the park boundaries.

#### ACCOMMODATIONS

The camping facilities in Platt National Park are unexcelled. Throughout the length of the park there are numerous wonderfully beautiful picnic areas and camping spots, with huge stone tables and seats and cooking ovens, lights, water, and all conveniences for campers. The camps are all under supervision and protection of rangers, and everything is as free as the air you breathe.

There are also many camp cottages outside the park boundaries with reasonable rates. Hotel accommodations are to be had if you do not wish to camp. Restaurants and cafes are plentiful, where good eating may be found at reasonable rates.

Platt National Park is almost in the center of the great Arbuckle Mountain region, and many interesting side trips may be made out to these points and back in 30 minutes. Turner Falls is perhaps the most widely known.

The park adjoins the city of Sulphur, county seat of Murray County, an attractive town of 5,000 population, built on hills overlooking the park and the Travertine Valley. It is reached by Highways 18 and 22. Highway 12 runs 7 miles east of Sulphur and Highway 77 runs 9 miles west. Traffic on these highways turns to the park from Scullin and Davis, respectively. It has complete bus service and is served by the Frisco Railway.

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

## RESOLUTION OF THE OREGON FARM BUREAU FEDERATION

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

RESOLUTION OF OREGON FARM BUREAU FEDERATION ADVISES EXTENSION OF RECIPROCAL TRADE AGREEMENT LAW, PROVIDED PROTECTION IS ASSURED AGRICULTURE AND TREATIES ARE RATIFIED BY THE SENATE

We commend the American Farm Bureau for its statement filed with the Federal Committee for Reciprocity Information concerning the proposed Argentine trade treaty.

We endorse the general policy of the American Farm Bureau Federation with respect to trade treaties under which the Federation supports the principle of trade treaties, but we oppose any specific treaty which has the effect of reducing the price of agriculture and livestock commodities below parity prices. We further oppose the renewal of the Trade Treaty Act unless adequate protection can be assured to agriculture through proper hearing in negotiating such treaties and they be ratified by the United States Senate.

We reaffirm our belief in the principle of the American market for the American farmer.

Since the reciprocal-trade agreements have sacrificed the interests of the producers of numerous specialty commodities such as field, vegetable, and flower seeds, potatoes, bulbs, and nursery stock, we recommend the restoration of the duties on such items.

## Benjamin Franklin on the Farm Problem

## EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

## ARTICLE BY CLIF STRATTON IN TOPEKA DAILY CAPITAL

Mr. HOPE. Mr. Speaker, there are those who have an idea that the farm problem is something new. The following article written by my friend, Clif Stratton, able Washington correspondent of the Topeka Daily Capital, and quoting from a letter by Benjamin Franklin, shows the contrary.

A reading of the Franklin letter indicates, among other things, (1) that England almost 200 years ago had an agricultural surplus problem; (2) that the industrialists of that day, like some in our own time, believed that cheap food and clothing were more important than fair prices for farm products; (3) that existing legislation, then as now, discriminated against agriculture; (4) that Franklin subscribed to the theory that agricultural prosperity was the basis of industrial prosperity; and (5) that he also believed that agriculture and industry should be on an equality and that in order to compensate farmers for furnishing food and other raw materials at less than a parity price, indemnifying payments should be made to farmers out of the Public Treasury.

The article follows:

FARM PROBLEMS DISTRESSING EVEN IN BEN FRANKLIN'S TIME  
(By Clif Stratton of the Capital's Washington Bureau)

WASHINGTON, January 27.—For the benefit of those who believe the farm problem started with the World War, or with Herbert Hoover, or with the New Deal, the following from Benjamin Franklin—written apparently while he was in England and while England had the corn laws which included prohibition of exports of foodstuffs—is reprinted:

"To the Public:

"I am one of that class of people that feeds you all, and at present is abused by you all; in short, I am a farmer.

"By your newspapers we are told that God has sent a very short harvest to some other countries of Europe. I thought this might be in favour of old England; and that now we should get a good price for our grain, which would bring millions among us, and make us flow in money; that to be sure is scarce enough.

"But the wisdom of the Government forbade the exportation. "Well," says I, "then we must be content with the market price at home."

"No," says my lords the mob, "you shan't have that. Bring your corn to market if you dare; we'll sell it for you for less money, or take it for nothing."

"Being thus attacked by both ends of the constitution, the head and tail of government, what am I to do?"

"Must I keep my corn in the barn, to feed and increase the breed of rats? Be it so; they cannot be less thankful than those I have been used to feed."

"Are we farmers the only people to be grudged the profits of our honest labour? And why?"

"Oh, but the manufacturers! the manufacturers! they are to be favoured, and they must have bread at a cheap rate!"

"Hark ye, Mr. Oak; the farmers live splendidly, you say. And pray, would you have them hoard the money that they get? Their fine clothes and furniture, do they make them themselves, or for one another, and so keep the money among them? Or do they employ these your darling manufacturers, and so scatter it again over all the nation?"

## WORKS BOTH WAYS

"The wool would produce a better price, if it suffered to go into foreign markets; but that, Messieurs the Public, your laws will not permit. It must be kept at home that our dear manufacturers may have it the cheaper. And thus, having yourselves thus lessened our encouragement for raising sheep, you curse us for the scarcity of mutton."

"Now, if it be a good principle, that the exportation of a commodity is to be restrained, that so our people at home may have it cheaper, stick to that principle, and go thorough-stitch with it. Prohibit the exportation of your cloth, your leather, your shoes, your iron ware, and your manufactures of all sorts, to make them all cheaper at home. And cheap enough they will be, I will warrant you, till people leave off making them."

"Some folks seem to think they ought never to be easy until England becomes another Lubberland, where it is fancied that streets are paved with penny rolls, the houses tiled with pancakes, and chickens, ready roasted, cry, 'Come and eat me.'"

"You say poor laborers cannot afford to buy bread at high price unless they had higher wages. Possibly. But shall we farmers afford our laborers higher wages if you will not allow us to get, when we might get it, a higher price for our corn?"

"But it seems we farmers must take so much less that the poor may have no much cheaper."

"This operates, then, as a tax for the maintenance of the poor. A very good thing, you will say. But I ask, why a partial tax? Why laid on us farmers only? If it be a good thing, Messieurs the Public, take your share of it by indemnifying us a little out of your Public Treasury."

## Reciprocal Trade Treaty Act

## EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. O'CONNOR. Mr. Speaker, the proposal before Congress to extend the Reciprocal Trade Treaty Act has been widely criticized. In Montana and throughout the West, it is generally believed that the act, in its present form, is operating to the disadvantage of western economic life.

I concur in the criticism the West has directed against this proposed extension of the act in its existing form. I am one of those who feel that, for a long time, we have been much too concerned with affairs outside the United States of America—with helping our neighbors—good and otherwise—and far too little concerned with the problems of our own citizens.

The Trade Treaty Act is one of those efforts to promulgate our "good neighbor" policy. Perhaps it is the chief effort. At least, I have heard it described as the keystone of our foreign policy. I have heard it upheld and opposed on many grounds which, to me, were outside the scope of actual issues involved within it.

For my part, I oppose the extension of this act, as it now stands, on two principal grounds. First, the act is inimical to the best economic interests of our western country. Second, the act is unconstitutional.

Huge stacks of statistics have been submitted for consideration during this congressional argument—just as many intended to show that the act is not helping the American farmer and livestock producer as there have been data intended to prove the act is helping.

If these contradictory figures are not lying, then at least it must be admitted that they are very confusing. The case, apparently cannot be decided on the basis of these sharply conflicting sets of statistics.

But the fact does remain, that whatever success the act has brought about so far as helping producers in this country is concerned, it has not, according to the reports from Montana and neighbor States, helped the West.

Our producers of cattle, sheep, grains, potatoes, sugar beets, and minerals—they have all suffered from the policy encompassed within the reciprocal-trade agreements.

The West does not, and I emphasize here that I do not, individually, complain against the administration of the reciprocal trade treaty law. The integrity of the Secretary of State, a truly respected man, who is chiefly responsible for administration of this law, is not involved at all here. He is in no sense on trial.

I complain against the validity of the law itself. I maintain that the law, as it stands, is unconstitutional. I shall attempt to tell why, briefly.

Under the Constitution of the United States of America, the exclusive power to establish tariffs, which is an exercise of the taxing power, is vested in the Congress.

All the power which the executive department exercises in the making of one of these so-called reciprocal-trade treaties comes to that department by delegation from Congress. Every change in a tariff rate is an amendment of a law. The twenty-odd trade agreements we have entered into, if valid, have amended acts of Congress hundreds of times.

But how can these agreements be valid if they violate the Constitution? It is an accepted principle of law that Congress can delegate to executive or administrative officials power to administer a law in accord with standards or rules set up by it, but Congress cannot delegate power to enact legislation.

The United States Reports, volume 295, page 495, cover the celebrated *Schechter* case. In this case the Court held that the Congress could not delegate its legislative powers in even domestic matters. If it has not such powers in domestic matters, it should follow without saying that it has no such powers in foreign relations matters, and therefore held such delegation invalid and, in so doing, used the following language:

Congress may leave to selected instrumentalities the making of subordinate rules within prescribed limits, and the determination of facts to which the policy, as declared by Congress, is to apply; but it must itself lay down the policies and establish standards.

The conclusion of such reciprocal-trade treaties then is obviously outside the Constitution, under terms of this court decree.

Most outrageous provision of the Trade Treaty Act, however, is its application of the so-called favored-nation clause. This clause operates so that when we make an agreement, exchanging concessions in tariffs with a certain other country, we find ourselves, under this "most-favored nation" interpretation, obligated to extend the same concessions to other countries, whereas, we, in turn, get nothing tangible or definite as compensation. From these other countries we get merely a promise of compensations under certain circumstances.

Is this sort of thing fair, either to our own producers, affected by treaty concessions, or producers in the specific countries with which we have made agreements? To me, it seems not.

In two other ways, I think the present law is a violation of our Constitution.

The Constitution provides that the House of Representatives shall originate all revenue measures, and the Constitution requires that the Senate shall ratify all treaties entered into by the United States.

Reciprocal-trade agreements are an exercise of the taxing power, vested exclusively in Congress, and such trade agreements are definitely revenue bills. They very definitely affect revenues. They most admittedly are treaties.

So, then, on three counts, the trade-treaty law offends against fundamental provisions of our Constitution.

Who is to blame for this unhappy condition? Why Congress, of course. Congress abdicated its rights, under the Constitution, when this law was first enacted.

Now, it is proposed that we reenact an unconstitutional law. This time, if we do so, we share the blame with the executive branch of the Government, because it has requested the enactment a second time. But what an insignificant satisfaction to excuse ourselves, like so many small children, pleading, "They asked me to do it."

So I say again, my opposition to extending the present reciprocal trade treaty legislation is based on its unconstitutionality and on the objections of the western area, including the State of Montana, where the legislation has worked definite hardships.

We have plenty of problems right here in our own United States that we ought to concentrate our attention on. Our own farmers, our own business interests, and our own 9,000,000 jobless workingmen and workingwomen—they all deserve our united efforts in working out solutions to their problems.

We in the United States are our own "best neighbors."

I say, let us start to put our own house in order. We must protect the credit of our Nation. It is America's real first line of defense in a war-crazed world. We must keep our expenditures within our income; we must start to balance our budget; and we must take care of our own people, solve our own problems, and keep our nose out of the affairs of our neighbors.

### Constitutionality of Unfair and Vicious Minnesota Old-Age-Assistance Lien Law Being Tested in Courts

#### EXTENSION OF REMARKS

OF

HON. R. T. BUCKLER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

RADIO ADDRESS BY HON. LEONARD ERIKSSON

Mr. BUCKLER of Minnesota. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD I include the following radio address delivered by the Honorable Leonard Eriksson, of Fergus Falls, Minn., concerning a court case and legal aspects of the efforts to test the constitutionality of the Minnesota old-age-assistance lien law.

In my home State of Minnesota there is a great deal of interest in the old-age assistance and other features of social security as it applies to the States. During the last session of the Minnesota Legislature, a Republican-controlled house and senate passed a vicious old-age-assistance lien law, which provided for the State taking liens on homes and property owned by the pensioners receiving old-age assistance. When the pensioner dies the homestead is taken over by the State in order to get back the money that was paid out by both the State and Federal Governments to the pensioner.

There is widespread dissatisfaction in Minnesota against this vicious law, and at present efforts are being made to test its constitutionality. It so happens that the participants in this test case come from my own congressional district in Minnesota, and the attorney in the case is Mr. Leonard Eriksson, of Fergus Falls, Minn., a former member of the Minnesota State Legislature.

Mr. Eriksson recently spoke on the air on the subject entitled "The Social and Some Legal Aspects of the Old Age Lien Law."

Since this subject is of interest to all the people of the Nation, as well as the people of my own State, I ask the privilege of inserting Mr. Eriksson's speech into the CONGRESSIONAL RECORD. His remarks might make it possible that other States do not make the grave mistake that Minnesota has made in passing such vicious legislation against the good pioneers of our State.

Mr. Eriksson's address delivered over radio station KGDE at Fergus Falls follows:

Ladies and gentlemen, I appear this afternoon through the generosity of our radio station KGDE, in defense of home and old age, and therefore in defense of youth. Our radio station has graciously and generously given this valuable opportunity to Mr. and Mrs. Dimke that they might have a chance to inform the public about their effort to save their home.

A feeling seems to have developed that no one is longer disinterested enough to take an interest in the cause of the poor.

The bold among the poor who dare to move forward for the good of their kind frequently suffer from the envy of those who lack that courage. Man, like Nature, forgets his wounds. It has ever been thus. When Moses had landed his oppressed brethren on the safe side of the Red Sea they reproached him because they missed for a brief day the fleshpots in the land of their oppressors. Freedom and the promised land were ideals submerged by the demands of their stomachs. It is so today. Those who lead the way, or seek to lead the way, to a better life must now, as in all ages past, suffer from the suspicion and envy of even those who will profit from the exploits of those who dare.

Remember Dred Scott, a Negro, who was brought to Minnesota, a free Territory, in 1834 or 1835. Four years later he returned to Missouri, a slave State, where he was reclaimed as a slave. He brought suit in 1848, claiming the rights of a freeman through residence in free territory. That suit was decided in 1857 by the United States Supreme Court, which ruled that under the form of government then existing he, a Negro, "had no rights which the white man was bound to respect, and that the Negro might justly and lawfully be reduced to slavery for his benefit." That decision by the highest Court of the land seemed to shut the door of hope to the black man. We know better now. "God moves in mysterious ways, His wonders to perform," and out of that dreary, discouraging, hope-crushing decision came, only 5 years later, the declaration of emancipation.

Today all weaklings among the common people and the best interests and the best people of our day are offended by the daring attempt of my friends to take their problem to the courts.

The present issue, namely, the fate of our aging people, searches the foundations of our State. That issue may be summarized thus:

Are the aged needy, with their homes, because of their need, to be committed to the supervision of bureaucrats? And is their property, including their homes, to be taken from them or out of their control as the price of their right to live? And shall a political party, legislating for the State, be allowed to establish, out of human misery, a paradise for politicians by providing for more political jobs and more government expense than have ever before been thought of?

We ask, "What is this lien law? What does it do, and how does it operate?" These questions call for an orderly answer.

In 1935, when our legislature was conservative and the Governor liberal, the general old-age pension law was enacted. Under that law these pensions have been paid until this year. The provisions of that law conformed to the requirements of the Federal Government as stated in the Social Security Act. The Federal social-security law, and the rulings of the Social Security Board, required from each State prepared to receive Federal money for old-age pensions a provision in its old-age pension law for a lien "on the estate" of each recipient to secure the repayment to the United States of that money which had been paid from the Federal Treasury. It required no lien against the homestead of the recipient of old-age assistance. The Federal law has not been changed. The 1935 old-age-assistance law of Minnesota met this requirement of the Social Security Act, and provided in addition that the contributions made by the counties and the State should likewise be a lien against the estate of the pensioners. The legislature of 1939 amended this law of 1935, as I shall presently explain, and the issue in question arises out of that amendment.

Proceeding under the authority of this amendment of the old-age pension law, the county agencies of the State on last Monday filed and recorded a lien statement, prepared and approved by the State agency, in the office of the register of deeds in every county, giving notice of the lien claimed by the State against every man and woman on the pension rolls. The amount claimed as secured by the lien thus recorded is the whole amount paid out as old-age assistance, thus including that contributed by the Federal Government. This lien is a mortgage on all property owned and claimed now, and on all property hereafter gotten, by the old-age pensioners, subject only to the rights of existing liens of existing creditors, and subject to some other minor and useless provisions.

The State agency has interpreted the old-age-assistance law, as amended, and under that interpretation the homesteads of the old-age pensioners become mortgaged to the State for the money paid out as old-age pensions on and after January 2, 1940. This lien or mortgage is effected or given to the State, according to this interpretation,

when the pensioner receives and cashes the first pension check in 1940.

Up to this time no mortgage has been held to be good security between a creditor and a debtor unless it represented a mutual agreement between the mortgagor and the mortgagee. In this instance this necessary consent of the home-owning pensioner is wrung from him by the State while he suffers from the need of help to survive by the simple expedient of claiming that the pension check for an amount ranging from \$5 to \$30, when cashed by the pensioner after the lien has been filed and recorded without his knowledge, is his consent. The pensioner had nothing to do with its terms and provisions. The pension check comes through the mail 9 or more days after the lien was recorded. During those 9 days the proceeds of the former checks are all used up and so when this January check comes the old-age pensioner's power of resistance has been exhausted. He feels as well as knows that unless he accepts this pension check his health and probably his life is definitely endangered, for without that check he cannot buy his fuel, his food, or his rough articles of clothing. He cannot eat his house. Indeed he cannot sell his home without the approval of the agency. The cashing of the check mailed to him has become an absolute necessity unless he wants to starve. Life is precious to all of us, including the old-age pensioners. Now the interpretation of the agency is that this is the necessary consent to that mortgage, and that it converts the notice of the State's intention to claim a lien into a legal and effective mortgage on all the property of these old-age pensioners, securing the repayment to the State, not only of the January 1940 pension check, but of all future pension checks.

Chapter 315 of the 1939 Session Laws is the second act amending the 1935 old-age pension law. Time allows the mention of only the most pertinent features of this chapter. One of its provisions requires a pensioner who owns property outside of Minnesota to sell it and live on the proceeds from such sale.

The second important feature of this chapter 315 is that it introduces the use of the word "property" as applied to liens. "Property," unlike "estate," includes the "homestead." Subdivisions 2, 3, and 5 of section 1, chapter 315, provides that "no person shall be paid old-age assistance without first 'giving' the State a lien on all his property situate within the State—and the 'giving' of this lien is secured as I have described it. Thus the words 'estate' and 'property,' representing two different concepts, are both used in relation to the same subject.

Mrs. Dimke insists that the State cannot, any more than any other creditor, deprive her of her rights as wife, in her husband's homestead without her voluntary consent. This, in brief, are the basic issues involved in this test case.

It is not my purpose here to argue the law. My present purpose is fully served by stating the issue and by recalling the historic reason why the home, until now, has been recognized almost as sacred. Our courts have uniformly ruled that in States, such as ours, the individual citizen is the natural supporter and defender of free government, and that consequently in a republic, such as ours, it is good public policy to encourage and multiply the number of home owners. Our own Supreme Court has said that "the whole theory of the law exempting homesteads from debts is based upon the idea that as a matter of public policy each citizen of the Government should have a home where his family may be sheltered and live beyond reach of financial misfortune. The policy of the State is to preserve the home to the family, even at the sacrifice of just demands, for the reason that the preservation of the home is deemed of paramount importance."

This policy has its roots in the struggles of countless generations who have sought the day when they might own at least one little spot of ground on this earth where they might be safe from creditors and misfortune.

This policy has now been suddenly changed, if the present claim of our State is upheld by the court of last resort. The homes of our old friends, who, from one cause or another, may be in need of this life-saving check, will no longer be the "shelter" where they may live "beyond reach of financial misfortune." On the contrary, their homes become, if the Court should sustain this claim of the State, the very place where their financial misfortune will constantly intrude its ugly head to be the unwanted guest of the needy aged at every meal during their every waking hour; and to sleep with them at night.

Under our form of government, consisting of three independent but coordinating branches, each operating within the terms of our written Constitution, it is not inconceivable that this act of the legislature, which is one of these three departments of our State government, may be held to create a lien in favor of the State and enforceable as a mortgage against the homesteads. I merely say that it is conceivable.

But, should that be the decision, the law is nevertheless evil and the legislature which enacted it should, in that event, be required to repeal it, because this act is a throw-back to the Dark Ages when the poor had "to pine (away their days) with fear and sorrow."

This old-age pension law, as now amended, presents a problem of serious import, not alone to the old but to all of us. The pensioners are all of them over 65. Their remaining years will soon have been spent. The biggest problem resulting from this legislation is its effect on the rest of us.

Consider these indisputable facts: The probable average life expectancy of these pensioners is not less than 5 years; the average assistance paid is about \$20 per month per person; the average value of their homes is not over \$2,000, whether free, or in the form of an equity; and the overwhelming percentage of the children of the home-owning pensioners are now, and will continue to be, so

far as we can now judge, unable to refinance these homes when their parents pass on, so as to pay back to the State what it has advanced. Then, it is clear, that in the course of the next 5 years, which is probably the average life expectancy, the amount secured by this lien is \$2,400 in the case of man and wife, and \$1,200 in the case of a single person.

These indisputable facts must satisfy every person that at the end of the next 5 or 10 years our Commonwealth will be the owner of probably 50,000 homes, scattered all over the State. An army of inspectors will be then needed to care for these thousands of homes, whether leased or not. These homes will demoralize the real-estate market in every city and village of the State. Graft and pull will invade every community. The State will suffer intolerable waste and the younger generation will be deprived of hope. In the meanwhile the investigators and the checkers and the statisticians of the county and State agencies, will increasingly invade the home of our old people on the pretense of watching over the use of the homes which are no longer sanctuaries for our old friends where they may withdraw from misfortune but which have become the rendezvous of a new hoard of officeholders.

Does anyone dispute this claim? If you do, I ask:

Have not the investigators of the welfare boards already invaded the homes of the pensioners, telling them where to board, what to eat and wear, and rationing their daily needs to the minutest detail? Has not the control and power of the county and State agencies over the lives of our pensioners produced fear in them to such a degree that our old friends dare not longer to act or speak like free Americans? Do not these investigators, already direct the lives of our needy aged or try to do so? If, then, the homes of the pensioners are also subjected to the control of this new bureaucracy where will the limit be to the cost of this old-age assistance and where will be the limits of the resulting injury to the character of these old people?

Those who voted for this law excuse their actions by two principal claims: First, they say it means savings to the taxpayers; second, they say that those children who do not support their old folks ought not to share in the estate left by their parents.

Both of these excuses are unsound. The lien affects the estate and deprives the children from inheriting it unless they pay the value of the estate. Instead of economy, this law will mean more and bigger waste. Those children, who can, but will not help their parents, can be made to pay. In fact, it is the duty of the agency to make those collections.

Finally, old age is a social problem of growing importance and proportions. That problem cannot be solved by forcing a mortgage on the homes of the needy aged as a price for letting them live poorly a few years longer.

Our doctors have conquered the ravages of sickness and disease to such an extent that our population has been growing older. There are now more people in the group of 20 to 65 in our population, and fewer under 15, than at any time in 20 years. No change in this condition is probable, even if possible, for 20 or 30 years at least. Our population between 20 and 55 has increased by about 19,000,000 since 1920, and this increase is three-fourths of the total increase in our population.

The same forces which have lengthened our average life span from 35 to 60 or 65 in the last 50 years are still at work and will continue to lengthen human life. Thus, in the next half century we will have a population predominantly old. Is it good for the State, whether viewed from the economic or political angle, to allow those years to be years of increasing unhappiness and uselessness to our coming majority? Not long ago more than half of our population was under 20. Today it is the reverse. While our life span has been lengthened, strange bars across the gate of opportunity have been raised so that old age now begins at 40. Jobs are not for those who are 50 or over. Youth insists rightfully on its chance to make a place for itself. Usefulness in industry is reckoned by the clock. Yesterday a man was considered useful, today he is judged useless in our industrial life, because yesterday he was below 65 and today he is over 65. And the statistics show that in 1930 87 percent of all men 60 to 65 were at work, 60 percent of all men from 70 to 75. Today these percentages are infinitely less.

These and many other factors combine to raise this important question: What is to be done for our growing population of ageing men and women who have not, because of economic changes, been able to provide for themselves? Will this problem be more easily or justly solved by impressing their homesteads with a mortgage, wrung from the ageing whose sense of security has already been undermined by the fear of hunger, lack of shelter, and other needs of the body? Will the program represented by this law serve the hopes of the struggling youth? Instead of breeding new hope and sustaining the ambitions of our young people, will not these practices breed instead fear and insecurity to the point where the number of pensioners will so increase that the burden of those who are employable will be unbearable? Youth, after all, must bear the burden. And why should they who are young save for a home when they get more of a pension without one?

The tremendously important social changes wrought during the last 19 years are by no means confined to industry. They, or their effects, are reechoed in disasters found inside our own doorsteps. We observe sadly how those who live in security, free from want, have become during this same period arrogantly selfish and terribly callous to the feelings and the rights of those citizens who have lost out in the race of life. We forget that these toilers, whether as farmers or as laborers, have by their labor "made our country the greatest ever known." Bureaucracy and old-fashioned privilege have joined hands to wrest from the people the control of our Gov-

ernment. Under differently worded slogans, but to the same purpose, these two forces proceed in their common enterprise.

The presence of these thousands of needy aged is due to many causes, all connected with the changes wrought in all fields of national endeavor during the last 20 years or more. The "depression" which still haunts us, drove 2,000,000 men in rural America "from their paternal acres by (the force of) economic necessity," and took \$30,000,000,000 of wealth from those who lived by agriculture. A Nation-wide scourge of poverty and unemployment was suddenly produced beneath which burrow those who seek to erect for respectful recognition a new aristocracy—the aristocracy of the purse. The leaders of this new aristocracy do not yet understand that their own future security depends on the happiness and contentment of the masses. They ignore conditions that are and say, "There is no poverty." But I answer, "Go out among the people; look into the pots of the pantries and into the cupboards of the masses, and you will find that poverty is the lot of a great percentage of the common people everywhere. You will learn how the poor among us get along with old, worn-out shoes and frayed coats 10 to 40 years old, and with food just enough to keep them above the starvation line."

Organized wealth and their apologists pronounce this lien law good because it drives some of these poor old folks off the pension rolls. Some of these old folks love their old homes so much that they prefer to gamble on getting their daily bread. The worshipers of Mammon care nothing about the anguish and unhappy days which their old neighbors suffer so long as their tax is reduced a nickel. But has it become fair, in law or morals, to protect property and not protect human beings from fear and social insecurity?

The Eliphaz who comforted Job, as he sat seemingly forsaken and suffering from the boils of his flesh, is still with us to comfort our old neighbors and to encourage our young people with these taunting words:

"Remember, I pray thee, whoever perished being innocent? or where were the righteous cut off?"

The modern, taunting Eliphaz accuses our old people of being the source and cause of their own suffering, just as Eliphaz accused Job of being the cause of his misfortune, forgetting, as Eliphaz did, that only yesterday these our neighbors "upheld the falling and strengthened the weak hands."

The present economic condition of our State demands that young and old alike fight this law, which, among all the relief laws, penalizes thrift and the needy old people who own a home. To be against this pension lien law is to be right, "let it turn out as it will."

From 1861 to 1865, under the leadership of the Republican Party, the United States fought the Civil War to free the black man from slavery. That war was costly, both in blood and treasure; but it represented the finest ideals of humanity and stands as the grandest achievement in the record of that great party. Is it thinkable that that party, with such a glorious tradition to its credit, will now black out that honorable record by enacting a law which enslaves the souls of our old people, white and black alike, by thrusting upon them, under color of law and economy, the fear and anguish which come from the enforced mortgaging of their homes as the price of their right to exist? The flag of the Grand Army never before beat a retreat when fighting the cause of humanity.

## Gold and Its Power—Part I

### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. THORKELSON. Mr. Speaker, the internationalist alone is responsible for the chaotic state in which we find the world, for wherever he is you will find dissension, hatreds, unemployment, poverty, and despair. He has always been a source of trouble and will continue to be until he is denied the use of gold as a weapon to destroy and browbeat nitwitted rulers and weak governments into submission. History will show that it is his fanatical craving for gold and the manner of its use, which is to buy, sell, and bribe, that is largely responsible for his repeated expulsion from many nations.

The power of gold is greatest when nations are in debt, so he creates debt to wield his power. Debt begets despair and when nations are in debt, weak rulers and dupes fawn before the throne of Mammon. The internationalist now has the gold but lacks a kingdom for his throne, and to consummate his desire he wants war.

His ultimate hope is that we will join Europe in another World War to enthrone him, for it is only upon the ruins of nations and our civilization that he can establish a federal world union or super world government, similar to

that of the defunct League of Nations. Nations that survive the war on the side of the victor will, if they subscribe to this union, exchange their sovereign rights for a minor position in this world government, and the vanquished nations, if not destroyed, will be held as vassal states. European nations realize this, so it will be a fight to the finish, with devastation and mutual destruction. The real victorious nations will be those that stay out of the war.

The purpose of this world government is to combine the military force of all member nations as a policing power to enforce its rule upon its members, as well as upon independent nations. It is a grand scheme, and one in which an international socialist crowned as king will emerge as a ruthless imperialistic despot. This is particularly true if he succeeds in placing his own men in command of the military, policing, intelligence, and justice forces.

Such government is not our conception of popular government, for it is not free and will not establish justice. It will not insure domestic tranquillity, but will instead bring about strife. It will weaken or destroy our defenses and ignore the general welfare of the people. Instead of securing the blessing of liberty to ourselves and to our posterity, it will contrariwise restrict or deny liberty to us and enslave our children, so whatever it is, we do not want a "world federal union," now or at any future time.

It should now be clear that the internationalist and internationalistic sympathizers are deliberately planning to involve the United States in the present European war. No better evidence is needed to prove this than the propaganda now launched in the daily press, the movies, and over the air. Incidents blamed upon the enemies will be provided to arouse public sympathy in favor of England and possibly other countries that may be considered appealing to the American public. These incidents no doubt will be built upon destruction of American shipping, property, and possible loss of life. When this happens, bear in mind that it could have been prevented had we remained neutral.

American ships are leaving our ports today with contraband cargo consigned to neutral countries that we know will be intercepted by British Navy patrols and conveyed to British ports, where the cargo will be unloaded. This has been going on for a long time, and what have we done about it? Nothing. The State Department has wasted a lot of hot air in protests to fool and befuddle the American people.

Have we taken any steps to protect our neutral rights? No, indeed; not even in protecting the mail of our own citizens. Piracy is no word for it. Petty thievery is better, for when a power stoops so low as to pilfer a few hundred thousand dollars from private mail it is indeed in a class by itself. The State Department can protect our neutral rights by serving notice on Great Britain that nothing will be sold to England or France until both countries allow American cargoes and American ships to proceed unmolested and free to all neutral ports. Such attitude by the State Department would protect our ships from attack by all belligerents and prevent incidents that might, because of deliberate misrepresentation, be employed to excite public feeling.

There is plenty of evidence to show that the Executive, his private advisers, the State Department, and many ambassadors including the roving ambassador, Mr. House, were intensely pro-English during the World War, and this attitude on their part brought about the resignation of Mr. W. J. Bryan as Secretary of State. This sentiment is the same today, so little can be expected from these sources to keep the United States out of war. It is, therefore, the duty of the people to let it be known in a most forceful manner that they are opposed to war.

It is about time that we begin to use common sense and open our eyes to the true state of affairs. Knowing the ownership of the daily press, little or nothing can be expected from it in opposing war or in stating facts. So it is better to do our own thinking. Now suppose we ask ourselves this question: What can we get out of war? Nothing. We have absolutely nothing to gain, but should we become involved, it will mean the most terrific destruction of life and property in the history of the world. In the end it might mean destruction of this Republic. It is high time

that the people remember that they are the supreme power in this Government, and that Congress represents the people. If anyone attempts to involve the United States in the present European war, the people en masse should demand that Congress impeach such officials and remove them from office. This is within the power of Congress, and it is a power that must be employed to prevent mass murder.

Greed for gold is largely responsible for the turmoil in which we find ourselves and the world today, and there will be no permanent relief until each nation sets aside the gold in its own treasury as credit and security for its own people, to whom it rightfully belongs.

Ownership and control of gold will make war and stop war, and to leave this power in the hands of a few people, national or international, is not only an invitation to war but will in the end terminate in world disaster. These periodical conflicts can be stopped by depriving the international money changers of pseudo-ownership or control and the right to manipulate gold and credit to promote and finance war. It is for this reason that I advocate that they be deprived of this power.

#### GOLD AND POWER

Gold, more than any other metal, possesses the physical characteristics and rarity which makes it particularly useful as a medium to establish value. Much fear has been expressed in the press that gold may become obsolete and useless, but little credence should be placed in such statement, for gold has been the power since the days of Babylon. It is gold that leads to power and it is the control of gold that has made submissive servants of weak rulers. Gold is the weapon of the internationalists, and we are the next victims of this oligarchy. When the final day of reckoning comes, it will be found that our Treasury will be depleted of gold, and make no mistake about that, because when outstanding obligations are liquidated our exchequer will be empty.

Why does gold possess such magic charm? It is because this metal has been accepted by all nations of the world as a standard medium of value that will buy in accordance to its own weight and fineness everything that man needs and wants, except redemption of his immortal soul.

If gold is of no value, why are interests outside of the Treasury and the Governors of the Federal Reserve System holding \$15,788,038,830.64 of gold certificates? Surely no one can deny that these gold notes are the first claim on the gold now protected and stored in the United States Treasury's vaults, and guarded by the United States Army at the taxpayers' expense.

If gold is to become useless, why are the internationalists fortifying their own interests by holding title to this metal? Why are they and their agents defrauding the American people of a property that has been earned by the people, and that rightfully belongs to them? Why have the Executive and the Secretary of the Treasury, under the pretext of an emergency, coerced Congress into setting aside \$2,000,000,000 in gold for their own use? Why did not these gentlemen have Congress set aside \$2,000,000,000 of our commodity or managed money, and leave the \$2,000,000,000 in gold as a protection for our own people and as security for our national currency structure? These are questions of interest to all people in the United States.

Why are foreign investors holding more than \$7,000,000,000 of our private securities upon which earnings are paid to them in gold when the same foreign nations through their banks owe the United States more than \$14,000,000,000 in defaulted war debts, upon which we have received no interest or payment?

[Department of Commerce, Washington, released June 19, 1939]

Secretary of Commerce Harry L. Hopkins announced today that the value of foreign investments in the United States at the end of 1938 amounted to \$7,883,000,000 as compared with \$7,036,000,000 at the close of 1937.

Of the total amount of foreign investments in this country at the close of 1938, \$5,690,000,000 represented long-term investments while \$2,193,000,000 represented foreign-owned dollar balances and other short-term banking items, Secretary Hopkins said.

Estimates of foreign investments in the United States were prepared by Paul D. Dickens of the Finance Division of the Bureau of Foreign and Domestic Commerce.

The value of long-term investments in the United States belonging to foreigners increased \$420,000,000 during 1938 largely as a result of the increase in the average market price of common stocks. Net purchases by foreigners of United States securities during the year amounted to approximately \$49,000,000. The combination of the higher market prices and net purchases resulted in a \$400,000,000 increase in the estimated value of foreign holdings of American common stocks. Direct investments in this country, meaning investments by foreign companies in United States subsidiaries, increased slightly, such investments in 1938 amounting to \$10,000,000. Estimated bond holdings by foreigners increased by \$15,000,000, while holdings of preferred stocks fell off \$5,000,000.

Reports received from 380 United States corporations giving data regarding the foreign holdings of their shares (exclusive of shares held in the names of American nominees) disclosed that the value of common stocks held by foreigners increased by about 24 percent during 1938. The number of common shares held increased by more than 8 percent. Preferred-stock holdings increased 15 percent in market value but declined very slightly on both a number-of-shares basis and a par-value basis.

Approximately three-fourths of the common stocks held by foreigners are shares listed on the New York Stock Exchange, probably because of the desirability of a high degree of marketability. Preferred-stock holdings, while composed of a smaller percentage of New York Stock Exchange issues, have for the last 4 years been showing a higher degree of concentration in issues listed on the New York Stock Exchange.

The number of United States railroad common and preferred shares held abroad increased during 1938 by 12.6 and 3.6 percent, respectively. Holdings of manufacturing and distribution shares of both common and preferred status increased but not as much as did the rails. On the other hand, foreign holdings of petroleum and mining shares, both common and preferred, declined slightly. Public-utility common stocks held in foreign countries increased, while preferred stocks were reduced.

Data regarding foreign long-term investments in the United States were first made available by the Finance Division in 1937 in a comprehensive survey, entitled "Foreign Investments in the United States," which applied particularly to holdings at the end of 1934 when it was estimated that such investments aggregated \$4,357,000,000. Subsequent estimates were placed at \$5,109,000,000 and \$6,108,000,000 for the respective year ends 1935 and 1936. In 1937 long-term investments by foreigners aggregated \$5,270,000,000.

Short-term investments by foreigners in the United States aggregated \$614,000,000 in 1934, \$1,220,000,000 in 1935, \$1,530,000,000 in 1936, and \$1,766,000,000 in 1937.

*Foreign long-term investments in the United States, by types of investment, as of the end of 1938—Estimated value*

Type of investment:	
Direct investments (book value)-----	\$1,685,000,000
Common stocks (market value)-----	2,250,000,000
Preferred stocks (par value)-----	425,000,000
Bonds (par value)-----	580,000,000
Other investments-----	750,000,000
Total-----	5,690,000,000

This Department of Commerce release states that in 1937 foreign investors held \$7,036,000,000 of American securities, and that these holdings increased to \$7,883,000,000 in 1938. We may, therefore, assume that there has been an increase of foreign investments in American securities in 1939 and 1940. This statement does not include United States corporate bonds, which, no doubt, amount to many additional millions.

I received this letter on this subject:

DEPARTMENT OF COMMERCE,  
BUREAU OF FOREIGN AND DOMESTIC COMMERCE,  
Washington, February 19, 1940.
